Delay occurred in the plans for the dedication of the monument to the late President Harding, erected on the outskirts of Marion, owing to the reported failure of the Harding Memorial Association and the Republican State Committee to obtain from President Hoover an assurance that he would attend the ceremony. On the motion of former Attorney-General Harry M. Daugherty the association on October 6 postponed the dedication indefinitely.

The minority interest, led by Cyrus S. Eaton of Cleveland, who opposed in the courts the merger of the Youngstown Sheet and Tube Company with the Bethlehem Steel Corporation, obtained an injunction against the union of the companies on December 29. Judge D. G. Jenkins of the Court of Common Pleas in granting the writ opined that "full, accurate and candid" information had not been furnished the stockholders of the Youngstown company.

ELECTIONS. The Republican ticket in the State was severely handled on November 4. The State elected a Democratic Governor, a Democratic Senator and six more Democratic Representatives than in the existing delegation. For Governor, George White, Democrat, obtained by unofficial count 1,031,787 votes, to 922,137 for Governor Myers Y. Cooper, running for reelection on the

Republican ticket. For United States Senator, Robert J. Bulkley, Democrat, obtained 1,042,125 votes (unofficial), to 801,350 for Roscoe C. McCulloch, Republican, supporter of Prohibition and actual holder of the Senate seat. McCulloch was reported to have suffered by the defection of a considerable part of the colored vote. The State's delegation of Federal Representatives as fixed by the election consisted of 13 Republicans and 9 Democrats. Nicholas Longworth, Speaker of the House, was among the Republicans reelected. Republican control of both houses of the State Legislature was preserved, though by heavily reduced majorities. Republican State officers elected were Clarence J. Brown, Secretary of State; Harry S. Day, State Treasurer; and Gilbert Bettman, Attorney-General. A proposed amendment to the State constitution, requiring that the State pay to the subdivisions of origin at least half of income and inheritance taxes collected, was approved.

OFFICERS. Governor, Myers Y. Cooper; Lieutenant-Governor, John T. Brown; Secretary of State, Clarence J. Brown; Treasurer, H. Ross Ake; Auditor, Joseph T. Tracy; Attorney-General, Gilbert Bettman; Director of Education, J. L. Clifton.

JUDICIARY. Supreme Court: Chief Justice, Carrington T. Marshall; Associate Justices, Reynolds R. Kinkade, James E. Robinson, Thomas A. Jones, Edward S. Matthias, Robert H. Day, Florence E. Allen.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women in Ada, Ohio; founded in 1871, and under the direction of the Methodist Episcopal Church. It consists of a college of liberal arts, college of law, college of pharmacy, a teacher training division in the liberal arts college, and a college of engineering. In the academic year 1929-30 there were 1014 students in residence, and in the summer quarter 436 students. The faculty consisted of 60 members. The productive endowment of the institution amounted to \$470,158, and the income for the year to \$217,791. The library consisted of 21,000 volumes. President, Robert Williams, A.M., D.D., LL.D.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women in Columbus, Ohio; founded in 1870. The enrollment for the autumn term of 1930 totaled 10,841, distributed as follows: Graduate School, 1106; agriculture, 882; applied optics, 38; arts and sciences, 2143; arts-education, 57; commerce and administration, 1989; dentistry, 207; education, 1756; engineering, 1726; law, 288; medicine, 343; nursing, 98; pharmacy, 152; veterinary medicine, 145. There were in addition 4485 students registered in the summer quarter of 1930. The faculty numbered 990, an increase of 32 over 1929. The endowment amounted to \$1,150,299. The total income for the year was \$8,665,485, while the total expenditures were \$8,707,259. The university also had current assets amounting to \$4,723,209, and the buildings and equipment were valued at \$20,042,882. The library contained 360,000 volumes. President, George W. Rightmire, LL.D.

OHIO UNIVERSITY. A State university for the higher education of men and women; founded in Athens, Ohio, in 1804. The student enrollment for the first semester of 1930 was 2590, of whom 1331 (993 men and 338 women) were in the college of liberal arts, and 1259 (404 men and 855

women) were in the college of education. In the college of liberal arts, the students were distributed as follows: Seniors, 173; juniors, 208; sophomores, 338; freshmen, 535; graduate students, 10; special music students, 52; unclassified students, 15. The distribution in the college of education was as follows: Seniors, 150; juniors, 212, sophomores, 348; freshmen, 518; graduate students, 19; unclassified students, 12. The student enrollment for the 1930 summer session was 1445, of whom 243 (125 men and 118 women) were in the college of liberal arts, and 1202 (304 men and 898 women) were in the college of education. The income for 1929 was \$1,517,588.65. The faculty numbered 221. The library contained 72,315 bound volumes. President, Elmer Burritt Bryan, L.H.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women in Delaware, Ohio, under the control of the Methodist Episcopal Church; founded in 1844. For the autumn semester of 1930 the total enrollment was 1843, distributed as follows: Seniors, 304; juniors, 382; sophomores, 469; freshmen, 566; special students, 21; graduate students, 41. The faculty numbered 175. The productive endowment of the university amounted to \$3,127,600 and the income for the year 1929-30 to \$673,178. The library contained 128,046 volumes. During 1930 Stuyvesant Hall, a dormitory for freshmen women, was under construction. President, Edmund D. Soper, D.D. LL.D.

OIL. See PETROLEUM.

OIL ENGINES. See INTERNAL COMBUSTION ENGINES.

OIL HYDROGENATION. See CHEMISTRY, INDUSTRIAL.

OKLAHOMA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,396,040. The population on Jan. 1, 1920, was 2,028,283. The capital is Oklahoma City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------------|------|-----------|-------------------------|--------------|
| Cotton | 1930 | 4,061,000 | 900,000 ^a | \$ |
| | 1929 | 4,492,000 | 1,200,000 ^a | 94,200,000 |
| | 1930 | 3,141,000 | 86,436,000 ^b | 23,683,000 |
| Corn | 1929 | 3,020,000 | 48,320,000 | 38,173,000 |
| | 1930 | 3,547,000 | 83,696,000 | 19,881,000 |
| Wheat | 1929 | 4,236,000 | 44,478,000 | 44,083,000 |
| | 1930 | 1,451,000 | 13,059,000 | 7,835,000 |
| Grain sorghum . | 1929 | 1,384,000 | 20,488,000 | 13,314,000 |
| | 1930 | 1,209,000 | 1,148,000 ^b | 10,691,000 |
| Hay | 1929 | 1,224,000 | 1,364,000 ^b | 15,656,000 |
| | 1930 | 919,000 | 25,732,000 | 9,778,000 |
| Oats | 1929 | 792,000 | 20,592,000 | 9,884,000 |
| | 1930 | 48,000 | 8,893,000 | 4,672,000 |
| Potatoes . . | 1929 | 44,000 | 3,313,000 | 4,307,000 |
| | 1930 | 15,000 | 915,000 | 915,000 |
| Sweet potatoes . | 1929 | 15,000 | 990,000 | 1,138,000 |
| | 1930 | 15,000 | 990,000 | 1,138,000 |

^a Bales. ^b Tons.

Farms in the State numbered 204,268 in 1930, the total having risen from 197,218 for 1925 and 191,988 for 1920.

MINERAL PRODUCTION. Oklahoma, though subordinate to California in quantity of petroleum produced, led the States in the value of its petroleum production both for 1928 and for 1929. The output of its wells was 253,704,000 barrels for 1929, as against 249,857,000 for 1928; by value, \$354,200,000 (estimated) for 1929 and \$347,600,000 for 1928. Petroleum furnished not far from

three-fourths of the entire mineral product of the State, by value, for 1928. The production of natural gas, however, was large and fairly well maintained. Its quantity was 320,861,000 M cubic feet for 1928 and, for 1927, 326,864,000 M; its value, \$47,476,000 for 1928 and \$41,391,000 for 1927. Gasoline extracted from natural gas rose steadily to the quantity of 619,691,000 gallons for 1928 and 676,500,000 for 1929; and to the value of \$40,959,000 for 1928 and \$42,960,000 for 1929. The mine production of zinc rose to 192,042 short tons for 1929, from 180,252 for 1928; in value, to \$25,349,544 for 1929, from \$21,990,744 for 1928. The production of lead was 46,515 short tons for 1929, and for 1928, 43,687; in value, \$5,860,638 for 1929 and \$5,067,692 for 1928. The coal product totaled 3,774,080 net tons for 1929 and 3,501,325 for 1928; in value it was \$11,481,000 for 1929 and \$10,365,000 for 1928. The yield of gypsum was 397,752 tons for 1928, in value \$2,021,635. Stone, sand, and gravel were also produced in important quantities. The value of the State's entire mineral product, duplications eliminated, was \$486,634,347 for 1928; for 1927, \$524,594,732.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$18,856,605 (of which \$2,992,333 was for local education); for interest on debt, \$109,639; for permanent improvements, \$15,555,094; total, \$34,521,338 (of which \$15,115,785 was for highways, \$3,440,717 being for maintenance and \$11,675,088 for construction). Revenues were \$33,654,688. Of these, property and special taxes formed 16.8 per cent; departmental earnings and compensation to the State for officers' services, 7.6; sales of licenses, 48.6 (including taxes of \$5,449,113 on sales of gasoline). The State's funded debt outstanding on June 30, 1928, was \$2,761,200. Net of sinking-fund assets, it was \$2,706,917. On property bearing an assessed valuation of \$1,729,342,830 were levied in the year State taxes of \$4,323,357.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 6681.67. There were built, in 1930, 27.49 miles of first and 4.50 of second track.

EDUCATION. The study of the financial conditions in the public school system received much attention in the course of the year, and plans were made for important recommendations on this point to the ensuing Legislature. The number of individuals of school age in the State was reported as 758,198. There were enrolled in the public schools 675,797 pupils; of these, the number in kindergartens was 6513; in elementary grades, 569,217; in high-school grades, 99,461; and as special students, 426. Yearly expenditure for public-school education was \$29,539,480, current, and \$4,008,476 additional in capital outlay. The yearly salaries of teachers averaged \$1088.

POLITICAL AND OTHER EVENTS. The Democratic State primary elections were noteworthy by reason that candidates of the more radical wing of the party defeated for both the Gubernatorial and the Senatorial nomination opponents identified with the petroleum interests. Former Senator Thomas P. Gore was nominated for the U. S. Senate and William H. Murray for the Governorship. The State suffered severely in the late summer and the autumn from drought. For the relief of afflicted farmers Governor Hollo-

way, after conference with Federal officials early in September, initiated a plan for the creation of a private corporation with a capital of \$1,000,000, to make loans up to a total of \$10,000,000, with funds to be advanced by intermediate credit banks.

The State's policy of curtailing the production of petroleum in its oil fields, by orders of the State Corporation Commission, was extended and was upheld in the State Supreme Court. An order of the Commission, issued on June 30, limited the production of the chief fields severally by percentages of their potential outputs. The total for the State was thus set at an estimated maximum of 650,000 barrels a day, subject to change after two months. Further curtailment, however, was ordered subsequently. The C. C. Julian Oil and Royalties Company brought suit for an injunction against the orders of the Commission. The State Supreme Court ruled on October 14 that the Commission had full authority to prorate petroleum production under a statute of 1915 empowering it to make regulations to prevent the waste of crude oil. The State income tax law was attacked in numerous suits brought in the course of the year; it had been enacted in 1915 and had not previously been impugned as to legality.

The C. E. Stout well of the Morgan Petroleum Company, about a mile from the centre of Oklahoma City, deluged the neighborhood with petroleum at the end of October, causing danger of fire for three days, until it was capped on November 2. See **PETROLEUM**.

ELECTIONS. On November 4 W. P. Pine, United States Senator and Republican candidate for reelection, was defeated by former Senator T. P. Gore, Democrat, the vote as unofficially reported being: Gore, 253,505; Pine, 230,837. William H. Murray, familiarly known as "Alfalfa Bill" Murray, Democrat, was elected Governor, defeating Ira B. Hill, Republican, by 299,001 votes to 204,664 (unofficial). Seven Democrats and one Republican were elected Representatives, the Democrats gaining two seats. The Legislature remained Democratic by heavily increased majorities. The voters rejected proposed State constitutional amendments to render women eligible to hold high State offices and to place the University of Oklahoma and the Oklahoma Agricultural and Mechanical College under separate boards of regents.

OFFICERS. Governor, W. J. Holloway; Lieutenant-Governor, C. C. Storms (acting); Secretary of State, Graves Leeper; State Auditor, A. S. J. Shaw; Attorney-General, J. Berry King; State Treasurer, R. A. Sneed; Superintendent of Public Instruction, John Vaughan; State Examiner and Inspector, John Rogers.

JUDICIARY. Supreme Court: Justices: Charles W. Mason, E. F. Lester, James B. Cullison, Charles Swindall, Robert A. Hefner, Albert C. Hunt, Thomas G. Andrews, J. W. Clark, Fletcher Riley.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1930 totaled 5418, of whom 3643 were men and 1775, women. These were distributed as follows: Graduate school, 277; arts and sciences, 2080; business 640; education, 187; engineering, 1074, fine arts, 399; law, 268; medicine, 225; nursing, 134; and pharmacy, 134. For the summer session of 1930,

2052 students were registered. There were 425 faculty members. The productive funds of the university amounted to \$3,200,000, and the income for 1930-31 was \$1,624,000. The library contained 120,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

OKU, ōku, YASUKATA, COUNT. A Japanese military leader, died in Tokyo, July 19, 1930. He was born in Fukuoka-ken in 1846. Entering the army in 1871, he fought with distinction on the imperial side in the civil war of 1877 and was cited for his bravery in cutting through the besieging lines of the rebels around Kumanoto. He commanded the 5th (Hiroshima) Division in the war with China during 1894-95, and later was appointed commander of the Tokyo Bay defense and of the eastern military districts. He became a general in 1903, and on the outbreak of the war with Russia the following year received command of the 2d Army. He won the battles of Kinchow, or Nan Shan, Telissu, and Ta-shih-chao, and participated in the great battles at Liao-Yang, Shaho, and Mukden, gaining a reputation as one of the greatest military strategists. From 1906 to 1912 he was chief of the general staff and member of the supreme military council. He retired with the rank of field marshal, which had been bestowed on him in 1911. He was created Baron in 1895 and was elevated to the rank of Count in 1907.

OLD AGE PENSIONS. FEDERAL ACTION. The Congress of the United States, in the spring of the year, witnessed considerable discussion of the problem of old age security in view of the generally expressed sentiment that the handling of the question was too difficult a matter for State action. Thus, as a result of a group of bills submitted, the House Committee on Labor held hearings on February 20, 21, and 28, in which legislators and other interested persons urged the preparation of a bill to furnish relief through Federal agencies. Among the legislators who addressed the Committee were: Senator C. C. Dill, of Washington; Congressmen F. H. La Guardia, Hamilton Fish, Jr., and Dr. William I. Sirovich, of New York; Congressman Royal C. Johnson, of South Dakota; Congressman Clyde Kelly, of Pennsylvania; and Congressman Roy O. Woodruff, of Michigan. The following organizations sent representatives to urge Federal coöperation with the States in the handling of the problem: American Association for Old Age Security, American Federation of Labor, Fraternal Order of Eagles, Fraternal Order of Red Men, Socialist party, the four Railroad Brotherhoods, and the American Association for Labor Legislation. There appeared in opposition representatives from the National Manufacturers Association, the Sentinels of the Republic, and the Woman Patriot group. Particularly interesting was the statement of Murray W. Latimer, who presented the results of a study of private industrial pensions. Among the conclusions of this investigation were the following: 1. The pension movement in the United States, which had been rapidly growing for years, by 1930 embraced some 4,000,000 employees, 60 per cent of whom were employed in railroad and public utility companies. 2. However, the previous 10 years had witnessed a steady diminution in the number of employees being added under these private pension systems. The report made this significant conclusion: "Universal adoption of present types of pension plans would insure pensions only to a

minority of employees by reason of the service requirements necessary to become qualified for pensions."

Characteristic of the types of measures being introduced in Congress was House Bill No. 13,016 presented by Representative Frederick N. Zihlman, of Maryland, on June 17. This provided the characteristic grants-in-aid form of relief, which had been typical of Congressional enactments in the previous decade. Thus, this old age bill in question called for an appropriation of \$10,000,000 to be allotted to the States on the basis of their population. The Secretary of Labor was authorized to administer this fund. Under the bill Federal aid was to be granted to States enacting pension laws providing assistance to persons who are 60 years of age and over, without property in excess of \$5000, and without children responsible for the support of the parents. The bill called for a citizenship requirement of 20 years.

NEW YORK. After a stubborn battle, in which the arguments pro and con were given wide attention and after a complete investigation conducted by a legislative commission, the New York State Legislature on Mar. 31, 1930, enacted an old age pension law. It is significant to note that public sentiment had so thoroughly accepted this programme of social legislation that the bill was passed by both houses of the Legislature without a dissenting vote. Particularly commendable in the work antecedent to the passage of the measure was the rôle played by Senator Seabury C. Mastick, who was chairman of the legislative commission that conducted the hearings and which drafted the bill. Praise was accorded also to the persistent and intelligent efforts of the American Association for Old Age Security whose marshaling of the facts bearing on the widespread character of improvident old age in the Empire State helped materially in the early enactment of this important code. The New York act, which was speedily signed by Governor Roosevelt, is in most particulars similar to statutes already passed in other States. The act provides for pensions to men and women 70 years old or over who are United States citizens and have resided in the State for 10 years and in the county for one year. The State and the counties are to administer and bear the cost of the pensions together. For the necessary administrative work there was created a Division on Old Age Security in the State Department of Social Welfare. Public welfare officials are to determine the nature of the relief to be received and the manner of providing it. In other words, there are no statutory maximums fixed by the law. Medical and surgical care and nursing may also be given. Competent experts estimated that approximately 51,000 aged persons would be reached by the provisions of the law. Applications for the pensions were opened on Sept. 1, 1930, to make possible the beginning of payments on Jan. 1, 1931.

The report of the New York State Legislative Commission on Old Age Security, above referred to, in view of the fact that it was based on seven months of investigation, is of sufficient interest as a social insurance document to be quoted at some length. The main conclusions of the Commission were the following: 1. Many of the needy aged were not adequately or properly cared for in the State of New York. 2. Many of the needy aged should be provided for outside of institutions "where they may continue to live among friends and enjoy a sense of freedom, self respect and

security." 3. The Commission estimated, as a result of its careful surveys, that approximately 51,000 persons 70 years of age and over were in need of assistance because their children were not able to give aid. 4. Responsibility for the administration of pension legislation should be borne jointly by the counties and the State, and the cost should be similarly divided. Particularly interesting was the Commission's attack upon the poorhouse as an adequate solution for the problem of old age. The report read:

The almshouse is not a satisfactory method of providing relief for all classes of the needy. It is the lineal descendant of workhouses and farms, which were first erected to care for the homeless and unemployed, and not primarily for the sick and the aged who inhabit them to-day. Investigations made by this and by other legislative commissions have shown that in some of the almshouses there is no segregation of the sick from the able-bodied or the mentally alert from the feeble-minded or, occasionally, the insane. . . . Many county homes are out of date, improperly equipped, unable to furnish proper infirmary or hospital care; nor will their facilities permit the segregation of the physically fit from the sick or the mentally deficient from the able-minded.

The Commission estimated that the average cost for the care and relief of elderly persons in need in New York State and without assistance from their own relatives would be \$242 a year. The report said: "In many cases the cost of maintaining an individual in his own home will be less than the present cost of institutional care."

MASSACHUSETTS. As a result of the governor's approval on May 28, Massachusetts joined the

vote of the county board. The statute fixes a maximum pension of \$1 per day with funeral expenses not to exceed \$100 if the estate of the deceased was insufficient to defray the costs. In 1930, eight counties had accepted cooperation with the State. (The State bears one-third of the costs.) Among these counties was Milwaukee County, the most populous one in the State. In 1925 only one county had adopted the system and had eight beneficiaries on its pension roll to whom it paid \$180. In 1929, six counties had adopted the system, had 401 beneficiaries on their rolls and expended in all \$67,689 of which \$22,563 had been contributed by the State. It is to be noted that Milwaukee County did not begin cooperating with the State until Feb. 1, 1930, and, therefore, its activities were not included in the above-cited figures.

AUSTRALIA. It is interesting to contrast this more or less limited programme with the extensive one to be found in the Commonwealth of Australia. The Commonwealth invalid and old age pension act of 1908 became operative on July 1, 1909, and provided pensions for aged and totally incapacitated persons. In 1930, the maximum fixed by statute was \$253 per year and the law also provided that the pensioner's total income, including the pension, was not to exceed \$411. On June 30, 1928, the number of old age pensioners was 139,367 of whom 41 per cent were males and 59 per cent females. The accompanying table indicates the age distribution of the persons added to the pension rolls in the year 1927-28.

SEX AND AGE GROUPING OF PENSIONERS ENROLLED IN 1927-28 IN AUSTRALIA

| Age group | Males | | Females | | Total | |
|-----------------------------|--------|----------|---------|----------|--------|----------|
| | Number | Per cent | Number | Per cent | Number | Per cent |
| 60 to 64 years | 1,349 | 14.7 | 5,809 | 62.6 | 7,158 | 38.8 |
| 65 to 69 years | 5,358 | 58.6 | 2,073 | 22.3 | 7,431 | 40.3 |
| 70 to 74 years | 1,763 | 19.3 | 871 | 9.4 | 2,634 | 14.3 |
| 75 to 79 years | 510 | 5.6 | 333 | 3.6 | 843 | 4.6 |
| 80 years and over | 171 | 1.9 | 195 | 2.1 | 366 | 2.0 |
| Total | 9,151 | 100.0 | 9,281 | 100.0 | 18,432 | 100.0 |

roll of States having old age pension laws on their statute books. There were, therefore, in 1930, 12 States with such legislation, viz: California, Colorado, Kentucky, Maryland, Massachusetts, Minnesota, Montana, Nevada, New York, Utah, Wisconsin, and Wyoming. The territory of Alaska, too, had an old age pension law. The State senate passed the measure on May 20 by a vote of 30 to 4, and the house on May 23 by a vote of 102 to 54. The house had originally favored a pensionable age limit of 60 years for women and 65 for men, but was compelled, in order to insure passage of a bill at this session, to compromise and accept the senate's bill which fixed the pensionable age at 70 years for both sexes. The administration of the Massachusetts law is placed in the hands of the State Department of Welfare and the local welfare boards. The act fixes no specific amount of pension. The State is to pay one-third of the cost in the cases of aged persons having a legal township residence and the full amount in the case where the pensioner has no such legal residence. The act was to become operative July 1, 1931.

WISCONSIN. An old age pension law came into effect in this State in 1925 with the characteristic provisions of an age requirement of 70 years, American citizenship, State residence of 15 years and a county residence. Adoption of the law was made optional with the counties on the

The number of persons in 1928 who received invalidity pensions was 55,517. The table herewith indicates the number of persons added to the invalidity pension rolls in the year 1927-28.

AGE AND SEX OF RECIPIENTS OF INVALIDITY PENSIONS, 1927-28

| Age group | Males | Females | Total |
|-----------------------------|-------|---------|-------|
| 16 to 19 years | 368 | 485 | 853 |
| 20 to 29 years | 477 | 539 | 1,016 |
| 30 to 39 years | 503 | 408 | 911 |
| 40 to 49 years | 862 | 712 | 1,574 |

| Total | 3,973 | 4,003 | 7,976 |

In the year ending June 30, 1928, the Commonwealth of Australia expended on both these types of pensions (and this does not include administrative costs) a total of \$47,678,985.

CANADA. The progress being made under the old age pension systems established in the Canadian provinces in recent years has been discussed in earlier YEAR BOOKS. The Dominion government reported that up to the conclusion of the fiscal year 1929-30, it had contributed a total of \$3,771,000 to the provinces in aid of aged persons. The total expenditure among the provinces was \$7,542,000 and covered relief

granted to 42,553 pensioners. The following indicates the distribution among the provinces of both pensioners and money allotments: Alberta, 2017 pensioners, \$267,420; British Columbia, 4576 pensioners, \$2,049,674; Manitoba, 5104 pensioners, \$1,640,295; Ontario, 26,370 pensioners, \$2,255,688; Saskatchewan, 4482 pensioners, \$1,113,942; Northwest Territories, four pensioners, \$557. It will be recalled that all the provinces did not enact their pension legislation at the same time and this, therefore, accounts for the differences in the sums expended. Thus, British Columbia was the first province to adopt the law; Ontario was the last.

OLD TESTAMENT ARCHAEOLOGY. See ARCHAEOLOGY.

OMAN. See ARABIA.

ONTARIO, ōn-tā'ri-ō. Second in size (after Quebec) among the Canadian Provinces, Ontario lies between Quebec on the east and Manitoba on the west. The area is 407,262 square miles; the population on June 1, 1930, was estimated at 3,313,000 (2,933,662 at the census of 1921). Toronto, the capital, had about 569,899 inhabitants in 1928 (521,893 in 1921). Other cities, with their estimated populations, were: Ottawa, capital of the Dominion, 121,000 in 1928; Hamilton, 158,170 in 1930; London, 71,310 in 1930; Windsor, 68,893 in 1929. In 1928, births numbered 68,420; deaths, 37,108; marriages, 25,728. There were (1927) 7150 elementary schools and 474 secondary schools, with a total of 724,989 pupils; also the Universities of Toronto, Queen's (Kingston), Western Ontario (London), McMaster (Toronto), and Ottawa (Ottawa).

Ontario leads all Canadian Provinces in manufacturing and also is rich in agricultural, mineral, and forest resources. In 1928 there were 9900 industrial establishments, with 320,729 employees, having a gross value of production of \$1,949,724,119, and a net value of \$915,222,879. In the same year the provincial Hydro-Electric Power Commission, which operates virtually all electric power installations, distributed 1,032,500 horse power to 560 municipalities and 522,700 customers. About 14,000,000 acres are under cultivation, of which 10,020,294 acres produced field crops valued at \$241,778,000 in 1929. Mineral production in 1930 was valued at \$112,926,411 (\$117,960,722 in 1929). Gold, silver, copper, nickel, platinum, crude petroleum, and natural gas are the chief sources of mineral wealth. The forested area is about 240,000 square miles and the value of timber cut in 1927 was \$54,055,133. The fisheries in 1928 yielded a \$4,030,753 catch; fur production (1927-28) was valued at \$4,401,889. There are over 11,000 miles of steam railway and more than 52,000 miles of public highways. About 2,500,000 tourists were estimated to have visited the Province in 1929.

The Province is administered by a lieutenant-governor, a cabinet, and a chamber of 112 members elected for four years. Following the election of Oct. 30, 1929, the Legislature was constituted as follows: 90 Conservatives, 12 Liberals, 5 Progressives, 4 Laborites, and 1 United Farmer. Ordinary revenues for the fiscal year ended Oct. 31, 1930, were \$57,325,000 and ordinary expenditures, \$57,953,000. For 1930-31, the main estimates amounted to \$68,002,212, of which \$28,000,000 was appropriated for use of the provincial power commission. There has been government control and sale of liquor since the Conservative victory in 1926. Lieutenant-

Governor in 1930, W. D. Ross; Premier and President of the Council, G. Howard Ferguson.

In the Dominion general election of July 28, 1930, the Province returned 59 Conservatives, 22 Liberals, and 1 United Farmer to the House of Commons. The Ontario Liquor Control Commission reported sales during 1929-30 of \$52,283,001, with profits of \$9,315,967. The Legislature in the spring of 1930 authorized the expansion of the Ontario Hydro-Electric Power Commission's activities and set aside \$2,000,000 for loans to farmers for the purchase of electrical appliances and equipment. A bonus of 1 per cent per unit on iron ore produced in the Province was voted and \$10,000,000 was appropriated for the development of northern Ontario, including an extension of the Temiskaming and Northern Ontario Railway toward James Bay. A new building to house trade and other representatives of the Ontario Government was opened in London, England, in October, 1930. See CANADA.

OREGON. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 953,786. The population on Jan. 1, 1920, was 783,389. The capital is Salem.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|--------------|--------------|
| Hay | 1930 | 1,227,000 | 2,561,000 * | \$24,083,000 |
| | 1929 | 1,166,000 | 2,217,000 * | 31,391,000 |
| Wheat | 1930 | 1,017,000 | 23,391,000 | 18,615,000 |
| | 1929 | 1,058,000 | 23,114,000 | 25,554,000 |
| Oats | 1930 | 289,000 | 11,849,000 | 4,147,000 |

| Barley | 1930 | 104,000 | 3,744,000 | 1,872,000 |
| | 1929 | 116,000 | 4,292,000 | 3,305,000 |

* Tons. ♢ Pounds.

Farms in the State numbered 55,259 in 1930, as against 55,911 in 1925 and 50,206 in 1920.

MINERAL PRODUCTION. As usual the production of stone, sand, and gravel made up the major part of the mineral industry of the State for 1928. The quantity of stone produced was 1,875,250 short tons for 1928 and 1,863,930 for 1927; the value, \$2,117,322 for 1928 and \$1,951,631 for 1927. There was an increase in gold mining in 1929, although the output remained distinctly secondary to those of the important gold-producing States. The quantity of gold mined in 1929 was 17,092 fine ounces, as against 10,931 in 1928; the value, \$353,323 in 1929 as against \$225,908 in 1928. Coincidentally the number of producing placer mines increased by 21, to 111;

45 lode mines operated in 1929. The mine production of copper also rose, to 655,746 pounds, in value \$115,411 for 1929, from 358,463 pounds, in value \$51,019, for 1928. Silver and lead were produced only in minor amounts. The yield of mercury attained 3759 flasks, in value \$458,147, for 1928. The value of the entire mineral product of the State was \$6,686,988 for 1928; for 1927, \$6,821,224. See GEOLOGY.

The total value of the gold, silver, copper, lead, and zinc produced from lode and placer mines in Oregon in 1930 was estimated at \$309,100, or a decrease of \$176,300, compared with 1929, by the U. S. Bureau of Mines. There were decreases in the output of all metals, with copper recording the largest loss. Western Oregon led in the value of the output of metals, but with the output of a new dredge in Eastern Oregon the eastern and western portions of the State were about equally divided as to the gold yield. The value of the gold yield in Oregon in 1930 was estimated at \$285,300, a decrease of about \$68,000, compared with 1929. The larger part of the output came from placer mines, chiefly from dredging operations, but water shortage the last two seasons reduced the gold yield. The output of silver from lode and placer mines in Oregon in 1930 was estimated at 8500 fine ounces, valued at \$3200, a decrease of about 21,500 ounces in quantity and of about \$12,800 in value, compared with 1929. The output of copper from mines in Oregon in 1930 was estimated at 161,900 pounds, valued at \$20,100, which was a decrease of about 493,800 pounds in quantity and of about \$95,300 in value, compared with 1929. The output of lead in Oregon in 1930 was estimated at 9500 pounds, valued at \$500, a decrease of 10,680 pounds in quantity and of about \$800 in value, compared with 1929.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 3487.54. There were built, in 1930, 27 miles of additional first track.

EDUCATION. A committee of the State Teachers' Association prepared a report embodying an educational plan for the State. This plan was described as providing a method of reorganizing the school system, and as having the support of the educational forces. Provision was made during the year for extending State supervision among the smaller high schools.

POLITICAL AND OTHER EVENTS. State Senator George W. Joseph, a Portland lawyer disbarred from practice in the State for having made attacks on the integrity of members of the State Supreme Court, entered the campaign for nomination as the Republican candidate for Governor, on a platform asserting that he sought his vindication by that course. He gained a slight majority over Governor Norblad in the primary election of May 18, but died within a month of a heart attack. By action of the Republican central State committee its former chairman, Philip Metschan, a Regular Republican, was nominated candidate for Governor in Joseph's stead. Progressive Republicans who had cast their vote for Joseph revolted and named Julius E. Meier, a Portland merchant, as independent candidate, who pledged himself to a reform of the State's policy as to hydroelectric resources and to the abolition of the Public Service Commission. The Republican ranks were thus widely split.

By the presentation to the Secretary of State of a petition carrying 15,733 names, it was pro-

vided that there should be a referendum vote at the November elections on the proposal that the State constitution be amended to forbid the manufacture, sale, purchase, possession or donation of cigarettes or their makings. The State tax on intangibles established by a statute of 1929 and requiring individuals to pay on the basis of interest and dividends received was declared unconstitutional by the State Supreme Court on October 28 because not applying equally to corporations.

ELECTIONS. Julius E. Meier, independent candidate, was elected Governor on November 4, defeating both Edward F. Bailey, Democrat, and P. Metschan, Republican, by heavy pluralities. Charles L. McNary, Republican, was reelected United States Senator, receiving 127,240 votes, as unofficially reported, to 60,639 for Elton Watkins, Democrat. Two Republicans and one Democrat were elected to the House of Representatives. The Legislature remained in Republican control. A proposed State constitutional amendment to create water and power utility districts was carried by popular vote. It was also voted to give Legislative authority to fill vacancies, and a measure according exemptions from income taxation was approved. The voters repealed a measure for the payment of interest on the debts of irrigation and drainage districts by the State. The initiated proposal for a constitutional amendment to forbid cigarettes was rejected, as were proposals to create an office of Lieutenant-Governor, to set up a cabinet form of government, to extend bonus loans to certain of the veterans, to increase Legislators' pay, and to revise the license tax on motor vehicles.

OFFICERS. Governor, A. W. Norblad (succeeded on Dec. 22, 1929, I. L. Patterson, deceased); Secretary of State, and State Auditor, Hal E. Hoss; Treasurer, Thomas B. Kay; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

JUDICIARY. Supreme Court: Chief Justice, O. P. Coshow; Associate Justices, Henry J. Bean, George M. Brown, George Rossman, Harry H. Belt, Percy R. Kelly, John L. Rand.

OREGON, UNIVERSITY OF. A State institution of higher education in Eugene, Ore.; founded in 1872. It consists of a college of literature, science, and the arts, graduate school, and schools of architecture, business, education, journalism, law, music, physical education, medicine, and social work, the latter two being located in Portland. The enrollment for the autumn term of 1930 was 3344, of whom 1970 were men and 1374 women, and 2830 were undergraduates and 176 graduate students, with an additional enrollment in the law school of 89 and in the medical school of 249. In the summer session of 1930 the registration totaled 1701, of whom 437 were men and 1264 were women. The faculty for the autumn term numbered 216. The total income for the year Oct. 1, 1929, to Sept. 30, 1930, was \$2,084,761. The endowment amounted to \$164,452, with a productive income of \$8933. The main library contained 217,769 volumes, and the medical school library more than 11,000 volumes.

During the summer of 1930 construction was started on an out-patient clinic building, located on the Portland medical school campus and made possible through a gift of \$400,000 from the General Education Board. During the fall term of 1930 work was completed on a \$200,000 central unit of the proposed \$500,000 fine-

arts building. Towards the construction of this, \$15,000 was received from Mrs. Gertrude Bass Warner, and \$18,075 from the estate of Elizabeth Harmon. The American Medical Association gave \$7000 to the medical school library. Beginning with the year 1930-31 the personnel work of the university was reorganized with a dean of personnel administration at the head. President, Arnold Bennett Hall, J.D., LL.D.

OREGON STATE AGRICULTURAL COLLEGE. The Federal land-grant college of Oregon, established under Federal and State support in 1868 in Corvallis. The college is coeducational and grants degrees in 10 schools: Agriculture, chemical engineering, commerce, engineering and mechanic arts, forestry, home economics, military science, mines, pharmacy, and vocational education. Supporting divisions not granting degrees are the school of basic arts and sciences, the school of health and physical education, the department of industrial journalism, and the department of music. The department of religion is privately maintained. The enrollment for the autumn term of 1930 was 3321, of whom 2250 were men and 1071 were women. The 1930 summer session registration was 1423. The total resident enrollment for the full year 1929-30 was 5636. There were 328 members on the teaching faculty.

The income for 1930-31 from the original land-grant and other Federal funds, from the State of Oregon (millage tax), student fees, etc., as well as from certain Oregon counties for extension work, was \$2,041,864. This was apportioned as follows: Resident instruction, \$1,472,786; experiment station, \$204,376; extension service, \$364,702. There were 94,602 catalogued volumes in the library. The Joseph N. Teal loan fund of \$5000, the Harry Holgate prize in freshman forensics, the Mary J. L. McDonald fellowship in reforestation, the Kappa Delta Pi education award, and the Drusilla Shepard Smith prizes in home economics were established during the year.

President of the College, William Jasper Kerr, Sc.D., LL.D.

OVERMAN, LEE SLATER. An American lawyer and legislator, died in Washington, D. C., Dec. 12, 1930. He was born in Salisbury, N. C., Jan. 3, 1854, and was graduated from Trinity College (N. C.) in 1874. On being admitted to the bar in 1878, he practiced in Salisbury, and entered politics as a Democrat. He was a member of the State Legislature five times, being speaker in 1893; in 1895 was defeated for the United States Senate through a coalition of Populists and Republicans; was president of the Democratic State Convention and presidential elector at large in 1900; and in 1902 defeated his old rival, J. T. Pritchard, for the Senate. He was reelected for five terms

thereafter. He was the author of the famous Overman Act, introduced in the Senate in February, 1918, which gave President Wilson unrestricted power to coordinate and consolidate all government activities as a war emergency.

OVERTON, GRANT (MARTIN). An American writer, died July 4, 1930, in Patchogue, N. Y., where he was born Sept. 19, 1887. He attended Princeton University during 1904-06, and for several years was on the reportorial staffs of the *New York Sun*, *Denver Post*, and *San Francisco Examiner*. In 1916 he became an editorial writer for the *New York Sun* and was its literary editor during 1918-19. After several years' association with George H. Doran Company (later Doubleday-Doran Company), he became fiction editor of *Collier's Weekly* in 1924 and consulting editor in 1927. His books include: *The Women Who Make Our Novels* (1918); *Mermaid* (1920); *World without End* (1921); *The Answerer* (a novel on the life of Walt Whitman, 1921); *When Winter Comes to Main Street* (1922); *American Nights Entertainment* (1923); *Island of the Innocent* (1923); *The Thousand-and-First Night* (1924); *Cargoes for Crusoes* (1924); *The Philosophy of Fiction* (1928); and *The American Novel* (1929). He edited *Mirrors of the Year* (1926-27); *Cream of the Jug* (humorous stories, 1927); *The World's 100 Best Stories* (1927); and *The World's 50 Best Short Novels* (1929).

PACIFIC RELATIONS, INSTITUTE OF. An organization formed in Honolulu in 1925 to serve as an unofficial body in studying the conditions of the Pacific peoples, with a view to the improvement of their mutual relations. It holds biennial conferences, promotes and coordinates research by other agencies, conducts research through its own secretariat, and endeavors to stimulate the mood of inquiry regarding Pacific problems on the part of the public generally. It is governed by a Pacific council, consisting of one representative from a recognized affiliated body of similar purposes in each country, including Australia, Great Britain, Canada, China, Japan, New Zealand, and the United States.

The main activities of the institute during 1930 were built around the research and education work growing out of the Kyoto conference and looked toward preparation for the China conference in 1931. The research programme included the following subjects: Population movement from Shangtung and Hopei to Manchuria; land utilization and rural economics in Korea; comparative study of boycotts; government of Pacific dependencies; the status of aliens in Pacific countries; industrialization at Shanghai, Nantung, Wushih, and other cities; comparative study of changing rural social life; land utilization in New Zealand.

The research committee of the American council of the institute was engaged in conducting the following studies: Filipino immigration; foreign merchants trading in China; history of the consortium; Oriental influences on American life; differences between Oriental and Occidental civilizations; tariff policy. The education committee initiated a study of China and Japan in American libraries, and also conducted an inquiry into the status of Oriental languages as an entrance credit in American colleges and universities.

Officers of the Pacific council elected at Kyoto in 1929 were: Chairman, Jerome D. Greene of Lee, Higginson & Co., New York City; first vice chairman, Inazo Nitobe of Japan; second vice

chairman, Newton Rowell of Toronto, Canada; treasurer, F. C. Atherton of Honolulu; chairman of the international research committee, Charles P. Howland of New York City; research secretary, John B. Condliffe. Charles F. Loomis was the acting general secretary. Headquarters of the institute are in Honolulu, and of the American council at 129 East 52nd Street, New York City. Jerome D. Greene was chairman of the American council and Edward C. Carter, honorary secretary and treasurer.

PAINTING. The interest of the public in modern art continued its upward course in 1930, and the popularity of the modern artist, a term which could not have been used a few years previously, had become established. Although it was doubtless no easier than ever to achieve fame overnight, a moderate amount of notice was within the reach of the persistent and enterprising, and it was no longer necessary for an artist to starve because he belonged to his own time. Indeed he became encouraged to feel that the world owed him a living. There is something particularly American about this idea of the importance of the artist as an individual, the importance of his work as individual expression, his right to reap the profits of both, and the critic's willingness to help him to success. The occasion of the rise of modern art, however, is not American. Any one who observed the spectators' attitude of acceptance, even of reverence, at the Modern Museum's exhibition of painting in Paris, would realize that the French painters were responsible for America's late attack of worship of the contemporary in art. Their influence on American taste and on American painting—whose congenital lack of individuality had reduced taste to a convention—had aroused in the United States the first sanction of individual expression, even if the individualism paraded in borrowed garments. As those who sanctioned prided themselves upon being catholic, he was an innovator indeed who did not fall into some one of their categories. Whether or not this popularity was merely another manifestation of the vagaries of fashion, the critic of 1930 cannot have sufficient perspective either backward or forward to say; but one thing was certain, the academic and conventional in painting seemed damned for the present and modernism was in the ascendant among collectors and in the propaganda of the press.

An interesting result of the spread of art among persons of great wealth in America, which one heard so much about, and also of the growth of the importance of the artist as an individual was the temptation to supply by forgery the increased demand for art as a commodity. It was no longer sufficient in this world of mass production for the artist to sacrifice quality to quantity, but others must do so for him. The old masters had long provided a fair field for imitation, but only lately had it occurred to forgers to beat the living artist at his own game. Van Gogh was conveniently dead when certain works

attributed to him recently aroused controversy, and it was only a matter for experts to thrash out; but with Picasso threatened the tendency would surely bear watching. See earlier articles on ART EXHIBITIONS; ART MUSEUMS; ART SALES.

BIBLIOGRAPHY. Among the important publications of the year may be included the following: *The Islamic Book*, by Sir Thomas W. Arnold and Prof. Adolf Grohmann, a concise and accurate introduction to Persian painting; *Ancient Painting from the Earliest Times to the Period of Christian Art*, by Mary Hamilton Swindler, a much-needed handbook of the subject, comprehensive, readable, and well illustrated; *Die Wandmalerei Pompejis, Eine Einführung in ihr Verständnis*, by Ludwig Curtius, a detailed exposition of a late phase of ancient painting; *The Gothick North, A Study of Medieval Life, Art, and Thought*, by Sacheverell Sitwell; *Saint Christopher in English Mediæval Wallpainting*, by H. C. Waite, a scholarly piece of research; *A History of Spanish Painting*, by Chandler Rathfon Post, a scholarly, complete, and interesting book; *An Introduction to Italian Painting*, by Sir Charles Holmes, one of the better books apropos of the Italian exhibition in London; *Venetian Painting of the Seicento and the Settecento*, by Giuseppe Fiocco; *A Critical and Historical Corpus of Florentine Painting*, Section III, dealing with the lyrical tendency in the Florentine school, part of a work of 30 volumes comprising only illustration and bibliography; *Florentine Frescoes*, by Tancred Borenius; *Unknown Masterpieces*, edited by W. R. Valentiner and others, a yearly publication of lesser-known works in private collections; *Pietro Lorenzetti*, by E. T. de Wald, the most comprehensive study of this master that had yet appeared; *Fra Angelico, His Life and Work*, by Paul Muratoff, translated from the Russian; *Botticelli*, by Adolfo Venturi, translation into English of an authoritative work; *Leonardo und Sein Kreis*, by Wilhelm Suida, an exhaustive, acute, and well-documented book; *Drawings by Pisanello*, by George F. Hill, Keeper of Coins and Medals in the British Museum and well-known authority on Pisanello; *The Paintings and Drawings of J. B. C. Corot*, with an introduction by Victor Rieuicker, which shows Corot in a new light; *Art Nonsense*, by Eric Gill; *A History of British and American Etching*, by James Laver, a useful survey; *100,000 Years of Art*, by E. G. Morris; *Ernest Lawson*, by F. Newlin Price; *The Meaning of Art*, by A. Philip McMahon; and *Masterpieces of Russian Painting with color plates*, edited by Michael Farbman.

See also LITERATURE, ENGLISH AND AMERICAN under *The Fine Arts*.

NECROLOGY. Among the artists and critics of art who died during 1930 were the following: Francisco Alcantara, Spanish art critic; Cora Brooks, American painter; Carl Van Buskirk, portrait painter; Glance Cambon, Italian portrait painter; Pio Cellini, Italian designer and sculptor; Preston Dickinson, American painter; Alphonse Dinet, French painter of Algerian scenes; Anton Faistener, Austrian painter; Walter Greaves, English painter, pupil of Whistler; Henry de Groux, Belgian artist; Samuel Halpert, American artist; Charles Webster Hawthorne, American painter; John Kirchmayer, German woodcarver; Augustus Lamplough, English water color painter; Verdugo Landi, Spanish painter;

Henry C. Lee, American artist and archæologist; Émile René Ménard, landscape painter; Ferdinand von Miller, sculptor of the Munich school; David Muirhead, Scotch landscape artist; Jules Pascin, French painter of note; Lucian Whitney Powell, American landscape painter; Elia E. Riepin, Russian painter; Julius Rolshoven, American painter; Edwin Scott, American painter; Sigurd Skou, Norwegian artist; George Gardner Symons, American landscape painter; and David Croal Thomson, art critic. Many of these are discussed in appropriate biographical articles and in the **NECROLOGY**.

PALEONTOLOGY. See **GEOLOGY**.

PALESTINE. A territory comprising that part of historic Palestine which lies to the west of Trans-Jordan and between Syria on the north and Egypt and the Hejaz on the south; formerly a vilayet of the Turkish province of Syria. Captured by the British during the World War, it has been administered since Sept. 29, 1923, by Great Britain under a mandate of the League of Nations. The mandate confirmed the Balfour Declaration of Nov. 2, 1917, in which the British government pledged its aid in establishing in Palestine "a national home for the Jewish people."

AREA AND POPULATION. The area under British mandate is about 10,000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom 590,890 were Moslems; 83,794 Jews; 73,024 Christians; 7028 Druses; 163 Samaritans; 265 Bahais; and the remainder Sikhs, Hindus, and Metawilehs. On June 30, 1930, according to official statistics, there were 916,998 inhabitants (excluding nomads). Of the total, 682,433 were Moslems, 154,330 Jews, and 80,225 Christians. Capital, Jerusalem, with a population in 1922 of 62,678. Other large towns, with their populations in 1922, are Jaffa, 47,709; Haifa, 24,634; Gaza, 17,480; Hebron, 16,577; Nablus, 15,947. The Jewish settlements are grouped in the four districts of Judæa, Samaria, and upper and lower Galilee. The total population of Jews permanently settled in Palestine had risen since the World War from 56,000 to 165,000 in 1929, or about 18 per cent of the total population. Jewish immigration in 1929 exceeded emigration by 3503, while in 1928 Jewish immigration and emigration balanced. For the year ended Sept. 30, 1930, 5883 Jews entered Palestine. In 1928, total births were 42,895, and deaths, 23,054.

EDUCATION. In 1929, there were 314 Government schools, with 21,259 pupils, mostly Moslem; 307 Jewish schools, with 28,207 pupils; 191 Christian schools, with 14,592 pupils; and 73 private Moslem schools, with about 4500 pupils. There was also a Hebrew University at Jerusalem, with 250 students.

PRODUCTION. Palestine is primarily an agricultural country. Production of the chief crops, in tons, in 1928 was: Wheat, 65,288; barley, 46,697; durra, 32,732; olives, 365; olive oil, 454; lentils, 1397. Wine production was 1,488,477 liters and the orange and lemon crop exported totaled 2,202,435 cases. Bananas and tobacco are grown also. Limestone, sandstone, gypsum, rock salt, and sulphur are the chief minerals found. A concession for the exploitation of cooking salt, carnallite, and bromide in the Dead Sea was granted to a British company in 1929. Industry is confined to the making of wine, soap, olive oil, and tobacco products. Approximately 2,000,000 timber and fruit trees were planted in 1928. In the same

year there were 226,611 sheep, 367,730 goats, 23,850 camels, and 600 buffaloes. Construction of a 24,000-horse-power hydro-electric plant utilizing the waters of the Jordan and Yarmouk rivers was in progress during 1930.

COMMERCE. The large excess of imports over exports, due primarily to expenditures in Palestine by foreign Jews, continued in 1928. Imports of merchandise and specie totaled £6,788,767 and exports, £1,519,461. Reexports amounted to £177,892 and goods in transit to £177,447. Trade was mainly with Egypt, Syria, the United Kingdom, and Germany. Oranges, laundry soap, water melons, wines, almonds, barley, durra, and sesame were the chief exports.

FINANCE. For the calendar year 1929 revenue was estimated at £2,148,326 and expenditure at £2,187,595.

COMMUNICATIONS. During 1928, a total of 1033 steamers of 2,394,689 tons and 2007 sailing vessels of 39,840 tons entered the ports of Palestine; steam vessels leaving numbered 1035 of 2,383,356 tons, sailing vessels, 2024 of 39,717 tons. Jaffa and Haifa are the chief ports. At the latter a modern harbor was under construction. Railway lines in 1929 totaled 774 miles and there were 438 miles of metaled roads.

GOVERNMENT. A Constitution promulgated Sept. 1, 1922, provided for the appointment of the High Commissioner and Commander-in-Chief and of an executive council. It provided also for a legislative council, consisting of the High Commissioner, 10 official, and 12 unofficial members, the latter to be elected and to include not less than two Christians and two Jews. The legislative council had not yet been instituted in 1930, the reason given being that many Arabs refused to participate in the elections. In the meantime its functions were performed by an advisory council appointed by the High Commissioner. High Commissioner in 1930, Lieut.-Colonel Sir John Robert Chancellor. The Chief Secretary, H. C. Luke, who was in charge in the High Commissioner's absence during the rioting of 1929, was transferred to a post in Malta in 1930.

HISTORY. While Great Britain in 1930 proceeded cautiously to evolve the new policy in Palestine necessitated by the Arab-Jewish outbreaks of August, 1929, both factions continued to exert pressure on the mandatory power in an effort to force recognition of their respective positions. Meanwhile interest centred in the attempt to fix responsibility for the 1929 riots and disorders.

The Shaw (British) Commission of Inquiry published its report Mar. 31, 1930. In general, the findings were favorable to the Arab cause, although the Labor representative on the commission dissented from the majority opinion. In sharp disagreement with the Shaw Commission's findings were those of the Mandates Commission of the League of Nations, which held secret hearings during June and July on the Palestine situation. The latter's report, issued August 25, scored Great Britain for the alleged inadequacy of the military and police forces in Palestine and for failure to anticipate the trouble and take preventive steps. Contrary to the Shaw Commission, the Mandates Commission concluded that the Arab uprising was premeditated and that it was directed against the British authorities, as well as against the Jews. The League group criticized Britain for alleged failure in its task of insuring "simultaneously the establishment of a Jewish

President accepted the resignations of the entire Cabinet on the following day, averting a political crisis by the selection of a new Ministry. Duncan's post was filled by Dr. Octavio Mendez Pereira, former Minister to France. The deposed Secretary was acclaimed by a throng of 8000 in Panama City September 11. A committee which investigated his administration of the Education Department, in a report issued December 24, charged the misuse of funds to the extent of \$500,000 and recommended judicial action.

No developments with regard to the ratification or modification of the treaty with the United States signed in 1926 but rejected by the National Assembly were reported. Roy T. Davis assumed the post of United States Minister to Panama early in the year. He subsequently arranged a settlement of the so-called Bermudez claim, pending more than 13 years, for the sum of \$100,000. A bill to transfer control of wireless communication in Panama from the United States to the Panamanian Government was introduced into the National Assembly on September 17. Radio control in Panama, considered vital to the defense of the Canal, was granted to the United States by Presidential decree in 1919. The unrattified treaty of 1926 contained a similar provision. The complications resulting from the enforcement of the Volstead Act in the Panama Canal Zone led Foreign Minister J. D. Arosemena to lodge a "friendly protest" with Minister Davis in September. The United States court in the Canal Zone convicted a Panama citizen for carrying intoxicants through the Canal Zone.

On Jan. 11, 1930, the Panama Government formally protested to Costa Rica against alleged propaganda carried on among peasants in the disputed Coto region. See PANAMA CANAL ZONE.

PANAMA CANAL. The total number of commercial vessels transiting the Canal during the calendar year ended Dec. 31, 1930, aggregated 5885, and the total tolls collection was \$26,146,024.96. The number of transits declined 545, or 8.5 per cent, in comparison with the calendar year 1929, while tolls collections decreased \$1,446,690.88, or 5.2 per cent. The lower percentage of decrease in tolls in comparison with the decrease in number of transits was caused by the greater average tonnage of the vessels transiting in 1930. The decrease in Canal traffic was attributed to the existing world-wide adverse business conditions. The daily average number of commercial transits during the year was 16.12, as compared with 17.62 in the calendar year 1929, and 17.31 for the calendar year 1928. The daily

average tolls collection in 1930 amounted to \$71,632.95, as compared with \$75,596.48 in the calendar year 1929 and \$72,065.46 in 1928. In the accompanying tabulation, the number of commercial transits and the amount of tolls collected are shown for the calendar year 1930, with the daily averages of transits and tolls, with comparative totals for the calendar years 1929 and 1928, and the fiscal year ended June 30, 1930.

PANAMA CANAL ZONE. The strip of land 5 miles wide on each side of the Panama Canal ceded to the United States by Panama in the treaty of Nov. 18, 1903. Area, 554 square miles, of which 163½ are taken up by Gatun Lake. The population at the census of Apr. 1, 1930, including military and naval forces, totaled 39,469, of whom 18,783 were white (14,431 males and 4352 females), 19,492 were Negroes (10,817 males and 8675 females), and 1194 of mixed and other races (907 males and 287 females). Exclusive of civilian residents attached to them, the military personnel was: Army, 8686; Navy, 1194; total, 9880. Deaths in the Canal Zone in 1929-30 numbered 292; births, 534. The treaty of 1903 gave the United States control over sanitation and quarantine in the cities and harbors of Panama and Colon, although they remained within the jurisdiction of Panama. The status of the Canal Zone is that of a military reservation under the Governor of the Panama Canal, appointed by the President of the United States. Airplanes inspected and passed upon entering the Canal Zone in 1929-30 totaled 326, as against 72 in 1928-29. An air line from Miami, Fla., to Colón, via Jamaica, was opened Dec. 3, 1930. Governor in 1930, Col. H. Burgess, U. S. A. See PANAMA CANAL.

PAN-AMERICANISM. During 1930 the Pan American Union continued to devote much of its efforts toward making effective the resolutions of the sixth International Conference of American States, held in Havana in 1928. In addition, the union cooperated in other important Pan American movements, especially in arranging for and assisting in special or technical conferences of a Pan American character.

Among the events of outstanding importance during the year were the following:

GUATEMALAN-HONDURAN BOUNDARY CONFERENCE. Representatives of Guatemala and Honduras met in Washington on Jan. 20, 1930, to attempt a settlement of the boundary dispute that has for so long existed between the two countries. After considerable negotiations, in which the delegates of both nations displayed a marked generosity of spirit in dealing with the delicate question, a treaty was signed which prepared the way for a final settlement. By their actions, the delegates gave a practical demonstration of the devotion of the American republics to the principles of arbitration and conciliation in the solution of international controversies. See GUATEMALA.

FOURTH PAN AMERICAN CONGRESS OF ARCHITECTS. The fourth Pan American Congress of Architects met in Rio de Janeiro from June 19 to 30, 1930. An important feature of the Congress was a Pan American Exposition of Architecture.

INTER-AMERICAN COMMISSION OF WOMEN. Since its creation as the result of a resolution of the sixth International Conference of American States, the Inter-American Commission of Women has continued its activities in studying the juridical status of women in the American

| | Total for month | |
|-----------------------------|-----------------|----------------|
| | Transits | Tolls |
| January | 531 | \$2,360,211.24 |
| February | 491 | 2,131,386.12 |
| March | 515 | 2,260,002.36 |

| Total, calendar year, 1929 | 6,480 | 27,592,715.84 |
| Total, calendar year, 1928 | 6,334 | 26,375,962.41 |
| Total, fiscal year, 1930 .. | 6,185 | 27,076,890.01 |

Republics. It held its first general session in Havana from Feb. 17 to 24, 1930.

INTER-AMERICAN CONGRESS OF RECTORS, DEANS, AND EDUCATORS. Pursuant to a resolution of the sixth International Conference of American States, and the action of the governing board of the Pan American Union, the Inter-American Congress of Rectors, Deans, and Educators met in Havana from Feb. 20 to 23, 1930. One of the principal purposes of the Congress was to organize the Inter-American Institute of Intellectual Cooperation. The Congress was held during the period of the bi-centennial celebration of the University of Havana, at which time there also took place in Havana the International Congress of Universities.

INTER-AMERICAN CONFERENCE ON AGRICULTURE, FORESTRY, AND ANIMAL INDUSTRY. This conference met at the Pan American Union from Sept. 8 to 20, 1930, to consider many important questions relating to all phases of agriculture in the Pan American countries.

CONVENTION ON THE REGULATION OF AUTOMOTIVE TRAFFIC. In connection with the meeting of the sixth International Road Congress in Washington during October, 1930, there were held two special sessions at the Pan American Union, which were attended by delegates from the Pan American nations. At these sessions there was considered and signed a convention on automotive traffic, which, when ratified by the signatory nations, would provide uniformity throughout the Western Hemisphere in automotive traffic regulation.

COLUMBUS MEMORIAL LIGHTHOUSE. During the year preparations were made for the second stage of the competition to decide upon an architect for the lighthouse. The 10 winners of the first stage were to re-compete, and in 1931 their designs were to be judged by the international jury of award in Rio de Janeiro. The winner of the second stage of the competition was to be the architect of the Columbus Memorial Lighthouse, to be erected on a chosen site at Santo Domingo, Dominican Republic, the first permanent European settlement in the New World.

PAN AMERICAN UNION. An official international organization maintained and supported by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a governing board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director general and assistant director chosen by this board.

The services rendered by the Union may be broadly summarized under the following heads:

ECONOMIC. The office of the trade adviser provides a general commercial information service on all phases of Latin American trade and general economic conditions. This office also issues a large number of general descriptive booklets and pamphlets on Latin American nations, cities, and important trade commodities, which are kept up to date by constant revision. The division of *finance* supplies current information on developments in public and private inter-American finance. During 1930 the division prepared a study on Latin American revenues, expenditures, and public debts, which was to be issued annually in the future. The *statistical* division prepares reports on the trade of the Pan American nations,

as well as a general survey of the commerce of all Latin America. These reports are issued annually.

In the field of agriculture, the newly created division of agricultural cooperation is active in promoting the exchange of information relating to new and improved agricultural methods throughout the American continent, the elimination of plant and animal diseases, etc. The division played a prominent part in the important Inter-American Conference on Agriculture, Forestry, and Animal Industry, which met in Washington in September, 1930.

CULTURAL AND INTELLECTUAL. The division of intellectual cooperation offers a valuable contribution to the development of cultural and intellectual relations among the Pan American nations by promoting the exchange of professors and students, the establishment of scholarships, and the fostering of contacts and exchange relations among scientific, literary, professional, and artistic organizations. During 1930 the division cooperated in the preparation of a draft of organization of the Inter-American Institute of Intellectual Cooperation. At the Inter-American Congress of Rectors, Deans, and Educators, held in Havana, Cuba, in February, 1930, the organization of the institute, with which the division was to work in close contact, was definitely determined.

The Columbus memorial library of the Pan American Union offers a wide collection of books and periodicals on Pan American affairs, and its facilities are in constant demand by scholars, research workers, and others. In 1930 the library contained 75,000 volumes, 230,000 index cards, and a large collection of maps. A feature of its service is the publication of bibliographies on Pan American subjects.

The introduction of Latin American music into the United States, under the direction of the counselor, was an important feature of the Union's activities in 1930. During the year a number of concerts, featuring Latin American music and artists, were held under the auspices of the Union, and broadcast both in the United States and in Latin America. Copies of this music are also lent to clubs engaged in a study of Latin America.

PUBLICATIONS. The Pan American Union publishes monthly bulletins in English, Spanish, and Portuguese, which are chronicles of all phases of Pan American activities. In addition, it issues a large number of miscellaneous publications on a wide variety of topics. During 1930 four special series in Spanish and Portuguese were issued monthly on agriculture, education, social welfare, finance, industry, and commerce.

CONFERENCES. One of the important functions of the Pan American Union is that of giving effect to the resolutions and conclusions of the international conferences of the American States. These activities consist in conducting investigations and preparing reports on the various subjects entrusted to the Union by the conferences, and in arranging for the many special or technical conferences which are the outgrowth of the international conferences. During 1930 a number of these special or technical conferences were held. See **PAN-AMERICANISM.**

PAN AMERICAN SANITARY BUREAU. This is an official organization of the American republics which concerns itself with the collection and dissemination of information on all phases of ques-

tions relating to public health and sanitation in the republics. A monthly *Bulletin* is issued. The bureau is headed by Dr. Hugh S. Cumming, Surgeon General of the United States Public Health Service, assisted by a directing council.

The director general of the Pan American Union in 1930 was Dr. Leo S. Rowe; the assistant director, Dr. Esteban Gil Borges. Headquarters are in the Pan American Union Building in Washington.

PANGALOS, GENERAL THEODORE. See Greece under *History*.

PAN-PACIFIC UNION. An organization founded in 1907 to "secure and collate accurate information concerning the material resources of Pacific lands; to study the ideas and opinions that mold public opinion among the peoples of the several Pacific races; and to bring men together who can understandingly discuss these ideas and opinions in a spirit of fairness, that they may point out a true course of justice in dealing with them internationally." The Union is in no way the agency of any Pacific government but has the good will of all; its honorary heads are the presidents, premiers, or governor-generals of Pacific lands—the United States, Australia, New Zealand, China, Netherland East Indies, Canada, Japan, Siam, Mexico, Peru, Chile, Indo-China. It is supported in part by government and private appropriations and subscriptions, chambers of commerce, boards of education, scientific societies, and other organizations being affiliated and working with it. Its central office is in Honolulu, because of the location of the Hawaiian Islands at the ocean's crossroads. Its management is under the control of an international board of trustees.

The second Pan-Pacific women's conference met in Honolulu in August, 1930, for the purpose of perfecting an autonomous organization. The Pan-Pacific Women's Association was established, with a council representing 13 charter member countries. Dr. Georgina Sweet of Melbourne, Australia, was elected president. A third conference was to be held in Hawaii in 1933. On Dec. 4, 1930, Prince Iyesato Tokugawa, former president of the Japanese Imperial Diet, dedicated the Pan-Pacific Club House in Honolulu, the new home of the Pan-Pacific Union. The official periodical of the organization is the *Mid-Pacific Magazine*, an illustrated monthly. It also publishes the *Bulletin of the Pan-Pacific Union* and the *Journal of the Pan-Pacific Research Institution*. The president in 1930 was Wallace R. Farrington, former Governor of Hawaii; the director was Alexander Hume Ford. Executive offices are in Honolulu, T. H.

PANSY. See ALDEN, ISABELLA MACDONALD.

PAPER AND PULP. The production of wood pulp and paper in the United States in 1930, as estimated by the American Paper and Pulp Association, suffered a considerable decrease from the previous year. The accompanying tabulation

of statistics for 1929 and estimated production for 1930 indicates the sharp decline in output.

Paper production in the United States suffered a decline in practically all grades, as the accompanying statistics from the American Paper and Pulp Association indicate:

U. S. PAPER PRODUCTION
[Tons: 2,000 lbs.]

| Grade | 1929 | 1930 (Estimated) |
|------------------------------------|------------|---------------------|
| News | 1,392,276 | 1,281,500 |
| Hanging | 101,002 | 96,000 |
| Catalogue, poster, novel, etc. . . | 262,420 | 236,000 |
| Book paper, uncoated | 1,497,912 | 1,300,000 |
| Cover | 28,072 | 24,200 |
| Writing | 587,383 | 489,000 |
| Wrapping | 1,605,783 | 1,400,000 |
| Boards | 4,451,187 | 3,950,000 |
| Tissue | 370,468 | 350,000 |
| Building | 659,142 | 510,000 |
| Other paper | 194,898 | 103,300 |
| Total | 11,090,543 | 9,740,000 |

According to a preliminary tabulation of the data collected in the Census of Manufactures taken in 1930, the total value (f.o.b. mill price) of paper and paper boards produced for sale in 1929 by establishments in the United States amounted to \$809,630,000, an increase of two-tenths of 1 per cent as compared with \$807,969,857 reported for 1927, the last preceding biennial census year. The total value of paper and paper boards produced and consumed in the same plants in the manufacture of converted paper products amounted to \$83,789,400 in 1929, as compared with \$64,236,990 in 1927. The total production of paper and paper boards in 1929 amounted to 10,866,634 tons (of 2000 pounds), as against 10,403,338 tons in 1928 and 10,002,070 tons in 1927. The total production for 1929 was made up as follows: Standard newsprint, 1,401,665 tons;

SUMMARY FOR THE INDUSTRY: 1929 AND 1927

| | 1929 | 1927 |
|--|--------------------------|--------------------------|
| Number of establishments | 680 | 710 |
| Wage earners (average for the year) ^a | 101,600 | 98,566 |
| Wages ^b | \$138,064,000 | \$130,474,739 |
| Cost of materials, fuel, and purchased electric current ^b | 585,583,000 | 572,785,588 |
| Products, total value ^b | 954,176,000 | 919,891,465 |
| Paper and paper boards produced for sale .. | 809,630,000 ^c | 807,969,857 ^c |
| Other products | 144,546,000 | 111,921,608 |
| Value added by manufacture ^d | 368,593,000 | 347,105,927 |

^a Not including salaried employees. The average number of wage earners is based on the numbers reported for the several months of the year. This average somewhat exceeds the number that would have been required for the work performed if all had been continuously employed throughout the year, because of the fact that manufacturers report the numbers employed on or about the 15th day of each month, as shown by the pay rolls, usually taking no account of the possibility that some or all of the wage earners may have been on part time or for some other reason may not actually have worked the entire month. Thus in some cases the number reported for a given month exceeds the average for that month.

^b Manufacturers' profits cannot be calculated from the census figures because no data are collected for certain expense items, such as interest on investment, rent, depreciation, taxes, insurance, and advertising.

^c In addition, paper and paper boards to the value of \$83,789,400 for 1929 and \$64,236,990 for 1927 were produced and consumed in the same plants in the manufacture of the "Other products" (converted paper products).

^d Value of products less cost of materials, fuel, and purchased electric current.

U. S. PULP PRODUCTION

[Tons: 2,000 lbs.]

| Grade | 1929 | 1930 (Estimated) |
|----------------------|-----------|---------------------|

^a Includes data for poster, novel, news-tablet, lining, etc.

^b Not reported separately.

^c Includes "wrapping" other than sulphite and kraft.

In 1930 the total value of paper base stocks imported into the United States was \$106,921,914, as compared with \$118,132,740 in 1929. In this total pulp woods amounting to 1,582,210 cords valued at \$17,017,489 in 1930, and 1,350,722 cords valued at \$14,598,949 in 1930 figured. In 1930 there was imported sulphite wood pulp to the amount of 988,135 tons valued at \$55,920,650, of which 665,049 tons valued at \$33,193,598 were unbleached, and 323,086 tons valued at \$22,727,052 were bleached. Of the sulphite wood pulp, Sweden supplied 385,600 tons valued at \$20,538,626; Canada, 351,594 tons valued at \$21,167,731; and Finland, 107,148 tons valued at \$5,213,041. The sulphate wood pulp unbleached imported in 1930 aggregated 357,351 tons valued at \$16,447,258, as against 384,005 tons valued at \$20,518,076 in 1929. Sweden also was the leading source with 242,065 tons valued at \$10,283,488, followed by Canada with 65,157 tons valued at \$4,026,301, and Finland with 33,239 tons valued at \$1,414,239 in 1930. Rags for paper stocks to the amount of 281,592,177 pounds valued at \$5,565,340 were imported in 1930, as against 446,496,028 pounds valued at \$9,341,795. The imports of paper and manufactures into the United States were valued at \$147,439,758 in 1930, as against \$163,184,327 imported during the year 1929.

Imports of standard newsprint paper, free of duty, in 1930 totaled 4,559,303,478 pounds valued

at \$131,800,333, as against 4,845,401,341 pounds valued at \$144,492,736 in 1929. Canada continued to be the leading importer with 3,978,570,163 pounds valued at \$110,470,307, followed by Newfoundland and Labrador with 312,372,024 pounds valued at \$8,848,403, and Finland with 83,592,327 pounds valued at \$1,930,971 in 1930.

The United States exported paper base stock in 1930 valued at \$4,175,838, as against \$5,078,346 in 1929. The exports of paper and pulp manufactures from the United States in 1930 suffered a decline, being valued at \$30,301,759, as against \$37,086,009 in 1929. Newsprint does not figure as largely in the exports as in the imports, being valued at \$812,231 in 1930, and exceeded by book paper valued at \$2,155,175, and wrapping paper valued at \$2,759,441, among the various other manufactures.

CANADIAN PULP PRODUCTION

[Tons: 2,000 lbs.]

| Grade | 1929 |
|----------------------|-----------|
| Groundwood | 2,420,774 |
| Bleached sulphite | 324,548 |
| Unbleached sulphite | 911,684 |
| Sulphate or kraft | 250,104 |
| Screenings | 99,182 |
| All other wood fibre | 14,937 |
| Total | 4,021,229 |

CANADIAN PAPER PRODUCTION

[Tons: 2,000 lbs.]

| Grade | 1929 |
|-----------------------|-----------|
| News | 2,725,331 |
| Book and writing | 73,502 |
| Wrapping | 91,374 |
| Paper boards | 250,061 |
| Other paper products | 56,881 |
| Total specified paper | 3,197,149 |

For the year 1930 the exports of pulp and paper from Canada were valued at \$177,500,020, for 1929 the total value of these exports amounted to \$198,287,106 so that 1930 showed a decline of \$20,786,884, or 10 per cent from the previous year. Wood pulp exports for the year amounted to \$39,059,979 as compared with \$43,577,021 in 1929 and of paper to \$138,440,243 as compared with \$154,710,085 in 1929. Pulp wood exports increased in 1930, the total being 1,330,466 cords valued at \$13,611,617, as compared with 1,294,995 cords valued at \$13,314,738 exported in the year 1929. See CHEMISTRY, INDUSTRIAL.

PAPUA, pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian government Sept. 1, 1906. Area, 90,540 square miles, of which about 87,786 are on the Island of New Guinea. On June 30, 1929, there were 1523 Europeans and about 275,000 natives in Papua. Port Moresby is the capital and a port of entry. Schools and missions are maintained by five missionary bodies. European plantations are devoted mainly to coconuts, rubber, and sisal production.

The forests contain valuable timber, and the mineral resources, which are considerable, include gold, copper, osmiridium, coal, lead, zinc, tin, and iron. Gold, copper, and osmiridium are exported. There are indications of petroleum. In 1928-29

imports totaled \$358,910 and exports, \$337,365. Tonnage entered and cleared, mostly in the Australian trade, aggregated 184,946 tons. The local revenue for 1928-29 amounted to \$93,751 and the expenditure, \$152,949. The annual deficit is met by an Australian government subsidy. The territory is administered by a lieutenant-governor appointed by the Governor-General of Australia, and an executive and a legislative council, both consisting of official or nominated members. Lieutenant-Governor and chief judicial officer in 1930, Sir J. H. P. Murray. See NEW GUINEA.

PARAGUAY, pâr-â-gwâ. An inland republic of South America, bounded by Argentina, Bolivia, and Brazil. Capital, Asunción.

AREA AND POPULATION. Including that part of the Chaco under dispute with Bolivia, the area is estimated at 176,000 square miles; the estimated population in 1929 was 843,905 (excluding about 30,000 Chaco Indians). Populations of the leading cities, with suburbs, in 1926 were: Asunción, 113,684 (142,519 in 1928); Villarrica, 26,000; Concepción, 11,000; Luque, 13,000; Carapeguá, 12,000; and Paraguarí, 10,000.

EDUCATION. Education is free and nominally compulsory. Of the 168,781 children of school age in 1929, 104,084 were enrolled in schools; average attendance, 86,188. The university in 1928 had 411 students and 60 professors.

PRODUCTION. Stock raising, lumbering, and agriculture are the chief industries, accounting, respectively, for 38, 34, and 25 per cent of the total exports in 1929. Two-thirds of the area is covered with forests of hard and soft wood, the leading forest products being yerba maté (native tea), quebracho extract, and lapacho, curupaz, and cedar lumber. Agriculture is confined mainly to the fertile forest clearings of the eastern area. Stock breeding is carried on in the western plains region. The chief crops, with the production in pounds in 1928, were: Manioc, 1,361,288,000; sugar cane, 934,296,000; corn, 141,893,000; sweet potatoes, 99,242,000; tobacco, 27,908,100; cotton, 20,039,800; alfalfa, 17,740,800; peanuts, 19,483,000; beans, 15,303,200; rice, 6,762,800. White potatoes, castor beans, and oranges are grown also. In 1926, there were 3,270,000 cattle, 195,192 sheep, and 209,901 horses in the country. Iron, manganese, copper, and other mineral deposits remain practically unexploited. Meat packing and the production of animal by-products, flour, quebracho extract, beverages, and shoes are the chief industries.

COMMERCE. Foreign trade declined in 1929, imports falling to 13,850,000 pesos (\$13,460,000) from 14,305,000 pesos (\$15,886,000) in 1928 and exports to 13,176,000 pesos (\$12,804,000) from 13,802,000 pesos (\$15,327,000) in 1928. Of the exports, which were the lowest since 1924, 85 per cent went to Argentina. Argentina transhipped about one-third of her imports from Paraguay to the United States, Germany, and Great Britain. Argentina furnished over one-third of all Paraguay's imports. Imports from the United States and Great Britain increased 11.6 and 1.8 per cent, respectively, in 1929, while imports from Argentina and Germany declined 13.3 and 10.9 per cent, respectively. The principal exports, in order of importance in 1929, were: Quebracho extract, canned meats, yerba maté, tobacco, and cattle hides.

FINANCE. According to the President's message to Congress in April, 1930, actual ordinary revenues in the fiscal year 1928-29 totaled 256,186,791

paper pesos and ordinary expenditures 216,698,836 paper pesos, as compared with budget estimates in which ordinary receipts and disbursements balanced at 253,478,000 paper pesos (1 paper peso exchanged at \$0.0233 in 1929). Extraordinary budgetary expenditures totaled 5,356,270 paper pesos, and extra budgetary expenditures an additional 64,531,925 paper pesos. Of the last-named amount, nearly 40,490,094 paper pesos were paid out of extraordinary special revenues, according to the President. The budget for 1928-29 was extended into 1929-30 when Congress failed to act upon the new budget presented to it. The national debt on Nov. 30, 1929, stood at 6,958,000 gold and 43,586,000 paper pesos (about \$16,563,000), of which 4,219,000 gold pesos (\$4,070,000) represented the external debt. From 1913 to 1929, American investments in Paraguay increased from \$3,000,000 to \$15,000,000 and British investments from \$16,000,000 to \$18,000,000.

COMMUNICATIONS. Of 517 miles of railway line in operation in 1928, the principal line was that of the Paraguay Central Railway (274 miles), which during the year carried 484,000 passengers and 172,000 tons of freight, with gross receipts of \$1,120,000. The length of telegraph and telephone wire was 2220 and 4793 miles, respectively. In 1930, the inadequate highways were being extended. Asunción was linked with Buenos Aires by river and air lines; two new river steamers were placed in service in 1930. The first section of the new port under construction at Asunción was opened in January, 1930.

GOVERNMENT. Executive power is vested in a president elected for four years, who acts through a ministry of five members; and legislative power in a congress of two houses: a senate of 20 members and a chamber of deputies of 40 members elected directly by the people. President in 1930, Dr. José P. Guggiari, who assumed office Aug. 15, 1928.

HISTORY. The outstanding development in Paraguayan history during 1930 was the temporary settlement of the dispute with Bolivia over the Chaco territory, which led both countries to the verge of war in 1929. The restoration of the *status quo* in the Chaco was due primarily to the mediation of the Uruguayan Foreign Minister (see BOLIVIA under History). The renewal of diplomatic relations with Bolivia and the subsequent overthrow of the belligerent Siles régime in the latter country favored a peaceful settlement of the boundary question. Nevertheless, clashes between border patrols in the Chaco were reported toward the end of the year. Paraguay accordingly urged that the dispute be submitted anew to the Inter-American Conciliation Commission at Washington in an effort to arrive at a permanent solution of the problem. During the year two modern river gunboats were completed for Paraguay in Italian shipyards and negotiations were entered into for the reorganization of the military establishment by an Argentinian Mission.

The state of martial law proclaimed in September, 1929, by President Guggiari was extended throughout 1930 by decision of the President and Council of State. In his message to Congress of Apr. 2, 1930, President Guggiari said the state of siege was made necessary by efforts of communists to foment internal disorders during the crisis with Bolivia. The Minister of Interior, on May 6, defended the continuation of military rule

on the ground that "communistic plottings" affecting the army had been discovered by the Government. Opponents charged that the Government had illegally proclaimed the state of siege in order to perpetuate its control.

The post of Minister to the United States was filled early in the year by the appointment of Luis Riart, former President of Paraguay. Further immigration of Mennonites from Canada and Prussia to the Mennonite colony established in the Chaco region in 1928 testified to the success of the experiment. The colony, established under a charter from the Paraguayan Government granting virtual autonomy and exemption from military service, was specializing in the production of cotton. Dr. Eligio Ayala, President of Paraguay from 1924 to 1928, died in Asunción Oct. 24, 1930.

PARK COLLEGE. A nonsectarian institution for the higher education of men and women in Parkville, Mo.; founded in 1875 and cooperating with the Presbyterian Church in the United States of America. The enrollment for 1930-31 totaled 497 distributed as follows: Seniors, 70; juniors, 73; sophomores, 122; freshmen, 221; and specials, 11. The faculty numbered 39. The endowment funds amounted to \$1,708,200, from which the income was \$89,000. Tuition and fees amounted to \$106,200 and donations to \$28,800; \$31,300 was yielded from other sources. The library contained 38,000 volumes. A plan of honors work was adopted in 1927, providing special opportunity for independent study to gifted students in the upper division. During 1930 the Tyler Memorial Chapel, costing approximately \$100,000, was under construction. President, Frederick W. Hawley, D.D., LL.D.

PARKS, NATIONAL. According to the annual report of Horace M. Albright, Director of the U. S. National Park Service, for the fiscal year 1929-30, travel to the national parks broke all records, despite the general decrease in long-distance rail travel and resort use. In all, 2,774,561 persons used the national parks, an increase of 93,964, or 3.5 per cent, over 1929. The national monuments reported a decrease from 567,667 to 472,095 visitors. Part of this decrease was due to the abolishment of the Papago Saguaro National Monument, which in the previous year was visited by 87,600 persons. Approximately 50,000 persons visited this area up to the time of change in status.

The acquisition of private holdings within the national parks was continued during the year under congressional authority and appropriation. The outstanding transaction was the Yosemite purchase, in which 15,570 acres of magnificent sugar pine land were involved at a total cost of approximately \$3,300,000. A contribution from John D. Rockefeller, Jr., of half this purchase price, was met by an equal amount of Government funds. Negotiations for the transfer to the Government of several other tracts of land in Yosemite National Park, and of land in the Lake McDonald section of Glacier National Park, were also in progress when the Director submitted his report.

Appropriations for the National Park Service for the fiscal year ended June 30, 1930, amounted to \$7,813,817.18, with additional authority to enter into contracts for road work up to \$2,500,-

000. For the fiscal year 1931, \$9,999,135 was appropriated, with additional authorizations for road work up to \$2,500,000. Cash donations for development and improvement of the national parks for the 1930 fiscal year amounted to \$1,781,453.05. Revenues for the 1930 fiscal year amounted to \$1,015,740.56. This is the first time in the history of the parks that the revenues had reached the million mark.

The total area of the national park and monument system was changed from 15,846 square miles to 16,156 square miles through various changes. The Carlsbad Cave National Monument became the Carlsbad Caverns National Park; land for the proposed Great Smoky Mountains National Park area was accepted by the United States government for administration and protection as described below; the George Washington Birthplace National Monument was established; and the areas of Zion, Rocky Mountain, and Yosemite National Parks and the Craters of the Moon National Monument were extended.

With the transfer on Aug. 28, 1930, by the States of North Carolina and Tennessee of title to the United States covering 158,876.50 acres, a beginning of the Great Smoky Mountains National Park was made. The Park Service took over this area but it was not to be organized as a national park until 427,000 acres had been acquired. However, the greater part of the remaining area had been acquired or was under condemnation by State commissions, and it was hoped that within a short time it would be available for full park development. In the meantime, a protective force was installed and arrangements made for a trained park superintendent. The whole cost of \$10,000,000 was being borne, one-half by the two States and one-half by the Laura Spelman Rockefeller Memorial.

Minimum boundary lines of the Shenandoah Park project were definitely established on the ground, so that officials of the State of Virginia could make appraisals to determine the exact cost of acquiring the lands necessary for park purposes. Private and State subscriptions and appropriations had provided the funds necessary to purchase the lands for the proposed Mammoth Cave National Park. Some of the area was acquired and steps were being taken to secure the remainder, for transfer to the United States.

Congress also established the George Washington Birthplace National Monument at Wakefield, Va., and authorized the creation of the Colonial National Monument which will include Jamestown Island, part of Williamsburg, and York town battlefield. In this small area are the landmarks of the beginning and the end of the colonial period. Hawaii National Park was placed under exclusive Federal jurisdiction. The Hoover Dam Reservoir area was reserved with a view to considering its possibilities as a national monument. Eventually it would be a great inland lake, nearly 100 miles long, through wild country, including the lower end of the Grand Canyon, and might possibly provide a transportation route for tourists traveling by car from Zion and Bryce Canyon National Parks to the dam.

Major road construction in the national parks was being pushed as rapidly as available funds and contractual authority would permit, in cooperation with the Bureau of Public Roads of the Department of Agriculture. There were put into use during the year some notable spectacular new roads, involving careful landscape planning. Such

roads as the Zion-Mount Carmel, the Cape Royal in Grand Canyon, the Paradise Valley, and Yakima Park in Mount Rainier, the Sylvan Pass in Yellowstone, and the west-side portion of the Transmountain Road in Glacier, were outstanding examples. The elimination of dust from the park highways through oiling was accomplished in Sequoia, General Grant, Yosemite, Crater Lake, Mount Rainier, Glacier, Yellowstone, Zion, and Grand Canyon National Parks. Oiling was also extended to the principal trails in the major parks.

PARSONS, FRANK ALVAH. An American art educator, died in New York City, May 26, 1930. He was born in Chesterfield, Mass., Apr. 1, 1868, and after attending Wesleyan Seminary studied art in Italy, France, England, and Austria. From 1890 to 1898 he lectured in Boston and vicinity, and from 1899 to 1905 taught at Columbia University, where he also completed the course in fine arts in Teachers College. He founded the New York School of Fine and Applied Art in 1905, acting as president and director until his death. Branches of the school also were established in Paris, London, and Florence. From 1903 to 1914 he was lecturer on interior decoration at the Brooklyn Institute of Arts and Sciences, and from 1915 until 1930, professor of advertising display at New York University. He also traveled extensively, lecturing before women's clubs, civic associations, teachers' conventions, and museum classes. In 1927 he was made a chevalier of the Legion of Honor of France in recognition of his services to the advancement of Franco-American relations. He was the author of *Principles of Advertising Arrangement* (1912); *Interior Decoration, Its Principles and Practice* (1915); *The Psychology of Dress* (1920); and *The Art Appeal in Advertising Display* (1921), and co-author of *Advertising, Its Principles and Practice* (1915); and *Art, Its Principles and Practice Applied to Modern Life* (1916).

PARTRIDGE, THE RT. REV. SIDNEY CATLIN. Protestant Episcopal Bishop of the Diocese of West Missouri, died in Kansas City, Mo., June 22, 1930. He was born in New York City, Sept. 1, 1857, and was graduated from Yale University in 1880 and from the Berkeley Divinity School in 1884. After ordination as deacon in the Protestant Episcopal Church in 1884 and priest the following year, he went to Shanghai, China, where he taught three years in St. John's College and was chaplain of St. Mary's Hall. During 1887-99 he was rector of the Boone School and missionary in Wu-chang, China. In 1900 he was consecrated Bishop of Kyoto, Japan, in recognition of the wide influence which he exerted throughout the Far East. He became Bishop of the Diocese of West Missouri in 1911. The D.D. degree was conferred on him by the Berkeley Divinity School in 1900.

PARTRIDGE, WILLIAM ORDWAY. An American sculptor, author, and lecturer, died in New York City, May 22, 1930. He was born in Paris, France, Apr. 11, 1861. After attending Columbia University in 1885, he studied modeling in Florence under Galli, in Rome under Welonski, and in Paris. He exhibited at the International Exposition in Berlin in 1891, at the Paris Salon in 1892, and at the Royal Academy in London in 1902. He first gained recognition by his well-characterized portrait busts, which included not only distinguished men of the day but great poets, artists, and musicians. Among these are: Chief

Justice Melville W. Fuller, in the chamber of the United States Supreme Court, Washington; Dr. S. Weir Mitchell, in the College of Physicians and Surgeons, Philadelphia; Rear Admiral Robert E. Peary, at Bowdoin College; Dean J. H. Van Amringe, at Columbia University; Edward Everett Hale, in the Union League Club, Chicago; and the poet Whittier, in the Boston Public Library. His sculpturing showed the touch of the idealist, with a sense of transcendent beauty in such works as the Kauffman Memorial in Rock Creek Cemetery, Washington; "Memory," in the Averell Memorial Art Museum, Rochester, N. Y.; the baptismal font in the Cathedral of Sts. Peter and Paul, Washington; "Pieta," in St. Patrick's Cathedral, New York City; and the heads entitled "Peace" (Metropolitan Museum, New York City), "Madonna" (Brooklyn Museum), and "Nearing Home" (Corcoran Gallery, Washington).

Mr. Partridge showed an equal refinement and versatility of technique in his heroic and colossal works. Among these are: "Alexander Hamilton," in front of the Hamilton Club, Brooklyn, N. Y.; "Shakespeare," in Lincoln Park, Chicago; "General Grant," in front of the Union League Club, Brooklyn; "Pocahontas," in Jamestown, Va.; "Nathan Hale," in St. Paul and Washington; "Alexander Hamilton" and "Thomas Jefferson," at Columbia University; "Horace Greeley," in Chappaqua, N. Y.; and Samuel J. Tilden, on Riverside Drive, New York City. He also became well known as a lecturer through the courses on fine arts which he gave at Columbian (later George Washington) University (1897-1903), the Concord School of Philosophy, and the Brooklyn Institute of Arts and Sciences. His writings include: *Art for America* (1894); *The Song Life of a Sculptor* (poems, 1894); *The Technique of Sculpture* (1895); *The Angel of Clay* (a novel, 1900); *Nathan Hale, the Ideal Patriot* (1902); and *The Czar's Gift* (a novel, 1906).

PEACE. The Executive Committee of the World Conference for International Peace through Religion held sessions from August 12 to 15, at Berne, by invitation of the Swiss government. Sixty-two members attended, representing every continent and the major religious groups. Washington, D. C., was unanimously selected as the place for a World Conference for International Peace through Religion, to be held from Nov. 10 to 24, 1932. In choosing Washington, the Executive Committee cordially accepted the invitation of the American Congressional Committee asking that the World Conference be made a part of the George Washington Bicentenary celebrations in 1932. Preparations for the conference pointed to a world-wide movement, rather than the holding of a single meeting. The Washington conference was considered the next step forward, to be followed by a second conference in the Far East and, at a later date, by a still greater gathering at Geneva or some other central European point.

Dr. Henry A. Atkinson, General Secretary, announced that the presidents of the conference would include the Rev. Dr. S. Parkes Cadman, former President of the Federal Council of the Churches of Christ in America; Dr. Albert Ein-

stein, Berlin, Germany; Baron Sakatani, member of the Japanese House of Peers and former Mayor of Tokyo; Dr. Rabindranath Tagore, India; and the Rt. Rev. the Lord Bishop of Liverpool.

In April, 1930, the Japanese National Committee of the World Conference for International Peace Through Religion, consisting mainly of members of the Permanent Religious Committee of the League of Nations Association of Japan, the Japan Religious Association, and the Kiitsu Kyokai (Concordia Society, another association of religionists), was formed. Baron Sakatani presided at the first general meeting in Tokyo in June. Thirty-two committeemen attended, including members from Kyoto and Nara; Mr. Nishivama, chief of the Bureau of Religious Affairs of the Department of Education; Mr. Matsuo, chief of the section of Religious Business; Mr. Tsurumi, secretary of the Department of Foreign Affairs; and Mr. Aoki, chief of the Tokyo Bureau of the League of Nations. Baron Sakatani said that he was deeply moved by the enthusiasm of religious men of other countries who dared to visit foreign countries in order to promote peace through religion. Considering that Japan should not be outdone by other countries in this line of work, he had been participating with a firm faith in the organizing of this committee.

The 102d annual meeting of the board of directors of the American Peace Society was held May 2, 1930, in Washington, D. C., with President William Fortune presiding. All the old officers were reelected. Resolutions upon the death of Senator Theodore D. Burton, who during two terms was president of the society, and Dr. W. H. P. Faunce, for many years an honorary vice-president, were adopted.

Representatives of France, Germany, Great Britain, and Japan were guests of the Fifth Conference on the Cause and Cure of War held in Washington, Jan. 14-17, 1930. At this meeting delegates from the following organizations were present: American Association of University Women; Council of Women for Home Missions; Federation of Women's Boards of Foreign Missions of North America; General Federation of Women's Clubs; National Board of the Young Women's Christian Associations; National Council of Jewish Women; National Federation of Business and Professional Women's Clubs; National League of Women Voters; National Woman's Christian Temperance Union; National Women's Trade Union League. Mrs. Carrie Chapman Catt presided.

Rennie Smith, M.P., resigned in February as directing secretary of the National Council for Prevention of War, a federation coordinating the efforts of all bodies working against war, and was succeeded by Gerald Bailey, a member of the Society of Friends. This organization maintained offices at 39 Victoria St., London, S. W. I.

At Mürren, Switzerland, was held the annual meeting of the World Alliance for International Friendship through the Churches. Sessions of the management committee were attended by representatives of the national councils of the Alliance in the United States, Australia, Austria, Belgium, Great Britain, Bulgaria, Canada, China, Czechoslovakia, Danzig, Denmark, Estonia, Finland, France, Germany, Greece, Holland, Hungary, Italy, Latvia, Lithuania, Norway, Poland, Portugal, Rumania, Spain, Sweden, Switzerland.

Among the outstanding figures of the conference were its chairman, Bishop Amundsen of

Denmark; Lord Dickinson of England; Professor Siegmund-Schultze of Berlin, an earnest advocate of peace before and during the War; Pastor Jezeziel of Paris; Dr. Henry A. Atkinson and the Rev. Dr. W. P. Merrill of New York; Judge Alexis de Boer, of Hungary; Professor Choisy of Geneva; and Professor Zankov of the Orthodox Church of Bulgaria, a professor of theology at Sophia. At one session Professor Arseniew, a Russian Orthodox refugee stationed in Germany, reported on the religious persecution in Russia. Bolshevism, he said, was not only an economic system but an atheistic creed, marked by hatred for Christianity and for Christians. Corroborative evidence was given by delegates from Finland and Lithuania, and statements on the subject were received from the American and Finnish councils.

Resolutions were unanimously adopted urging that nations signatory to the Paris Peace Pact take the necessary steps to implement the pact by an announcement to the world that, in case of a threat of war anywhere, the nations, parties to the pact, would agree to meet for conference and provide the pacific means possible for settling the dispute and checking the nation which had violated its pledge and threatened the peace of the world; pledging the councils to work for the adoption by each nation of such measures; and expressing sympathy with all persons suffering for their faith in Russia.

A complex problem was that of religious minorities in the Balkans; for example, Bulgars in Yugoslav territory were compelled to attend services in Slavonic, being denied the use of their own language in worship. The matter was to be more fully considered at the International Conference of the Alliance to be held in Cambridge in 1931 and in the meanwhile a regional conference for the Balkans, including Greece, Bulgaria, Rumania, and Yugoslavia, was to be held to discuss the question with a delegation of the secretariat of the Alliance.

The Briand Memorandum on European Federal Union was referred to the Executive Committee of the Alliance with a view to the preparation of a memorandum on the whole question from the Christian point of view. See INTERNATIONALISM.

NATIONAL STUDY CONFERENCE. Believing that the churches should keep abreast of the international situation and should be prepared to interpret that situation from the standpoint of Christian principles, ideals and motives, the National Committee on the Churches and World Peace held a Third National Study Conference, in Evanston, Ill., February 25-27. The opening address of the Conference was made by the Chairman of the National Committee, Bishop G. Ashton Aldham, of the Protestant Episcopal Church. A series of round-table conferences considered the following themes: "The Religious Ethic in International Life," "The Church, the Pact and Peace Policies," and "Religious Education and the Pact." The first considered such questions as the place of nationalism in the modern world, the relation of nationalism and internationalism, the relation of the Church to the State, patriotism and religion, and conscientious objectors and citizenship; the second group America's foreign policy from the standpoint of the Pact, consideration being given to the London Five-Power Conference on Naval Armaments, the relation of the United States to the World Court and the League of Nations, the Inter-American Arbitration Treaty,

and the United States and the Far East. Still another group considered the problem of peace education for children, young people, and adults.

The first of these National Study Conferences on the Churches and World Peace was held in Washington, D. C., in 1925, and the second in Columbus, Ohio, in 1929. Approximately forty communions and allied religious organizations were represented at the Evanston conference.

Fifty thousand copies of the Armistice literature of the Federal Council of Churches Commission on International Justice and Goodwill were distributed among the clergy and representative laymen of more than a score of communions, in most instances this distribution being effected through the peace committees of the various bodies. Armistice Week was thus made the occasion by great numbers of churches for an intensive study of the world situation from the Christian standpoint. As an aid in developing discussion, the Commission suggested the following syllabus of questions, dealing with the international policies which the United States should follow in order to give practical value to the Kellogg Peace Pact:

1. *Armaments.*—The United States has recently signed a naval treaty with Great Britain and Japan in order to remove the menace of an uncontrolled competitive naval building program. Should or should not the American Navy be now built up to the limits allowed by the treaty? Why, in either case?

2. *Meeting a War Menace.*—In case two or more nations, in violation of their pledges, appear to be on the point of going to war, what should the United States do in the light of the Peace Pact? Should or should not the United States announce to the world that whenever a war menace arises it will promptly confer with the other major nations regarding the situation?

3. *Neutrality.*—In case a war actually breaks out the United States would normally be a neutral. In case the League of Nations declares a blockade of one or both the nations, should or should not the United States insist on its rights as a neutral to trade with the belligerents, even if such insistence involves the use of its Navy? What are the reasons for and against such a course?

4. *Military Training in Civilian Schools and Colleges.*—What effect has military training on the mind and attitude of pupils toward the problems of war and peace? Should or should not compulsory military training under the War Department be continued in our civilian educational institutions? Why? Why not?

5. *Economic International Relations.*—The European nations are struggling desperately with the economic consequences of the war. The problems relate to reparations, debts, and tariffs. Does or does not the American attitude toward these problems hinder Europe's recovery? Should or should not America modify her policy on Europe's war debts? Should or should not America modify her tariff policy in the light of Europe's needs and feelings?

6. *The World Court.*—What is the present situation regarding American membership in the World Court? Should or should not the United States promptly ratify the World Court treaties and become a member at once?

7. *The League of Nations.*—The League of Nations is the world's forum for discussing and formulating the world's international policies for assuring world peace. The United States is cooperating with most of its commissions and committees. What would be the respective advantages and disadvantages of complete membership in the League?

Peace was a paramount issue in 1930 Church assemblies. The Northern Baptist Convention at its meeting in Cleveland, after expressing its belief that the London Naval Treaty should be ratified, said: "We very earnestly urge that the Treaty shall not be made the basis for a heavy naval building programme and that in dealing with the Treaty and with all legislation affecting international relations, the fundamental significance and value of the World Peace Pact shall be fully recognized."

The United Presbyterian Assembly of North America, at Des Moines, Iowa, ordered the fol-

lowing message sent to President Hoover: "As followers of the Prince of Peace we respectfully submit that the proposed billion dollar navy is reactionary and imperialistic and certain to arouse international suspicion, fear and ill-will. We urge that this programme be so drastically reduced as to give substance to our profession of international goodwill." In a similar vein the General Synod of the Reformed Church in America, at its meeting at Asbury Park, said: "We believe that for the United States to enter upon a billion dollar building programme at this time in order to secure naval parity would be contrary to the purpose of the Pact of Paris and to the original aim of the London Conference."

The Methodist Episcopal Church, South, meeting in Dallas, Tex., said: "The partial success of the recent London Naval Conference clearly indicates that Christian people all over the world must so mold public opinion and mobilize the agencies of peace as to compel the nations of the earth to abandon war in fact and not simply by treaty, as a method of settling international disputes."

The general point of view of these various denominational utterances was gathered up in a statement adopted by the Administrative Committee of the Federal Council of Churches on July 25, which, after expressing great satisfaction with the ratification of the London Naval Treaty said:

We would call the attention of the churches to the fact that the building of the new ships allowed the United States under the treaty is permissive, not mandatory. Inasmuch as the tonnages permitted by the London Naval Treaty have been fixed upon disappointingly high levels we seriously question the advisability of entering into the naval construction programme required if the United States is to build the so-called "treaty navy." It has been estimated that the cost to the American people of such a building programme would approximate a billion dollars. Already, according to the President, the United States is spending more money on its army and navy than any other nation in the world.

Moreover, the United States, in agreement with fifty-five other nations, has renounced war as an instrument of national policy. We can best evidence our faith in these peace pledges by refraining from building up to the limit of the tonnages allowed under the London Treaty.

The Assembly of the United Presbyterian Church adopted the following statement voicing its peace policy:

The General Assembly believes that compulsory military training in our public schools, colleges and universities should cease, and we request the presidents of all educational institutions having compulsory military training to abolish the compulsory feature of the system, believing that only by so doing can we observe the intent and spirit of the Peace Pact. We favor the abolition of all military training in high schools or for youth of high-school age, as such training tends to foster the war spirit and to develop a wrong attitude toward life.

Similarly, the General Synod of the Reformed Church in America called upon the people of their churches:

To stand with educators against the programme of enlarged and popularized military training in schools and colleges, and to advocate a more effective, constructive preparation for citizenship through civilian educational processes.

Many of the denominational assemblies recognized the primary place of education in the consummation of the peace ideal. The Northern Baptist Convention asked each church:

To make systematic education for peace a regular part of its instructional programme in the church school

and also in all young people's societies and adult groups.

The General Synod of the Reformed Church called upon its pastors:

To educate their congregations concerning the growing will to peace and the development of world peace organizations.

Leaders of the church school, young people's societies, missionary and other organizations were likewise urged "to give intelligent treatment to the theme of peace." The General Assembly of the Presbyterian Church in the U. S. A. reviewed "with satisfaction and commendation the present programme on education for peace, developed and promoted by the Board of Christian Education" and urged "the hearty support of the church in the use of this programme."

PEACHES. See HORTICULTURE; ENTOMOLOGY, ECONOMIC.

PEARCE, RICHARD MILLS, JR. An American pathologist and educator, died in New York City, Feb. 16, 1930. He was born in Montreal, Canada, Mar. 3, 1874. On graduation from the Harvard Medical School in 1897, he became resident pathologist at the Boston City Hospital. He returned to Harvard in 1899 as instructor in pathology, and from 1900 to 1903 was successively demonstrator and assistant professor of pathology at the University of Pennsylvania. After studying for a few months at the University of Leipzig he became, in 1903, director of the Bender Hygienic Laboratory in Albany, N. Y., professor of pathology and bacteriology at the Albany Medical School, and director of the Bureau of Pathology and Bacteriology of the New York State Department of Health. He was called to the New York University and Bellevue Hospital Medical College as professor of pathology in 1908, and two years later returned to the University of Pennsylvania as professor of pathology and, later, of research medicine. He remained at Pennsylvania until the entry of the United States into the World War, when he became a major in the medical corps of the U. S. army and acted as secretary of the medical advisory committee of the American Red Cross, director of the Bureau of Foreign Medical Service, and chairman of the division of medicine and related sciences of the National Research Council. He resumed his connection with the University of Pennsylvania after the War, and in 1920 became associated with the Rockefeller Foundation, carrying out its first medical surveys in South America and other countries. He was appointed general director of the division of medical education in 1923 and during his incumbency extended the Foundation's programme of coöperation in the development of centres of medical training in various parts of the world. His greatest research contribution was on cytotoxins and the pathology of the spleen. He was the author of *Medical Research and Education* (1913) and *The Spleen and Anæmia* (1917).

PEARS. See HORTICULTURE.

PEARSE, MARK GUY. An English clergyman and author, died in London, Jan. 1, 1930. He was born in Camborne, Cornwall, Jan. 3, 1842. After studying medicine at St. Bartholomew's Hospital, he decided to enter the Methodist ministry, and studied at Wesley College, Sheffield, and at Didsbury College, Manchester. He was ordained in 1863 and held various charges in Leeds, Brixton Hill, Ipswich, Bedford, Highbury, Westminster,

and Bristol. In 1889 he became associated with the Rev. Hugh Price Hughes in the conduct of the West London Wesleyan Mission, and this partnership lasted until the death of the latter in 1902. He then became an itinerant preacher and lecturer. His writings include devotional works and semi-religious tales, especially of Cornwall. The best known are: *Daniel Quorm and His Religious Notions* (1874); *Elijah, the Man of God* (1891); *The Gentleness of Jesus* (1898); *The Story of a Roman Soldier* (1899); *West Country Songs* (1902); *Bridgetslow* (1907); *The Prophet's Raven* (1908); and *Christ's Cure for Care* (1914).

PENANG, pē-nāng'. One of the Straits Settlements. See STRAITS SETTLEMENTS.

PENNSYLVANIA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 9,631,350. The population on Jan. 1, 1920, was 8,720,017. The capital is Harrisburg.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|-------------------------|--------------|
| Hay | 1930 | 2,852,000 | 3,788,000 * | \$74,503,000 |
| | 1929 | 2,886,000 | 4,298,000 * | 56,248,000 |
| Corn | 1930 | 1,322,000 | 29,084,000 | 27,630,000 |
| | 1929 | 1,309,000 | 46,470,000 | 46,470,000 |
| Potatoes .. | 1930 | 234,000 | 23,166,000 | 26,641,000 |
| | 1929 | 234,000 | 25,740,000 | 41,184,000 |
| Wheat | 1930 | 1,122,000 | 25,236,000 | 20,201,000 |
| | 1929 | 1,119,000 | 20,138,000 | 24,371,000 |
| Oats | 1930 | 1,075,000 | 40,312,000 | 19,350,000 |
| | 1929 | 1,014,000 | 29,913,000 | 17,050,000 |
| Apples | 1930 | | 9,774,000 | 9,285,000 |
| | 1929 | | 5,973,000 | 9,258,000 |
| Tobacco ... | 1930 | 39,500 | 38,118,000 ^b | 4,955,000 |
| | 1929 | 38,700 | 49,536,000 ^b | 5,944,000 |
| Buckwheat | 1930 | 199,000 | 2,488,000 | 2,214,000 |
| | 1929 | 199,000 | 3,383,000 | 3,383,000 |
| Rye | 1930 | 124,000 | 2,108,000 | 1,665,000 |
| | 1929 | 124,000 | 1,984,000 | 2,103,000 |

* Tons. ^b Pounds.

Farms in the State numbered 172,046 in 1930, as against 200,443 in 1925 and 202,250 in 1920.

MINERAL PRODUCTION. Coal, bituminous and anthracite, formed nearly three-fourths of the native mineral product of the State for 1928. Activity in the bituminous field increased in 1929, the quantity mined being 143,516,421 net tons, as against 131,202,163 in 1928; the value, \$258,607,000 in 1929 and \$249,895,000 in 1928. The anthracite mines produced 65,974,551 long tons in 1929, a decrease from the 75,348,069 short tons of 1928; by value the product was \$392,979,161 for 1929 as against \$393,637,690 for 1928. Much bituminous coal went into coke ovens. Coke shipments from these ovens attained 14,489,283 short tons, in value \$55,129,765, for 1929, from by-product ovens, in addition to some 5,439,000 short tons from beehive ovens. Although producing relatively little native iron ore the State maintained a long lead in the production of pig iron. Its blast furnaces shipped, in 1929, 14,058,194 long tons of pig iron, as against 12,289,455 in 1928; by value \$257,154,601 in 1929 and \$216,425,084 in 1928. The natural gas output was smaller in 1928, reaching for that year 79,466,000 M cubic feet, as against 105,709,500 M for 1927; in value it was \$40,432,000 for 1928 and \$47,135,000 for 1927. Cement production fell in 1929, the mills

shipping 39,309,662 barrels of cement, as against 41,161,019 in 1928; by value, \$55,600,953 in 1929 and \$62,572,588 in 1928. Clay products totaled \$47,928,803 for 1928; for 1927, \$50,988,821. The yield of petroleum rose to 11,805,000 barrels for 1929, from 9,956,000 for 1928; in value to \$45,700,000 (estimated) from \$32,550,000. Stone, sand, gravel, and lime were worked in important quantities. The total value of the native mineral products of the State was \$881,490,033 for 1928; for 1927, \$936,773,189.

FINANCE. State expenditures in the year ended May 31, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$99,080,568 (of which \$26,730,446 was for local education); for operating public service enterprises, \$99,631; for interest on debt, \$4,115,895; for permanent improvements, \$32,691,113; total, \$135,897,207, of which \$798,077 was represented by interdepartmental entries. Of the total, \$42,847,708 was expended for highways, \$20,558,185 being for maintenance and \$22,289,523 for construction. Revenues were \$153,713,648. Of these, special property and other special taxes furnished 37.9 per cent; departmental earnings and compensation to the State for officers' services, 6.7; sale of licenses, 42.9 (in which was included the gasoline sale tax totaling \$19,937,722). Of funded State debt on May 31, 1929, there was outstanding \$93,758,320, of which \$93,221,000 was for highways. Net of sinking fund assets, the debt was \$84,951,158. There was no general State assessment of property.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 11,153.77. There were built, in 1930, 9.87 miles of first, 2.51 of second, 1.84 of third, and 1.87 of fourth track.

EDUCATION. The erection of a new State education building was completed. The Lloyd Mifflin Memorial Home, for elderly women teachers and convalescents, was established, providing an agency for the betterment of the individual teacher's prospects of security. The State's population of persons of school age, as estimated for the year 1928-29, was 1,995,100. There were enrolled in that year, in the public schools, 1,897,128 pupils. Of these, 1,589,108 were in common or elementary schools and 308,020 in high schools. The year's expenditures for public-school education totaled \$211,789,815. Salaries of teachers, for the year, averaged \$1406.

CHARITIES AND CORRECTIONS. The central organization of the State government for dealing with the dependent and delinquent in 1930 was the State Department of Welfare. It had as its administrative head a Secretary of Welfare. Its forces were organized in four bureaus. Of these, the Bureau of Children supervised institutions of child care and cooperated with county officials to distribute the Mothers' Assistance Fund, while its orthopedic unit helped defray treatment for child cripples. The Bureau of Assistance supervised the State-aided hospitals and the almshouses, homes for the aged and other organized forms of relief. The Bureau of Mental Health supervised mental hospitals and kindred institutions. The Bureau of Restoration had the supervision of State, county, and borough penal institutions, conducted prison industries, and carried on the education of prisoners. The 28 State institutions were managed each by a board of trustees. These institutions were: 10 surgical

hospitals, at points in the coal districts, having 1218 beds; 8 State hospitals for mental cases, at Allentown, Danville, Farview, Waymart, Harrisburg, Norristown, Torrance, Warren, and Wernersville, having in all some 12,000 inmates; 4 institutions for mental defectives, having in all some 4400 inmates, the four being Penhurst State School, Polk State School, Laurelton State Village, and Cumberland Valley State Institution for Male Defective Delinquents; the Selinsgrove State Colony for Epileptics, Selinsgrove, 150 patients; and 6 penal or correctional institutions—the Eastern State Penitentiary at Philadelphia, Western State Penitentiary at Pittsburgh, Rockview Prison Farm at Rockview, Pennsylvania Industrial Reformatory (for male delinquents from 15 to 25 years old) at Huntingdon, State Industrial Home for Women (delinquent) at Muncy, and Pennsylvania Training School (delinquent children) at Morgantown—these institutions having among them a population of about 6000.

In the course of the wave of bank suspensions, in many sections of the country, toward the end of the year, the Bankers' Trust Company of Philadelphia ceased payments on December 22. It operated under State charter and had had resources of \$55,491,501 on September 24.

POLITICAL AND OTHER EVENTS. The normally firm organization of the Republican party in the State was disturbed by the return to the political field of ex-Governor Gifford Pinchot. He entered the primary campaign for the Republican nomination as Governor, supported by Joseph R. Grundy and opposing Francis Shunk Brown, who had the support of the Vire organization. He won in the primary of May 20, despite the casting of a heavy anti-Prohibition vote that helped give the nomination for U. S. Senator to Secretary of Labor James J. Davis. The expenditures of the several Republican candidates, which had aggregated \$3,000,000 or more in 1926 and had then aroused serious objection, were much less for 1930, being in the neighborhood of \$1,000,000, of which Pinchot spent about \$90,000. On the plea that perforated ballots employed in Luzerne County were void and should not be counted an effort was made to have the vote of that county thrown out, which would have upset Pinchot's majority. Declaring that the Pennsylvania Railroad interests were trying to steal the Governorship, Pinchot announced on July 10 that if the candidacy were denied him he would run as an independent. The State Supreme Court decided in August that the contested ballots of Luzerne County should stand as valid.

There followed a movement among Pinchot's opponents in his own party to start a new Liberal party organization, indorsing the anti-Prohibition Democratic candidate for Governor, John M. Hemphill. Some prominent Republicans withdrew their support from the regular organization; the bolters included nearly all the 48 leaders of the Philadelphia Republican organization. There were, on the other hand, a number of defections from the Democratic ranks to Pinchot. Secretary Davis and Mr. Pinchot, though running on the same ticket, engaged in a controversy late in October as to whether Davis had publicly declared that President Hoover had asserted his wish that the entire Republican ticket of the State be elected, Pinchot included. Davis denied that this was the case.

The position of the anthracite mining industry was improved by the execution in July of an

agreement over the wage scale, executed by the leading anthracite mine owners and the anthracite group of the United Mine Workers. This agreement was to run from the expiration of the existing compact on September 1 to Apr. 1, 1936. It was designed to maintain virtually the existing scale of wages and it provided for the creation of a joint committee of six representatives each, from the operators' and the mine employees' groups, to solve difficulties that might arise. The question of wages was to be open to arbitration once a year. Plans for the formation of a corporation controlling more than 50 banks, the Western Pennsylvania Bank Corporation, were matured in May. The Water Gap highway, a five-mile stretch of road through the rough country between Portland and Stroudsburg to form a part of the shortest route between New York and the West, was opened on August 29. Application to close the oldest railroad in the country, the Honesdale branch of the Delaware and Hudson, was made to the Interstate Commerce Commission on September 7.

The city of Philadelphia bought Hog Island, the war-time site of Government shipyards, from the Government for \$3,000,000, for development as a combined marine, rail, and air terminal. By an ordinance signed on June 27 the city agreed to lease the city-owned Broad Street subway to the Philadelphia Rapid Transit Company for two and a half years at a rental of \$780,000 a year, plus a sum of \$475,000 to cover back rent. Owing to tax delinquencies the city and county budget was not sufficiently covered by receipts, and in consequence the city undertook the plan of financing the bond charges on the North Broad Street subway route out of the transit-loan funds. A suit brought by Controller Hadley in 1929 to remove control of the Rapid Transit Company from the hands of the Mitten Management was interrupted by Judge Harry S. McDevitt of the Court of Common Pleas, who brought about a conference of the opposed interests for the purpose of settling the issue. This conference early in 1930 employed a commission of experts to recommend a plan for better organization of transit. The report of this group, published in June, renewed in modified form the proposal that the city acquire by condemnation or private purchase the Philadelphia Rapid Transit and its thirty and more underlying companies.

Ground was broken at Logan Circle in Philadelphia for the site of the building to be erected to the memory of Benjamin Franklin, and the Benjamin Franklin Memorial, Inc., promoting the enterprise, announced at the same time the completion of the subscription of the required \$5,000,000. The trustees of the University of Pennsylvania approved in March a plan to build a home for the College of Liberal Arts at Valley Forge, on a tract donated by Henry N. Woolman. Actual construction was to await the raising of the needed funds. A proposal with strong denominational support, to have Philadelphia high-school students released for one school hour a week in order that they might go to their own places of worship and receive religious instruction, was rejected on February 5 by the Board of Education.

See CHILD LABOR.

ELECTIONS. Former Governor Gifford Pinchot, Republican candidate, was elected Governor on November 4, despite the defection of a great part of the organization of the party in Philadelphia.

He obtained, according to an unofficial report, 1,073,660 votes, to 991,606 for John M. Hemphill, Democrat. Secretary of Labor James John Davis, Republican, was elected U. S. Senator, defeating Sedgwick Kistler, Democrat, by 1,276,436 votes to 472,135 (unofficial). The Legislature remained strongly Republican in both branches. Democratic candidates gained 3 seats in the Federal House of Representatives, the Republicans retaining 33.

OFFICERS. Governor, John S. Fisher; Lieutenant-Governor, Arthur H. James; Secretary of the Commonwealth, Robert R. Lewis, later James A. Walker; Treasurer, Edward Martin; Auditor-General, Charles A. Waters; Attorney-General, Cyrus E. Woods, later William A. Schnader; Superintendent of Public Instruction, John A. H. Keith.

JUDICIARY. Supreme Court: Chief Justice, Robert S. Frazer; Judges, Emory A. Walling; Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer, George W. Maxey.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education in Philadelphia, primarily for men but with certain courses open for women; founded in 1740. It is composed of the college of arts and sciences, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, hygiene, and public health. The 1930 autumn enrollment was 15,320, including all schools and departments. Of those enrolled, 8372 were candidates for degrees; 2969 were candidates for certificates; and 3979 were partial students and auditors. The enrollment for the 1930 summer session was 2070. The faculty numbered 1406. The productive funds amounted to \$18,018,180, and the income for the year was \$5,504,811. The library contained 712,358 bound volumes and 70,000 pamphlets.

The important gifts and subscriptions received during the year included \$500,000 from Eldridge R. Johnson, \$250,000 of which was to be added to the \$800,000 previously subscribed by Mr. Johnson to the Eldridge R. Johnson Foundation for Research in Medical Physics, and the remaining \$250,000 to be used for pressing needs of the university. An additional sum of \$56,000 was received from the estate of Ellis D. Williams for the establishment of the Ellis D. Williams Endowment Fund; and an additional gift of \$17,713 from Louis J. Kolb for the Louis J. Kolb Fund for the Treatment of Cancer, increasing Mr. Kolb's gift to \$117,713. The Rockefeller Foundation made an appropriation of \$80,000, covering a period of two years, toward the programme for study of tuberculosis at the Henry Phipps Institute, while \$50,000 payment was received by virtue of a pledge of \$150,000 by the Laura Spelman Rockefeller Memorial for the department of industrial research special programme fund. The Julius Rosenwald Fund appropriated a sum not to exceed \$75,000 for three years, ending June 30, 1933, to be used in the study of regularization of employment in the Philadelphia area, while an appropriation of \$75,000 was received from the Carnegie Corporation, \$25,000 being payable annually for three years, in support of fundamental research in the cause and cure of tuberculosis.

A notable incident of the academic year 1929-30 was the revision of the statutes of the university to provide for the new office of president, or administrative head, and the election thereto of Thomas S. Gates, LL.D., a trustee of the university. Under this change the historic office of provost, or academic head, was retained, with Josiah H. Penniman, Ph.D., Litt.D., LL.D., L.H.D., provost since 1923, occupying that office.

PENNSYLVANIA MUSEUM OF FINE ARTS. See ART EXHIBITIONS, ART MUSEUMS.

PENNSYLVANIA STATE COLLEGE. A nonsectarian institution for the higher education of men and women at State College, Pa.; founded in 1855. On Nov. 1, 1930, the undergraduate enrollment totaled 4407, distributed as follows: Agriculture, 729; chemistry and physics, 474; engineering, 1173; education, 755; liberal arts, 1033; mineral industries, 227; specials, 92; graduate school, 231. There were 3240 students registered in the 1930 summer session. The resident faculty numbered 585, including the agricultural and home economics extension staff. The productive funds of the college amounted to approximately \$517,000, and the income for operation for the year to \$4,443,000. The library contained 117,000 volumes. The college celebrated the seventy-fifth year of its founding in the fall of 1930, at which time 12 major structures and several smaller units, completed since 1927 in a rebuilding programme, were dedicated. The new buildings and their cost, equipped, are: Old main, \$840,000; mineral industries, \$450,000; liberal arts north, \$182,000; power plant, \$785,000; recreation hall, \$550,000; Frear Hall, \$210,000; Pond Laboratory, \$390,000; hospital, \$127,000; Grange Dormitory, \$263,000; main engineering, \$350,000; botany building, \$194,000; sheep barn, \$36,000; poultry range, \$29,000; veterinary barn, \$10,000; and dairy barn addition, \$11,000. During the year there was organized a new school of physical education and athletics, with Hugo Bezdek as director. Summer session features included institutes of French, English, and music education, and a nature camp in central Pennsylvania mountains. President, Ralph D. Hetzel, LL.D.

PEROSI, CARLO, CARDINAL. A prelate of the Roman Catholic Church, died in Vatican City, Feb. 22, 1930. He was born in Tortona, Italy, in 1868 and was ordained a priest in 1901. In 1903 he was called to Rome by Pope Pius X, who invested him with the benefice of the Vatican Basilica. Later he was made consultor of the Sacred Congregation of the Council, a member of the Tribunal of the Apostolic Penitentiary, and a substitute in the Sacred Consistorial Congregation. In 1915 Pope Benedict XI appointed him one of

the consultors of the Supreme Sacred Congregation of the Holy Office and made him canon of the Church of Santa Maria Maggiore. He was created a cardinal-deacon by Pope Pius XI in 1926, and two years later was appointed secretary of the Sacred Consistorial Congregation. In the latter office he assisted with the preparation of matters for discussion in consistories, the erection and division of dioceses, and the election of bishops.

PERSIA. A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Teheran; reigning Shah in 1930, Riza Khan Pahlavi.

AREA AND POPULATION. The area is estimated at about 628,000 square miles; the population at from 8,000,000 to 10,000,000, about 3,000,000 of whom are nomads. Turks, Kurds, Leks, and Arabs predominate among the nomads. Europeans in the country were estimated at from 1000 to 6000, most of them in Teheran. The chief cities, with their approximate populations, are: Teheran, 210,000; Tabriz, 180,000; Ispahan, 100,000; Meshed, 85,000; Resht, 80,000; Kerman, 40,000; Kermanshah, 40,000; and Shiraz, 35,000. The bulk of the population are Moslems of the Shi'a and Sunni sects.

EDUCATION. About 90 per cent of the population are illiterate. The number of pupils registered in 1928 aggregated 151,000, including 50,304 in Government schools, 41,810 in private schools, 6586 in foreign schools, 36,073 in "Maktab" schools, and 6188 in native religious schools. In 1930, more than 750 Persian students were studying in Europe, about half of them being supported by the Government. In the preceding few years, 1133 new schools of Western type had been added to the school system.

PRODUCTION. Persia is predominantly agricultural, the chief products being wheat, barley, rice, tobacco, wool, fruits, opium, gums, cotton, and silk. Government estimates, in pounds, of crops in 1929 were: Cotton, 58,918,000; tobacco, 29,459,000; wool (in grease), 50,000,000; tea, 177,000. Mining is confined largely to the extraction of petroleum. The Anglo-Persian Oil Company, which holds a concession covering all except the five northern Provinces, produced 45,250,000 barrels of oil in 1929, as compared with 43,461,000 in 1928 and 39,688,000 in 1927. Other mineral resources, for the most part undeveloped, include deposits of iron ore, coal, copper, lead, manganese, marble, cobalt, and nickel. Rugs are the principal manufactured product. Exports of rugs to the United States, which normally takes half of the total, were valued at \$7,877,000 in 1929, as compared with \$8,568,000 in 1928.

COMMERCE. For the fiscal year ended Mar. 21, 1929, imports were valued at \$82,580,000 (\$79,128,000 in 1927-28) and exports at \$152,822,000 (\$103,920,000). Increased shipments of petroleum accounted for most of the gain in exports, and larger imports of gold and silver for the increase in imports. Foreign trade showed a considerable recession in 1929-30. Imports in 1928-29 came principally from the Union of Soviet Socialist Republics, with British India and the United Kingdom ranking in order. Exports (excluding petroleum) went chiefly to Russia (35 per cent), the United States, and the United Kingdom. Including mineral oils, the United Kingdom ranked first among Persian foreign markets. Shipments to the United States were valued at \$8,125,000

and the imports from that country at \$3,940,000.

FINANCE. The budget returns for 1928-29 showed revenues of 295,134,000 krans (average exchange value of the kran in 1929 was \$0.1007) and expenditures of 340,170,000 krans, making a deficit of 45,036,000 krans. Receipts from the sugar and tea monopolies, allocated to railway construction, and royalties received from the Anglo-Persian Oil Company, held as a treasury reserve in European banks, were not shown in the budget. The oil royalties were estimated at between £1,250,000 and £1,500,000. In the budget for 1930-31, revenues were estimated at 353,375,000 krans and expenditures at 352,988,000 krans, the anticipated surplus being 387,000 krans. The national debt on Mar. 20, 1928, included £1,638,000 (about \$7,971,000) of funded debt and 7,214,000 krans (about \$707,000) of floating debt. On June 20, 1927, the funded debt stood at £1,668,000 (\$8,117,000) and the floating debt at 7,885,000 krans (about \$770,000).

Persia's monetary system was changed from a silver to a gold standard under a law passed by the Medjliss on Mar. 18, 1930, which established the gold ryal, containing 100 dinars, as the legal monetary unit. The ryal was equivalent in value to about \$0.25. The same measure provided that commencing Mar. 21, 1930, all customs duties should be collected on a gold basis.

COMMUNICATIONS. The railways in operation in 1929 reported 230 miles of line. The principal system was the Tabriz-Julfa line, extending 126 miles, which reported gross receipts of about 5,900,000 krans (\$590,000). See under *History* below. Air lines connected Teheran with Resht on the Caspian Sea, Kasr Shirin on the Iraq frontier, and Bushire on the Persian Gulf. Telegraph lines extended 20,495 miles and telephone wire, 3734 miles. Vessels entering the Persian Gulf ports in 1928-29 totaled 12,821, of 8,381,231 net registered tons; those entering the Caspian Sea ports, 2734, of 568,058 tons. Direct steamship service between the Gulf and Atlantic ports of the United States and ports on the Persian Gulf was inaugurated in December, 1930.

GOVERNMENT. Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government with a parliament or Mejliss. The actual running of the government is in the hands of a cabinet. Prime Minister in 1930, Mehdi Quli Kahn Hedayat, appointed March, 1929. The reigning Shah, Riza Khan Pahlevi, was publicly proclaimed Dec. 16, 1925, and crowned Apr. 25, 1926.

HISTORY. New rebellions among the tribesmen of southern Persia and disputes with Turkey over the Mount Ararat boundary and with Great Britain over the Bahrain Islands were the outstanding developments of 1930. The difficulties with Turkey arose as a result of the revolt of Kurdish tribesmen on the Turkish side of the border, who were joined by Kurds from Persian territory and who were pursued over the Persian boundary by Turkish troops. Persia demanded damages for the invasion of her territory. Negotiations for a revision of the boundary in the Mount Ararat region were reported proceeding satisfactorily at the end of the year (see *TURKEY* under *History*). Drilling for petroleum by the British in the Bahrain Islands near the Arabian coast of the Persian Gulf led the Persian government to protest to the League of Nations against British control of the islands. The British made no move to abandon their drilling activities.

Despite uprisings of the southern tribesmen, caused in part by efforts of the Government to disarm them, and increasing economic difficulties, modernization of the country on Western lines proceeded rapidly under the firm guidance of Riza Khan Pahlevi. Motor highways were rapidly extended and motor transport was replacing horse-drawn vehicles in Teheran and other leading cities. Progress on the southern section of the projected Trans-Persian railway line was delayed by a dispute between the German-American company holding the concession and the Government. The concession was later reported cancelled and on October 19 the Medjliss authorized the Government to engage foreign engineers to complete that section.

The nationalistic policies of the Government were evidenced by new laws requiring all Persians residing abroad to return to Persia within one year on pain of forfeiture of both their citizenship and their property in Persia. Foreigners in Persia were required to dispose of their real estate, except dwellings, to Persian subjects within one year. To further the development of national resources, a new Ministry of National Economy was created, headed by Mirza Mohammed Ali Kham Farughi, Zoka ul Mulk, formerly Prime Minister. Prince Firuz Nosrat ud Daulah, a former Cabinet Minister, fell a victim to the Shah's vigorous efforts to eliminate corruption from the Government. Convicted of accepting a bribe, he was deprived of all political rights and sentenced to a fine of \$5800 and four months' imprisonment.

To relieve difficult business conditions and check the declining exchange value of the kran, the Medjliss authorized the adoption of a gold monetary unit (see above under *Finance*) and on Feb. 25, 1930, passed an emergency law drastically curtailing purchases from abroad. Commissions were established to fix the selling and buying rates of all foreign currencies and to pass upon applications for foreign exchange by importers. After serving 18 months as treasurer-general, Dr. Walder of Switzerland was succeeded by M. DeKerckheer, a Belgian who had reorganized the Persian customs service.

The slave trade between southern Persia and southeastern Arabia was reported to persist, despite efforts of British naval police in the Persian Gulf to suppress it. Ex-Shah Ahmed Mirza (q.v.) died at Neuilly, Paris, France, on February 27, thus bringing to an end the Qajar Dynasty established in 1794. See *EARTHQUAKES*; *KURDISTAN*.

PERSIAN LITERATURE. See *PHILOLOGY*, *MODERN*.

PERU, pē-rō'v. A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Chile. Capital, Lima.

AREA AND POPULATION. Including the Province of Tacna, with an area of 3282 square miles, regained from Chile by the boundary settlement of 1920, the area of Peru is about 524,800 square miles. The population in 1929 was estimated at 6,187,000, as compared with 4,574,000 in 1896. Over one-half of the population were native Indians. For the period 1924 to 1928, the average annual births were 135,005 and deaths 58,398. The chief cities, with their estimated populations in

1929, were: Lima and suburbs, 316,000; Callao, 77,000; Arequipa, 70,000; Cusco, 40,000; Chiclayo, 35,000; Trujillo, 30,000; Iquitos, 25,000; Huancayo, 25,000; Ica, Ayacucho, Huarás, and Piura, 20,000 each.

EDUCATION. Like the other Andean republics, Peru has a high percentage of illiteracy. Elementary education is nominally free and compulsory between the ages of 7 and 14. For the school year 1929-30, there were 3567 primary schools, with 317,107 pupils enrolled; and 110 secondary schools, with 11,790 students. The University of San Marcos at Lima had 1531 students in 1928. There were other universities at Arequipa, Cuzco, and Trujillo.

PRODUCTION. Despite the importance of mining in the national economy of Peru, agriculture remains the basic industry, providing the means of subsistence for about 80 per cent of the population. As rainfall is negligible over the entire region from the Pacific coast to the crest of the Andes, about 80 per cent of the cultivated land is artificially watered. The Government in 1930 was constructing projects in northern Peru, which, when completed, would place nearly 500,000 additional acres under irrigation. The yields of the principal crops in 1928-29 were: Wheat, 3,186,000 bushels; rice (rough), 2,905,000 bushels; sugar cane, 3,183,000 metric tons; raw sugar, 362,000 metric tons; cotton (ginned), 107,324,000 pounds. Cacao, coffee, tobacco, corn, olives, grapes, rubber, and wool are produced also. The wool clip in 1929 totaled 10,300,000 pounds, or 2,000,000 pounds less than in 1928.

The value of mineral production in 1928 (\$120,075,000) was considerably exceeded in 1929. In the latter year the output of petroleum was 13,034,000 barrels, valued at \$81,495,000; copper, 52,085 metric tons, \$17,013,000; silver, 21,496,000 troy ounces, \$12,572,000. Other mineral products in 1929, by quantity, were: Gold, 122,141 troy ounces; lead, 21,410 metric tons; zinc, 12,425 metric tons; coal, 221,000 metric tons; vanadium ore, 902 metric tons. Guano production for the year ended Mar. 31, 1929, was 136,382 tons. Iron-ore deposits of more than 180,000,000 tons in the Province of Ica were surveyed in 1929 and 1930. Coal resources were estimated at 700,000,000 tons of anthracite and 1,329,000,000 tons of bituminous. Peruvian industries operate mainly for local consumption. They include cotton and wool textiles, flour, beer, petroleum products, cottonseed oil, leather, shoes, etc. The annual value of manufactures, including copper and oil products, was estimated at over 300,000,000 soles (about \$120,000,000). Business conditions, which had been fairly satisfactory in the first quarter of 1929, became progressively worse during the balance of the year and in 1930 as prices for cotton, sugar, and mineral products declined. The curtailment of public works and political disorders contributed to the general depression (see below under *History*).

COMMERCE. Foreign trade in 1929 was marked by increases of 7.1 and 8.5 per cent, respectively, in the values of exports and imports for consumption over 1928. According to preliminary figures, exports totaled \$134,033,000 (\$125,145,000 in 1928) and imports \$75,941,000 (\$69,987,000 in 1928). Although the values of sugar, cotton, wool, and cattle-hide exports were lower, the values of mineral exports were considerably higher than in 1928. Foreign trade slumped sharply in 1930, imports and exports during the first half of the

year falling 23 and 18 per cent, respectively, as compared with the corresponding period of 1929.

The United States furnished 42.5 per cent of all Peruvian imports in 1929 (41.1 per cent in 1928), as compared with 15.3 per cent for the United Kingdom and 9.6 per cent for Germany. The United States was also Peru's leading customer, purchasing 33.3 per cent of all exports (28.5 per cent in 1928), as against 18.3 per cent by the United Kingdom (23.9 per cent in 1928) and 6.1 per cent by Germany (8 per cent in 1928). Besides metals and ores, the chief exports are sugar, hides, cotton, and wool.

FINANCE. The budget for 1930, signed by President Leguía Dec. 30, 1929, balanced at £P14,098,719. Chief items of expenditure were: Ministry of Finance, £P5,309,201; Interior, £P2,200,862; Justice, £P1,969,128; War, £P1,625,368; Promotion, £P1,472,515. Preliminary returns for the year indicated a deficit of about \$10,000,000 (£P2,050,000). Due to the failure to formulate a new budget by the end of 1930, the existing budget was to be used as a basis of operations during the first quarter of 1931. The Peruvian pound, equivalent to \$4.8665, was replaced as the unit of currency on Mar. 27, 1930, by the sol, which had a par value of \$0.40. Government receipts during 1929 totaled 140,358,317 soles and expenditures 140,204,551 soles, as compared with budget estimates balancing at 125,836,361 soles.

The external debt of the National Government on June 30, 1929, totaled \$90,820,141 and £4,226,280, as compared with \$73,494,041 and £2,845,690 on the same date in 1928. The internal consolidated and floating debts (June 30, 1929) stood at £P4,533,651 and £P3,659,175, as compared with £P3,963,846 and £P3,663,740, respectively, a year earlier. A national savings bank, with an initial capital of £P1,500,000 was established Jan. 2, 1930.

COMMUNICATIONS. Railways in operation in 1929 extended 2810 miles, of which 642 miles were owned by the state and 2168 miles by private interests. All lines carried 5,881,000 passengers and 3,329,000 metric tons of freight during the year, the gross receipts totaling £P2,825,000 (\$11,294,000). By the end of 1929, motor roads had been completed north from Lima to the vicinity of the Ecuadorean border and south to Arequipa and the Chilean frontier, and from Cerro de Pasco north to Huánuco and south to Ayacucho. A 90-mile stretch of highway from Huarás to Huari was opened on Aug. 4, 1930. With the opening of a new air service from Lima to Chachapoyas on Aug. 14, 1930, the length of air lines in operation in the country exceeded more than 3000 miles. The state-owned telegraph system had 12,853 miles of wire in 1928. The privately-owned telephone system was greatly extended and improved during 1929 and 1930, international services being inaugurated in December, 1929. Radio telephone and telegraph stations for communication with other parts of Latin America, the United States, and Europe were under erection.

The merchant marine comprised 38 vessels of 62,100 tons in 1929. Including traffic on Lake Titicaca and the Amazon River, vessels entering the ports in 1928 aggregated 18,578,000 net registered tons.

GOVERNMENT. Under the Constitution of Jan. 18, 1920, executive power is vested in a President, elected for five years and eligible for reelection (under a constitutional amendment of 1927); legislative power rests with a congress consist-

ing of the Senate of 35 members and the House of Representatives of 110 members, all elected by direct vote for five years. The President acts though a Cabinet of seven members, appointed and removed at his pleasure. President at the beginning of 1930, Augusto B. Leguía, who was reelected Aug. 5, 1929, for the term 1930 to 1935.

HISTORY

THE DOWNFALL OF LEGUÍA. The termination of President Leguía's 11-year régime came with dramatic suddenness following a revolt at Arequipa on Aug. 22, 1930. University students and the army promptly declared for the rebels and at 3 o'clock on the morning of August 25 the dictator signed his resignation with the comment: "I hereby close another chapter in Peru's history."

A former insurance salesman, veteran of the war of 1879 with Chile, and president of the Latin American Chamber of Commerce in London, Leguía first assumed a dominant rôle in Peruvian politics when he entered the Presidency in 1908 with an ambitious programme of administrative and financial reform. Lack of funds defeated him in 1912 and he did not return to power for seven years. A candidate for the Presidency in 1919, he did not wait for the election returns but engineered a *coup d'état* with the aid of the army. A new Congress elected at his behest rewrote the Constitution and legalized his assumption of power. Amendments to the Constitution by executive decree, the deportation of hundreds of his political opponents, rigid censorship of the press, and a firm check on student agitations assured his continuance in office. He was reelected in 1924 and again in 1929, with the support of the two largest political parties in the country.

Encouraging the exploitation of Peru's resources by foreign capital, Leguía increased the Government's revenues by 120 per cent. He expended great sums in the development of railways, motor roads, harbors, irrigation projects, schools, and other public works, floating large loans in the United States when revenues proved insufficient to meet his ambitious demands. The smouldering resentment at his iron rule was fanned into flame by his refusal to withdraw at the end of his term in 1929 and by the hardships imposed upon all classes by the increasing business depression. The Peruvian pound declined steadily following the Wall Street crash of 1929, reaching the lowest point in history on Aug. 21, 1930. Unable to float new loans, Leguía was forced to curtail his public-works programme and thousands were thrown out of work. Charges of corruption in the "Leguía machine" multiplied, the settlement of the Tacna-Arica dispute with Chile left many ultra-nationalists disgruntled, while the white landowners grew increasingly restive at the President's sympathetic policy toward the Indians.

On April 24 and 25, the police revealed that they had frustrated two conspiracies to assassinate the President. At the same time martial law was declared in the Departments of Lima, Lambayeque, Junin, and Callao. The successful revolution against President Siles in Bolivia on June 27 reëchoed in Peru. The insurrection at Arequipa on August 22 was led by Col. Luis M. Sánchez Cerro, active in a revolt against Leguía in 1922 and subsequently a veteran of the Spanish Foreign Legion. Two days later the President's Cabinet resigned and on August 25, in an effort to stave off complete disaster, he resigned his power to a

junta of his military advisers headed by Gen. Manuel Ponce. It was too late to forestall the Arequipa revolt. There was rioting and street fighting in Lima. The army and the mass of the population went over to Col. Sánchez Cerro, and on August 27 General Ponce surrendered the reins of power to a second military junta, headed by the Arequipa leader as Provisional President. The naval vessel *Almirante Grau*, bearing Leguía into exile from Callao, was ordered to return. On September 1, the former dictator, seriously ill, was imprisoned on the island of San Lorenzo, in Callao Harbor, to await trial for his alleged misdeeds.

THE PROVISIONAL GOVERNMENT. One of the first moves of the Provisional government was to set up a special tribunal for the trial of Leguía and his supporters on various charges of malfeasance. The tribunal acted with deliberation. On September 15, it caused the arrest of Gen. Manuel Ponce; Oscar Leguía, nephew of the ex-President; Pedro José Radra y Gama, former Foreign Minister; Gen. José Luis Salmon, former War Minister; and other prominent military men and civilians. A list of persons to be prosecuted for "illegal enrichment," submitted to the national sanction court on November 4, was headed by the former President, his three sons, his three sons-in-law, eight members of former Leguía Ministries, and 16 others. On Dec. 31, 1930, the tribunal exonerated Commander Harold B. Grow of taking sides in the civil conflict. A citizen of the United States, Commander Grow had been engaged by President Leguía as Director General of Aviation.

Among other acts of the new régime were the abolition of the censorship, elimination of organized gambling, the lifting of martial law, and the suspension of those constitutional guarantees which obstructed the prosecution of former officials. Assurance was given that the Tacna-Arica settlement with Chile would be allowed to stand and that the new government would seek to adjust the boundary dispute with Ecuador. Recognition was extended to the new régime by the United States on September 18.

The change of administrations did nothing to relieve Peru's serious economic and financial difficulties. Within a fortnight the new Government had to cope with labor troubles at the Cerro de Pasco copper mines. On November 12, labor unrest at the mines flamed into rioting, in which 15 men, including two citizens of the United States, were killed. On the following day martial law was declared in the Departments of Lima and Junin and the Government arrested 40 strike leaders and agitators. The foreign residents of the disaffected mining towns were evacuated to Lima. A wave of nationalism, tinged with a vague sort of communism among the submerged classes, evidenced itself in the mobbing of Chinese and Japanese merchants, criticism of foreign mining interests and a demand for revision of contracts between the government and various foreign public-utility enterprises.

On November 22, the Provisional President revised his Cabinet as a result of widespread criticism directed at the Minister of Interior and other members. There were three holdovers in the new Cabinet, in which civilians assumed the portfolios of Finance and Justice. While Colonel Sánchez Cerro retained his popularity, the new Ministry caused dissatisfaction among numerous elements. The newspaper *La Prensa* was suspended November 24 for criticism of the Cabinet.

On the same day a clash between Communist and Civil party demonstrators in Lima resulted in the wounding of 15. Troops were later needed to suppress disorders in the Talara oil fields. Meanwhile the Provisional government (November 9) had issued a decree ordering a general election to choose a National Assembly. While no date for the election was fixed, it was announced that the Assembly would meet at Lima on May 2, 1931, to frame a new Constitution, enact new election laws, and "organize the executive power."

In an effort to balance the budget, the Provisional government further curtailed public-works projects, reduced the personnel of embassies and the pensions and salaries of government employees, and engaged Prof. Edwin Kemmerer of Princeton University to reorganize the financial structure. The liberal tendencies of the new régime were illustrated by a decree issued October 8 establishing a divorce law. Uruguay was previously the only South American country to recognize divorce.

FOREIGN RELATIONS. The development of major interest in Peruvian foreign relations during the year was the severance of diplomatic relations by Uruguay on September 17. The Provisional government had declared the Uruguayan Minister at Lima *persona non grata* as a result of his close friendship with former President Leguía and had refused to recognize the right of the Uruguayan Legation to give asylum to Jesus Salazar, former president of the Peruvian Chamber of Deputies, who was wanted on charges preferred by the special revolutionary tribunal. Uruguay charged that Peru had violated provisions of the Treaty of Montevideo with respect to the right of asylum of political prisoners. The dispute was finally adjusted through the good offices of Brazil and diplomatic relations were resumed on Dec. 4, 1930.

PESHAWAR. See INDIA under History.

PETROLEUM. According to preliminary figures compiled by the U. S. Bureau of Mines, 896,265,000 barrels of crude petroleum was produced in the United States during 1930. Unlike the preliminary figures of former years, the 1930 total accounted for the crude oil consumed on the leases and the net change in producer's stocks. The final figure of actual production probably would amount to approximately 898,000,000 barrels, or a decline of about 109,000,000 barrels, or 11 per cent from the 1929 output, of 1,007,323,000 barrels. Production of raw materials other than crude, that is, natural gasoline and benzol, also declined in 1930, imports of crude petroleum and refined oils were lower, and the total new supply of all oils amounted to 1,056,305,000 barrels as compared with 1,171,359,000 barrels in 1929. The trend in stocks of all oils was reversed in 1930, when a net decline of 23,296,000 barrels was recorded as compared with a net increase of 68,156,000 barrels in 1929. Exports of crude and refined oils in 1930 totaled 156,666,000 barrels as compared with 163,120,000 barrels in 1929. The daily average indicated domestic demand for all oils in 1930 amounted to 2,529,000 barrels as compared with an average of 2,576,000 barrels in 1929. This decrease reflects the decline in crude throughput at refineries.

As the year 1930 opened, production was steadily declining from the record levels of 1929. In February, production in the two leading producing States, Texas and California, increased materially and the upward trend in crude output

was resumed. Then followed four months of relatively steady output, during which the restrictive effects of proration were about balanced by the increased demand for crude by refineries. The most effective curtailment in crude output in 1930 began in July and was continued throughout the remainder of the year. The output at the close of the year was at the lowest point in over four years.

Although 1930 was a year of continuous curtailment of output in the majority of fields, the total potential production, or the total shut-in production, showed a steady increase. This resulted from the completion of large wells in such fields as Oklahoma City and Hobbs, these wells being either capped or pinched back to a fraction of their initial output. The number of oil wells completed in 1930, 11,577, compared with completions in 1929, 15,572, indicated a material falling off in drilling activity, but the total initial output of the completions in 1930 was over 50 per cent higher than in 1929.

The rank of leading crude-oil producing States in 1930 was unchanged from 1929. Texas was again first, with a production of 289,965,000 barrels, a slight drop from the previous year. Production in California declined materially but the State retained second place, with an output of 228,099,000 barrels; Oklahoma was third, with an output of 215,227,000 barrels. Practically all of the States reported decreased output in 1930; the exceptions were Indiana, Louisiana, New Mexico, New York, and Pennsylvania. The gain in production in New Mexico—from 1,830,000 barrels in 1929 to 10,172,000 barrels in 1930—was particularly notable and resulted almost solely from the development of the Hobbs field in the southeastern part of the State. Production in Arkansas continued to decline as the output of the Smackover field fell off steadily. The decrease in production in California was quantitatively greater than for any of the States, and resulted primarily from reduced output in the Santa Fé Springs and Long Beach fields. Production in Kansas was curtailed in some fields but the total output in 1930 was just under the 1929 total. Louisiana was one of the few States that showed an increase in production in 1930; this gain resulted primarily from the development of the Zwolle field. Production in Oklahoma fell off from 255,004,000 barrels in 1929 to 215,227,000 barrels in 1930. This material decline can be attributed almost solely to the decline in output of the Seminole district. Production in the Oklahoma City field increased from 8,710,000 barrels in 1929 to 33,306,000 barrels in 1930, but the latter represents only a small fraction of what the field could have produced if rigid proration had not been practiced. The trend in production in the salt-dome pools of Texas continued upward in 1930; the total output of the rest of the State, exclusive of West Texas, increased, due largely to the development of the Darst Creek field. However, these increases were more than compensated by the decline in the West Texas fields. Production in Wyoming continued to decrease in 1930, as Salt Creek, the principal field, continued to decline. The production of Pennsylvania Grade crude, produced in the States of New York, Pennsylvania, West Virginia, and in southeastern Ohio, increased from 23,736,000 barrels in 1929 to 24,482,000 barrels in 1930. This increase resulted from developments in the Bradford-Allegany district, where the producers

have built up a substantial potential through the use of the five-point method of water flooding. Stocks of crude petroleum fell off in 1930, the first decline since 1926. Total stocks of crude petroleum, on Dec. 31, 1930, amounted to 512,797,000 barrels as compared with 535,264,000 barrels on hand at the beginning of the year. This represents a decline of over 20,000,000 barrels, nearly all of which occurred in the area east of California.

Imports of crude petroleum decreased for the second successive year; the 1930 total was 62,129,000 barrels as compared with 78,933,000 barrels imported in 1929. As had been the case for several years, Venezuela ranked first as a source of supply of foreign crude, although in 1930 Colombia was the only country to show an increase over 1929.

REFINED PRODUCTS. Runs to stills of crude petroleum in 1930 amounted to 927,447,000 barrels, a decline of 60,261,000 barrels from 1929. This decrease was partly due to the shutdown of a number of refineries which were unable to operate at a profit but refiners sought to maintain a balance between the supply and the demand for gasoline. Despite the decline in crude oil processed, the production of motor fuel showed a slight increase—from 439,393,000 barrels in 1929 to 441,534,000 barrels in 1930. This increase resulted from an increase in percentage yield of from 44.0 per cent in 1929 to 47.0 per cent in 1930. Imports of gasoline amounted to 16,927,000 barrels, or nearly double the 1929 figure. Exports of gasoline amounted to 65,621,000 barrels in 1930, which represented a small increase over 1929. The indicated domestic demand for motor fuel amounted to 395,560,000 barrels, an increase of 19,561,000 barrels, or 5 per cent over 1929. During the first six months of the year, the consumption of motor fuel was approximately 9 per cent above the previous year but during the last half of 1930 the full effects of the general business depression were felt and the indicated domestic demand figures for August, October, and November were below those of the same months in 1929.

The production of kerosene was lower for the second successive year and both the exports and indicated domestic demand declined. The decrease in output exceeded the drop in consumption and stocks of kerosene were reduced to 6,883,000 barrels, the lowest point since 1923. The output of gas oil and fuel oil declined materially during 1930. Imports of fuel oil rose from 20,545,000 barrels in 1929 to 26,080,000 barrels in 1930. The trends of the statistics for the related products, lubricants and wax, in 1930, were very similar. The production, indicated domestic demand, and exports for each fell off and stocks increased.

NATURAL GASOLINE. The production of natural gasoline did not show its usual increase in 1930, the total output for the year dropping off from 2,195,400,000 gallons in 1929 to 2,172,900,000 gallons in 1930. This decline in output was closely related to the drop in crude output and the Seminole district, which showed a very rapid de-

cline in crude output, was also credited with the most material loss in the production of natural gasoline. The output of the Kettleman Hills field amounted to 156,700,000 gallons in 1930, as compared with a comparatively small amount in 1929. This increase more than compensated for the losses in production in the rest of the State and the California total for the year, 814,100,000 gallons, represented a small gain over the 1929 output. Production in Texas, the third-ranking State, increased as the result of gains in output of the Panhandle plants.

The world production of natural gasoline increased from 41,470,069 barrels in 1927 to 58,200,357 barrels in 1929, a gain of 16,730,288 barrels, or 40 per cent, according to a survey conducted by E. B. Swanson, Chief Petroleum Economist of the U. S. Bureau of Mines, through which the first complete quantitative data on natural gasoline production and utilization in foreign countries were assembled. During the period covered by the survey, United States production accounted for more than 90 per cent of the world total, but the output of foreign plants formed an increasing proportion of the total, advancing from 5.8 per cent of the total in 1927 to 8.6 per cent in 1929. The relative proportions of domestic and foreign production of natural gasoline are shown in the table at the bottom of the page.

WORLD'S PRODUCTION OF CRUDE PETROLEUM. The world's production of crude petroleum during 1930 reached a total of 1,418,723,000 barrels, a decrease of 65,318,000 barrels, or 4 per cent, from the total of 1,484,041,000 barrels recorded for 1929, according to preliminary figures compiled by E. B. Swanson of the U. S. Bureau of Mines. United States production dropped from

* Compiled by E. B. Swanson, Chief Economist, Division of Petroleum Economics.

^b 1930 figures are subject to slight revision.^c Production for fiscal year ended Sept. 30, calendar year 1929 production estimated at 103,000,000 barrels; 1928, 87,800,000 barrels.^d Net production; actual production less oil returned to structure.

1,007,323,000 barrels in 1929 to approximately 898,000,000 barrels in 1930, a decline of about 109,000,000 barrels, or 11 per cent. Production in countries other than the United States, however, increased from a 1929 total of 476,718,000 barrels to 520,723,000 barrels in 1930, an increase of 44,005,000 barrels, or 9 per cent. United States production, consequently, accounted for 63.3 per cent of the world's total, the lowest ratio since 1921.

Based on annual totals, Venezuela held its position as the second largest producing country, with Russia (U. S. S. R.) in third place. Venezuelan production held very closely to the 1929 figure, but production in Russia reached a total of 135,165,000 barrels, an increase of 31 per cent over the 1929 calendar year estimate of 103,000,000 barrels. During the latter part of 1930, it was reported, monthly production in Russia exceeded that of Venezuela. Persia, Rumania, and the Netherland East Indies all recorded increased production, while the decline in Mexican production continued, with the result that Mexico dropped from fourth to seventh place among the world's oil producing countries, with Persia succeeding Mexico in the fourth position and followed in order by Rumania and the Netherland East Indies. Among the smaller producing countries, Germany made the most marked advance, its production exceeding a million barrels for the first time in the post-war period. Bolivia was added to list of crude-oil producing countries during 1930. See CHEMISTRY, INDUSTRIAL; GEOLOGY.

PHELAN, JAMES DUVAL. An American lawyer and former United States Senator, died in San José, Calif., Aug. 7, 1930. He was born in San Francisco, Calif., Apr. 20, 1861, and was graduated from St. Ignatius College in 1881, later studying law at the University of California. While practicing his profession in San Francisco, he became prominent in the Democratic party, and was elected mayor of the city for three suc-

cessive terms, from 1897 to 1902. In 1900 he was chairman of the association which secured a new reform charter for San Francisco, and in the same year received the complimentary vote of the Democratic minority in the State Legislature for United States Senator. After the disastrous San Francisco earthquake and fire in 1906, he was one of the most efficient leaders in relief and reconstruction, being chairman of the committees of fifty and forty for these purposes and president of the Red Cross Fund. In 1913 he was appointed by the Department of State to visit various European countries and invite their governments to participate in the Panama-Pacific Exposition. He served as United States Senator from California from 1915 to 1921, during which period he was particularly active in legislation affecting Japanese immigration and ownership of land and leases on the Pacific Coast. An honorary Ph.D. degree was conferred on him by Santa Clara College in 1903, and he also served as regent of the University of California. He was the author of *Travel and Comment*, an account of his trip around the world during 1921-22.

PHENOMENOLOGY. See PHILOSOPHY.
PHILHARMONIC-SYMPHONY ORCHESTRA. See MUSIC.

PHILIPPINES, fil'i-pîns, -pêns -pîns. The largest island group of the Malay Archipelago; a possession of the United States, ceded by Spain in the Treaty of Apr. 11, 1899. Capital, Manila.

AREA AND POPULATION. Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5123; Negros, 4902; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. An estimate of the population in 1928 placed it at 11,921,600, or a

density of 104.2 per square mile. The population of Manila was 285,306 in 1918; estimated at 344,200 in 1927. Other cities, with the population in 1918, were Cebu, 65,502; Legaspi, 52,756; Iloilo, 49,114. From 1923 to 1927 the average annual birth rate per 1000 inhabitants was 32.8 and the death rate 18.1. From 1924 to 1929 an average of 11,862 immigrants entered yearly, as against 1134 emigrants.

At the census of 1918 the race distribution was as follows: Brown, 9,386,826; yellow, 50,826; white, 12,399; Negro, 7623; half-breed, 34,663. About 91 per cent of the population was Christian and 932,953, or 9 per cent, were Moros and pagans. Much of the commerce and business of the islands is in the hands of Chinese, Americans, and Europeans, but Filipinos in 1930 were entering these fields in increasing numbers.

EDUCATION. Education is free, secular, and co-educational. Schools are conducted in English. In September, 1929, there were 1,163,039 pupils in the public schools, 93,618 in private schools, and 7642 students in the state-supported University of the Philippines at Manila. The total school population was 3,179,570. Teachers in the public schools in 1928 included 293 Americans and 25,958 Filipinos. About 40 per cent of the children of school age were attending school in 1930. Illiteracy was estimated at between 50 and 60 per cent and about 1,000,000 of the 12,000,000 inhabitants spoke English. Approximately 21 per cent of all expenditures in 1929 were for education.

PRODUCTION. Agriculture is the main support of the population, the value of all agricultural crops in 1928 amounting to \$236,293,000, as compared with \$251,833,000 in 1927. The cultivated area in 1929 was about 9,900,000 acres; grass and open land, 13,100,000 acres; and forest land, 46,500,000 acres. The Government owns 98 per cent of the forest lands. About 34,580,000 acres of idle land are suitable for cultivation.

The acreage and production of the chief crops in 1929 was as follows: Rice, 4,387,000 acres and 68,152,000 bushels; corn, 1,273,000 acres, 13,994,000 bushels; manila hemp (abaca), 1,198,000 acres, 469,465,000 pounds; tobacco, 204,000 acres, 100,133,000 pounds; coconuts (1928), 1,274,000 acres, 1,906,804 coconuts; coffee, 3000 acres, 2,863,000 pounds; cacao, 4000 acres, 2,675,000 pounds; sugar, 637,000 acres of cane, 1,650,200,000 pounds of raw sugar. Raw sugar accounted for nearly 33 per cent of the total value of exports in 1929. Coconuts and coconut products accounted for 32 per cent of the exports, a decrease of 2 per cent compared with 1928 resulting from damage to coconut groves by the leaf miner, an insect pest. Rubber, tea, citrus fruits, quinine, and camphor are other products. Lumber production in 1929 increased 23 per cent to a record total of about 754,000,000 board feet, and shipments increased 16 per cent to 104,697,000 board feet, valued at \$3,619,000.

Livestock in 1928 included 1,220,000 cattle, 1,950,000 carabaos (water buffalo), 10,300,000 swine, 410,000 sheep, 1,415,000 goats, and 325,000 horses and mules. Gold is the principal mineral mined, the output in 1929 totaling 139,000 troy ounces (92,000 troy ounces in 1928). There is a small production of silver, platinum, coal, chromite, and iron. The total value of mineral production in 1928 was \$6,359,000. The output of the chief manufactured articles in 1929 was: Cigarettes, 4,427,000,000; cigars, 295,000,000; copra, 1,066,000,000 pounds (for year ended June 30);

coconut oil, 434,000,000 pounds; cut timber, 754,000,000 board feet; split rattan, 5,589,000,000 pounds; unsplit rattan, 19,416,000 linear feet.

Business conditions became progressively more unfavorable after the first six months of 1929 with the continued fall in prices of export products. The depression in 1930 was particularly acute in the textile trade. In his report for the calendar year 1929, Governor General Davis stated that the per capita increase in the consumption of steel since 1903 was more than 40 per cent; in cotton goods, over 200 per cent; in meat and dairy products, over 300 per cent; wheat flour, 276 per cent; silk, 421 per cent; and paper, 450 per cent.

COMMERCE. Despite falling prices and somewhat irregular trade conditions, the total foreign trade in 1929 was valued at \$311,607,500, compared with \$300,562,500 in the previous record year of 1920. Exports totaled \$164,447,000, against \$155,055,000 in 1928, while imports increased to \$147,160,500 from \$134,657,000 in 1928. The balance of trade in 1929 was favorable by \$17,287,000. The United States in 1929 increased its share of Philippine imports, supplying 63.4 per cent of the total, as against 62 per cent in 1928. Of the total Philippine exports, 76 per cent went to the United States, as compared with 75 per cent in the previous year. China, Japan, Great Britain, Spain, and Germany were the other leading nations in the commerce of the island.

Leading Philippine exports were: Sugar, 695,868 metric tons, valued at \$53,244,000; manila hemp, 189,400 metric tons, \$28,420,000; copra, 173,570 tons, \$15,565,000; coconut oil, 190,52 tons, \$29,170,000; copra meal, 113,790 tons, \$3,790,000; desiccated coconut, 22,285 tons, \$3,540,000. Sugar, manila hemp, and coconut products accounted for 80.5 per cent of the total exports in 1929. Other important export commodities were leaf tobacco, cigars, embroideries, lumber and timber, maguery fibre, and hats.

The chief imports in 1929 were: Cotton manufactures, \$26,977,000; iron and steel product (excluding machinery and parts), \$12,830,000; petroleum products, \$9,785,000; machinery and parts, \$8,943,000; vehicles, \$7,362,000; rice, \$5,310,000; wheat flour, \$5,060,000. Preliminary estimates for 1930 placed total exports at 276,600,000 pesos (\$138,300,000) and imports at 257,200,000 pesos (\$128,600,000). Exports declined 16 per cent from 1929 and imports 13 per cent. The favorable export balance of 19,400,000 pesos was 44 per cent below 1929.

FINANCE. According to the Governor General's report, ordinary revenues in 1929 totaled 87,270,576 pesos, an increase of nearly 5,000,000 pesos over 1928, while ordinary expenditure totaled slightly less than 78,000,000 pesos, a decrease of about 800,000 pesos from the previous year (1 peso equals \$0.50 at par). The surplus at the end of 1929 amounted to over 51,000,000 pesos, of which over 41,000,000 pesos had been allotted for future expenditure, leaving a net unappropriated cash surplus of 10,021,000 pesos. The 1930 budget, as approved by the Governor General, balanced at 77,600,000 pesos, and the 1931 budget at 77,347,000 pesos. The Governor General on June 3, 1930, announced that the Government faced a deficit of 900,000 pesos in the insular and public works budgets for 1931, due to the cost of undertakings and falling revenues.

The net bonded debt increased by 1,400,000 pesos during 1929 to a total of 176,637,000 pesos.

The Philippine National Bank made a net profit of 3,265,027 pesos from operations in 1929.

COMMUNICATIONS. At the end of 1928 there were 791 miles of railway line in operation. Passengers carried during the year totaled 10,773,000 and freight, 2,170,000 tons. Gross receipts were \$6,566,000 (\$6,426,000 in 1927). During 1929 about 14 miles of new line were completed and placed in operation. At the end of 1929, there were 4200 miles of first-class highways, 2256 miles of second-class, and 1398 miles of third-class roads, a total of 7854 miles, compared with 3479 miles in 1910. A total of \$7,840,000 was expended on roads and bridges during 1929. There were (1928) 9915 miles of telegraph wire, 40,389 miles of telephone wire, and 58 radio stations. Consolidation of all private telephone interests in the Philippine Long Distance Telephone Company was effected in 1930. A radio station communicating directly with the United States was opened at Manila, Dec. 1, 1930.

Vessels in the overseas trade entering the ports in 1929 numbered 1510 of 5,617,000 net registered tons (4,325,243 tons in 1928), of which 1,763,000 tons were American, and 1,706,000 tons British. Entrances at Manila totaled 4,190,000 tons; Iloilo, 376,000 tons; and Cebu, 773,000 tons.

GOVERNMENT. Executive power rests in a governor general, appointed by the President of the United States; and in six departmental secretaries, all Filipinos except the vice governor, who is secretary of public instruction. A senate of 24 members and a house of 93 members are elected by popular vote (except for nine representatives and two senators appointed by the Governor General). A council of state, headed by the governor general, serves to link the executive and legislative branches. Governor General in 1930, Dwight Filley Davis.

HISTORY

INDEPENDENCE MOVEMENT. The Philippine independence movement made noticeable progress during 1930, gaining an important victory in the favorable report on the Hawes-Cutting bill submitted to the United States Senate by its Committee on Territories on June 2. The bill provided for the grant of complete independence to the Philippines if a plebiscite at the end of five years of autonomous, probationary government by Filipinos showed the islanders to be still in favor of separation from the United States. The vote in the committee was eight to four in favor of the bill, despite opposition to its provisions voiced by Secretary of State Stimson, former Governor General of the Philippines, and by Secretary of War Hurley. A minority report, signed by Senator Bingham, chairman of the committee, and three other members, attacked the bill as "tantamount to a proposition for immediate independence" and predicted that its adoption would result in disaster to both the Filipinos and American interests in the Philippines and the Far East. Due to the union of forces between those advocating independence for the Philippines on moral grounds and those who wished to erect a tariff wall against sugar and other Philippine products, and to exclude Filipino immigrants, the prospects for adoption of the Hawes-Cutting bill during 1931 seemed bright. Representatives of farm and labor organizations exerted powerful influence on behalf of the measure.

Members of the Philippine Independence Mission, who returned to Manila August 22 after a

sojourn of several months in Washington, reported that the outlook for independence was favorable. Secretary Stimson and others reported opposition to immediate independence on the part of Philippine business and other non-political elements. A number of events in the islands, however, showed the nationalist movement gaining rapid headway. The veteran General Emilio Aguinaldo, head of the short-lived Philippine Republic and later an advocate of the continuance of the American connection, announced on June 12 that he would accept the invitation to cooperate in the campaign for independence. The appointment by President Hoover on July 29 of Nicholas Roosevelt of New York, to be Vice Governor of the Philippines, aroused such a storm of protest in the islands that Mr. Roosevelt later withdrew his acceptance. In a book on the Philippines and articles in American journals, Mr. Roosevelt had opposed independence for the islands.

A new nationalistic party, known as the *Bagong Katipunan*, was launched by Speaker Manuel Roxas of the Philippine House of Representatives on November 15. Its programme included control of natural resources, independence, encouragement of the use of local products in place of foreign-made articles, elimination of corruption in public office, and the development of a distinctive Philippine culture. The movement won the support of powerful political leaders and of Filipino business and shipping interests. General Aguinaldo on November 22 announced himself opposed to the movement on the ground that it was political and not patriotic.

The threat to the Philippines offered by Japanese and Chinese immigration was emphasized during the year when the native Secretary of Commerce and Communications reported to Governor General Davis that lack of enforcement of the immigration laws had resulted in an influx of some 12,000 Japanese into Davao Province, where they were in many cases displacing Filipino laborers and farmers. The Japanese immigrants were admitted by customs officials as merchants, the secretary reported, but only 2000 of the 12,000 were so engaged. The laws forbid the immigration of Oriental laborers. It was pointed out that an independent Philippine government might have difficulty in excluding Japanese or Chinese immigrants without antagonizing their respective governments. Secretary Stimson, in his testimony before the Senate Committee on Territories, declared that immediate independence for the Philippines would inevitably result in the submerging of the existing Malay civilization by the Chinese, a process already far advanced in the Straits Settlements and other Malay territories.

THE ECONOMIC DEPRESSION. The necessity of strict economy in Government expenditures to offset the decreasing revenues caused by the business depression was stressed by Governor General Davis in his message delivered at the opening of the Philippine Legislature July 15, 1930. The Governor General declared that economic development was "the most important problem of the Philippines."

In the first five months of 1930, Mr. Davis reported, revenue collections fell off 11 per cent from the same period in 1929, while in May the decrease was over 24.4 per cent. His appeal for economy was coupled with a demand for the elimination of graft. He urged the diversification

of agriculture, encouragement of foreign investments, and inter-island air services as needed steps in the islands' development.

OTHER EVENTS. In April, a typhoon demolished 13 towns in Leyte Province and seriously damaged the coconut groves of that region. Moro outlaws fought off attacks of Philippine constabulary units in Lanao Province, Mindanao Island, during May and June, killing one officer and four soldiers and wounding three officers and 15 soldiers during a clash on May 7. Governor General Davis on December 19 dismissed the Provincial Governor of Davao for irregularities in office.

Consult Dean C. Worcester, *The Philippines, Past and Present*, New York (1930); Nicholas Roosevelt, "Independence and Peace in the Pacific," *Foreign Affairs*, April, 1930.

PHILLIPS UNIVERSITY. A coeducational institution of higher learning at University Station, Enid, Okla.; founded in 1907. The enrollment for 1929-30 in all departments was 861. The faculty numbered 39. The productive endowment amounted to \$548,830. The library contained 19,158 volumes, exclusive of public documents. President, Isaac Newton McCash, D.D., LL.D.

PHILOLOGY, CLASSICAL. The best way to gain a fair conception of the more important contributions to classical philology is to examine lists of articles and books, or abstracts of them, or both, given in certain periodicals—*The American Historical Review*, *The American Journal of Philology*, *Antiquity*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *History*, *Athenaeum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative importance of items listed. A very valuable feature of this work is the "Namenverzeichnis," which gives in alphabetical order the names of the scholars whose articles or books are named in the body of the work, with references back to the numbered items which describe articles or books. For a notice, by C. Knapp, of vols. liii-iv, covering the years 1926, 1927, 1928 see *The Classical Weekly*, xxiii, pp. 158-159.

The Year's Work in Classical Studies, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philosophy," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

To *The Loeb Classical Library* (see YEAR BOOKS, 1911-1929) additions were made, on the Greek side, of versions of Aristotle, *Physics* (the first of two volumes), P. H. Wicksteed and F. M. Cornford; Arrian, *History of Alexander and India*, E. I. Robson; Athenaeus, *Deipnosophistai* (the fourth of seven volumes), C. B. Gulick; Josephus, *Jewish Antiquities* (the fourth of eight volumes: Books i-iv of the *Jewish Antiquities* are here translated), H. St. J. Thackeray; Plato,

Timaeus, *Critias*, *Cleitophon*, *Menaeus*, *Epistles*, R. G. Bury; Plato, *Republic* (the first of two volumes, covering Books i-v), P. Shorey; Strabo, *Geography* (the seventh of eight volumes covering Books xv-xvi), H. L. Jones. On the Latin side there were added translations of Cicero *Pro Quinctio*, *Pro Roscio Amerino*, *Pro Rosci Comoedo*, *Contra Rullum*, J. H. Freese; Florus *Epitome of Roman History*, E. S. Forster, and Nepos, J. C. Rolfe (in one volume); Livy (the fifth of thirteen volumes, covering Books xxi-xxii), B. O. Foster; Ovid, *The Art of Love*, and *Other Poems*, J. H. Mozley. On *The Loeb Classical Library* see *The Classical Weekly*, vol. xxiv pp. 1-4, 9-11, 17-18.

The great *Lexicon Plautinum*, by G. Lodge, was very greatly advanced by the publication of vol. ii, parts vi and vii, pages 481-672. This part contains the articles "Quidem . . . Sapiō." Sixteen hundred pages of this monumental work have appeared; it is gratifying to know that the manuscript of the remaining 190 pages is ready. It is hoped that the remaining two parts will be published in 1931. This work is the most extensive undertaking that any American classical scholar has thus far, single-handed, essayed and accomplished.

In *The American Journal of Philology*, li, appeared "Bucephalas and his Legend," A. R. Anderson; "When did Alexander Reach the Hindu Kush?" C. A. Robinson, Jr. (the author thinks "that Plutarch's statement of a four months' halcyon by Alexander in Persis should be cut to seven weeks, so that Alexander may spend the winter of 330-29 at the Hindu Kush, and the next two winters at Zariaspa and Nautaca respectively"). "A Yale Papyrus and a Reconsideration of the Chronology of the Year 238 A.D.," P. W. Townsend; "The Authenticity of Letter 41 in the Julio-Basilian Correspondence," Sister Agnes Clare Way (there is "a growing tendency of scholarship, based on the scores of subject-matter and manuscript tradition, to consider the letter unauthentic"); "Tradition in the Epithalamium," A. L. Wheeler (material preserved by certain Greek rhetoricians, material derived from lost Greek epithalamia, was used by Roman poets; through a study of this material we gain increased knowledge of the epithalamium); "On the Use of the Term 'Ellipsis,'" H. C. Nutting; "Lucretius and Thomson's Autumnal Fogs," Gertrude G. Cronk; "Hittite and Indo-European Nominative Plural Declension," W. Petersen; "Vocalic Alternation in the Disyllabic Base in Indo-European," Louis H. Gray; "Chariton and his Romance from a Literary-Historical Point of View," B. E. Perry ("Chariton . . . is the truest spokesman of the culture upon which the Greek erotic romance in its beginnings rests . . ."); "The *Lex Lutatia* and the *Lex Plautia De Vi*," J. N. Hough; "Authorship of the *Ciris*," R. B. Steele (the *Ciris* is one of the poems of the *Appendix Vergiliana*; Professor Steele inclines to the view that the *Ciris* is a youthful work of Vergil); "Roman Census Statistics from 508 to 225 B. C.," T. Frank; "Vergil and Pollio," H. Bennett; "Particularism in the Roman Empire during the Military Anarchy," C. E. Van Sickle; "Medea's Waxing Wrath," J. E. Harry.

From *Classical Philology*, xxv, may be mentioned "The *Babylonians* of Aristophanes," G. Norwood; "Petronius in the Mediaeval *Florilegia*," B. L. Ullman; "The Silkworm of Aristotle," W. T. J. Forbes; "Boccaccio's Knowledge

of the Life of Vergil," C. G. Osgood; "Virgil's Knowledge of Greek," H. R. Fairclough (at the end of this paper the author asks, "can we longer tamely submit to the reckless and unfounded assertions that have been published by certain scholars that Virgil had an indifferent knowledge of Greek?"); "The Magic Elements in Roman Prayers," E. E. Burriess; "Contrast and Repetition as Devices in the Technique of Character Portrayal in Roman Comedy," O. L. Wilner; "How Thucydides Wrote His History," W. K. Prentice; "The Text of Petronius in the Sixteenth Century," B. L. Ullman; "Extenuating Circumstances in Athenian Courts," A. P. Dorjahn; "Episodes in Old Comedy," G. Norwood; "Silence in Tragedy and the Three-Actor Rule," A. C. Schlesinger (the author's conclusion is ". . . I hope this paper may help to lay the ghost of the three-actor rule by removing some apparent evidence for it. May the attention of the reader be directed instead to the lean effectiveness of the Greek dramatic masterpieces"); "Senatorial and Civil Years in Athens," B. D. Meritt (by 407-406 "the old senatorial year had ceased to exist as a separate entity. When it passed out of existence it could, of course, no longer be used as a chronological framework for the records of state expense . . ."); "Livy's Account of the Equites," H. Hill ("... Livy conceived of a double grouping of *equites* under the republic: first, the eighteen centuries of *equites equo publico*; and, second, the *equites equo privato*, whose qualification was the *census* . . ."); "The Athenian *Proedroi*," S. B. Smith; "St. Chrysostom and the Greek Philosophers," P. R. Coleman-Norton; "Ancient Texts of Terence," L. W. Jones; "Interrelation of the Latin Poets Under Domitian," R. B. Steele; "Mediaeval Latin Vocabulary, Usage and Style: As Illustrated by the *Philobiblon* (1345) of Richard De Bury," C. C. Mierow; "The Wooden Horse," W. F. J. Knight ("... The wooden horse of Troy was a magical, not a tactical device, intended to break the magical potency of the ring-wall of Troy . . .").

In *The Classical Journal*, xxiv, xxv appeared "Dionysius of Syracuse—Financier," C. J. Bullock; "The Vogue of Ovid since the Renaissance," R. H. Coon; "The Nationality of Vergil," Leanora R. Furr (the author seeks to show, by an examination of Latin inscriptions, that the *Gens Vergilia* and the *Gens Magna*, the *gentes* respectively of Vergil's father and mother, were of Samnite origin; she refuses to believe that Vergil was of Celtic origin. She concludes thus: "... Vergil is a genuine Italian singing the glories of his own race"); "Tennyson and Lucretius," O. L. Wilner; "The Earliest Prose Work of Athens," G. Norwood; "Plato, Artist and Puritan," W. R. Agard; "Political Campaigns in Roman Municipalities," Eva M. Sanford; "Light Reading from the Papyri," Adelaide B. Hawes (by an examination of *Oxyrhynchus Papyri* i-xvii, 1898-1927, the author seeks to throw light on the life of the Greek common people); "The Conflict of Languages in the Roman World," R. J. Bonner; "Some Mediaeval Conceptions of Vergil and their Origins," E. T. Sage; "Vergil's Detractors," N. W. DeWitt; "Zoologically Speaking," Lillian B. Lawler (a title defective at once in taste and in syntax for an article in which the author discusses the attitude of the Romans toward animals); "Navigation on the Tiber," J. E. Eubanks; "What do we know About Vergil?," T. Frank; "The Aeneid as a Work of Art," J. W.

Mackail; "Vergil and the Tragic Drama," N. W. DeWitt; "Virgil, an Appreciation," T. R. Glover; "Virgil the Magician," E. K. Rand; "The Present Status of the Virgilian Appendix," H. W. Prescott; "The Later Tradition of Vergil," M. B. Ogle; "The Influence of Virgil Upon the Forms of English Verse," H. R. Fairclough; "Some Remarks on the Character of Aeneas," C. Knapp; "The Function of the Gods in Vergil's Aeneid," Dorothea C. Woodworth; "The Development of the Character of Aeneas," G. Howe; "Catullus—A Pivotal Personality," F. M. Debatin.

The Classical Weekly, xxiii-xxiv, contained the following articles: "Vergil's Treatment of Trees in the Aeneid," T. W. Valentine; "The Objects of a Roman's Prayers," E. E. Burriess; "The Art of Terence," L. A. Post; "The Influence of Isocrates' Political Doctrines on Some Fourth Century Men of Affairs," M. L. W. Laistner; "Homeric Litotes," F. P. Donnelly; "Marcus Caelius Rufus," M. M. Odgers; "Imagination in the Study of the Classics," G. Lodge; "The Literary Interpretation of Caesar," G. Lodge; "The Loeb Classical Library—Recent Additions," C. Knapp; "Greek and Roman Weather Lore of Winds," E. S. McCartney; "Schiller and Vergil," E. S. Gerliard; "Homer and Sir Arthur Conan Doyle," S. E. Bassett (by a study of a posthumous story by Sir Arthur Conan Doyle Professor Bassett disposes of the criticism directed against inconsistencies in Homer; in a subjoined comment Prof. C. Knapp applies the argument to the inconsistencies in the Aeneid); "The Use and Worship of Fire Among the Romans," E. E. Burriess; "Ambrose and Cicero," M. B. Emeneau; "Vergil and the Roman Forum," H. F. Rebert.

In *Transactions and Proceedings of the American Philological Association*, lx, which contains the papers read before the Association at its meeting of December, 1929, the following articles appeared: "The Preludes to Plato's *Laws*," L. A. Post; "The Relationship of Hittite to Indo-European," E. H. Sturtevant; "The Fate Motive and its Echoes in the *Oresteia*," J. W. Pugsley; "Homer and the Cult of Heroes," R. K. Hack; "The Murderers of Laius," W. C. Greene; "Tiberius' Refusal of Divine Honors," Lily R. Taylor; "The Sociative Ablatives," B. M. Allen; "Plutarch and the Ruler Cult," K. Scott; "The Character of Clytemnestra in the *Agamemnon* of Aeschylus," Florence M. B. Anderson; "Scheria and the Phaeacians," A. D. Fraser; "The Manuscripts of the *Integumenta* on the *Metamorphoses* of Ovid by John Garland," L. K. Born; "The Distinctive Character of Enjambement in Homeric Verse," M. Parry; "Evidence from Early Roman Religion Concerning the Growth of the City," Inez G. Scott.

From the *Philological Quarterly*, ix, we may mention "Die Urform des Einganges in der Attischen Tragödie," W. Nestle; "Aristotle's Pity and Fear," M. T. Herrick; "Hypermetric Lines and Interlinear Hiatus in Latin Hexameter Verse," Alice H. Carpenter; "Taylor, Aristotle, and Blake," F. E. Pierce.

In England the more accessible depositories of the results of classical study are *The Year's Work in Classical Studies* (see the second paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. The articles in *The Classical Review* are very numerous, and are in consequence very short. Their combined value, however, is great. From *The Classical Quarterly*, xxiii, we mention "Ancient Italian Beliefs Concerning the

Soul," H. J. Rose; "Nerikos," A. Shewan (the author holds that there was only one town with the name Nerikos; he considers various views concerning the location of that one town); "An Alleged Anomaly in Pindar's Metric," C. M. Bowra; "Terence Quotations in Servius," J. D. Craig; "Plato and Allegorical Interpretation," J. Tate ("... Plato, far from giving an impetus to allegorism, actually placed a curb on it by compelling those who respected the poetic traditions to admit that the poets often expressed mere opinion and not truth..."); "Anaxagoras' Theory of Matter," F. M. Cornford; "The Year of the Armistice, 423 B.C.," H. T. Wade-Gery; "Priscian's Quotations from Terence," J. D. Craig; "Historical Elements in the Story of Coriolanus," E. T. Salmon; "The Dating of Plautus' Plays," W. B. Sedgwick; "The Seventh and Eighth Platonic Epistles," L. A. Post.

There remains only space enough to mention a few of the more important books that have come to the writer's attention. Since it is, in general, clear from its title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their authors' names. In a few instances a needed word of commentary is added:

W. Aly, *Formprobleme der Frühen Griechischen Prosa*; W. N. Bates, *Euripides, A Student of Human Nature*; F. Beckmann, *Geographie und Ethnographie in Caesar's Bellum Gallicum*; C. H. Beeson, *Lupus of Ferriceras as Scribe and Text Critic* (this is a study of Lupus's autograph copy of Cicero, *De Oratore*; the book presents also a facsimile of the manuscript, Harleianus 2736); R. J. Bonner and Gertrude Smith, *The Administration of Justice from Homer to Aristotle*, vol. i; C. M. Bowra, *Tradition and Design in the Iliad*; J. Burnet, *Essays and Addresses*; A. Calderini, *Aquileia Romana: Recherche di Storia e di Epigrafia*; R. G. Collingwood, *The Archaeology of Roman Britain*; P. E. Corbett, *The Roman Laws of Marriage*; H. R. Fairclough, *Love of Nature Among the Greeks and the Romans*; T. Frank, *Life and Literature in the Roman Republic*; E. W. Gardiner, *Athletics of the Ancient World*; C. B. Gulick, *Goodwin's Greek Grammar*, revised; M. T. Herrick, *The Poetics of Aristotle in England*; L. Herrmann, *Les Masques et les Visages dans les Bucoliques de Virgile*; R. Hope, *The Book of Diogenes Laertius, Its Spirit and Its Method*; M. A. Johnstone, *Etruria Past and Present*; G. Lugli, *The Classical Monuments of Rome and its Vicinity*, vol. i, translated from the Italian, by G. Bagnani; J. W. Mackail, *The Aeneid, Edited with Introduction and Commentary*; A. Meillet, *Aperçu d'une Histoire de la Langue Grecque; Mélanges Paul Thomas, Recueil de Mémoires Concernant La Philologie Classiques* (this volume, containing over 750 pages, is a tribute to a distinguished classical scholar, Paul Thomas, Professor Emeritus in the University of Ghent). The seventy-eight papers cover a wide variety of topics. Two are by Americans: "Notes on the Andria of Terence," Charles Knapp, of Columbia University, and "Les Idées de Platon et l'Évolution d'Aristote," Paul Shorey, University of Chicago.

C. W. E. Miller, *Selections from the Brief Mention of Basil Lanneau Gildersleeve* (this splendid work consists of selections from the comments which, under the title of "Brief Mention," Professor Gildersleeve, who, for forty years, was editor of *The American Journal of Philology*, used

to make, in issue after issue, on classical matters. The range of these comments was extraordinary; they had a profound interest and a great charm. Many a reader, on receiving his copy of *The American Journal of Philology*, looked first to see what was to be found there by way of "Brief Mention." These comments were, in effect, often reviews of books and articles, especially such as dealt with Greek syntax and Greek authors); J. S. Morgan, K. McKenzie, C. S. Osgood, *The Tradition of Vergil: Three Papers on the History and Influence of the Poet*; J. L. Myres, *Who Were the Greeks?*; B. Nardi, *The Youth of Virgil*, Translated from the Italian by B. P. Rand; A. Neuberger, *The Technical Arts and Sciences of the Ancients*, Translated from the German by H. L. Brose; E. K. Rand, *A Walk to Horace's Farm, and In Quest of Virgil's Birthplace*;

I. A. Richmond, *The City Wall of Imperial Rome*; Gisela M. A. Richter, *The Sculpture and the Sculptors of the Greeks*; G. McN. Rushforth, *Latin Historical Inscriptions Illustrating the History of the Early Empire*, second edition; Catharine Saunders, *Vergil's Primitive Italy*; M. Schuster, *Tibull-Studien*; H. H. Scullard, *Scipio Africanus in the Second Punic War*; L. R. Van Hook, *Greek Life and Thought*, revised edition; A. Walde, *Lateinisches Etymologisches Wörterbuch*, third edition, by J. B. Hofmann (two out of ten parts have appeared); W. L. Westermann, *Upon Slavery in Ptolemaic Egypt*; W. Will, *Vergil*; W. J. Woodhouse, *The Composition of Homer's Odyssey*.

PHILOLOGY, MODERN. In the survey presented in the 1929 YEAR BOOK, attention was called to the fact that because the spirit of internationalism was rapidly becoming the prevailing tendency of modern times—due in the main in the linguistic field to the extraordinary progress made by the radio, which renders uniformity of speech imperative—the struggle for predominance was confined to a few major languages, with English in the van, while the vast number of minor languages and dialects were threatened with swift and total annihilation. The natural consequence of the above-mentioned tendency was, as was anticipated in our survey of 1929, a revival of nationalism, which, interpreted linguistically, signifies merely an effort on the part of the minor nationalities to preserve the speech of their forebears.

Hardly had the YEAR BOOK gone to press when M. Tesnière, of the University of Strasbourg, whose many years of study of this subject assured him the rank of authority, stated that the injection of nationalism and race-feeling into the struggle for linguistic precedence had not only served to add coals to the fires of bitter political strife in Europe, but had further rendered the linguistic map as complicated, if not more complicated than ever.

Thus in the latter weeks of 1929 the Belgian Government resigned when it found itself unable to solve the problem as to whether French or Flemish should be the language of the University of Ghent. The new government of Premier Jaspas, after devoting its entire attention to this linguistic question for several weeks, finally yielded to the demands of the champions of Flemish and voted on February 27 to convert the University of Ghent into an entirely Flemish institution. To an outsider this appeared to be a very just solution to this vexing problem since the other state university of Belgium, Liège, was French-speaking, while in the two leading municipal uni-

versities of the country, Brussels and Louvain, the official language was also French. Until this decision was rendered, then, the Flemish population, though in the majority, could claim no state university as their cultural centre. Furthermore, since judges—and hence advocates—as well as other public officials previously had been educated only in the use of the French language, the Flemish-speaking element of the population, consisting mainly of peasants, had little to hope for in the way of public justice. Though Premier Jaspar urged in his address to Parliament that every high official should be bi-lingual, he nevertheless foresaw the difficulties presented by the language question and, therefore, prudently remarked that, since it was difficult for a Walloon to learn to read Flemish, the Flemish champions could not reasonably expect Walloon officials to be able to read documents in Flemish before some time within the first twenty years of their public service.

It is sad to relate, but on all sides we behold evidences of the destruction of linguistic barriers and the rapid disappearance of minor languages and dialects. That philologists are fully aware of this regrettable situation may be seen in their strenuous efforts to save what they can from the cataclysm with which they are threatened. They are therefore stressing the study of secondary languages concomitantly with the study of the primary languages in the various countries wherein more than one language is spoken. In this way they hope that at least some of the vestiges of the ancient dialects may be preserved. To the Linguistic Society of America belongs the credit of having sought to meet this problem in the most satisfactory as well as practical manner. Though only six years old this Society has achieved the most important results of any similar organization in America, or, for that matter, in any other country. Oblivious to all racial and linguistic differences this Society inaugurated its work with the publication of a quarterly review, *Language*, devoted to the study of all languages. This was followed by the creation of a series of monographs, free of all discrimination against dialects no matter how insignificant they may appear. But the greatest achievement of the Society lay in the inauguration, at Yale University in the summer of 1928, of the Linguistic Institute which had no parallel in any country.

The third and most successful session of the Institute was held at the College of the City of New York from July 7 to August 15, 1930. Thirty-three courses were offered, in all of which there were registrants save in Old Spanish and Turkish. Besides such general subjects as Introduction to Linguistic Science, Psychology of Language, and Study of Dialects, of which the teachers were Professors Sturtevant, Esper, and Roedder respectively, the offering included the following courses, the names of the teachers being listed in parentheses: Sanskrit and Pali (both by Prof. Edgerton of Yale); Comparative Grammar of Greek and Latin (Prof. Bolling of Ohio State University); Greek Dialects (Prof. Sturtevant of Yale); The Language of the Homeric Poems (Prof. Bolling); *La Langue et le Style latins* (Prof. Jules Marouzeau of the University of Paris); Ocean and Umbrian and Linguistics in High School Latin (Dr. Kerns of New York University); The Classical Element in English (Prof. Richardson of Yale); Vulgar Latin (Prof. Muller of Columbia); Old French (Dr. Winifred Sturdevant of Columbia);

Old and Middle Irish (Prof. Gerig of Columbia); Gothic and Old Norse (Prof. Schurt of George Washington University); Old High German (Prof. Roedder of the College of the City of New York); German Etymology and Old Saxon and Old Frisian (Prof. Prokosch of Yale); Old English (Prof. Lotspeich of the University of Cincinnati); Middle English (Prof. Reuning of the University of Breslau); History of the English Language (Prof. Lotspeich); American English (Prof. Kurath of Ohio State University); Lithuanian and Church Slavonic (Prof. Senn of the University of Kaunas, Lithuania); Comparative Grammar of the Semitic Languages, Hebrew and Arabic (Prof. Blake of Johns Hopkins University); and Finnish (Dr. Olli of the College of the City of New York).

Another indication of the rapid trend of events—impossible to anticipate even as late as three years previously—might be seen in the following: In 1925, as mentioned in our survey of that year, Prof. Edward Sapir, of the University of Chicago, published in the *Romanic Review* (XVI, 1925, 244-256) an article entitled, "Memorandum on the Problem of an International Auxiliary Language." Therein he urged the creation of a new international auxiliary language embodying the basic principles of all the leading languages of the world and adapted to meet the requirements of modern civilization. The article, though signed by Professors Leonard Bloomfield, Franz Boas, J. L. Gerig and G. P. Krapp, and distributed widely by the International Auxiliary Language Association whose headquarters are at New York, met with no immediate response of any importance. However, in March, 1930, exponents of six rival international languages—Esperanto, Ido, Nov-Esperanto, Occidental, Novial, and Latin without Inflections—held a meeting on linguistic research at Geneva under the chairmanship of the venerable and distinguished Otto Jespersen of Denmark.

According to Mrs. Dave H. Morris of New York, who was the sole representative of IALA at the meeting, it was the consensus of opinion of those present that one neutral language, secondary to all national languages and in conflict with none, be developed and established in accordance with general principles proposed by Professor Sapir. The experts further recommended that a committee selected by IALA undertake the task of preparing this new language. Accordingly announcement was made at the annual meeting of IALA held at the home of Mrs. Morris in New York on May 19 that preliminary work along these lines had been begun.

"That the need of such a language is now greater than ever," says the July-September issue of the *Romanic Review* (p. 281), "may be seen from the reports of the World Power Conference held at Berlin during June 16-25. According to the *New York Times*, the 4000 delegates to this conference hailed from more than fifty different countries. As a consequence of the number of tongues spoken there, it was found necessary to install head-telephones in the conference room, over which the speeches were translated into six different languages." It was obvious, therefore, that international language experts now realize the utter hopelessness of attempting to impose on the modern world a language that has emerged suddenly "full-armed," like Athena, from the brain of a single scholar. Furthermore, it required no prophet to foresee that, unless immediate co-

operative action were resorted to, unskilled persons would hasten to supply this need in much the same way as they have rather heedlessly created the technical terms required by most recent inventions such as the aeroplane, moving and talking pictures, radio, etc. It is to be hoped, therefore, that this projected language will become a reality.

GENERAL—Larz Ringbom's *The Renewal of Culture* (New York) is a translation from the Swedish of this work on the history and development of culture. Ales Hrdlicka's *The Skeletal Remains of Early Man* (Washington, D. C.) is a revised and enlarged edition of a study published in 1914 by the Smithsonian Institution under the title *The Most Ancient Skeletal Remains of Man*. G. Eliot Smith's *Human History* (New York, 1929) consists of a history of man's cultural development. E. M. Whishaw's *Atlantis in Andalusia* (London) supplies evidence of an advanced civilization prevailing in Spain at least 10,000 years B.C. W. Kirkconnell's *The European Heritage* (New York) consists of a synopsis of European cultural achievement as traced through racial stocks in some fifty languages and dialects. E. A. Speiser's *Mesopotamian Origins* (Philadelphia) comprises a study of the basic population of the Near East, issued by the University of Pennsylvania. F. Howell's *Aryan Blood in Modern Nations, and the Howells* (Boston) presents an account of the history of the Aryan race down to the formation of modern nations, supplemented by a history of the Howell name and a genealogy of the family. H. E. Proctor's *A Peculiar People or a Nation and a Company of Nations* (London) may be also called a peculiar book since the author attempts therein to link the ancient Britains to ancient Chaldaea. A. Mawer's *Problems of Place-Name Study* (Cambridge, Eng.) is a thoroughly scholarly work containing certain general methods that may be applied to the study of place-names.

In folklore and primitive religion we have A. H. Krappe's *The Science of Folklore* (New York), a comprehensive and critical introduction to the subject; Sir J. G. Frazer's *Myths of the Origin of Fire* (ib.), a valuable study by the author of the famous *Golden Bough*; Padraic Colum's *Orpheus: Myths of the World* (ib.), an anthology of myths belonging to various civilizations; E. Bendann's *Death Customs* (ib.), a new volume in "The History of Civilization" series; W. R. Dawson's *The Bridle of Pegasus* (London), consisting of studies in magic, mythology and folklore; H. R. Evans' *History of Conjuring and Magic* (Kenton, Ohio), a revised edition of a brief study of its history from the earliest times to the end of the eighteenth century; Geza Roheim's *Animism, Magic and the Divine King* (New York), being a study of cults, customs, charms, philtres, the meanings of myths and legends and the development of religions; G. H. Luquet's *Art and Religion of Fossil Man* (New Haven, Conn.), a study showing that primitive man believed implicitly in the survival of the dead, translated from the French by J. T. Russell, Jr., with a preface by G. G. MacCurdy; Odell Shepard's *The Lore of the Unicorn* (Boston), an attempt to trace the history of the fabulous animal through myths and legends of many peoples; and F. E. Williams' *Orokaiva Society* (London), being a study of the native people of Papua, with special emphasis on their ritual and their religious belief.

With relation to more modern religion we have F. J. Badcock's *History of the Creeds* (New York),

a study in religious history; and, of course, one cannot omit studies devoted to the ever-active adversary, without whose pernicious negative influence all positive religious thought might be impossible, i.e. the Devil. Father Louis Coulange's *Life of the Devil* (ib.), translated from the French, traces his history as well as his influence in the evolution of Christianity, while two French psychologists, Maurice Garçon and Jean Vinchon, give in *The Devil* (ib.), translated by H. Guest, a historical, critical, and medical study of the Evil One, for they consider belief in him to be a pathological problem.

This section may be closed with mention of the following important works: C. Wissler, *Introduction to Social Anthropology* (ib.), a discussion of the social aspects of primitive civilizations; W. C. D. Dampier-Whetham, *History of Science* (ib.), treating the development of scientific thought and its relation to philosophy and religion; M. Cary and E. H. Warmington, *Ancient Explorers* (ib., 1929), containing a study of the means and methods of ancient pioneers of travel; D. Hunter, *Paper Making through Eighteen Centuries* (ib.), presenting a history of the subject more comprehensively than in the same author's previous work on *Old Paper Making*; A. Neuburger, *The Technical Arts and Sciences of the Ancients* (ib.), relating their knowledge of mining, metal- and wood-work, agriculture, ceramics, etc.; and W. R. Dawson's interesting study of the history of ancient medicine entitled *The Beginnings: Egypt and Assyria* (ib.), which reveals that even in those pre-Christian times hartshorn, castor oil, cummin and coriander were used.

REFERENCE WORKS. Whatever may be our opinion regarding contemporary contributions to philology, literature, art, etc., there is no doubt that this epoch may be characterized, like that of fourteenth-century France, as one of great compilations, such as works of reference, dictionaries, etc. To mention but a few we have T. L. Stedman's *Practical Medical Dictionary* (New York) in an eleventh revised edition; J. Thomas's *Universal Pronouncing Dictionary of Biography and Mythology* (Philadelphia) in a fifth edition, revised and enlarged; *Crowell's Dictionary of Business and Finance* (New York) in a third revised edition; A. Macz and M. R. Paul's *Dictionary of Color* (ib.) which contains a list of all the color names recorded in the English language as well as a guide for relating colors with their names; Florence H. and H. E. Wilson's *Bibliography of American Biography* (Philadelphia); and the first volume of the *Dictionary of Industrial Administration* (London), comprising the organization, administration and management of modern industry, to be published in two volumes, edited by John Lee.

ARCHAEOLOGY. Excavations made in the past few years by archaeologists the world over have not only added much to our knowledge of ancient art and life, but have also contributed valuable information to hitherto little known languages. A good example may be seen in Hittite, to the study of which these discoveries have brought new zest. Inscriptions recently uncovered have in fact almost revolutionized our knowledge of this ancient people and its language. A few general works relating to this field may, therefore, be of interest. The ninth revised edition of C. M. Coburn's *The New Archaeological Discoveries* (New York, 1929) reveals their bearing upon the New Testament, and especially upon the life and

times of the primitive church. R. V. D. Magoffin's *Magic Spades* (*ib.*) is a popular survey of the recent great discoveries in this field. G. L. Robinson's *The Sarcophagus of an Ancient Civilization* (*ib.*) relates principally to the finds at Petra, Edom and the history of the Edomites. H. H. von der Osten and E. F. Schmidt's *The Alishar Huyuk* (Chicago, Ill.) is the first of two volumes which are to present the discoveries made in the first season's excavations at the Alishar Mound in Anatolia. C. Leonard Woolley's *Dead Towns and Living Men* (New York) contains the record of this famous archaeologist's adventures in the buried cities of the ancient world. The same scholar's *Ur of the Chaldees* (*ib.*) supplies a survey of seven years of excavation carried on by him as Director of the Joint Expedition of the British Museum and the Museum of the University of Pennsylvania to Mesopotamia. Finally *The Field Museum-Oxford University Expedition to Kish, Mesopotamia* (Chicago, Ill., 1929) contains an account of archaeological findings made in that field from 1923 to 1929. See article on **ARCHAEOLOGY**.

NON-INDO-EUROPEAN—Mention should be made here of *Confucianism* (New York) in which Prof. F. Starr, of the University of Chicago, presents not only a lucid and simple account of the life and thought of the great Chinese philosopher but also the development and changes that his ideas have undergone in modern times. Other works include L. C. Arlington, *Chinese Drama from the Earliest Times until Today* (Shanghai), a panorama of its history, including synopses of thirty Chinese plays; Kate Buss, *Studies in the Chinese Drama* (New York), a brief informative account; B. Marsh, *China and Japan in Our Museums* (Chicago), which contains the beginnings of a survey of resources available in North America for a study of the Orient; and finally W. Cohn, *Chinese Art* (New York), comprising a study of Chinese architecture, bronzes, sculpture, ceramics, etc. In *Shambhala* (*ib.*), the well-known artist, N. Roerich, provides a number of legends, parables, and notes that he collected in the course of his journey through Central Asia and especially Tibet.

Turning now to Africa, we have Prof. W. L. Westermann's interesting work entitled *Upon Slavery in Ptolemaic Egypt* (New York), which contains the text and translation of a fragment of a royal ordinance, dated about 198-7 B.C., of Ptolemy V, fixing the amount of the tax on sales of slaves in ancient Egypt. The author also supplies new information on law, taxation, and slavery in the Hellenistic period. Other works on Egypt include *Great Ones of Ancient Egypt* (New York), being historical studies by various Egyptologists, with portraits in color by Winifred Brunton; L. Spence, *The Mysteries of Egypt* (Philadelphia), relating the secret rites and traditions of the Nile; M. A. Murray, *Egyptian Sculpture* (New York), an account of its various styles and periods; and S. Clarke and R. Engelbach, *Ancient Egyptian Masonry* (London), a detailed study of the technical methods of construction used by the architects of ancient Egypt.

On Central and South Africa the more important contributions are: H. Obermaier and H. Kühn, *Bushman Art* (London), an elaborate account of the origins, technique, and meaning of the cave-paintings of South Africa; Capt. R. S. Ratray, *Akan-Ashanti Folk Tales* (London), collected in the Gold Coast Colony; Lobagoda, *The*

Folk-Tales of a Savage (New York), being tales of the West African bush; and F. Hives, *Ju-Ju and Justice in Nigeria* (London), which describes the thrilling experiences of a district commissioner in suppressing the terrorism exercised over the Aro people by priestly fetiches.

INDO-IRANIAN—Whatever may be one's personal reactions to the merits or demerits of the claims of India and England, two facts of extraordinary impressiveness stand forth, revealing the great value to mankind of India's historic culture: On the one hand, the splendid idealism of Sir Rabin-dranath Tagore and Mahatma Gandhi and, on the other, the extraordinary rôle being played by the recently emancipated women in the spiritual and intellectual revolution that was taking place in a country that has hitherto been supposed to be fettered by traditions of sequestration of women. No Occidental country—not even, in fact, the World War—can offer similar parallels. Surely then a civilization that can produce such admirable forces is worthy of being studied and preserved.

With this idea in view a group of Hindu and American scholars and devotees requested the writer of these lines to direct their efforts in the creation of an India Academy, the seat of which was located in New York and incorporated under its laws. One of the first important accomplishments of the India Academy has been, thanks to the combined efforts of Dr. J. C. Chatterji of Bombay, Dr. K. F. Leidecker and Hari Govil of New York, to bring about for the first time in history a federation of all Indian societies functioning in America. This much desired federation having become a *fait accompli*, the Academy could proceed to carry out its aims, which include instruction in the languages, philosophy and culture of India, and the publication of the various works which have been offered to it by American and Hindu scholars.

Among the valuable works relating to India that have recently come from the press were the following: *The Aryabhatiya of Aryabhata* (Chicago), an ancient Indian work on mathematics and astronomy, translated with notes for the Chicago University Press by W. E. Clark; *The Cloud Messenger* (New York), a translation from the Sanskrit of an Indian love lyric by C. King, issued in the Wisdom of the East Series; J. J. Meyer, *Sexual Life in Ancient India* (2 vols., *ib.*), a study in the comparative history of Indian culture; I. B. Horner, *Women under Primitive Buddhism* (*ib.*), an account of how Buddhism emancipated women from masculine domination; D. Goddard, *The Buddha's Golden Path* (London), a manual of practical Buddhism based on the teachings and practices of the Zen sect; N. K. Sidhanta, *The Heroic Age of India* (New York), a new volume in the History of Civilization Series; Wendell Thomas, *Hinduism Invades America* (*ib.*), a study of the rapidly growing influence of Indian thought; M. T. Titus, *Indian Islam* (London), a religious history of Islam in India; and, finally, *The Lights of Canopus* (*ib.*), described by J. V. S. Wilkinson, which is devoted to a MS. of Indian fables of the greatest period of Moghul art.

As for Persian, it may be stated that the year 1930 marked an epoch in the history of the *Rubaiyat* of Omar Khayyam, the most famous poem in Persian literature. It was first announced on April 8 that Prof. Mahfazul Huy of the Presidency College, Calcutta, revealed to the

members of the Asiatic Society there that he had discovered a manuscript of the poem, containing 206 quatrains, that was made in 1505, only 46 years after the priceless copy now in the Bodleian Library at Oxford. As this manuscript, transcribed by Sultan Ali of Mushbad, is illustrated with beautiful miniatures, it is now obvious that the first illuminated copy of the poem was produced by the East and not by the West as heretofore believed. Secondly, at least three new editions of English translations of the poem were issued: that of Dr. F. Rosen (London) which is claimed to be a more accurate version than Fitzgerald's, since it is based on recently discovered Persian manuscripts, and which also contains a new work attributed to Omar, *The Book of New Year's Day*; a new edition of Edward Fitzgerald's translation (New York) with an introduction by George Saintsbury and illustrations by Willy Pogany; and finally a facsimile of the first edition of the Fitzgerald translation (Denver, Colo.). In addition to the above translations of the *Rubaiyat*, mention may be made of Sir Arnold T. Wilson's *Bibliography of Persia* (London), and Basil Gray's *Persian Painting* (*ib.*), a survey prepared in readiness for the 1931 exhibition of Persian art at the Royal Academy, London.

EUROPEAN, GENERAL—Before considering the ancient languages and literatures of the different nations of Europe, it behooves us first of all to note a few general works of interest to students of philology and allied subjects. Of an historical character we note first C. E. Russell's *Charlemagne: First of the Moderns* (Boston), a biography of the great King of the Franks; the second volume of A. A. Vasiliev's *History of the Byzantine Empire* (Madison, Wis.), which goes from the Crusades to the Fall of the Empire in 1453; *The Cambridge Medieval History* (New York), planned by the late J. B. Bury, of which the fourth volume deals with the Victory of the Papacy; the fifth and concluding volume of T. F. Tout's *Chapters in Medieval Administrative History* (London); H. Lamb's *The Crusades* (New York), a popular account of the great period; and A. Hyma's *Erasmus and the Humanists* (*ib.*), a new volume in the Landmarks in History Series. The cultural aspect of the history of medieval Europe is dealt with in Preserved Smith's monumental *History of Modern Culture* (*ib.*) of which the first volume covers the period from 1543 to 1687; and E. Friedell's *Cultural History of the Modern Age* (New York), a translation from the German of the first volume discussing the Renaissance and the Reformation.

Special studies include A. C. Flick's *Decline of the Medieval Church* (2 vols., New York), a study of the forces operating within and without the Church from the 13th to the 15th centuries; C. J. Offer's *The Bishop's Register* (*ib.*), a translation of documents from medieval episcopal registers designed to illustrate their contents as well as various phases of medieval episcopal activity; the fourth volume of G. G. Coulton's *Life in the Middle Ages* (Cambridge, England), dealing with monks, friars, and nuns; O. Cargill, *Drama and Liturgy* (New York) in which the author attempts to prove the existence of a theatrical profession from the earliest times; C. Gill's, *Studies in Midland History* (Oxford), dealing with various aspects of medieval city and municipal development; Dorothy Hartley's *The Old Book* (London), an anthology of the Middle Ages, including love songs, carols, recipes, prayers, ser-

mons and curses; and Helen Waddell's delightful collection of *Medieval Latin Lyrics* (London), with text and translation on opposite pages.

ENGLISH. The outstanding event in English studies during the year 1930 was the founding of the Facsimile Text Society. The aim of this most welcome organization, which owes its existence to the vision of Prof. F. A. Patterson of Columbia University, is to reproduce for the use of scholars works, both ancient and modern, which are not easily available because of their rarity. During the year some eight volumes were published, and several more were proposed as soon as the necessary funds were forthcoming.

The early period of English literature is represented by the following works: T. Allison, *English Religious Life in the Eighth Century* (New York), a study based on contemporary letters; *Sir Gawain and the Green Knight* (*ib.*, 1929), an Anglo-Saxon romance translated by T. H. Banks; Ruth E. Messenger, *Ethical Teachings in the Latin Hymns of Medieval England* (*ib.*), dealing especially with the seven deadly sins and the seven principal virtues; *Everyman* (*ib.*), a new edition of the famous morality play; *A Treasury of Middle English Verse* (*ib.*), edited and rendered into modern English by Margot R. Adamson; and T. Burke, *The English Inn* (*ib.*), a descriptive and historical account.

The fascinating Geoffrey Chaucer, to whose extraordinary popularity attention was called in the 1929 YEAR BOOK, still held the limelight, if we may judge by the following works devoted to him and his poetry: Dorothy Martin, *A First Book about Chaucer* (New York), being a brief introduction to a study of him; O. F. Emerson, *Chaucer Essays and Studies* (Cleveland, O.), consisting of articles collected from scholarly periodicals and published as a memorial to the author by his colleagues; *The Canterbury Tales of Geoffrey Chaucer* (2 vols., New York), comprising the original text, together with a version in modern English verse; and *The Canterbury Tales* (*ib.*), translated into modern English verse by F. E. Hill. Special mention should be made here of Prof. A. J. Barnouw's beautiful rendering into Dutch verse of Chaucer's *Canterbury Pilgrims* under the title *De Vertellingen van de Pelgrims naar Kantelberg door Geoffrey Chaucer* (Haarlem).

Among important works devoted to the Elizabethan period we may note Sir Sidney Lee, *Elizabethan and Other Essays* (Oxford), consisting of selected essays and lectures edited by F. S. Boas; J. S. Harrison, *Platonism in English Poetry* (New York), a new edition of this study in 16th and 17th century poetry; the second volume of *Tottel's Miscellany* (Cambridge, Mass.), a new edition of the famous anthology of Elizabethan poetry edited by H. E. Rollins; the first book of Spenser's *Faery Queene* (New York), edited by G. N. Pocock; A. V. Judges, *The Elizabethan Underworld* (*ib.*), a collection of Tudor and early Stuart tracts and ballads, recounting the lives and deeds of Elizabethan thieves and vagabonds; and W. S. Davis, *Life in Elizabethan Days* (*ib.*).

Sir Richard Paget's *Human Speech* (New York), while dealing with speech in general, is of primary interest to students of the English language. It consists of observations, experiments, and conclusions as to the nature, origin, and purpose, and, finally, possible improvement of human speech. E. Weekley's *The English Lan-*

guage (ib.) is an authoritative work which explains the contribution made to the formation of the English language by Anglo-Saxon, Middle English and Modern English as well as the influences from within and from without that have aided in producing the modern language. Janet R. Aiken's *Why English Sounds Change* (ib., 1929) is a contribution to the history of the language. S. A. Leonard's *The Doctrine of Correctness in English Usage* (Madison, Wis.) is devoted to the development of the language from 1700 to 1800. Janet R. Aiken's *English, Past and Present* (New York) attempts to explain the changes that are continually taking place in the use of the English tongue. E. Weekley's *Adjectives and Other Words* (ib.) not only deals with the origin, history, and use of many English adjectives, but discusses also a great variety of words, of speech characteristics, and of changes in language. G. A. Harttrampf's *Vocabularies* (Atlanta, Ga., 1929) supplies a long list of synonyms, antonyms and relatives. B. H. Clark's *Speak the Speech* (Seattle, Wash.) attacks all efforts at standardizing English, which, the author maintains, will result only in making its users "as indistinguishable from one another as filling stations, and just as interesting." He hopes, therefore, to see an organized movement to encourage provincialism in speech, through which the language can alone preserve its character. Finally, *The Little Oxford Dictionary of Current English* (Oxford) defines some 30,000 commonly used words.

GERMANIC. Unsettled political conditions combined with the high cost of printing, due to the autocratic power wielded by labor organizations, were threatening Germany's century-old renown as the seat of philological erudition. Among the contributions deserving mention are Prof. A. J. Barnouw's *A Middle Low German Alexander Legend* (New York), which had been edited from a newly discovered manuscript in the possession of the author; *Goethe and Faust: An Interpretation* (ib.), being a critical study, with passages newly translated into English verse, by F. M. Stawell and G. Lowes Dickinson; part one of Goethe's *Faust* (Princeton, N. J.), translated by W. P. Andrews, and edited and revised by G. M. Priest and K. E. Weston; *The Sorrows of Young Werther* (London), a new translation of Goethe's novel, with an introduction by Dr. W. Rose; *The Ring of the Nibelung* (New York), a modernized version of Wagner's tetralogy by C. L. Le Massena; and H. G. Atkins's *Heine* (ib.), a biography. In folklore and lexicography we have *Swiss Legends* (ib.), collected and translated by J. S. Kennard; H. W. Mitchell's *Tales from the Swiss Alps* (Chicago), translated from the German; A. Wobell's *German-English Technical and Scientific Dictionary* (New York), containing about 75,000 references and a mass of technical data, numerous chemical formulas, scientific and botanical terms; the fourth edition of E. Christiani, *Bürgerlich Rechts-Lexikon* (Leipzig); and J. Kreppel's *Handwörterbuch für Politik und Wirtschaft die Gegenwart* (ib.), of which the first volume goes as far as Chile. To this may be added the *Tourist's Vade Mecum of Dutch Colloquial Conversation* (ib.), including phrases in general use, vocabularies, tables and imitated pronunciation.

The millenary celebration of the establishment of democratic government in Iceland served to direct the attention of the world to the Scandi-

navian people. In commemoration of this great event we have S. Johnson's *Pioneers of Freedom* (Boston), which is a history of the Icelanders and the Icelandic Free State from 874 to 1262; W. Kirkconnell's *The North American Book of Icelandic Verse* (New York), consisting of an anthology with brief biographical sketches of the poets represented therein; A. Thorgilsson's *The Book of the Icelanders* (*Islendingabók*) (Ithaca, N. Y.), edited and translated, with introduction and notes, by H. Hermannsson; J. A. MacCulloch's *Eddic Mythology* (Boston), the eleventh volume in the *Mythology of All Races Series*; A. Olrik's *Viking Civilization* (New York), a study in the heroic period of Scandinavia, revised after the author's death by H. Ellekilde; T. D. Kendrick's *History of the Vikings* (London), stressing their colonial enterprises; Rosa Hobhouse's *Norse Legends* (New York), retold from the Eddas; and the fifth volume of *Studies and Records* (Northfield, Minn.), a collection of historical papers dealing with Norwegian-American relations, published by the Norwegian American Historical Association.

SLAVIC. The fact that Vernadsky's *History of Russia* (New Haven, Conn.) had passed through a third edition proved the interest of Americans in Russia. F. Nowak's *Medieval Slavdom and the Rise of Russia* (New York) traces the rise of the Slavs to European power. In folklore we have the following interesting works: W. W. Strickland, *Panslavonic Folk-lore* (ib.), translated and compared, with notes, comments, introductions, etc.; Nandor Pogany, *Magyar Fairy Tales* (ib.), illustrated with drawings by Willy Pogany; *Fairy Tales from Baltic Shores* (Philadelphia), consisting of folklore stories from Estonia, adapted and translated by Eugenie Mutt; and Ida Zeitlin, *King's Pleasure* (New York, 1929), containing legends of Serbia.

CELTIC. An epoch in the history of Celtic studies was marked by the publication of Dr. J. F. Kenney's monumental *Sources for the Early History of Ireland* (New York), the first volume of a Columbia University doctoral dissertation which is devoted to the ecclesiastical sources and which appeared at the close of the year 1929. This scholarly work, which was pronounced by Provost E. J. Gwynn of Trinity College, Dublin, as "quite the most important work on *res Celticae* which has appeared since the publication of Thurneysen's *Heldensage*," gives, in its first chapter, in broad synthesis the history of historical writings in Ireland from early times to the present. The succeeding chapters present the ecclesiastical sources, both in manuscript and published form, from the earliest times to about 1170. For the first time a successful attempt has been made to offer critical guidance in the extensive literature of the subject. When complete, the work will include a second volume discussing the secular sources of early Irish history. Another work of great value, notwithstanding the fact that it is of much more technical character, is R. D. Scott's *The Thumb of Knowledge in Legends of Finn, Sigurd and Talesin* (New York), also a doctoral dissertation of Columbia University. Through extensive researches the author has shown that this motif—that the placing of the finger, after touching certain foods, against a tooth produces omniscience—is found in many early literatures.

V. Bertoldi's *Arcaismi e innovazioni al margine del dominio celtico* is an important contribution

to the *Silloge Linguistica* (Turin), dedicated to the memory of G. I. Ascoli, Italy's greatest philologist. Other studies in Irish history include M. V. Ronan's *The Reformation in Ireland under Elizabeth, 1558-1580* (New York), which serves as a sequel to the author's *The Reformation in Dublin, 1536-1558*; J. E. Pomfret's *The Struggle for Land in Ireland, 1800-1923* (Princeton, N. J.), a discussion of Irish land troubles; and D. Gwynn's biography of *Daniel O'Connell: The Irish Liberator* (New York). Irish folklore is discussed in N. J. O'Connor's *There Was Magic in Those Days* (ib.), a fairy tale drawn from ancient Celtic lore; and Padraic Colum's *Cross Roads in Ireland* (ib.), containing sketches of Irish life. *The Journal of the American Irish Historical Society, 1929-1930* (ib.), published under the editorship of the learned Dominick Hackett, contains papers on the achievements of the Irish in the United States. Dr. J. Sampson, author of a standard work on the dialect of the Welsh gypsies, has compiled an anthology of writings on the Romany called *The Wind on the Heath* (London). Prof. T. Gwynn Jones's *Welsh Folklore and Folk Custom* (ib.) is based on manuscript sources and oral tradition as well as on printed books.

Attention has frequently been called herein to the multifarious activities of the American Iona Society. As the Society planned to construct in the city of Inverness a college for the purpose of preserving the Scottish language, traditions and culture, it had in press a volume on the *History and Distribution of the Universities of Great Britain* by Hugh Gunn. Among useful works published during the year 1930 are G. M. Thomson's *Short History of Scotland* (London); A. Morgan's *Makers of Scottish Education* (ib.); and F. R. Hart's *The Disaster of Darien* (Boston), the story of the Scots Settlement on the Isthmus of Darien at the close of the 17th century and the causes of its failure. J. H. Easterby's *History of St. Andrew's Society of Charleston, S. C., 1729-1929* (Charleston) was published by the Society on the occasion of its 200th anniversary.

ROMANCE. French. The Institute of French Studies in the United States, whose publications are issued under the scholarly and efficient editorship of Prof. G. L. van Roosbroeck, continued its activity during the year. Among the publications issued were the following: Bibliography—M. M. Barr, *A Bibliography of Writings on Voltaire (1825-1925)*; A. E. Terry, *Jeanne d'Arc in Periodical Literature (1894-1929)*; L. F. Strong, *Bibliography of Franco-Spanish Literary Relations*. General—R. Caulfield, *The French Literature of Louisiana*. Comparative Literature—H. D. MacPherson, *R. L. Stevenson: A Study in French Influence*; J. Rossi, *The Abbé Galiani in France*; R. D. Scott, *The Thumb of Knowledge in Legends of Finn, Sigurd and Taliesin: Studies in Celtic and French Literature*. Linguistics—E. Cross, *Syncopé and Kindred Phenomena in Latin Inscriptions From the Parts of the Roman World Where Romance Speech Developed*. Old French—E. Brugger, *The Illuminated Tree in Two Arthurian Romances*; H. E. Manning, *La Vie de Saint Thibaut: An Old French Poem of the Thirteenth Century*; J. Harris, *Marie de France: The Lays Gueemar, Lanval and a Fragment of Yonec* (with a study of the life and work of the author). Sixteenth and 17th Centuries—J. L. Gerig, *Antoine Arlier and the Renaissance at Nîmes*; H. D. MacPherson, *Censorship under Louis XIV (1661-1715): Some Aspects of Its Influence*; I. Leaven-

worth, *The Physics of Pascal*; G. L. van Roosbroeck, *The Unpublished Poems of the Marquis de la Fare (1644-1712)*; G. L. van Roosbroeck, *The Genesis of Corneille's "Mélite"*; H. L. Cook, *Georges de Scudéry's La Mort de César* (republished with an introduction); B. Matulka, *Georges de Scudéry's Le Prince Déguisé* (republished with an introduction). Eighteenth Century—D. E. Smith, *D'Alembert's Discours sur la Philosophie*, a facsimile reproduction of the original manuscript; G. L. van Roosbroeck, *Alzirette: An Unpublished Parody of Voltaire's Alzire*; G. L. van Roosbroeck, *L'Empirique: An Unpublished Parody of Voltaire's Mahomet*; G. L. van Roosbroeck and A. Constans, *Polichinelle, Comte de Paonfier: An Unpublished Parody of the Glorieux de Destouches (1732)*; E. H. Polinger, *Pierre Charles Roy, Playwright and Satirist (1683-1764)*. Modern French Literature—S. A. Rhodes, *The Cult of Beauty in Charles Baudelaire* (2 vols.); I. Brown, *Leconte de Lisle: A Study on the Man and His Poetry*. Original and Rumanian Studies—G. L. van Roosbroeck, *Grotesques*; L. Feraru, *The Development of Rumanian Poetry*. The Publications of the Institute of French Studies, Inc., is a non-commercial cooperative and inter-university organization, designed for the service of scholarship in the broad sense of the word.

Important articles published in the *Romanic Review* (New York) include "La Notion de Radical en Français" (pp. 291-295) by A. Meillet, the great philologist of the Collège de France; "Essais de Sociologie linguistique" (pp. 99-115) by Leo Jordan, professor in the University of Munich; and M. Halperin's "The Duke of Saxony and the Date ad quem of Cliges" (pp. 239-242). In "French Names in Our Geography" (pp. 195-203), H. G. Bayer supplies some curious etymologies of American place-names, selected from his collection of over 5000 such names of French origin.

Old French is represented by the following publications: Jane Beardwood, *Rhyme of Latin and French Words in Old French* (Phila.), a doctoral dissertation of the University of Pennsylvania; F. G. Yeandle, *Bertrand de Bar-sur-Aube, Chanson de Geste* (New York), a Columbia dissertation edited according to MS BXIX (Royal) of the British Museum; Lucy A. Paton, *Sir Lanclot of the Lake, A French Prose Romance of the Thirteenth Century* (ib.); E. Brugger, *Der sog. Didot-Perceval*, published in the *Zeitschrift für Romanische Philologie*; and Bro. L. L. Boll, *The Relation of Diu Krône of Heinrich von dem Türlin to La Mule sanz Frain, A Study in Sources* (Washington, D. C.), a dissertation of the Catholic University of America.

In the 14th and 15th centuries we note Mabel D. Holmes, *Joan of Arc* (Phila.), a biography; F. S. Shears, *Froissart: Chronicler and Poet* (London); and E. Gabory, *Alias Bluebeard* (New York), the biography of Gilles de Raiz, the notorious criminal who was a lieutenant of Jeanne d'Arc.

Contributions to the French Renaissance include *A Distinguished Family of French Printers of the 16th Century: Henri and Robert Estienne* (Brooklyn, N. Y.), a monograph in an edition limited to 400 copies; A. Gide, *Montaigne* (New York), an essay in two parts, translated from the French; H. D. Sedgwick, *Henry of Navarre* (Indianapolis, Ind.), a biography of Henry IV of France; and the following works devoted to

famous women of the period: J. D'Orliac, *The Moon Mistress: Diane de Poitiers* (Philadelphia), the life of a celebrated French beauty, translated by F. A. Atkinson; P. Rival, *The Madcap Queen* (New York), the story of Marguerite de Navarre, translated from French; and J. H. Mariejol, *A Daughter of the Medici* (ib.), the romantic life of Margaret of Valois, also translated from the French.

Among contributions to the seventeenth century may be cited, J. Chevalier, *Pascal* (ib.), a biographical and critical study of the French philosopher, translated from the French; C. C. J. Webb, *Pascal's Philosophy of Religion* (Oxford), a collection of lectures; *The Fables of Jean de La Fontaine* (2 vols., New York), translated by J. Auslander and J. LeClercq; and two interesting biographical and critical studies of Molière (New York), one by J. Palmer and the other by H. Ashton. Studies in the eighteenth century include Georg Brandes, *Voltaire* (2 vols., ib.), a biography; N. L. Torrey, *Voltaire and the English Deists* (New Haven, Conn.), a Yale doctoral dissertation, forming Vol. I in the Yale Romanic Studies; H. Hoffding, *Jean Jacques Rousseau and His Philosophy* (ib.), a translation from the Danish; J. Carpentier, *Rousseau, The Child of Nature* (New York); Anna E. Burlingame, *Condorcet: The Torch Bearer of the French Revolution* (Boston); C. D. Brenner, *L'histoire nationale dans la Tragédie française du XVIII^e siècle* (Berkeley, Calif.); M. Souriau's edition of Bernardin de Saint-Pierre's *Paul et Virginie* (Paris); and the following of special interest to Americans: R. L. Hawkins, *Mme. de Staël and the United States* (Cambridge, Mass.), a monograph based on her correspondence with various Americans; S. W. Jackson, *Lafayette* (New York), a bibliography; Lida R. McCabe, *Ardent Adrienne* (ib.), a biography of the wife of Lafayette; and G. Chinard, *The Letters of Lafayette and Jefferson* (Baltimore).

Finally, one or two titles of the nineteenth century may be noted: R. Escholler, *Victor Hugo* (New York), translated from the French by L. Galantière; R. Kayser, *Stendhal, or the Life of an Egoist* (ib.), a biography translated from the German; M. G. Wright, *The Role of the Auditive Sense in Baudelaire's Works* (Phila.), a University of Pennsylvania doctoral dissertation; and O. Theis, *Sprache und Stil Mérimées in seinen Novellen* (Frankfurt).

To conclude, the following historical studies are of interest to those who are seeking the background of French literature and philology: J. S. C. Bridge's masterly *History of France* (vols. 3 and 4, London); C. Guignebert, *A Short History of the French People* (2 vols., New York), a translation from the French; F. Funck-Brentano, *The Old Regime in France* (ib.), a study of the social organization of pre-Revolutionary France, translated from the French; C. J. H. Hayes, *France, a Nation of Patriots* (ib.); and R. M. Haig, *The Public Finances of Post-War France* (ib.). See FRENCH LITERATURE.

ITALIAN. An important cultural organization founded during the year was the Society of Friends of the University of Rome, of which the officers were: J. J. Freschi, President; Dean A. Bouton of New York University and J. L. Gerig, Vice-Presidents; and Philip Le Boutillier, Treasurer. Among the founders were Dr. Nicholas Murray Butler, President of Columbia University; Dr. John Grier Hibben, President of Princeton Uni-

versity; Robert Underwood Johnson and Henry P. Fletcher, former Ambassadors to Italy; Dr. John H. Finley, William Guggenheim, Sam. A. Lewisohn and Jerome Hess, all of New York. The aim of the organization is to aid in constructing the American Section of the Città Universitaria of the University of Rome.

Of general interest are J. Jud, *La Valeur documentaire de l'Atlas linguistique de l'Italie et de la Suisse méridionale*, reprinted from the *Revue de Linguistique romane*; *Lares, Organo nazionale per le tradizioni popolari*, founded by P. Toschi; G. Pedrotti and V. Bertoldi, *Nomi dialettali delle piante indigene del Trentino e della Ladinia dolomitica* (Trento); E. G. Gardner, *The Arthurian Legend in Italian Literature* (New York), a study in literary history; E. H. Byrne, *Genoese Shipping in the Twelfth and Thirteenth Centuries* (Cambridge, Mass.), a publication of the Medieval Academy of America; and T. Okey, *Venice and Its Story* (New York), a new and revised edition.

Special studies include Rev. A. R. Bandini, *Dante's Purgatorio* (San Francisco), a lineal and rhymed translation; Gertrude Leigh, *New Light on the Youth of Dante* (Boston), the course of the poet's life prior to 1290 traced in the *Inferno*; T. C. Chubb, *The Life of Giovanni Boccaccio* (New York); *The Decameron of Giovanni Boccaccio* (ib.), in two translations, one by R. Aldington (2 vols.) and the other by Frances Winwar (2 vols.); J. Burkhardt, *The Civilization of the Renaissance in Italy* (ib.), translation of the fifteenth German edition; and B. Castiglione's *The Book of the Courtier* (ib.), a reprint of the translation of a famous Italian work of the sixteenth century. See ITALIAN LITERATURE.

SPANISH. Probably the leading Spanish society of the day is the Hispanic Society of America, located in New York. It not only possesses the largest and finest Spanish library—excepting, of course, the Biblioteca Nacional of Madrid—in the world, but issues every year numerous beautifully printed and very valuable publications. The most important one of the past year is Elizabeth Du Gué Trapier's *Catalogue of Paintings (14th and 15th centuries) in the Collection of the Hispanic Society of America*. Other works of importance published during the year are J. D. Bordona, *Spanish Illumination* (2 vols., New York), a history from the Visigothic period through the sixteenth century; Marie R. Madden, *Political Theory and Law in Medieval Spain* (ib.), a philosophical study of the theory of law and monarchy as developed in medieval Spain, issued by Fordham University; W. T. Walsh, *Isabella of Spain: The Last Crusader* (ib.), a biography of the famous Queen; P. E. Douglass, *The Comedia Ypolita* (Philadelphia), a University of Pennsylvania doctoral dissertation; Miguel de Cervantes, *Don Quixote* (New York), Ozell's revision of the translation of Peter Motteux; and A. Flores, *Lope de Vega* (ib.), a biography of the Spanish dramatist. General works include E. Mérimée, *History of Spanish Literature* (ib.), translated from the French, revised and enlarged by S. G. Morley; J. P. de O. Martins, *History of Iberian Civilization* (Oxford), a translation from the Spanish; and *Spain* (New York), a reference book on Spain for readers and travelers and a guide to studies in Spanish history, literature, art, etc., edited by E. A. Peers. See SPANISH LITERATURE.

Important works devoted to South America include S. G. Inman, *Trailing the Conquistadores* (ib.), a brief historical survey; T. Maynard,

De Soto and the Conquistadores (ib.), a biography; Stella B. May, *The Conqueror's Lady: Ines Suarez* (ib.), the story of a Spanish adventures who accompanied the Conquistadores to America; C. S. Braden, *Religious Aspects of the Conquest of Mexico* (Durham, N. C.), a historical study of a neglected aspect of the invasions of the Conquistadores; R. B. C. Graham, *José Antonio Paéz* (Philadelphia), a study of his adventures; and biographies of *Ferdinand Magellan* (New York), by E. F. Benson; and *Simon Bolívar* (ib.), by Hildegard Angell. See SPANISH-AMERICAN LITERATURES.

PHONETICS. T. Larsen and Frances C. Walker's *Pronunciation* (Oxford) is a practical guide to American standards. Other works are H. B. Gough, Lousene Rousseau, Mary E. Cramer and J. W. Reeves, *Effective Speech* (New York); Helen Stockdell, *Speech Made Beautiful* (ib.), and W. Johnson, *Because I Stutter* (ib.).

Exponents of the international language Interlingua seem to be the only ones who are showing signs of activity. During 1930 they issued the fifth volume of *Schola et Vita, Organo de Academia Pro Interlingua* (Milano) and *Interlingua* (Cavoretto-Torino) by G. Peano.

PHILOSOPHY. The leading problem before American philosophers for 20 or 30 years has been the nature of our knowledge of Nature. Is it direct or indirect? The New Realists in their volume answered the question affirmatively, while the Critical Realists in their polemical reply took the negative. The former group followed the lead of James's *Does Consciousness Exist?* and *A Pluralistic Universe* and espoused the views which have become known as epistemological monism and psycho-physical monism. The Critical Realists, on the other hand, reasserted the old epistemological, and psychophysical, dualism of Descartes and Locke, developed it in various directions to meet the new attack of its modern assailants, but confined themselves for the most part to polemic against the opposing views of the New Realists. Unfortunately the New Realists, after the first madness of conciliation, found that they did not agree among themselves as much as they had believed or hoped for, and the same was true, later, of the New Realists. The doctrinal development in both groups proved diffusive and the same lack of agreement was to be found among the corresponding groups in England.

Prof. Arthur O. Lovejoy's volume, *The Revolt against Dualism* (1930), which expounds and compares all these diverse and tangled doctrines in a masterly, thorough, and comprehensive treatise, was, therefore, especially welcome. We are accustomed, of course, to the thoroughness and rigor of Broad's epistemological discussions, but Professor Lovejoy's thoroughness is of a different sort. It is scholarly. Indeed, there is hardly a writer on the subject in question who is not appraised and criticized in a careful, sympathetic fashion on the basis of ample quotations. In the meantime the general issues and the unity of the argument as a whole are not forgotten. His chief contention is that perceptual knowledge is always mediated by ideas or sense-data, and that these are never identical with the surface of any physical object and form no part of nature.

Lovejoy's criticism of the various recent forms of New Realism (the opposing doctrine) is intricate and ingenious. Thus "Objective Relativism," a view which originates with Professor Whitehead, is guilty, according to the writer, of a num-

ber of fatal confusions. That motion is always relative to a reference frame, for one thing, does prove that all the qualities of physical objects are relative to, or "respective to," an organism. Such a view turns out, on analysis, to be an impossibility. If "an object has a quality" always means "an object has a quality from this place," Objective Relativism ends in complete subjectivism and skepticism, for the whole world in that case is only "for me" or for my organism at a particular point of space-time.

Professor Lovejoy has also made an elaborate attack on Bertrand Russell's theory of "aspects," and tries to show that this attempt to unify mind and matter and to eliminate the duality of knowledge is also fallacious. Nor does he spare his fellow Critical Realists. Santayana and Drake are taken to task for their theory of essences. According to this theory the essence is revealed in sense perception, but since an essence can be in more than one place at the same time, the same essence may belong to the very physical object which the essence, qua sense-datum, mediates the knowledge of. Thus the essence we see may belong to the existent which we can know only indirectly. Professor Lovejoy argues that, if the essence is seen, it is in space and time; it therefore cannot be an essence, and therefore cannot belong to the existent, or physical object in the sense in which it is given in sense-perception.

The old argument for epistemological dualism, based upon the time-lapse between the physical event which leads to a perception and the perception itself, is also reaffirmed and defended against the contentions of Bertrand Russell and followers of Einstein. It must be admitted that the event in a star in the Milky Way, which is responsible for my seeing a point of light, occurred some hundred years before my actual perception. At the time of the perception, however, the same event is not occurring, and perhaps the star has passed into a different phase, or disappeared. Therefore I cannot be seeing the star but a sense datum which mediates my knowledge of the star. The facts of Relativity do not vitiate this argument a bit, according to Professor Lovejoy. For there is no proof on the General Relativity Theory that a time-interval does not exist between the event in the distant star and my seeing of the star.

Closely related with this point is a discussion by the same writer, in *The Journal of Philosophy*, November, 1930, "The Dialectical Argument against Absolute Simultaneity," in which the Relativistic denial of Absolute Simultaneity is criticized and rejected. In the January number of *The Philosophical Review*, Professor Lovejoy also published another article concerning the curious consequences of the modern doctrine that the passage of time is relative to the frame of reference and the speed of light. It is supposed that Peter goes off at about the speed of a light ray to a distant constellation leaving his twin brother, Paul, behind on the earth. When he returns, still a young man, he finds that Paul has long been dead but that his grandchildren still remember him. The writer believes that these paradoxes, raised by the recent sensational developments of modern physics, have the most important implications in metaphysics and epistemology and should be studied critically by philosophers, for philosophical conclusions, he insists, should not be accepted passively at the hands of the scientists.

Another significant contribution to philosophy in 1930 was the English translation of Jean Nicod's brilliant book, *Foundations of Geometry and Induction*. It consists of two extended essays, treating of two of the most difficult problems in the logic of science. The first, which is concerned with the foundations of geometry, seeks to bridge the gap between the sense-data of experience and the constructions of pure geometry in a bold and original fashion. Professor Whitehead had attempted to solve this problem by the method of "extensive abstraction" but Nicod finds this procedure unsatisfactory. His own method is to begin with simple sensations and to build constructs out of our experience which will square with points, lines, and figures of pure geometry. The second essay on "The Logical Problem of Induction" is partly a criticism and partly a vindication of J. M. Keynes's, *A Treatise on Probability* (1921) and rivals this book in its depth and penetration. Together they constitute according to Bertrand Russell the last word in the theory of induction. Nicod attacks Keynes's doctrine, however, at various points. He takes exception to the proof of various theorems, maintains that induction by simple enumeration is fundamental and indispensable and denies that Keynes's attempt to show that an increasing probability approaches certainty is successful.

Two important books have also appeared in the field of aesthetics: *Beauty, An Interpretation of Art and the Imaginative Life*, by Helen Huss Parkhurst, and *Philosophy of Art*, by C. J. Ducasse. The former book is distinguished from most treatments of beauty by being beautiful itself and by dealing with such minor senses as smell and taste. The author believes that touch, taste, and odor may provide aesthetic experiences of great richness, but little structure. This is why they have been neglected. In style and bias the book resembles Santayana's *Sense of Beauty*. Although the book is systematic, it is also rich in concrete insights and well-chosen illustrations. In Professor Ducasse's book the interest in aesthetic theory, as opposed to art itself, is much more in evidence. It contains a lucid treatment of the usual theories and interesting original variations of the doctrines of Groos and Santayana. The book suffered, nevertheless, a great deal of criticism at the annual meeting of the American Philosophical Association at Charlottesville, Virginia, and Professor Monroe put his criticism in the form of an amusing myth. Professor Monroe also published a book during the year, *Great Pictures of Europe*, in which he attempted to demonstrate his curious theory that scientific rigor may be attained in aesthetics, if only critics can be brought by careful study and comparison to agree with one another.

In the philosophy of religion Prof. William P. Montague's book, *Belief Unbound*, constitutes a brief but original contribution. It is an attempt to establish a religion of freedom and happiness, without recourse to a dogmatic theology or a dogmatic ethics or any other superstructure save the eternity and impartiality of the Platonic Ideas.

Phenomenological literature was enriched by the publication of three books of especial merit. Emmanuel Levinas's volume, *La Theorie de l'Intuition dans la Phénoménologie de Husserl*, is the first general book on the philosophy of Husserl to appear in France. In 1925 M. Hering had published *Phénoménologie et philosophie religieuse* but since then only an article or two had

appeared. Now the French public is provided with a very valuable introduction to phenomenology which ought to prove extremely fruitful of results, especially in a country in which philosophy has taken, in general, such a different turn of development. Professor Levinas' book is extremely lucid and well-arranged, and he has been at great pains to document his statements by frequent references to the *Logische Untersuchungen* and the *Ideen*. Unfortunately Husserl's last book, *Transcendentale und Formale Logik* was published too late in the year 1929 to be included in Professor Levinas's excellent survey.

Martin Heidegger's *Kant und das Problem der Metaphysik* will also prove of great interest to many readers, who are interested to know the relation between the phenomenological developments and the Kantian philosophy. On the one hand, phenomenology owes a great deal to the transcendental analysis of the *Critique of Pure Reason*. On the other hand the denial of the possibility of metaphysics contained in that work is quite opposed to the new tendency toward ontology among the phenomenologists. Heidegger undertakes the analysis of some parts of the mental life which Kant had neglected and he attempts to rescue metaphysics from the subversive attack of the great "Critique."

The eleventh volume of the *Jahrbuch für Philosophie und Phänomenologische Forschung* also contains three important contributions to this field. Herbert Spiegelberg furnishes a long ontological analysis of "the essence of the Idea" in which a number of Husserl's doctrines are expanded and elaborated. Eugen Fink writes on "representation and image" while Hermann Mörchén discusses "the faculty of imagination according to Kant." The most interesting article is that of Oscar Becker on the Logic of Modality, in which he contrasts the "material implication" of Russell with the "strict implication" of C. I. Lewis and attempts a formal development of the latter. Brouwer's intuitionism is also discussed and Ernst Cassirer's *Philosophie der Symbolischen Formen*. Though Dr. Becker's article is very brief, it gives an intimation of the sort of work that phenomenologists should do in the future, if their analyses are to be put on a formal and rigorous basis. The publication of the third volume of Bolzano's *Wissenschaftslehre*, which continues the logical analysis of ideas and judgments of volumes i and ii in a remarkably original and painstaking fashion, should prompt to further developments of phenomenology and, perhaps, bring to light one of its main sources.

Among the historical books published during the year none was more welcome than Professor McKeon's *Selections from Medieval Philosophers*, vol. ii, *From Bacon to William of Ockham*. This volume contains selections from the writings of Roger Bacon, Saint Bonaventura, Saint Thomas Aquinas, Mathew of Aquasparta, John Duns Scotus, and William of Ockham, clearly and faithfully translated, and calculated to show the main trends and controversies of the great period of scholastic philosophy. Professor McKeon presents, for example, the clearest picture of the agreement and opposition of Scotus and Saint Thomas; he shows us the complicated and ubiquitous influence which Plato, Aristotle and Saint Augustine have had upon the development of the scholastic systems; and his brief introductions give us a more thorough and comprehen-

sive view of these writers than is afforded by the other books which have appeared in English.

Perhaps the most important philosophical event of the year was the seventh International Congress of Philosophy which met at Oxford, England, in September. The presence of Croce and Whitehead added a special glamour to the occasion, and distinguished philosophers from France, Germany, Italy, Soviet Russia, India, America, and several other countries came together to exchange ideas and establish friendship. A high point of the congress was Professor Montague's defense of the experienced necessity in the causal relation. Another exciting session was furnished by Professor Hans Driesch's sweeping attack on the school of phenomenology. To phenomenologists present on this occasion Professor Driesch's criticisms seemed to admit of easy answers but unfortunately there was no time for them to speak.

BIBLIOGRAPHY. As usual there is presented a list of the more significant works of the year in the field of philosophy, their titles indicating the general subject matter and scope. They are as follows: George Boas, *A Critical Analysis of the Philosophy of Emile Meyerson*; Bernard Bolzano, *Wissenschaftslehre*, vol. iii; Emil Brehier, *Histoire de la Philosophie*, vol. ii; *Le Dix-huitième Siècle*; R. D. Carmichael, *The Logic of Discovery*; Rev. M. C. D'Arcy, S.J., *Thomas Aquinas*; John Dewey, *The Man and His Philosophy*; Homer H. Dubs, *Rational Induction: An Analysis of the Method of Science and Philosophy*; C. J. Ducasse, *Philosophy of Art*; Howard O. Eaton, *The Austrian Philosophy of Value*; Warner Fite, *The Living Mind, Essay on the Significance of Consciousness*; Martin Heidegger, *Kant und das Problem der Metaphysik*; Edmund Husserl, *Jahrbuch für Philosophie und Phänomenologische Forschung*; *Lectures on Ethics* by Immanuel Kant, translated from the German by Louis Infield; John Laird, *Knowledge, Belief, and Opinion*; E. Levinas, *La Théorie de l'Intuition dans la Phénoménologie de Husserl*; Arthur O. Lovejoy, *The Revolt against Dualism*; Wincenty Lutoslawski, *The Knowledge of Reality*; Richard McKeon, *Selections from Medieval Philosophers—From Roger Bacon to William of Ockham*; William P. Montague, *Belief Unbound*; Jean Nicod, *Foundations of Geometry and Induction*; Helen Huss Parkhurst, *Beauty: An Interpretation of Art and the Imaginative Life*; Joseph Ratner, *Spinoza on God*; George Santayana, *The Realm of Matter*; Herbert W. Schneider, *The Puritan Mind*; S. Harrison Thomson, *Johannis Wyclif*; William Pearson Tolley, *The Idea of God in the Philosophy of St. Augustine*; Wilbur Marshall Urban, *Fundamentals of Ethics*; John W. Warbeke, *The Searching Mind of Greece*; Leo Richard Ward, C.S.C., *Philosophy of Value: An Essay in Constructive Criticism*.

PHIPPS, HENRY. An American steel manufacturer and financier, died in Great Neck, N. Y., Sept. 22, 1930. He was born in Philadelphia, Pa., Sept. 27, 1839, and attended the public schools in Allegheny City, Pa. In 1861, five years after he had begun as an office boy with Dillworth and Bidwell, spike manufacturers in Pittsburgh, he became the partner of a former employer in a distributing agency for the Du Pont Powder Company. At this time he was also part owner of a small iron mill, and his success in these ventures led to his association with Andrew Car-

negie and to his becoming eventually, next to Carnegie, the largest stockholder in the Carnegie Steel Company. On the organization of the United Steel Corporation in 1901, Mr. Phipps became one of the directors. He devoted much money and time to philanthropic and artistic undertakings. He contributed large sums to aid in the treatment and elimination of tuberculosis in Philadelphia and other cities and gave more than \$3,000,000 to the University of Pennsylvania for the endowment of the Phipps Institute for tuberculosis research and treatment. He also endowed the Phipps Psychiatric Clinic in connection with the Johns Hopkins University, and in 1907 gave \$1,000,000 to a commission for the erection of model tenement houses in New York City. The LL.D. degree was conferred on him by the University of Pennsylvania in 1913.

PHONETICS. See PHILOLOGY, MODERN.

PHOSPHATE ROCK. North Africa, including Algeria, Egypt, Morocco, and Tunis produces about 50 per cent of the world's supply of phosphate rock, and, consequently, interest attached to the approval of the French Senate in January, 1930, of the plan for constructing a railway from Tebessa to the frontier of Tunis so as to afford a new rail outlet for phosphate from Algeria. The leading phosphate producing company in Algeria was increasing its plant capacity and production, while in Tunis increased production also was recorded for 1930. In the United States about 36 per cent of the world's supply is produced, and this comes, in the main, from Florida. According to the U. S. Bureau of Mines, the production of phosphate in the United States in 1929 was 3,761,164 long tons valued at \$13,153,259. In the same year there was imported for consumption 44,899 long tons valued at \$469,171, and exported 1,142,746 long tons valued at \$5,386,919. In 1930 the American phosphate producers maintained their activity, and their exports, which afford an indication of the state of the industry, amounted to 65,992 tons of high-grade hard phosphate rock valued at \$447,432, and 1,159,129 tons of land pebble and other phosphate rock valued at \$5,180,110, the corresponding values in 1929 being \$473,031 and \$4,913,888. Tampa, Florida, is a leading port for export and Japan took the place of Germany as the leading market for American phosphate rock. During the year improved technical methods found increased application, so as to save fine phosphate hitherto lost. Other chemical treatments were in process involving furnace processes, acid decomposition methods, and the treatment of superphosphates. See FERTILIZERS.

PHOTO CELL. See PHYSICS.

PHOTOGRAPHY. Each year, the difficulties of photography under poor lighting conditions are becoming fewer as materials of increased sensitiveness, lenses of larger aperture and greater correction, and accessories such as flash powders are made available. Equipped with fast panchromatic film and a good camera, and having available flashlights which were noiseless, odorless, and smokeless, the press photographer of 1930 could tackle almost any assignment with confidence and bring back good pictures.

The quality of sound motion pictures continued to improve throughout the year as greater knowledge was gained in their preparation and application. Considerable thought and experimentation was devoted to the plan of introducing a wider film than the standard 35 mm. for taking and possibly showing sound pictures but no large-

scale production was attempted. A number of sound pictures by a two-color subtractive process were released for theatre presentation but this programme was curtailed during the latter part of the year along with others affected by the business depression.

Demonstration of television in variety theatres showed that encouraging progress was being made in this interesting field. The use of amateur motion picture sets was extended by the introduction of toy outfits selling at low prices. Further uses were made of photography, notably in astronomy, where it aided in the discovery of the ninth major planet, in aerial records for long-distance photography, and in analysis of high-speed motion.

APPLICATIONS OF PHOTOGRAPHY. Greater control of retouching of negatives or positives for photomechanical processes was made possible by the introduction of the Peridak process, which consists in using the two chemicals, hypo and potassium ferricyanide (Farmer's Reducer) in various proportions and at certain temperatures. Intaglio photolithography, originally introduced previous to 1900, was revived during 1930 under the name "offset deep." (*Printing*, 52, Nov. 29, 1930, p. 46 et. seq.) A photocomposing machine designed by Uher of Budapest was marketed, which according to Gamble (*Penrose's Annual*, 33, 1931, p. 1) works with great speed and precision. As each line of printed type or sign is completed, it is photographed automatically on a narrow film strip while the operator continues striking keys for the next line.

There was gradual but marked improvement noted in the quality of sound motion pictures during the year and a fair percentage of these were shown in color by a two-color subtractive process. Although the technical quality of the color process was improved, there was still much to be desired before full benefit of color could be realized (*J. Soc. Mot. Pict. Eng.*, 15, 1930, p. 68). Great interest was shown throughout the year in pictures on wide films, but all producing organizations concerned were proceeding cautiously. A limited number of such pictures were shown in theatres. A picture width-to-height ratio of 1.8 to 1 was agreed upon as proposed by a committee of engineers and film negative widths of 70 mm. and 65 mm. were most favored. Reduction printing to a positive film, intermediate in width between these negative widths and the standard 35 mm. width was considered a practical scheme. (*J. Soc. Mot. Pict. Eng.*, 15: 1930, p. 818.)

Sound picture projection installations were being made rapidly in Europe as well as in Australia, and South America, and an increasing demand was prevalent for pictures in native dialogue. Sound-on-film records appeared to be gaining in favor over disk records. The use of separate films for the sound and picture records for theatre presentation was thought by some to have certain merits. Valuable surveys were made by recognized committees who dealt with methods of silencing cameras and arc lights, the acoustics of set materials, and the use of standard release prints. Most of the tricks of the silent picture were worked out by cameramen for sound picture use.

Improvements in projector mechanisms were numerous, such as redesigning and positioning of the shutter to help reduce the heat on the film gate, the use of a single standard for mounting

two sound projectors, the introduction of new types of lamps, and the simplification in the construction of sound reproducer parts. A non-intermittent projector was demonstrated effectively at the May, 1930, meeting of the Society of Motion Picture Engineers (*J. Soc. Mot. Pict. Eng.*, 15: 1930, p. 20).

Encouraging progress was noted in television and public demonstrations were given of two processes in several American cities and in Europe as part of the regular programme of variety houses. In one of these demonstrations a sound motion picture was televised. (*The Observer*, London, July 6, Aug. 17, 1930.)

Besides their application as an entertainment medium, motion pictures were finding increasing use in other fields, as records of industrial processes, for classroom instruction, for historical and archaeological investigation, for time and motion studies, etc. Fifteen medical films were prepared under a programme in the United States and others were made by continental surgeons recording valuable details of their technique. A camera was perfected, capable of making 40,000 exposures per second, and offered a useful means of studying rapidly moving phenomena. (*Proc. Imp. Acad. Japan*, 5: 1929, p. 334.)

It was estimated that over 200,000 home motion picture projection sets in one form or another had been sold. Several models of new amateur ciné cameras were introduced during the year. One camera was designed to photograph four pictures on each frame of 16 mm. film. Late in the year, several very inexpensive 16-mm. film projectors were marketed, designed as toys for children. A growing interest was apparent in amateur equipment for reproducing sound with pictures, but all sound records for amateur use were on phonograph disks. One instrument combined a radio, a phonograph turntable, and an amateur projector. (*Kinemat. Weekly*, 155: Jan. 23, 1930, p. 67.)

Although a few additive color motion picture processes were being exploited during 1930, the chief interest from a production basis appeared to remain in subtractive methods. A screen plate was introduced using a separable regular screen and a fast panchromatic emulsion which permitted the first color photographs to be made from an airship (*National Geographic Magazine*, 58: Sept. 1930, p. 344). A few processes for making color prints were introduced but the three-color carbon transfer method retained its position as the most satisfactory workable process. A process using dye printing from gelatine reliefs was described by Wheeler for which it was claimed that the final prints could be made from a set of negatives in three hours; subsequent prints at three or four per hour. (*Penrose's Annual*, 33: 1931, p. 142.)

Photographic enlargements several feet long and 40 inches wide were used as murals for the decoration of homes and of business offices (*Commercial Phot.*, 5, May 1930, p. 405). Low magnification photomicrographs (5x to 10x) of small areas on paintings were made to determine the artists' identity (*Il. prog. fot.*, 36: 1931, p. 361). Storch of Vienna made ultra-rapid motion analysis studies of micro-organisms (*J. Soc. Mot. Pict. Eng.*, 15: 1930, p. 223), and Cant of London filmed the growth of normal, and of cancer cells. Progress in the technique of photomicrography with ultra-violet radiation was made by Lucas (*Bell Lab. Record*, 8: August 1930, p. 574),

LONG DISTANCE PHOTOGRAPH MADE ON INFRA-RED SENSITIVE FILM

Taken over Crater Lake, Oregon, of Mt. Ranier, Washington, 266 Miles Distant, by Capt. A. W. Stevens,
U. S. Army Air Corps

Reproduced by courtesy of U. S. National Museum and U. S. Army Air Corps

AÉRIAL PHOTOGRAPH SHOWING PREHISTORIC INDIAN CANALS NEAR MESA, ARIZONA
(ABOUT 1200 A. D.)

PROGRESS IN PHOTOGRAPHY

and by Trivelli and Foster. (*Science Supp.* 72: Nov. 7, 1930, p. 411.)

Further advance was made in aerial photography with the aid of improved equipment and more sensitive film. Over 1500 miles of territory in Alaska were mapped. Capt. A. W. Stevens of the U. S. Army Air Corps made two remarkable long-distance photographs on infra-red sensitive films. In April, 1930, he succeeded in photographing Mount Rainier in the State of Washington from a position 266 miles southward at an altitude of 20,000 feet over Crater Lake in Oregon, as reproduced on the accompanying plate. Later in the summer, he photographed Mt. Aconcagua in the Andes mountains from a position 320 miles away. This picture was taken under the auspices of the National Geographic Society and was the first to show clearly the earth's curvature.

An elaborate system of canals in Arizona, built by Indian engineers about 1200 A.D., were photographed by N. M. Judd of the U. S. National Museum working with U. S. Army air pilots. Most of these are completely invisible from the ground but can be detected easily in the aerial photograph, a specimen of which is shown herewith. When it is impractical to employ an airplane, very satisfactory pictures may be obtained by attaching a camera to a small balloon controlled from the earth as was done by one expedition studying the Megiddo Mound in the plain of Armageddon in Palestine. The work was carried out under the direction of C. Breasted of the Oriental Institute, University of Chicago.

The discovery of the new planet "Pluto" was made possible by photography, although its position had been calculated mathematically some time previously. See ASTRONOMY.

Motion picture studies of heart movements were made by "raying" the heart through a colored lead screen. With the aid of an improved fluorescent screen, a special camera equipped with an $f/1.25$ lens, and a highly sensitive film, x-ray motion pictures were obtained of the chest, throat, and mouth. (*Kinotechnik*, 12: June 1, 1930, p. 336.)

PHYSICAL MEASUREMENTS. A shielded photoelectric cell with a range of 100 to 3000 foot candles was devised by McCoy for the determination of the light values in motion picture sets. (*J. Soc. Mot. Pict. Eng.*, 14: 1930, p. 357.) Two types of portable photometers were made available for photographic use, one of which has the novel feature of a zigzag boundary between the two comparison fields (*Phot. Korr.*, 65: 1929, 218). Three instruments for precise analysis of photographic sound records were designed by Lindvik, namely, a microdensitometer, a sound track densitometer, and a variable slit sensitometer (*J. Soc. Mot. Pict. Eng.*, 15: 1930, p. 201). **Manufacture of Sensitized Materials.** The first commercial panchromatic plates were placed on the market in London in 1906. Since that date, new panchromatic emulsions were introduced for process work, portraiture, aerial and motion picture photography. Late in 1930, a panchromatic plate of extreme speed and increased green and red sensitiveness was introduced. A new class of dyes for panchromatization were developed by Steigmann which sensitize chloride chlorobromide emulsions but not bromiodide emulsions (*Zeit. wiss. Phot.*, 27: Oct. 1929, p. 1). Baines described a new method of determination of silver in photographic papers which

should prove a useful addition to analytical technique (*J. Soc. Chem. Ind.*, 49: Feb. 21, 1930). A descriptive outline was published by Knoche of a series of German patents on methods for the prevention of halation in photographic emulsions. (*Phot. Ind.*, 28: Mar. 5, 1930, p. 298.)

A negative paper film for use in roll film cameras was introduced from which the prints were to be made by reflected light (*Brit. J. Phot.*, 77: May 16, 1930, p. 297). A transparent paper support was announced which could be coated with either a negative or positive emulsion, and was claimed to be suitable for motion picture work (*Kinemat. Weekly*, 159: May 29, 1930, p. 41). A double-coated paper was marketed suitable for use with display illuminators, the back side of the print usually being colored so that by reflected light it showed as an ordinary print and by transmitted light as a colored photograph. (*Studio Light*, 22: June, 1930, p. 1.) The sensitiveness of X-ray films was increased during 1930; one material was introduced which was said to be 50 per cent more effective than previous samples and to be suitable for easy inspection before a window instead of the usual illuminator.

Additional photographic materials were introduced during 1930 possessing infra-red sensitiveness. Babcock used infra-red plates sensitized with neocyanine, and a chloroform solution of this dye as a filter to record the solar spectrum up to wave length 11,500. For the preliminary work, a small dispersion spectrograph was used requiring very short exposures but for the more accurate work a large concave grating spectrograph was employed. Over 350 lines were recorded between wave length 9867 and 11,634. Infra-red materials also were finding greater application for aerial photography.

NEW APPARATUS. No radical improvements in small camera design were noted, although the number of cameras in use having colored coverings appeared to have increased. A series of cameras were introduced by an English firm which were constructed of oxidized brass and fitted with insect-proof bellows especially recommended for use in tropical climates. Improved compact soundproof housings were developed for motion picture cameras for use both with standard 35 mm. film as well as film for color cinematography. Most sound cameras were electrically cranked with the aid of synchronous drives.

A unique lens was described for motion picture work which is equipped with a moving component connected to the shutter mechanism, focusing first on near objects, and lastly on infinity each time the shutter opens and closes during exposure of every frame of a motion picture. (*Bioscope*, 83: May 28, 1930, p. ix.) An English lens of 58 mm. focus working at $f/2$ was reported to be in use in Hollywood for wide film. Telephoto lenses for amateur cine cameras were finding some application.

Printing machines, automatic in operation and of improved design, were made available for both professional and amateur photographers. Self-focusing enlargers found increased use and most professional workers used one or more types of projection printing devices.

Rolling tripods of sturdy construction, microphone booms, and a beam microphone which could be focused like a large search-light were made available for the cameraman taking sound motion pictures. An adjunct for the still cameraman, or the commercial or press photographer,

was a photo-flash lamp consisting of a bulb filled with aluminum foil and oxygen. No smoke, noise, or odors accompanied its ignition either with ordinary house current or with a small flash-light battery. (*Abel's Weekly*, 46: Aug. 23, 1930, p. 233.)

Three types of editing equipment were introduced for use with motion pictures with sound on a disk or film. (*Amcr. Cinematographer*, 10: Feb. 1930, p. 33.) Improvements were noted in motion picture projector design with regard to decreasing fire hazard.

An amateur camera was made available which used 16 mm. film but exposed four pictures on the space usually taken by one frame. The projector used with the film was fitted with a movement working alternately, vertically and horizontally. (*Movie Dealer*, 2: Oct. 1929, p. 19.)

THE PHOTOGRAPHIC PROCESS. Abribat made a useful study of the electrolytic oxidation of photographic developers (*Sci. ind. phot.*, 1: Jan. 1930, p. 1), and Hamer and collaborators gave further facts on the use of desensitizers and sensitizer dyes. (*Phot. J.*, 70: May, June, September, 1930, pp. 232, 374, and 436.)

Certain useful practical tests were suggested on (a) the degree of exhaustion of developers (*J. Soc. Mot. Pict. Eng.*, 15: 1930, p. 389) and (b) on the determination of the presence of hypo in washed prints. (*Brit. J. Phot.*, 76: Nov. 29, 1929, p. 714) and (*J. Soc. Mot. Pict. Eng.*, 14: 1930, p. 419.) Hydrogen peroxide was suggested as having advantages over ammonia for use in hypersensitizing baths. (*Brit. J. Phot.* 77: May 9, 1930, p. 276.)

A toning bath formula was published which contained an oxidizing agent, ammonium persulphate, in addition to the usual chemicals, and was claimed to make possible the production of any tone from a warm black to a rich sepia. (*Studio Light*, 22: Sept. 1930, p. 1.)

A modified bromoil process called "oleobrom" was described which differed from its parent in that the ink was applied with ground-rubber rollers instead of brushes, and the print received a "developing treatment under water immediately between the two inkings" (*Brit. J. Phot.*, 77: May 23, 1930, p. 313).

PHOTOGRAPHIC THEORY. Each year a few new facts are added to the store of knowledge regarding the cause of sensitiveness of photographic emulsions. According to the present state of our knowledge, sensitiveness to light varies with the size and distribution, preëxistent to exposure, of certain "sensitivity specks" (silver and silver sulphide) on the surface of individual silver halide grains. Much evidence exists for the assumption that the latent image produced by visible light lies practically on the surface of the grains. Apparently the mechanism of the formation of the X-ray latent image is different from that of light and there is a much greater probability that centres of developability will be formed within the grains than on their surfaces. (*Phil. Mag.*, 9: Supp. May 1930, p. 787.)

Pauling confirmed the opinion held by several investigators that the lattice energy of silver halides is fundamental for their light absorption and photochemical decomposition, and developed a quantitative expression for the limits of photochemical absorption. (*Phys. Rev.* [2], 34: 1929, p. 954). This work was discussed and criticized by Sheppard and Vanselow (*J. Phys. Chem.*, 34: 1930, p. 2719). Toy and Harrison gave an

expanded account of their work on photoconductance. (*Proc. Roy. Soc.*, 127A: 1930, p. 613 et seq., also NEW INTERNATIONAL YEAR BOOK, 1929, p. 671.)

In an extensive investigation, Wulff and Seidl of Professor Fajans' laboratory, Munich, gave very definite experimental evidence confirming S. E. Sheppard's theory that chemical development involves the production of an absorption complex of developer and silver halide which then decomposes into silver and other products. (*Zeit. wiss. Phot.*, 28: 1930, p. 239).

Trivelli proposed a hypothesis on the formation of the solarized latent image for visible light exposures in which he states that "this phenomenon is mainly restricted to the surface of the grain." (*J. Franklin Inst.*, 209: March, 1930, p. 373.) Solarization in a photographic material results from excessive exposure over the maximum normally given and instead of obtaining greater density on development with increased exposure, less density is obtained until, with still greater exposure, the density again increases slightly. A critical investigation led Trivelli to accept the regression theory upon which his hypothesis was then built. A diminution in the size of the developable centre resulting from the action of halogen liberated by light was advanced as a cause of the first reversal of the solarization. (*J. Franklin Inst.*, 209: January, 1930, p. 37.) Arens, who with several others supported a progression theory of solarization, published data showing that bromide ions were effective in increasing solarization only if present during exposure. (*Zeit. wiss. Phot.*, 28: 1930, p. 91.)

Using photoelectric spectrophotometry of large single crystals of the halides of alkalis and silver, Hilsch and Pohl showed that the product of light action is measurable after exposures of the order of those for the latent image. The absorption spectrum of the latent image was measured and appeared to correspond to slightly aggregated atoms of metallic silver, whereas the product of the alkaline halides is monatomic alkali metal (*Zeit für Physik*, 64, 1930, p. 606).

Quantitative data were published on the effect of red and infra-red radiation on latent images produced with light exposures of different intensities. The bleaching-out of the latent image so obtained is called the Herschel effect. The maximum effect was found to shift to the lower densities as the intensity of first exposure was decreased. (*J. Franklin Inst.*, 207 and 208: 1929, pp. 765 and 483.

A loss to the field of theoretical research was the formal disbandment of the British Photographic Research Association which occurred in November. During the twelve years of its existence, many valuable scientific papers were contributed to the literature by its members. See also SPECTROSCOPY.

BIBLIOGRAPHY. General reviews of photographic progress are published annually by the Society of Chemical Industry (British), the *British Journal of Photography* (London) and the *American Photographic Publishing Company* (Boston, Mass.). A progress report of the motion picture industry is published semi-annually in the *Journal of the Society of Motion Picture Engineers* (New York). The more notable books published during 1930 include: H. M. Cartwright, *Photogravure* (Boston, Mass.); A. E. Krows, *The Talkies* (New York); Various Authors, *Technical Digest* (Hollywood, Calif.); J. R.

Cameron and J. F. Rider, *Sound Pictures and Trouble Shooters Manual* (Manhattan Beach, N. Y.); V. I. Pudovkin, *On Film Technique* (London); W. H. Hays, *See and Hear* (New York); H. H. Sheldon and E. N. Grisewood, *Television* (New York); K. Jacobsohn, *Theorie und Praxis der Hypersensibilisierung* (Berlin); K. Jacobsohn, *Das Arbeiten mit farbenempfindlichen Platten und Filmen* (Berlin); R. R. Rawkins, *Photographic Printing* (London); O. Wheeler, *Photographic Printing Processes* (London); F. C. Tilney, *Principles of Photographic Pictorialism* (Boston); C. W. Ackerman, *George Eastman* (New York.)

Several handbooks and annuals were issued as follows: J. Milbauer, *Chemische Tonungsmethoden*, vol. xiii of *Photofreund Bücherei* (Berlin); *Handbuch der wissenschaftlichen und angewandten Photographie*, edited by A. Hay, 9 vols. (Vienna)—volumes issued during 1930, vol. iv on *Erzeugung und Prüfung lichtempfindlicher Schichten. Lichtquellen*, by H. Lux, M. Andresen. F. Formstecher, R. Jahr, R. Heyne, A. Trumm; vol. vii on *Photogrammetrie und Luftbildwesen*, by R. Hugershoff; *Veröffentlichungen des Wissenschaftlichen Zentral-Laboratoriums der Photographischen Abteilung* vol. i Agfa (Leipzig); *Soviet Photo Almanac* (Moscow); *Kinematograph Year Book* (London); *Year Book of Motion Pictures* (New York); *Cinematographic Annual* (Hollywood).

PHOTOPLAYS. See MOTION PICTURES.

PHYSICAL ANTHROPOLOGY. See ANTHROPOLOGY.

PHYSICAL CHEMISTRY. See CHEMISTRY.

PHYSICS. The year 1930 was one of steady progress in physics. Atom theories converged, atom pictures came to the front again, spectra of atoms and molecules were intensively studied, cosmic physics and biophysics made substantial gains. Einstein arrived at Mt. Wilson to work with the Observatory staff on problems affecting relativity. Michelson built a vacuum tube one-mile long for measuring the speed of light. Many new books on physics by masters made the year notable. For sensational progress, however, applied physics dominated the year 1930. Outstanding were screen grids in radio receiving sets and perfected loud speakers, television with many experimenters and a host of amateurs busy nightly, dial telephone system which automatically transforms dialed numbers into clear audible speech, the Adler planetarium in Chicago giving star study a universal appeal, storage and deferred use of 2500 tons of solid carbon dioxide, a crystal clock devised to keep adjusted within one second for 3000 years.

Other achievements include Claude's power from temperature differences in sea water, Goddard's progress on high-altitude rockets for study of the upper atmosphere, frontal attack on the noise menace of cities, blind flying in fog or night by the U. S. Bureau of Standards system, the rapid increase in popular science in newspapers and in the readiness of research laboratories to open up their bag of wonders for the general public—these are samples of a year full of activity in applied physics. Each subject merits an extended account. The photo cell is a brilliant example.

The photo cell, for example, acts as a relay to ring a bell, turn on a fan or a light, count objects, measure turbidity, warn traffic at intersections, keep illumination at a set value, control

trains, indicate presence of smoke, turn on a fire extinguisher, control mechanical operations, operate talking pictures, operate television systems, transmit speech over a beam of light, give quantitative analyses, time sporting events, transmit still pictures by wire, record speech and music from sound films, measure light and temperature, measure light absorption or reflection, reverse shop machinery by reflected light, and an endless variety of complex reactions which will engage technicians for decades to come.

There are thus a host of industrial uses for the photoelectric cell—counting, sorting by size, form, or color; opening doors, stopping and starting machines—what not? At this writing news comes of a cell which turns on the water when the cup is placed under the faucet. The photoelectric cell is indeed the Aladdin's lamp of modern science, hailed as a device of unlimited applications.

Another development of applied physics was the new grid-glow current plotron tube which can measure 10^{-17} ampere, a current bearing about the same ratio to the current passing through a 50-watt lamp as two drops of water compare to the total volume of water pouring over Niagara Falls in a year. Combined with the photoelectric tube, the new grid-glow tube is an efficient device for measuring the radiant energy from individual stars.

Other new devices, gifts of physics to the world, were numerous. During the year in Pittsburgh there was produced by an electric arc in a nearly perfect vacuum, a temperature said to be equivalent to 900,000° Fahrenheit or 90 times hotter than the sun's surface, as a part of a research on the properties of arcs in vacuum.

An unexpectedly wide use was found for ironless induction furnaces. Some yield a ton of steel per hour, and designs of several times this capacity present no difficulty.

The high efficiency of mercury turbines, 85 per cent as compared with steam plants, 25 per cent, brought enlarged production of mercury and in turn provided for a larger use of mercury, for example, in the production of physical instruments.

A new ultraviolet microscope, reported from the Bell Laboratories, allows 3600 diameters magnification and sharply distinguishes planes of a thinness of ten one-millionths of an inch.

The largest American made telescope mirror (cast at the Bureau of Standards) was being figured by Fecker with an accuracy better than $\frac{1}{600,000}$ of an inch or one-tenth of a wave length of yellow light.

Pease reported the completion of the new 50-foot stellar interferometer devised by Michelson and Pease for measuring the diameters of stars by optical interferometry of the diffraction rings. With this device it is possible to measure a star one one-hundredth of a second of arc, a task equivalent to determining the diameter of a one cent piece at a distance of 250 miles, for example, from Washington to New York. A scientific journal calls this achievement at Mount Wilson "a legitimate scientific sensation."

Many important advances in physics cannot readily be translated into popular terms. Abstruse theories and equations, complex physical constants and numerical data underlying the science of physics are examples. Amid uncertainty and conflict of theories, spectroscopists

have kept steadily advancing in their accurate knowledge of wave lengths in the spectra of both atoms and molecules.

Raman was recognized as 1930 Nobel prize winner for a new type of spectra discovered in 1926 which had eluded keen scrutiny—the spectra of scattered radiation, which promised to throw so much light on atom groups in molecules and on the molecules themselves.

The new International Committee on Atomic Weights hereafter was to publish annually the only official atomic weight table and national tables were not to be issued.

Progress in atomic theory was such that as Swann truly said: "Wave mechanics is so definite that utilizing no experimental data other than the magnitude of the electronic mass, the electronic charge, and that mysterious constant h , which is known as Planck's constant because he first introduced it in the theory of heat radiation, it is possible to calculate from pure theory the mean life of an atom in any excited state."

Credit was due to many workers in spectral measurement which helped to create a new astronomy, and a new atomic conception. Almost sensational theories abound. Dirac's theory of the proton was the year's most astonishing. He assumes that if electrons fill most of the states of negative energy there will be some unoccupied "holes," as he calls them. The motion of these in an external electromagnetic field would appear negative energy giving a charge of $+e$. Dirac concludes that these may be "protons." If an electron of positive energy drops in the hole, the proton and electron are annihilated with emission of radiant energy.

Meggers, at the end of the year, had just completed his first measurements of the spectrum of the newly discovered element rhenium, atom No. 75, finding hyperfine structure characteristic of odd numbered elements with nuclear asymmetry.

Using the sharp magnesium spectral wave length 4481, Elvey measured the rotations of stars, finding an average of 60 kilometers per second, or thirty times that of our sun. The variable star W Ursæ Majoris with a diameter of 650,000 miles was found to rotate in a third of a day, a peripheral speed of about 600 miles per second.

In the field of molecular physics, gaseous molecules are known to possess rotational frequencies of 10^{12} , about the same as the elements of crystal lattices. Absorption spectra yield much data on molecular structure, moments of inertia, geometrical form and dimensions, types of binding, and (through the Raman effect) something of the atomic aggregates in the molecule.

Carpenter describes nine methods of forming single crystals, two from the vapor phase, three from the liquid, four from the solid phase, and discusses their production, orientation, and properties. Single crystals permit the accurate determination of the properties of pure structures.

Spectroscopy yields new estimates of the motion of our system of stars, the galaxy—300 kilometers per second and a complete rotation in 230,000,000 years.

Hubble finds that there are 30,000,000 galaxies perceptible with the 100-inch telescope within a distance of 300,000,000 light years. He finds new assurance of the homogeneous structure of

the universe. Recent measurements disclose the strange fact that all nebulae are receding from our system with speeds 100 miles per second higher for each million light years distance from us, the maximum now measurable being 75,000,000 light years distant. The farthest detectible nebula is estimated as at a distance of 300,000,000 light years. See ASTRONOMY.

The explanation of the steadily increasing red shift of spectral lines with distance from our system is attributed to relativity effect, or to some cause in interstellar space, rather than being an index of true recessional velocity. Calcium absorption lines are strongest in the most distant stars, proving that the calcium is in the intervening space with a density compared to air of one to ten billion. Plaskett and Pearce, after a study of Eddington's theory of interstellar calcium, positively ionized, state that there can be no possible doubt that Eddington's hypothesis of uniform distribution of the interstellar matter is fully confirmed.

Armellini, in a rigorous mathematical treatment of the latest theory of stellar evolution, found reason to support the theory of the transformation of mass into energy as the explanation of observed results. Stewart computed that ions in the sun may be accelerated tens of trillions of times per second, each acceleration lasting 10^{-16} second, and that electrons undergo accelerations 3600 times greater than this estimate and perhaps 60 times more frequently. Kinetic theory suggests that in the heart of a star ions may be accelerated 10^{-21} times gravity and free electrons 10^{-24} times gravity.

Luby noted that tidal effects of the planets cause solar activity periods, holding that Jupiter is mainly responsible, being 23 times as powerful as Saturn.

Without using the Non-Euclidian geometry of relativity theory, Kunz computes the three quantitative predictions of Einstein—the rotation of the perihelion of Mercury, deflection of light by the sun, and red shift of solar rays. With the quantum condition that light of frequency ν has a mass $h\nu/c^2$, he assumes that the potential energy of the gravitational field manifests itself as a change in ν , that the principle of conservation of energy holds, and that there are two masses, transverse and longitudinal, of a mass in motion (either as matter or energy).

Satisfactory results were obtained at the U. S. Bureau of Standards on the Waidner-Burgess standard of light—a hollow inclosure of fused thoria immersed in a bath of pure freezing platinum. Its advantages are that radiation from a hollow inclosure is always of the same quality and energy distribution, that platinum freezes at a definite temperature, that the radiation is independent of the kind of material, and an accuracy of $1/10$ per cent has been attained in comparing it with the Bureau's carbon filament standards. Quite accidentally, the color of the new standard is the same as the color of the carbon lamp, which still serves as a means of maintaining the accepted unit of candlepower.

Research on X-rays is one of the most active and prolific fields in physics. Among X-ray researches during 1930 may be cited: the study of asbestos to identify its useful types and disclose the mines from which they came; discovery of the cause of plasticity in lime; study of paint materials—composition, particle size, and crystallization as affecting the covering power,

tint, wear, and so on, of enamels and pigments; gaining new knowledge of how long grease molecules stand on end, keeping metal surfaces apart much as the "pile" on rugs permits one to rest on another without intimate contact; analysis of crystal structure and the measurement of the sizes of molecules of waxes, soaps, and other organic compounds; proof of the reality of the benzene structure.

We note that while spectroscopists are busy with X-ray energy levels, quanta and wave lengths, the general physicist is developing X-ray methods for very practical uses: development of procedure for inspecting the disposition of the parts of a completed electron tube; structure and internal strain of spark plugs; discovery that rubber is crystalline; discovery that rubber may stretch many times its supposed limit; discovery of a very important type of rayon through a study of the behavior and constitution of the crystalline threads of cellulose and silk; examination of molten metals inside of furnaces for study of melting points and surface tension; finally, for complete listing is impossible, the detection of optimum constitution and particle size of catalysts for high-pressure synthesis of methanol and other products.

Physics has few applications as interesting and varied as those of X-rays. X-rays are tools of industry. From inspecting the fitting of feet in new shoes, to the discovery of new chemical elements, X-rays give promise of unlimited uses. By X-rays doctors locate and treat tumors therapeutically; accelerate a hundred fold insect mutations in experimental evolution research; explore and chart atomic corridors of crystal fine structure; disclose the fact that a curious fish disease is a form of rickets. X-rays are used to examine the internal symmetry of golf balls; to inspect Swiss cheese in bulk for its internal holes; to examine, without opening, suspicious packages in the mails, and to detect concealed articles on the person at the customs; to check the soundness of metal castings; to locate pearls in oysters; gall stones in the body; nails or knots in wood for veneer cutting. Most of our knowledge of mummies comes through observation with X-rays, without unwinding their wrappings. They guide the surgeon and the dentist. They reveal elements of atomic structure through the knowledge they disclose of sub-atomic energies, and their uses are multiplying.

Young and Stetson found a method to analyze and synthesize vowels by electrical means—condenser microphone, amplifier system, filter tubes, tube oscillograph,—recording the changing intensities of the various frequency bands as the vowels are uttered. Gutzman, at the Congress on Experimental Phonetics, showed an X-ray speech film, designed to reproduce the respective movements of the speech organs, larynx, tongue, and hyoid, concurrently with the speech sounds.

Recent practical measurements of the noisiness of noise and the development of devices, methods, and units for such work is a notable effort to promote the comfort and well-being of people in communities. Laird found that noise caused typists to use up 19 per cent more energy for a given work than needed under quiet conditions. Skilled typists were the most adversely affected. Quiet gave a gain in speed of 4.3 per cent.

The physical properties of materials are a fertile field for physical research. W. H. Smith

produced the purest rubber ever made, dissolved it in ether and by cooling it to 80° below zero C., produced the first known crystals of rubber—an outstanding achievement of the year.

Correlations of solar activity and terrestrial weather were growing. Deeley's analysis of air pressure data showed that Arctic air pressures vary inversely with the number of spots central on the sun. Abbott found a short period of solar variation affecting the temperature of the United States, such that an 0.8 per cent change in the sun causes a 5° change at Washington.

Maris and Hulbert hold that above 400 kilometers (248.55 miles) free paths are large, impacts few, and ultraviolet a chief factor in ionization. Solar activity increases greatly the ultraviolet radiation. If, for example, we could remove 0.01 per cent of the sun's outer surface (6000°) the solar constant would increase 1 per cent only, but the ultraviolet content in sunlight would increase 100,000 times.

From studies of the upper air, Hulbert computed that at 100 miles there are 300,000 electrons per cubic centimeter. Radio reception over 50 miles from its source shows an echo from the ionized layer produced by solar ultraviolet. These heights are far above the blue sky which is caused at levels less than 30 miles. Data are obtained from studies of meteor trail drifts, theoretical distribution of the rare gases at high altitudes, temperatures by day and night, magnetic storms, and radio transmission and reception. Computation and observation showed that the ionization layer was lifted 50 miles higher during magnetic storms from the sun.

Stormer, whose report of long-interval radio echoes roused such interest as the first extra-terrestrial effect produced and observed by man, successfully predicted the time of recurrence, as confirmed by several physicists. Indo-Chinese physicists time echoes as high as 30 seconds after the signal and of one-third the original amplitude. Long-period radio echoes may afford a method of exploring electron streams in space far beyond the limits of the atmosphere of the earth.

In speculative physics discussions were active during the year. Lodge said that Einstein and he agreed that matter is passive, space active, and that matter merely serves to display the energy which fills space, sailing along the path of least resistance like a straw in a stream. They both hold that energy belongs to space. Spinney, in discussing the ether concept in modern physics, says that "the astounding history of the ether concept, of its rise and fall, its resurrection and its continuing power is probably without parallel in the records of the scientific world."

Most astonishing was the turn which the new principle of uncertainty was taking. Even the principle of causality was threatened. Born and Jordan, realizing that causality is not needed for the existence of physical laws, did not believe such laws are definite but that they indicate only probabilities that certain things will happen. According to them nature has some degree of freedom, is not bound rigorously by accurate laws, but only so far as the laws forecast the probability of the definite changes. Heisenberg, however, felt that there may be a principle of causality connecting present and future, but that we cannot find the laws.

Bridgman reviewed the astounding and rapid changes in physical thought and theory, and

suggested some generalized principles to give the physicist some sense of security. "We must be prepared," he said, "for unexpected new facts." We should know the limits of accuracy attainable in each kind of measurement. The actual experimental world transcends all our efforts to get into perfect mental contact with it. Uniqueness in an explanation is impossible and the quest for reality which connotes uniqueness is meaningless. He cites with approval Poincaré's statement that for every phenomenon there is an infinity of purely mechanical explanations. All this was leading the physicist to a changed attitude toward mathematical theory, to take it less seriously for it contains less of reality than he had realized. Finally, Bridgman stated that "a systematic development of the conceptual experiment . . . would be found by many . . . to give a more illuminating insight than a painful exposition of the details of the present-day mathematical picture." He then gave 21 searching questions to be answered only in terms of conceptual experiments.

BIBLIOGRAPHY. The year 1930 was remarkable for new books on physics. The three master works on wave mechanics by de Broglie, Sommerfeld, and Haas would alone make the year notable. *General Physics* by Franklin and Grantham is full of the senior author's personality. He uses the term "earthpull" for "weight" and "weight" is used interchangeably with "mass." Roller's *The Terminology of Physical Science* is informing and suggestive and Ferry's *Handbook of Physical Measurements* is a concise reference work for industrial technicians. Other books of the year include Schackel's *Heat, Light, and Sound*; Wood's *Sound*; MacMillan's *Theoretical Mechanics: The Theory of the Potential*; Haldane's *The Theory of Heat Engines*; and Kretschmann's *Atom und Welle*.

Dirac's *Principles of Quantum Mechanics* comes from the pen of a brilliant Cambridge physicist. Ruark and Urey published *Atoms, Molecules, and Quanta*. Applied physics is emphasized in *Matter and Radiation* by Buckingham, while Lindgh's *Röntgen Spektroskopie* gives a review of this rapidly advancing subject.

The infra-red spectrum is covered by Schaefer and Matossi's *Das Ultra-Rote Spektrum*. In special topics we find the following: James' *X-ray Crystallography*; Grant's *The Measurement of Hydrogen Ion Concentration*; Barnard's *The Selenium Cell*; Zworykin and Wilson's *Photocells and Their Application*.

Introductions to modern views of matter and energy are given in Wendt and Smith's *Matter and Energy* and in Andrade's *The Mechanism of Nature*. During the year the 24th volume of Wien-Harms *Handbuch der Experimental Physik* was issued.

Full of interest and suggestion are Adam's *The Physics and Chemistry of Surfaces*; and Kohlschutter's *From Atom to Shaped Body*, both setting forth the influences which determine form and structure.

Darrow's new and interesting work *The New World of Physical Discovery* opened the "door of science to the layman." Always interesting, Sir Oliver Lodge in *Beyond Physics* discussed the part that physics might play in interpreting life and the mind when a physics of organisms is developed to supplement the classical physics of mere aggregates since organisms are more than aggregates, they are in fact organizations.

The book year was marked by a return to the model or picture in atomic physics. Because of the significance of this trend at the beginning of the year 1931, Pauling and Goudamit's work *The Structure of Line Spectra* merits special mention. In basing it on the vector model and quantum mechanics, the authors state "The justification of the model is its usefulness in aiding the memory, in assisting in the interpretation of deductive results and their application to experiment, in suggesting new experiments and the theoretical explanation of new facts." The authors refer to the explanation of relativity doublets, noting "two such different mechanisms as the relativistic change in mass of the electron and interaction of its spin moment and orbital motion should lead to the same equation (Sommerfeld's no longer acceptable derivation of his still valid highly complicated formula) is without parallel in the history of physics." Dirac now derives the spin from relativistic equations so that the electron spin may now be considered a relativistic phenomenon, justifying the use of Sommerfeld's term "Relativistic doublets."

At the end of the year the outlook for further physical research was most promising. The great laboratories continued to grow and new laboratories at the rate of one or two a week were being established. In conclusion an example of a most important research in biophysics will recall to us how intimately physics is bound up with life. A new result attained by Crile was most significant. It will be recalled that in his *Bi-polar Theory of Living Processes* he postulated that vitality consists of the maintained difference of potential between the positively charged nucleus of the living cell and the negatively charged cytoplasm, the potential being preserved by the nuclear wall. In a new experiment he punctured the cell wall with a needle negatively charged. This increased the vitality of the cell, an amoeba being used. When the needle was positively charged (against the amoeba) the negative charge on the cytoplasm was neutralized and vitality dropped. Again reversing the charge on the needle, vitality was restored. The experiment furnishes one more proof of his thesis that difference of electrical potential between organs of the body, such as the brain and liver, and between the nucleus and the cytoplasm of the cell is the essence of life itself.

PITTSBURGH, UNIVERSITY OF. A nonsectarian institution of higher education for men and women in Pittsburgh, Pa.; founded in 1787. The total autumn enrollment for 1930 was 11,638, distributed as follows: College, 1866; engineering, 609; mines, 121; business administration, 694; education, 938; graduate, 1090; medicine, 264; law, 323; pharmacy, 283; dentistry, 327; retail training, 15; downtown division, 3370; Johnstown centre, 856; Erie centre, 639; Uniontown centre, 243. The extension division had an enrollment of 946 and the 1930 summer session, of 3509. There were 972 faculty members. The productive endowment amounted to \$1,944,973,

and the income from endowment to \$106,336; the annual income from the Pennsylvania State Legislature was \$600,000. The following bequests were received: \$325,000 from Leon Falk, Jr., and his sister, Mrs. Marjorie Falk Levy, for the erec-

tion of a model elementary school, under the direction of the school of education, in memory of their mother, Fanny Edel Falk; \$70,000 from the Buhl Foundation, given jointly to the Historical Society of Western Pennsylvania and the university, for research in local history; \$55,000 for the Andrew Johnson Kelly, Jr., Professorship of Real Estate, a memorial endowment fund; and \$30,600 from the Buhl Foundation for special research in medicine to cover a period of three years. The Falk Clinic costing \$900,000 was under construction. In September, 1930, a new course in safety engineering was opened, and a department of commercial education was established under the school of education. The library contained 136,300 volumes. Chancellor, John G. Bowman, LL.D.

PLATINUM. The most significant item in connection with the mining and distribution of platinum during 1930 was the decline in the price of the metal, which opening the year with an average of \$61.923 per ounce in New York fell gradually to \$27 an ounce on September 19, and after a recovery and an agreement among producers remained at about \$32 wholesale during the year. There was no decline in the demand for platinum, but an increased production, particularly from South Africa, which resulted in competition and the consequent decline to the lowest level recorded since 1910. The consumption of platinum was greater, however, than in previous years, except in the jewelry industry where there was a smaller amount used. The imports of platinum into the United States in 1930 consisted of 81,229 troy ounces of grain, nugget, sponge, and scrap valued at \$3,363,858; and ingots, bars, sheets, and plates, 24,926 ounces valued at \$961,334. Corresponding figures in 1929 were 74,063 troy ounces valued at \$4,466,149, and 40,594 ounces valued at \$2,640,097. The platinum refiners of the United States in 1929 purchased 516 ounces of crude placer platinum of domestic origin and 51,618 ounces of foreign crude platinum, according to the U. S. Bureau of Mines. Domestic material purchased in 1929 included 294 ounces from Alaska, 208 ounces from California, and 14 ounces from Oregon. Purchases of foreign crude platinum in 1929 were: from Australia, 852 ounces; from Canada, 7 ounces; from Colombia, 45,687 ounces; from Russia, 6 ounces; and from South Africa, 5066 ounces.

NEW PLATINUM METALS RECOVERED BY REFINERS IN THE UNITED STATES, 1925-1929
[In troy ounces]

| Year | Platinum | Palladium | Iridium | Osmiridium | Others | Total |
|------------|----------|-----------|---------|------------|--------|--------|
| 1925 | 41,800 | 7,358 | 283 | 648 | 54 | 49,643 |
| 1926 | 76,154 | 6,437 | 234 | 2,118 | 43 | 84,981 |
| 1927 | 41,121 | 3,879 | 256 | 691 | 163 | 46,050 |
| 1928 | 51,427 | 5,148 | 1,658 | 458 | 348 | 59,089 |
| 1929 | 41,760 | 5,295 | 802 | 864 | 256 | 47,977 |

POLAND. A European republic formed Nov. 9, 1918, as a result of the World War and comprising the territory formerly divided among Austria-Hungary, Russia, and Prussia, from the three partitions of Poland in 1772, 1793, and 1795, which were confirmed by the Congress of Vienna in 1815. After the World War, Poland, in addition to this original territory known as Congress Poland, acquired Prussian Poland, Polish Galicia, Upper Silesia, and a portion of the Vilna territory. Capital, Warsaw.

AREA AND POPULATION. With an area of 149,958 square miles, Poland had a population on Jan. 1, 1930, of 30,733,000, or 468,000 more than on the same date in 1929, according to the Central Statistical Bureau. At the census of 1921, the population was 27,176,717. The birth rate per 1000 of population in 1928 was 32.6 and the death rate, 16.7. Emigrants in 1928 totaled 186,630, of whom 85,375 went to Germany, 32,145 to France, 27,036 to Canada, 22,007 to Argentina, and 8507 to the United States. The largest cities with estimated populations in 1928, and the 1921 census population in parentheses, were Warsaw, 1,050,182 (936,713); Łódź, 580,529 (451,974); Lemberg, 238,303 in 1927 (219,388); Posen, 236,265 (184,758); Kraków, 191,385 in 1927 (183,706); Wilno (Vilna), 200,000 (128,954); Katowice, 115,697 in 1927 (104,868). Poles formed 69 per cent of the population in 1921, and Ruthenians 15 per cent.

EDUCATION. At the census of 1921, 29.4 per cent of the males and 35.8 per cent of the females over 10 years of age were illiterate. Elementary education is free and nominally compulsory. In 1928-29, there were 26,575 elementary schools, with 3,496,934 pupils, 777 secondary schools, with 203,939 pupils; 237 colleges for teachers, with 38,332 pupils; and 868 technical and professional schools, with 56,354 pupils. The 20 universities or institutions of university rank enrolled 43,249 students in 1928-29, divided among the universities as follows: University of Warsaw, 9181; Cracow, 6502; Łwów, 6092; Posen, 4126; Vilna, 3086.

PRODUCTION. Agriculture, stock raising, and forestry support about 65 per cent of the popula-

tion. Of the total area in 1928, 48.6 per cent was arable land; 16.9 per cent permanent grass and pasture; 23.1 per cent wood and forest. About 57.7 per cent of the arable land was devoted to cereals. Production of the chief crops (in quintals of 220.46 pounds) in 1929, with comparative figures for 1928 in parentheses, was: Wheat, 17,925,000 (16,116,881); rye, 70,098,000 (61,101,577); barley, 16,598,000 (15,272,051); oats, 29,531,000 (24,977,023); maize, 953,000 (850,399). The 1929 figures are preliminary. Production of other crops (in quintals) in 1928 was: Potatoes, 276,604,880; sugar beets, 49,027,518; linseed, 612,944; flax, 520,005. Hops, chicory (succory), and hemp are other important crops. Livestock in Poland on June 30, 1929, included 9,056,749 cattle, 4,046,734 horses, 2,523,493 sheep, and 4,828,641 swine. Lumbering operations account for about one-fourth of the total foreign trade of Poland.

Although the year 1929 witnessed the beginning of a decline in business and industrial activity, due largely to the decreased purchasing power of the agricultural population, the mineral and metallurgical industries continued their expansion. Production in millions of metric tons in 1929, with figures for 1928 in parentheses, was: Black coal, 46,236 (40,599); lignite coal, 74 (74); coke, 1858 (1669); steel ingots and castings, 1380 (1439); zinc, 167.8 (162); lead, 29 (36); raw potash, 352 (342); salt, 407 (401). Silver production in 1928 totaled 6937 kilograms. Gross crude-oil production in 1929 totaled 4,722,823 barrels, a decline of 9.2 per cent from the 1928 figure of 5,200,972 barrels. Natural gas production increased to 16,515,651,500 cubic feet from 16,226,288,604 cubic feet in 1928. Oil products exported totaled 249,281 tons (261,337 in 1928). The number of oil and gas wells in exploitation at the beginning of 1930 was 2825 (2690 in 1928). Industrial establishments on Jan. 1, 1930, included 775 textile factories, with 123,456 workmen; 734 metal works and factories, with 86,231 workmen; and 679 wood-working plants, with 43,407 workmen. Poland ranks as one of the leading industrial nations of eastern Europe. In 1930, the industrial depression increased. The number of unemployed at the end of July, 1930, totaled about 204,982 (105,069 in July, 1929).

COMMERCE. The heavy adverse balance of trade of 1928, attributed to large post-war foreign borrowings, showed a marked decline in 1929, falling to 297,600,000 zlotys (1 zloty equalled \$0.1119 in 1929) from the 1928 figure of 854,300,000 zlotys. Imports for home consumption decreased to 3,110,900,000 zlotys from 3,362,200,000 zlotys in 1928, while domestic exports increased to 2,813,300,000 zlotys from 2,507,900,000 zlotys in 1928. The decrease in imports and increase in exports of foodstuffs accounted for 71 per cent of the total improvement in the 1929 trade balance, as compared with 1928. The principal imports, by value, in 1929 were raw cotton, 258,806,000 zlotys; machinery, 131,822,000 zlotys; raw wool, 131,442,000 zlotys. Leading exports were wood and timber, 423,200,000 zlotys; coal and lignite, 384,392,000 zlotys; swine, 185,182,000 zlotys; eggs, 142,504,000 zlotys. Imports in 1929 came chiefly from: Germany, 850,408,000 zlotys; United States, 383,650,000 zlotys; United Kingdom, 265,027,000 zlotys; Czechoslovakia, 227,845,000 zlotys. Polish exports were purchased principally by: Germany, 877,121,000 zlotys; Czecho-

slovakia, 296,237,000 zlotys; Austria, 294,688,000 zlotys; and the United Kingdom, 288,255,000 zlotys.

Imports from the United States declined 82,996,000 zlotys (\$9,312,000), or 18 per cent, from the 1928 total. About half of the decrease was due to smaller imports of raw cotton from America. On the other hand, exports to the United States rose to 30,793,000 zlotys in 1929 from 19,000,000 zlotys in 1928. In 1930, all Polish imports totaled 2,245,973,000 zlotys and exports 2,433,244,000 zlotys, the balance of trade being favorable by 187,271,000 zlotys.

FINANCE. The budget for the fiscal year commencing Apr. 1, 1930, as passed by Parliament March 29, proposed expenditures of 2,940,922,000 zlotys, as against anticipated revenues of 3,038,737,000 zlotys, leaving an estimated surplus of 97,815,000 zlotys (par value of zloty equalled \$0.1122). Of the anticipated surplus, the Minister of Finance was authorized by the budget law to allocate 25,000,000 zlotys for short-term credits to small farmers and 65,000,000 zlotys to certain Government officials and to pensioners and their families as a housing subsidy.

Compared with actual receipts and disbursements in the fiscal year 1929-30, the 1930-31 estimates represented an increase of 8,062,000 zlotys in the anticipated revenues, a reduction of 29,820,000 zlotys in the proposed expenditures, and an increase of 37,882,000 zlotys in the tentative surplus. In 1929-30 actual revenues (in zlotys) totaled 3,030,675,000, as compared with the budget estimate of 2,954,967,000, and actual expenditures, 2,970,742,000, as against the estimate of 2,787,783,000. The actual surplus was 59,933,000 zlotys.

Compared with actual receipts for 1929-30, the estimated revenue items in the 1930-31 budget show a 15 per cent reduction in the aggregate of direct taxes and a reduction in all indirect taxes combined, exclusive of customs duties, of less than 4 per cent. Compared with actual disbursements for 1929-30, appropriations for 1930-31 were reduced by 20,605,000 zlotys for national defense, by 19,984,000 zlotys for labor and social welfare, by 11,597,000 zlotys for the Ministry of Finance, and by 39,619,000 zlotys for pensions. Appropriations for education and social welfare were increased by 18,369,000 zlotys, for the Minister of Justice, by 10,090,000 zlotys; for invalids' relief, by 7,600,000 zlotys; for the Ministry of Agriculture, by 5,493,000 zlotys; and for the Ministry of the Interior, by 2,838,000 zlotys. The appropriation for the service of the public debt was increased by 45,025,000 zlotys. Of the total expenditures budgeted for 1930-31, 28.7 per cent represented appropriations for national defense, 16 per cent, education; 8.6 per cent, interior administration; and 10.8 per cent, public-debt service.

The total public debt on Jan. 1, 1930, stood at 4,211,530,000 zlotys, of which 3,690,794,000 zlotys represented the external and 520,732,000 zlotys the internal debt. On the same date in 1929, the total debt was 4,018,008,000 zlotys. In United States dollars, the debt on Nov. 19, 1930, was reported at \$512,139,000, or about \$17 per capita.

COMMUNICATIONS. On Jan. 1, 1929, there were 10,695 miles of main line and 1422 miles of narrow-gauge line open to traffic, most of it owned and operated by the Government. Operating revenues in 1928-29 totaled 1,490,653,000 zlotys and operating expenses, 1,568,545,000 zlotys. The

budget for 1930-31 contained an item of 35,000,000 zlotys for railway construction. A new railway line connecting the new Polish port of Gdynia with Bromberg, about 100 miles distant on the southern edge of the Polish Corridor, was opened to traffic in November, 1930. Highways extended about 53,600 miles, and there were 1875 miles of navigable waterways, of which 298 miles were accessible to vessels of over 400 tons. In 1930, there were 733,950 kilometers (about 455,000 miles) of telephone lines, of which 356,710 kilometers were state owned.

SHIPPING. Merchandise imported and exported through the new Polish port of Gdynia increased from 10,167 metric tons in 1924 to 1,957,769 in 1928 and 2,822,502 in 1929. Of 2,492,858 tons of merchandise loaded at the port in 1929, coal constituted 2,447,895 tons. Improvement of the facilities of the port, which is government owned, continued steadily during 1930. The Polish government in 1930 purchased a controlling interest in the Baltic-American Line and inaugurated a steamship service from Gdynia to New York. A total of 1541 vessels of 1,445,291 tons entered Gdynia in 1929, and 1552 vessels of 1,457,713 tons cleared.

GOVERNMENT. Under the constitution adopted Mar. 17, 1921, executive power is vested in the President, chosen by both houses of the National Assembly for a period of seven years; and legislative power is vested in the National Assembly, consisting of the Senate of 111 members and the Diet (444 members), called the Sejm, both elected by universal suffrage. President in 1930, Ignace Moscicki, elected June 1, 1926. The Cabinet at the beginning of 1930 was composed as follows: Prime Minister, Casimir Bartel; War, Joseph Pilsudski; Foreign Affairs, August Zaleski; Finance, Ignacy Matuszewski; Justice, Felix Dutkiewicz; Interior, Henryk Jozewski; Commerce and Industry, Eugene Kwiatkowski; Agriculture, Dr. Leon Janta-Polczynski; Agrarian Reforms, Witold Staniewicz; Communications, Alphonso Kühn; Labor and Social Affairs, Aleksander Prystor; Public Works, Dr. Maksymilian Matakiewicz; Education, Dr. Slawomir Czerwinski; Posts and Telegraphs, Ignacy Boerner. The composition of the Sejm following the election of Mar. 4, 1928, was: Government Bloc, 122; Radical Peasant party, 69; National Minorities, 65; Polish Socialists, 65; Catholic National, 37; Peasant party, 21; Socialist National Minorities, 19; Christian Democrats, 16; National Workers' party, 14; Communists, 7; others, 9.

HISTORY

INTERNAL DIFFICULTIES. Marshal Joseph Pilsudski, for a decade the dominant figure in Polish politics, emerged from the unusually troubled political arena of 1930 with his dictatorial powers strengthened and extended. Parliamentary elections held in November regained for his bloc the safe majority in the Sejm which had been dissipated during the Marshal's illness in May, 1928. For years Pilsudski had denounced with fierce contempt the parliamentary system of government as a menace to Poland's national development and foreign policy. However, during the bitter party struggles of 1930 he observed the outward ritual of constitutionality, although violating it in spirit, his aim being to secure the legal revision of the Constitution along lines which would strengthen the powers of the executive and materially weaken those of Parliament.

The struggle between Pilsudski and his opponents in the Sejm opened in earnest in March, when a non-confidence motion directed against the Marshal's close friend, Minister of Labor Prystor, was carried by a vote of 197 to 120. The Socialist, Nationalist, and Peasant parties supported the motion. The Bartel government accordingly resigned March 14, after only ten weeks in office. President Moscicki, who was considered the official mouthpiece for Pilsudski, called upon Professor Stanislaw Szymanski, Marshal of the Senate, and then upon Jan Pilsudski, brother of the general, but the efforts of both to form a new Cabinet failed. On March 29, despite the absence of a Government, Parliament passed the budget for the fiscal year commencing Apr. 1, 1930. Immediately thereafter, Marshal Pilsudski induced the President to prorogue Parliament for an indefinite period. On the same day Col. Walery Slawek, leader of the Pilsudski bloc in Parliament, formed a minority Cabinet, which, with the exception of Premier Slawek and Minister of Justice Car, was composed entirely of the former members of the Bartel Ministry (see above under *Government*).

The personnel of the Slawek Cabinet was evidence of Pilsudski's intention openly to defy the Opposition. At a time when the serious economic and financial condition of the country called for internal harmony, the conflict between the Government and the Opposition became increasingly violent. A petition for an extraordinary session of the Sejm was submitted to President Moscicki May 9 by the Opposition groups of the Left and Centre and, in accordance with a Constitutional provision, he was obliged on May 20 to call the extraordinary session for three days later. An hour before the scheduled convening of the Sejm, a Presidential decree was delivered to the marshal of that body, postponing the session for 30 days. The decree stated that the Sejm could not be permitted to obstruct the Government when the economic crisis demanded the mobilization of all the nation's resources.

The Opposition's demand for the resignation of the Cabinet and new Parliamentary elections to permit the establishment of a majority government was strengthened by the formation on June 20 of a new anti-government bloc of six Left and Agrarian groups, with 160 votes in the Sejm and representing more than 5,000,000 voters. The Government's farcical constitutionalism reached its climax the following day when a Presidential decree formally closed the extraordinary session of Parliament, which had never met. Huge Opposition demonstrations "in defense of law and public liberties" were held during June and July in Warsaw and Cracow. Extraordinary sessions of the Sejm and the Senate were again demanded and it was decided to organize a nation-wide network of committees "to protect the public against administrative abuses and political reprisals." On August 25, Marshal Pilsudski responded in characteristic fashion to the agitation of the Opposition by assuming full dictatorial powers and forming a new Cabinet with himself as Premier. Five days later, President Moscicki proclaimed the dissolution of Parliament, fixing elections for the Sejm and the Senate on November 16 and 22, respectively.

The issue in the electoral campaign was the Marshal's effort to secure a two-thirds majority of Parliament to permit revision of the Constitution in accordance with his proposals of 1929

for a powerful executive and a weak legislature (see 1929 YEAR BOOK). The election was preceded by administrative measures intended to paralyze, if not destroy, the Opposition. About 80 Opposition leaders were summarily thrown into prison, while numerous Opposition candidates and voters were disqualified on technical grounds, or called for military service. The result of the elections was a moderate victory for the Government bloc, which won a working majority in the Sejm but failed to secure the two-thirds necessary to revise the Constitution. The Socialist and Peasant parties, forming the Opposition bloc, were the principal losers, while the National Democrats (Fascists), who opposed the Government, were the only other party to register gains at the polls. The Pilsudski adherents were thus squarely faced with responsibility for a constructive political and economic programme. The new Sejm, for the first time in the history of modern Poland, had a strong government majority. The lineup of the parties was: Government bloc, 249; Opposition bloc (Socialist and Radical Peasant groups), 80; National Democrats (Fascists), 63; Ukrainians and White Russians, 21; Christian Democrats, 14; Jews, 7; Germans, 5; and Communists, 5. Pilsudski's success in the Senatorial elections November 22 was proportional. The Government bloc won 75 of 111 seats, whereas it formerly held 46.

In advance of the opening of the new Parliament on December 9, Pilsudski resigned (December 4) as Premier and resumed his former position as the directing power behind the scenes. Col. Walery Slawek was again called to head the new Cabinet, which included: Vice Premier, Col. Bronislaw Pieracki; Interior, Gen. Felician Skladowski; Foreign Affairs, August Zaleski; War, Marshal Joseph Pilsudski; Justice, Czeslaw Michalowski; Education, Slawomir Czerwinski; Agriculture, Leon Janta-Polczynski; Industry and Commerce, Col. Aleksander Prytor; Communications, Alphonso Kühn; Public Works, Gen. Mieczyslaw Norwid Neugebauer; Labor, Gen. Stefan Hubicki; Land Reform, Leon Kozlowski; Posts and Telegraphs, Col. Ignacy Boerner; Finance (Acting), Col. Ignacy Matuzewski.

The Government's majority in the Sejm was demonstrated at the opening session December 9, when former Premier Casimir Switalski was elected Speaker by a vote of 238 out of 407. He announced that the immunity of Deputies would thereafter be waived. The budget for 1931-32 was introduced the following day. It placed the total estimated income at \$321,168,000, as against estimated expenditures of \$319,211,000, the latter figure being \$18,000,000 below the 1930-31 expenditure budget. The opening days of Parliament were marked by Opposition demands for the freeing of seven Deputies and of some 21 former Deputies who were still held in prison. It was charged that the prisoners were subjected to torture, starvation and humiliation. With his followers firmly in the saddle, Pilsudski left Poland in December for an extended vacation in Madeira.

FOREIGN RELATIONS. Poland's relations with Russia reached a critical stage during the spring of the year, but alarming rumors of war failed to materialize (see RUSSIA under *History*). Alleged terrorism employed to stifle the German minority in Upper Silesia during the parliamentary elections of November 22 ag-

gravated the tension between the two countries, already acute as a result of the speeches of the German Cabinet Minister, Gottfried Treviranus, demanding revision of the Polish-German frontier (see GERMANY under *History*). Germany on November 28 dispatched a note of protest to the Council of the League of Nations, charging that the German-speaking citizens of Polish Upper Silesia had been seriously hindered or prevented from exercising the franchise. Ten cases of outrages were cited in detail. Reports reaching Berlin indicated that four persons among the German-speaking minority were killed and large numbers beaten unconscious, while the homes of many others were wrecked. The Polish Minister of the Interior issued a communiqué November 26 placing the responsibility for the disturbances in upper Silesia upon the German minority. Germans were accused of the murder of a Polish policeman at Golasowice. The boundary dispute with Lithuania over the Vilna territory showed no evidence of approaching a solution (see LITHUANIA under *History*).

On Jan. 22, 1930, the American legation at Warsaw was raised to the rank of embassy and Poland concurrently appointed her former Minister to Washington, Tytus Filipowicz, as the new Ambassador.

OTHER EVENTS. A reign of terror in Eastern Galicia was reported during October. Sabotage and arson of Polish property and crops by an alleged Communist Ukrainian organization, intent upon uniting the 3,000,000 Ukrainian peasants of Polish Eastern Galicia with the Ukraine Soviet Socialist Republic, caused the Government to send a punitive military force into the region. The press reported the imprisonment of some 200,000 Ukrainians, including their representatives in the Sejm, and widespread excesses by the soldiery which were condemned in a pastoral letter of the Ukrainian Greek Orthodox Church.

Poland took a leading part in efforts to form an economic entente among the agricultural states of central Europe during the year. Two agrarian conferences were held in Warsaw, but no definite agreement was reported (see JUGOSLAVIA under *History*). A plebiscite held in Warsaw in December on the question of prohibiting the sale of intoxicants called attention to the fact that up to that time three towns and over 100 communes in Poland had voted in favor of similar proposals. Charles S. Dewey, American financial adviser in Poland, ended his three-year task there in November.

For recent works on Poland and its problems, consult Sir Robert Donald, *The Polish Corridor and the Consequences* (London, 1929); Rom Landau, *Pilsudski and Poland* (New York, 1929); and "The Reconstruction of Poland," *Foreign Policy Information Service Bulletin*, vol. vi, No. 7, June 11, 1930.

POLAR RESEARCH. Explorations in both the Arctic and Antarctic assumed increased importance in 1930 after conflicting claims to lands in both regions had been presented by spokesmen for five nations at the annual sessions of the Institute of Politics at Williamstown, Mass., in August. It was revealed for the first time that Norway, in a note to the United States State Department on Apr. 29, 1929, claimed the right of priority in the acquisition of the Antarctic territory in the region then being explored by Admiral Richard Evelyn Byrd, whenever the requirements of international law as to effective oc-

cupation were complied with. The United States had recognized neither Norway's nor Great Britain's claim to the territory in question, it was pointed out, while priority rights to other regions of the Antarctic continent were in dispute between the United States, Great Britain, Norway, France, and Argentina. Canada advanced a claim to all lands north of her as far as the Pole or any islands that might be discovered there in the future, a claim which spokesmen for the United States emphatically opposed. The Norwegian spokesman reiterated his country's view that it could not recognize Danish sovereignty over any parts of Greenland except those actually under Danish administration.

The immediate reasons for the discussion of sovereignty over the polar regions were the dispatch of British and German expeditions to Greenland to study the possibility of the establishment of air routes across the Greenland ice cap, the increasing international competition in the Antarctic whaling industry, and the project for the establishment under international auspices of a chain of weather stations in the Antarctic. In the 1930-31 season, approximately 100 Norwegian whalers, with 8000 men, were engaged in the whale hunting in the Antarctic. At the Williamstown discussion, it was proposed by Prof. Jesse S. Reeves of the University of Michigan that the polar regions be set aside as international property for disinterested scientific research.

ANTARCTIC. Complete reports of the accomplishments of the four expeditions in the Antarctic during the 1929-30 season were published during the year. Abnormal ice conditions retarded the *City of New York* on its way to return the Byrd Expedition to civilization, and it was Feb. 19, 1930, before the party sailed from the Bay of Whales. The two airplanes of the expedition were left behind at the camp for lack of room. The interval from January 1 to the departure of the expedition was marked by the completion of the work of the geological party, under Dr. Lawrence Gould, and the surveying and photographing by airplane of some 15,000 square miles of new territory in the vicinity of the Bay of Whales and Discovery Inlet. The discovery of what appeared to be a rock in one part of the bay and the general appearance of the central part of the barrier led Admiral Byrd to conclude that there was land underneath. On January 1 Dr. Gould announced by radio that he had discovered a "highly carbonaceous layer" in a sandstone formation 6000 feet up the side of Mount Nansen. Admiral Byrd's major geographical achievement was stated to have been his charting of the eastern portion of the Great Ross Ice Shelf and the adjacent coast. Upon his return to the United States in June, he was widely acclaimed and awarded numerous decorations, including a special gold medal of the National Geographic Society and the Navy Cross. Consult Byrd's book, *Little America* (New York, 1930).

Sir Hubert Wilkins concluded his air explorations of the other side of the Antarctic Continent, in the Graham Land region, early in the year and returned to the United States. There he obtained an obsolete submarine from the U. S. Navy and remodeled it in preparation for a projected submarine expedition to the Arctic in the summer of 1931. Dr. Isaiah Bowman, director of the American Geographical Society, told the National Academy of Sciences on September 18

that Sir Hubert's explorations in the Antarctic for two seasons were primarily in search of suitable bases for the establishment of meteorological observation posts from which weather reports could be radioed daily to Australia, South Africa, and Argentina.

The results of explorations by the British-Australian-New Zealand Antarctic Research Expedition under Sir Douglas Mawson and by the Norwegian expedition under Capt. Hjalmar Riiser-Larsen were set forth in articles by both explorers in the October, 1930, issue of the *Geographical Review*. By ship and airplane, Sir Douglas Mawson outlined the coast eastward from Enderby Land to the 67th meridian. Existence of land still farther to the east was indicated, he reported. An excellent whaling ground was discovered in the seas off the coast of Enderby Land, especially to the west thereof. The expedition, which sailed from Cape Town, Oct. 19, 1929, and completed its work in the Antarctic on Jan. 26, 1930, made some 750 deep-sea soundings and collected much hydrological, meteorological, and biological data. Corrections and extensions to charts of the Crozets, Kerguelen, and Heard Islands were also made. Riiser-Larsen, who also used airplanes extensively, mapped 370 nautical miles of coast west of Enderby Land between meridians 43° and 55° and 200 miles of new coastline from 8° 30' West to Coats Land. He discovered new whaling grounds also.

Sir Douglas Mawson sailed from New Zealand on the *Discovery* in November, 1930, to continue his Antarctic explorations. In December, the expedition made observations and soundings in the vicinity of Macquarie Island and the Bishop and Clerk Islets. Due to thick, misty weather Sir Douglas abandoned his search for Emerald Island, the reported discovery of which 100 years earlier had never been confirmed, and continued toward the Antarctic Continent.

ARCTIC. The outstanding event in Arctic exploration during the year was the discovery on White Island, also known as Giles Island, between Svalbard and Fridtjof Nansen Land (formerly Franz Josef Land), of the bodies of the Swedish explorer, Salomon August Andrée (q.v.) and his two companions, Knut Fraenkel and Nils Strindberg, who left Dane's Island, in the Svalbard Archipelago, on July 11, 1897, in an attempt to reach the North Pole by balloon. The discovery was made on August 6 by a Norwegian expedition, headed by Dr. Gunnar Horn, which stopped at White Island enroute to Fridtjof Nansen Land. The three bodies, well preserved by the ice through three decades, were removed to Sweden and cremated with state honors. Valuable records of the expedition, including Andrée's diary, boat, sledge, and camping equipment, were recovered. Andrée's diary, in which the last entry was made Sept. 5, 1897, was published in New York during the year under the title, *Andrée's Story*. Consult also George Putnam, *The Record of a Tragio Adventure* (New York, 1930).

On July 3, a British expedition sailed in Sir Ernest Shackleton's ship, the *Quest*, to survey the possibilities of an air route across the Arctic ice-cap of Greenland from Great Britain to Canada, with the Faroe Islands and Iceland as intermediate stations. Dogs for the sledge work of the expedition had previously been collected on the west coast of Greenland. The expedition was sent out under the auspices of the Royal Geographical Society and with Government coöperation. It con-

sisted of 14 members, headed by H. G. Watkins, and was equipped with airplanes, fast motor boats, and dog teams. The base camp was established on the southeastern coast and a station erected on the 8000-foot summit of the Greenland ice-cap, where two meteorologists remained throughout the winter.

The German Greenland Expedition, headed by Dr. Alfred Wegener, sailed from Holstenborg in April, 1930, for an 18-month study of the meteorological and geological conditions of Greenland and the possibilities of establishing a trans-arctic air route. The party, which included 17 members, made its base camp at Kamarujuk on the Bay of Umanak and several groups penetrated with motor and dog sledges to the centre of the island, where a weather observation post was established for the winter at an altitude of 10,000 feet. Dr. Wegener reported excellent success with his propeller sledges, having transported loads of 1000 to 1200 pounds 125 miles inland and attained a speed of 50 miles an hour on the return trips.

The Danish explorer, Dr. Lauge Koch, returned to Copenhagen Sept. 1, 1930, with a large collection of fossilized fish after a successful expedition to Greenland. His party mapped a considerable section of the coastline in the vicinity of Scoresby Sound previously unexplored. Traces were discovered of a warm period after the glacial period in Greenland's history and indications of coal veins and copper deposits were noted. In December, 1930, the Danish Committee for the Exploration of Greenland, headed by Premier Stauning, approved Dr. Koch's project for the erection of two head stations at King Oscar's Fiord and at Gael Hawkes Bay in East Greenland from which scientists could conduct thorough geologic, archaeological, zoölogic, and botanical investigations, as well as prospect for valuable minerals.

Extensive explorations by plane of the Arctic regions north of Canada were made under the auspices of the Canadian government during the summer and members of the Northwest Mounted Police added to the knowledge of this area by several notable trips by dog sledge. A two-plane party headed by Flight Lieutenant Mawdesley covered more than 20,000 miles of largely unexplored country in less than three months. Approximately 3000 photographs were taken, and much information collected concerning water courses, meteorological conditions, and the behavior of compasses around the North Magnetic Pole. The party noted few musk-oxen but great numbers of caribou. Other sources reported satisfactory progress of a herd of 3000 reindeer being driven from Alaska to the Mackenzie River district as a government aid to the Eskimos of that vicinity.

In a more spectacular flight to King William Land, Major L. T. Burwash and W. E. Gilbert in a Canadian government plane found the graves and relics of Sir John Franklin's expedition, the members of which perished 83 years previously in an effort to find the Northwest Passage. The numerous graves were arranged in orderly fashion, the evidence indicating that some of the men had succumbed to scurvy, while others had starved to death. The relics found were relatively unimportant. On his flight, Major Burwash photographed nearly 2000 miles of coastline, which had previously been roughly charted, and collected general information concerning the topography, geology, and mineral development of

the region between Coronation Gulf and Great Bear Lake. Capt. Robert A. Bartlett's Northeast Greenland Expedition found the ruins of two groups of Eskimo dwellings in July, which yielded interesting relics of the extinct tribes of that region. During his trip in the schooner *Morrissey*, Captain Bartlett collected marine specimens for the United States Coast and Geodetic Survey, the United States Fisheries, and the Smithsonian Institution.

A group of Soviet scientists, headed by Prof. Otto Schmidt, left Archangel in the icebreaker *Sedoff* in July and returned September 15, after having studied the possibilities of Fridtjof Nansen Land (formerly Franz Josef Land) and discovered two islands, named Kaminov and Wise Islands, in Lat. 79° 25' North and Long. 76° 10' East. The expedition planted the Soviet flag and left a party of four on Kaminov Island for the winter. The personnel of the Soviet radio station on Fridtjof Nansen Land was changed and studies were made of the interior of Nova Zembla. On Aldjir Island in the Nansen group the expedition found traces of the Baldwin-Ziegler Expedition under the American, Evelyn Briggs Baldwin, which wintered on the island in 1901.

The Soviet schooner *Sobby* sailed from Archangel August 3 in an effort to follow the northern coast of Siberia to Vladivostok. It was planned to land two groups of scientists and hunters to spend the winter on Taymir Peninsula and the Island of Laptiff, respectively, the former being charged with the establishment of a new whale fishery. The Soviet aviator, Chukhnovsky, spent the summer in exploratory flights covering the River Angar, the environs of the new port of Igarka at the mouth of the Yenisei, the unknown delta of the Pyasina River, and an extensive section of the Siberian northern coast. He reported immense schools of killer whales, and important fish and fur resources.

POLITICAL AND SOCIAL SCIENCE, THE AMERICAN ACADEMY OF. A national forum for the discussion of political and social questions, founded in Philadelphia, Dec. 14, 1889, and incorporated Feb. 14, 1891. The organization does not take sides upon controverted questions, but seeks to secure and present reliable information to assist the public in forming an intelligent and accurate opinion. In addition to monthly meetings during the winter, an annual meeting is held in the spring of each year at which six sessions, extending through two days, are devoted to the discussion of some general subject. The thirty-fourth annual meeting, which was held May 2-3, 1930, considered the general subject "Economic Tendencies Affecting the Peace of the World." Other meetings conducted during the year discussed the following subjects: "The Second Industrial Revolution and Its Significance"; "The Economic Basis of Reparations"; and "Security in Industry." The *Annals* is published bi-monthly as the official organ of the academy, each issue being devoted to a study of a particular topic of economic, political, or social importance. In 1930 the following volumes were issued: *The Anti-Trust Laws of the United States*; *Real Estate Problems*; *Colorado River Development and Related Problems*; *The Second Industrial Revolution and Its Significance*; *Prosperity Reserves of Public Works*; *Some Social Aspects of Mental Hygiene*; *Economics of World Peace*; *Postwar Progress in Child Welfare*; *Airport Problems of American Cities*; and *China*. These publications,

from time to time, have included special studies prepared by research fellows appointed by the academy. The officers in 1930 were: President, Dr. Ernest Minor Patterson; secretary, Dr. J. P. Lichtenberger; treasurer, Charles J. Rhoads; and vice-presidents, the Hon. Herbert Hoover, Dr. Carl Kelsey, and Dr. Charles E. Merriam. Headquarters, 3622 Locust Street, Philadelphia.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as: CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; STATISTICS; SOCIALISM; TRADE UNIONS; WELFARE WORK. See also the articles on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

POLITICAL SCIENCE, ACADEMY OF. An international institution for advancing the political sciences and promoting their application to public problems; founded in 1880 in New York City and incorporated in 1910. On Dec. 31, 1930, it had 7103 members, of whom nine were honorary members, 225 life members, 5635 individual members, and 1234 subscribing members, chiefly libraries and organizations. Two general meetings were held in 1930. The semi-annual meeting on April 11 in New York City dealt with the problem of public control of power. Three sessions were held, discussing the sub-topics of state regulation, immediate problems in public control, and the future of power supply and public control. The papers and addresses at this meeting were published in the *Proceedings*, vol. xiv, No. 1, under the title "Public Control of Power." At its fiftieth annual meeting, held on November 14, the academy discussed the Young Plan in Operation. There were three sessions devoted to the sub-topics of liquidating the War, America's interest in the settlement, and international collaboration. The papers and addresses of this meeting were published in the *Proceedings*, vol. xiv, No. 2. Four issues of the *Political Science Quarterly*, the official organ of the academy, were published during the year. The officers for 1930 were: Alanson B. Houghton, president; Albert Shaw, Paul M. Warburg, and R. C. McCrea, vice presidents; Parker T. Moon, secretary and editor of publications; George A. Plimpton, treasurer; and Ethel Warner, executive director and assistant treasurer. Headquarters are in Fayerweather Hall, Columbia University, New York City.

POLITICS, INSTITUTE OF. Formed for the discussion of foreign affairs, so as to promote a more sympathetic understanding of the problems and policies of other nations, these annual sessions were inaugurated by the trustees of Williams College in September, 1919. The first session of the institute was held in Williamstown, Mass., in the summer of 1921. Membership is open to men and women on the faculties of colleges and universities, to writers on foreign politics, to persons engaged in the direction of foreign

commerce or banking, to diplomatic and consular officials, to officers of the Army and Navy, to editors, foreign correspondents of the press, and, by invitation, to others who have had training and experience in the field of international law and politics.

The tenth session of the institute met July 31-Aug. 28, 1930, in Williamstown, Mass. Addresses were delivered by visitors of international reputation, including Prof. C. DeLisle Burns, who spoke on "Western Civilization and the World"; Lord Meston of Agra and Donottar, whose subject was "India and Nationalism"; and Admiral Sir Herbert Richmond, who took for his subject "Principles of Naval Disarmament." Lecture courses included: "France and the Disarmament Problem," by Dr. Paul Mantoux, Paris; "The Freedom of the Seas," by Lord Eustace Percy, London; "The Evolution of International Public Law in Europe since Grotius," by Dr. Walter Simons, Berlin.

The following is a list of round-table subjects with their respective leaders: "An Analysis of Western Civilization," Prof. C. DeLisle Burns; "Recent Economic Progress in Europe," Prof. Edwin F. Gay, Harvard University; "The Political Aspects of Aërial Navigation," Edward P. Warner, editor of *Aviation*; "The Far Eastern Situation," Prof. George H. Blakeslee, Clark University; "Limitation of Armaments," Admiral Arthur J. Hepburn, U. S. N.; "Pan American Problems," Prof. Jesse S. Reeves, University of Michigan. There were also special general conferences on "The Domestic and Foreign Problems of Russia," "The Arctic and the Antarctic," "Arbitration and Intervention in the Caribbean Area," and "India and Nationalism." At the last named Lord Meston of Agra and Dunottar presided.

The officers of administration of the institute in 1930 were: Harry Augustus Garfield, chairman; Walter Wallace McLaren, executive secretary; Williard Evans Hoyt, treasurer.

POLO. The major event of the 1930 polo season was the decisive victory of the United States team in capturing two straight matches from invading British players in the tenth international competition for the Winchester Cup at the Meadow Brook Club, Long Island, in September. Ninety thousand spectators witnessed the series, and in the second match were treated to a brand of polo rarely seen in the United States. The scores were 10-5 and 14-9. The United States team included Eric Pedley, Earle A. S. Hopping, Thomas Hitchcock Jr., and Winston F. C. Guest. The British team, from which illness eliminated several leading players, consisted of Gerald Balding, Lewis L. Lacey, C. T. I. Roark, and Humphrey Guinness.

With the aid of Roark of the British team, the Hurricanes won the American open championship at the close of the season. The national junior championship was captured by the United States Army team, the national intercollegiate title by Yale, and the Waterbury Memorial Cup, the most important handicap event, by the Roslyn team. The U. S. Army team visited Argentina at the close of the season in the United States, reaching the final in the Argentine open and defeating the Argentine Army in a special match. A team from Argentina visited the Pacific Coast and took the Coast championship home with them. Indoor polo enjoyed an unusually successful season in the United States, the Optimists capturing the national indoor open and Class A titles.

PORTO-RICHE, pòrtò'rèsh', GEORGES DE. A French dramatist, died in Paris, Sept. 5, 1930. He was born in Bordeaux, May 20, 1849, and produced his first important play, *Un drame sous Philippe II*, at the Odéon in 1878. His fame was established in 1891 when *Amoureuse* was produced with Mme. Réjane, and he became recognized as the father of contemporary French drama in his ability to analyze the erotic emotions of men and women. In 1923 he was elected a member of the French Academy, and served for many years as director of the Bibliothèque Mazarine. His principal works, in addition to *Amoureuse*, are: *La chance de Françoise* (1889); *L'Infidèle* (1890); *Le passé* (1898); *Les Malefilières* (1904); *Le vieil homme* (1911); *Le Marchand d'estampes* (1917); and *Anatomie sentimentale* (1920).

PORTO RICO, pòrtò-rekò. An island possession of the United States in the West Indies; the most easterly and smallest but most densely populated of the Greater Antilles; lying 480 miles east of Cuba, 1380 miles southeast of New York. Capital, San Juan.

AREA AND POPULATION. The area of the island is 3425 square miles and the population, according to the census of 1930, 1,543,913 (1,299,809 in 1920). The population in 1920 was 73 per cent white and 27 per cent Negro and mulatto. The chief cities, with their populations in 1930, are San Juan, 114,585 (71,443 in 1920); Ponce, 53,417 (41,912); and Mayagüez, 36,956 (19,124). For the period 1925 to 1929, births averaged 56,802 annually and deaths, 33,566; the birth rate per 1000 inhabitants was 39.6 and the death rate was 23.3.

EDUCATION. Elementary education is free and compulsory between the ages of 8 and 14. The ratio of illiteracy is about 48 per cent. According to the Governor's annual report for the fiscal year 1929-30, 221,248 pupils were enrolled in government-supported schools and the average attendance was 193,396, out of a total of about 500,000 children of school age. The sum of \$4,012,164, or 41.8 per cent of the total insular revenues, was spent on education in 1929-30, in addition to \$1,296,885 expended by the municipalities. Carlos E. Chardon, Commissioner of Agriculture, was appointed Chancellor of the University of Porto Rico Oct. 22, 1930, succeeding Dr. Thomas E. Benner.

PRODUCTION. A preliminary census report for 1930 showed 52,113 farms in Porto Rico, as compared with 41,078 farms in 1920. Primarily dependent upon sugar production for its prosperity, the island's economy was extensively deranged by the collapse of sugar prices in 1929 and 1930, following the destructive hurricane of September, 1928. Tobacco, coffee, and citrus fruits are other major crops; cotton, cacao, beans, and various textile fibres are grown also. For the year ended June 30, 1930, sugar production totaled 886,109 short tons, as compared with the short crop of 586,760 tons in 1928-29, while the tobacco output increased to about 27,000,000 pounds from a total of 24,600,000 pounds in 1928-29.

Due to hurricane destruction in 1926 and 1928, coffee production fell off from 26,330,000 pounds in 1925-26 to 1,279,000 pounds in 1928-29 but recovered in 1929-30 to over 12,000,000 pounds. The fruit growing and canning industry is expanding rapidly. Fruit orchards recovered more quickly from the 1928 hurricane than coffee trees, and the 1929-30 harvest was estimated to be a little above average. About one-fifth of the forests of the island were destroyed by the hurricane. During 1929 the insular forest department distributed 1,029,000 seedlings and plantings in connection with a reforestation programme (779,000 in 1928). There is virtually no mining, although small deposits of gold, silver, and other metals exist.

The chief manufacturing industries are sugar refining, and the making of cigars, cigarettes, fine needlework, women's wear, and men's clothing. In an effort to raise the general standard of living through industrialization, a law was passed in 1930 exempting new industries from taxation for a period of not over ten years. In 1928-29, cigar production rose to 220,110,000 from 207,770,000 in 1927-28, while cigarette production fell to 304,407,000 from the 1927-28 figure of 390,200,000. Shipments of needlework products to the United States increased from \$9,549,000 in 1928 to \$14,293,000 in 1929, or nearly 50 per cent. This industry, centred at Mayagüez, employed about 50,000 laborers, chiefly female. Of 460,940 available workers in Porto Rico in 1929, 170,519, or 37 per cent, were unemployed, according to the chief of the insular Bureau of Labor. Unemployment is chronic due to the dense overpopulation of the island.

COMMERCE. The total trade with the United States and foreign countries for the year ended June 30, 1930, totaled \$183,568,487, or 2.6 per cent more than during the hurricane year of 1928-29, when the figure was \$178,810,510. About 92 per cent of the total trade was with continental United States, shipments to the United States comprising 95.4 per cent of the total exports and shipments from the United States representing 87 per cent of all imports. The balance of trade, which was unfavorable in 1928-29 for the first time since 1923-24, became favorable in 1929-30. Imports totaled \$83,921,829 (\$97,860,760 in 1928-29) and exports \$99,646,658 (\$81,722,870 in 1928-29). The values of the principal exports, with comparative figures for 1928-29 in parentheses, were: Sugar, \$53,670,038 (\$35,224,038); coffee, \$151,503 (\$456,831 in 1928-29 and \$2,596,872 in 1927-28); leaf tobacco, \$10,602,170 (\$11,220,264); cigars, \$3,408,721 (\$3,847,797); fruit, \$7,671,525 (\$2,850,722); coconuts, \$218,787 (\$249,665). The chief imports were rice, wheat flour, and other grain products, cotton manufactures, iron and steel, and meat products.

In the calendar year 1930, Porto Rican shipments to the United States were valued at \$99,880,061 (\$78,126,574 in 1929), according to preliminary returns. Imports from the United States totaled \$74,219,219 (\$75,979,914 in 1929). The favorable balance of trade with the United States was \$25,660,000 in 1930 (\$2,146,000 in 1929).

FINANCE. The budget estimates for the fiscal year ended June 30, 1930, balanced at \$10,499,000, as compared with the 1928-29 budget of \$10,968,000. A deficit of \$2,000,000 in the 1929-30 financial operations was threatened early in the year, but careful paring of expenses reduced

the final deficit to about \$1,126,929. Revenue receipts were \$9,614,246 and net disbursements against appropriations were \$11,048,635. The appropriation of \$1,500,000 by the United States Congress for hurricane relief relieved the insular Government of the necessity of certain expenditures. The budget for 1930-31 provided for expenditures of \$10,451,000 from an estimated revenue of \$10,500,000.

In his address at the opening of the Porto Rico Legislature on Feb. 10, 1930, Governor Roosevelt reported that the net insular bonded indebtedness was \$25,390,000 and the insular floating indebtedness about \$3,024,950. In addition, the municipalities had an aggregate bonded indebtedness of \$18,314,000. In accordance with the Governor's recommendations, the deficit for 1929-30 was met in part by a \$1,000,000 loan floated during the year, the remainder being paid off out of a \$4,000,000 bond issue placed on the market July 1, 1930. The balance of the latter loan was used to fund the floating insular debt.

COMMUNICATIONS. There were in 1929 about 335 miles of railway line, 1115 miles of surfaced highways, 1098 miles of telegraph wire, and 28,942 miles of telephone wire. The telegraph and telephone systems are Government owned and operated. An air-mail and passenger service is in operation from Porto Rico to the United States and to South American points. Vessels in the foreign trade entering Porto Rican ports in 1929 numbered 1149 of 1,454,383 net registered tons (excluding trade with the United States), of which 627 vessels of 589,337 tons were American; vessels clearing totaled 1175 of 1,581,838 net tons.

GOVERNMENT. The Constitution, as determined by the Jones Act passed by the United States Congress in 1917, vests executive power in a governor appointed by the President of the United States and legislative power in a legislature of two elective houses: a senate of 19 members and a house of representatives of 49 members. A resident commissioner, elected by the people for a term of four years, represents Porto Rico in the United States Congress. The six departmental heads form an executive council, presided over by the Governor. The Jones Act conferred United States citizenship upon the people of the island. Governor in 1930, Col. Theodore Roosevelt, son of President Roosevelt, appointed in 1929.

HISTORY. Under the energetic leadership of Governor Roosevelt, and with assistance from the United States, Porto Rico in 1930 attacked with new vigor the difficult problems of overpopulation, poverty, disease, and illiteracy, which had become increasingly acute following the disastrous hurricane of September, 1928. In his report for the fiscal year ended June 30, 1930, the Governor stated that some 35,000 people on the island were suffering from tuberculosis, about 200,000 from malaria, and about 600,000 from hookworm. The tuberculosis death rate was four and one-half times that of continental United States and the malaria rate, two and one-half times greater. A complementary report by a committee of the American Child Health Association, issued in July, told of widespread suffering and extreme poverty due to unemployment, low wages, disease, overpopulation, and the great prevalence of illegitimacy and illegal marriages.

A broad health programme was instituted with the aid of American welfare organizations

concentrated in the Porto Rico Child Health Committee. The infant mortality rate was cut from 179 to 133 per 1000, dysentery and other diseases were restricted, and the general mortality rate was reduced to 21.3 per 1000, Governor Roosevelt reported.

To reduce unemployment, the Government inaugurated a system for the purchase of land from large estates and its distribution in small holdings. An efficient rural and vocational school policy was adopted, including the teaching of farm methods by visual instruction, and plans were outlined for the production of more vegetables and for fostering produce-marketing coöperatives. Employment was stimulated by an appropriation by the United States Congress of \$2,000,000 for road work.

Economics played a large part in the deliberations of the insular Legislature which adjourned April 17, 1930. The most important measures enacted provided for the establishment of an insular Department of Commerce, the reorganization of the judiciary system, and a uniform negotiable instruments law.

A survey of the economic and social situation in Porto Rico was completed and published during the year under the auspices of the Brookings Institution of Washington, D. C. (see *Porto Rico and Its Problems*, by Victor S. Clark and associates). The investigators reported that the majority of the daily laboring population earned approximately 70 cents a day and were employed about four days out of seven, the income of the average rural family amounting to from \$250 to \$275 annually. The great majority of the rural population are tenants, living upon the plantations and farms of large landowners, by whom they are partially employed.

The political recommendations of the Brookings Institution report, constituting a minor feature, aroused a storm of protest in the Porto Rican press. In general these recommendations favored restriction of the island's autonomy and repeal of the provisions of the organic act limiting land holdings of corporations to 500 acres.

The response to the political recommendations of the report emphasized the existence of a Nationalist movement on the island. The Nationalist convention held in May, 1930, was attended by spokesmen of three leading political parties. Two of the parties had independence planks in their platforms, although in both cases a referendum vote, sponsored by Congress, was provided for. The Nationalist leader, Pedro Albizu Campos, contended that 60 per cent of the population favored the establishment of a republic, a figure declared grossly exaggerated by his opponents. The actual membership of his party was small. Its members pledged themselves not to coöperate with the Government by accepting appointive public offices. The debate on the island's future status, stimulated in the native press by the economic depression, revealed a wide diversity of opinion as to whether statehood, autonomy, or independence would prove most beneficial. Absentee landlordism, as practiced by American financial interests owning large sugar plantations in Porto Rico, was held chiefly responsible for the poverty of the Porto Rican masses by many of the island's intelligentsia, regardless of their attitude towards independence. Consult Thomas E. Benner, "American Difficulties in Porto Rico" in *Foreign Affairs* (July, 1930) and the Governor's *Thirtieth Annual Report*. See UNEMPLOYMENT,

PORTS AND HARBORS. WORLD'S LARGEST DRY DOCK. The largest dry dock in the world was planned for construction in Southampton, England, to replace the existing floating dry dock. According to the plans the new dock was to be 1200 ft. long, 135 ft. wide and was to have a depth of 45 ft. The largest dry dock in 1930 was the Commonwealth Dock of the U. S. Navy at Boston, Mass. This dock is 1200 ft. long and 120 ft. wide, whereas the largest in Great Britain is the Gladstone Dock at Liverpool, 1050 ft. long and 120 ft. wide.

NEW YORK PIERS. Plans actively were brought forward during the year greatly to extend the Hudson River pier facilities of Manhattan Island. It was proposed to secure permission from the U. S. War Department to extend the pier-head line about 100 ft. into the Hudson and to replace existing piers in the mid-city section with new works of 1000 ft. in length.

AIRPORTS. The advent of commercial aviation had already resulted in numerous air-port developments and in some novel hangar constructions. Among those recently constructed the following may be noted:

St. Paul, Minn. By buying a comparatively inexpensive piece of waste land and filling and improving it, this city secured an excellent air port within one mile of the Post Office. The port covers about 300 acres on the Mississippi River and was to include a hydroplane basin. The plans adopted were particularly interesting because they allowed for a progressive development to meet future traffic needs and also permitted a progressive use of the port as construction continued. This was accomplished primarily by adopting a unique runway plan consisting of a series of intersecting triangles.

Seville, Spain. This city apparently was selected as the European port or terminus for transatlantic airship routes from both North and South America. A huge hangar for lighter-than-air craft was built there and a duplicate was to be erected at Buenos Aires. In plan of construction the Seville hangar was almost identical with the remarkable structure designed by M. Freyssinet and built several years previously at Orly, France, near Paris. Some 950 ft. long, 400 ft. wide, and 150 ft. high, this new structure was essentially a huge half section of corrugated concrete pipe. Inner and outer arches or ribs of reinforced concrete were joined by reinforced concrete walls only 4 inches thick, yet the structure arched over the great 400-ft. span and gave a clear and unobstructed view of the interior.

PORTUGAL. A republic of Europe, situated west of Spain in the Iberian Peninsula; the westernmost of all the states of Europe. Capital, Lisbon.

AREA AND POPULATION. The area of continental Portugal is 34,254 square miles; population, according to the census of 1920, 5,621,977, as compared with 5,574,578 in 1911. The Azores, with an area of 922 square miles, had a population of 232,012 in 1920; and Madeira, with an area of 314 square miles, a population of 179,002. In December, 1928, the estimated population was 5,920,000 in Portugal, 240,000 in the Azores, and 185,000 in Madeira. As Madeira and the Azores are considered integral parts of the republic, the total area was 35,490 square miles and the total population, 6,345,000 in 1928 (6,032,991 in 1920). Births in 1928 numbered 211,314; deaths, 124,088; marriages, 45,347. As

a colonial power, Portugal ranks third in the world. Her colonial possessions in Africa and Asia had an estimated area of 936,264 square miles, with a population of 8,737,853, of which 927,292 square miles with a population of 7,736,700 were in Africa. Lisbon, the capital, had a population at a special census in 1925 of 529,524 and Oporto, 215,625.

EDUCATION. At the census of 1920, 47 per cent of the males and 61.5 per cent of the females over the age of six were illiterate. Primary education is compulsory. Public elementary schools in 1927-28 numbered 7489, with 321,232 pupils; secondary schools, 33, with 15,096 pupils. The three universities, with the enrollments in 1927-28, were: Lisbon, 2249; Coimbra, 1621; and Oporto, 1137.

PRODUCTION. Agriculture is the predominant industry. The Ministry of Agriculture estimated that 60 per cent of the total area is cultivated, 20.4 per cent productive but uncultivated, and 15.7 per cent, or 3,502,000 acres, suitable for cultivation but not tilled. Cereals, pulse, other crops, and pasture occupy 37.4 per cent of the entire area, 6.2 per cent is under fruit trees, 5.4 per cent under vineyards, 26 per cent under forest, and 25 per cent is waste. Production of the chief cereal crops in 1929, with totals for 1928 in parentheses, was as follows (in quintals of 220.46 pounds): Wheat, 3,024,000 (2,053,648); rye, 1,345,000 (1,007,000); barley, 438,000 (311,000); oats, 876,000 (733,000). The maize crop in 1928 totaled 3,635,000 quintals; rice and potatoes, 202,013 metric tons; wine, 99,542,784 gallons; olive oil, 6,302,252 gallons. The sardine fisheries rank second among the industries of the country. Production of the sea fisheries in 1928 was valued at 245,000,000 escudos (1 escudo exchanged at \$0.0447 in 1929). Cork is an important export commodity.

Due to the lack of fuel and cheap transport, Portugal's considerable mineral wealth remains largely undeveloped. The mineral production in 1928 included: Coal, 201,000 tons; copper ore, 243,000 tons; super-phosphates of lime, 143,000 tons; lignite, 27,000 tons. In 1930, low mineral prices virtually closed down mining operations. Textile production is the principal manufacturing industry and employed about 45,000 operatives. Commerce and industry were generally depressed during 1930, but a good agricultural crop improved internal market prospects.

COMMERCE. According to revised figures issued by the General Board of Statistics, imports for consumption declined slightly in 1929 to 2,545,670,000 escudos (about \$113,791,000) from 2,682,800,000 escudos in 1928. Exports showed a slight increase to 1,080,520,000 escudos (about \$48,299,000) from 1,028,200,000 escudos in the previous year. The adverse balance of trade stood at 1,465,150,000 escudos (about \$65,492,361) in 1929 and 1,654,600,000 escudos in 1928. Wines, cork, and canned fish (especially sardines) were the chief exports, and wheat, codfish, and manufactured articles were the principal imports. Great Britain retained her leading position in the Portuguese trade in 1929, but increased imports from Germany and the United States reduced Britain's lead. Great Britain furnished 26.85 per cent of the total imports in 1929 (30.67 per cent in 1928) and took 23.37 per cent of all Portuguese exports. Germany furnished 15 per cent of the imports (13 per cent in 1928) and purchased 11 per cent of the

exports. The United States supplied 13 per cent (11 per cent in 1928) and took 7.22 per cent. France furnished 9.3 per cent and took 11.29 per cent.

FINANCE. Budget estimates for the fiscal year ended June 30, 1930, placed revenues at 2,033,433,000 escudos and expenditures at 2,024,854,000 escudos. Actual returns, according to an official announcement of Oct. 15, 1930, showed a surplus of 90,000,000 escudos (about \$4,000,000). For the fiscal year 1928-29, actual revenues amounted to 2,326,000,000 escudos and actual expenditures to 2,049,000,000 escudos, the surplus being about 277,000,000 escudos. This compared with a deficit of 195,000,000 escudos in 1927-28 and an accumulated deficit from 1919 to 1928 of some \$191,000,000. The floating debt was reduced from 2,196,000,000 escudos on April 30, 1928, to 1,170,000,000 escudos on the same date of 1930. The total public debt on Jan. 1, 1929, stood at 10,489,300,000 escudos, of which 4,326,200,000 escudos was internal (2,051,000,000 escudos comprising the floating debt) and 6,163,100,000 escudos external debt.

Portuguese finances in 1930 were reported in better shape than at any time since the revolution of 1910. An internal loan of about \$4,500,000 for the improvement of Portuguese ports was oversubscribed.

COMMUNICATIONS. Railway lines in operation in 1928 totaled 2103 miles, of which about 894 miles were state-owned line leased to the principal private operator. Highways extended about 9315 miles, most of which were in urgent need of repair. In 1930, a Franco-Portuguese aviation company obtained a 30-year concession for the exploitation of commercial aviation within Portugal and a monopoly of air routes between Portugal and her colonies. From May 19, 1928, to September, 1930, Portugal established telephone connections with 14 European countries. Vessels entering the ports in 1928 totaled 9549 of 26,131,562 tons; vessels clearing, 9467 of 26,116,202 tons.

GOVERNMENT. According to the Constitution of 1911, executive power is vested in the President, elected by Parliament for four years but ineligible for reelection, who acts through a responsible ministry; and legislative power in the Parliament of two chambers, the Upper House having 71 members elected by the municipal councils and the Lower House, 164 members elected for three years by direct suffrage. Acting President in 1930, Gen. Antonio Oscar de Fragoso Carmona (elected March 25, 1928). The Cabinet, as constituted Jan. 20, 1930, included: Prime Minister, Gen. Domingos de Oliveira; Interior, Dr. Antonio Lopes Matheus; Commerce and Communications, Dr. Antunes Guimaraes; Foreign Affairs, Commander Fernando Augusto Branco; Marine, Commander Magalhaes Correia; Justice, Dr. Lopes de Fonseca; War, Col. Joao Namorado de Aguiar; Agriculture, Lieut. Col. Linhares de Lima; Finance and (acting) Colonies, Dr. Antonio de Oliveira Salazar; Education, Dr. Gustavo Ramos. Parliament had not been convened (1930) since the establishment of the military dictatorship on June 6, 1926.

HISTORY

INTERNAL UNREST. The military dictatorship of President Carmona remained supreme

throughout 1930 by effectively crushing a number of monarchist and republican revolutionary conspiracies. An elaborate and efficient secret police system, with ramifications throughout the Provinces, and a rigid censorship of the press enabled the military chiefs to nip successive plots in the bud and to deport the ringleaders. As economic depression and unemployment became more acute during 1930, the restiveness of the population under military rule and high taxation evidenced itself in the increasing tension, which the dictator's promises of a return to constitutionalism failed to relieve. The Carmona régime, however, continued its excellent work of rehabilitating the national finances and improving the long-neglected highways and public works. A new Cabinet was formed Jan. 21, 1930, by Gen. Domingos de Oliveira (see above under *Government*), after a previous effort by Col. Passos Souza had failed. General de Oliveira announced that there would be no change in the policies of the dictatorship. His Cabinet was composed mainly of clericals and moderate republicans.

During July the Government frustrated two revolutionary conspiracies, the first headed by the monarchist leader, Col. Joao Almeida, and the second hatched by the Democrats in collaboration with a section of the army, Colonel Almeida and over 300 soldiers and civilians were arrested and on July 20 the Government deported to the Azores 27 soldiers and civilians accused of participating in the conspiracies. A third conspiracy was reported to have been blocked on October 6 by the timely concentration of government forces in key positions in Lisbon and the arrest of republican ringleaders.

An official note issued July 24, 1930, announced that steps were being taken to form "a civilian organization destined to guarantee the transition of the Government from the dictatorship to constitutional normalcy, which will assure the continuance of the work begun by the dictatorship." Subsequently (on July 31) the principles of a new party, the *Uniao Nacional* (National Union), were formulated at a meeting of the Cabinet and some 750 civil governors and chairmen of city councils called to Lisbon for that purpose. The Governors were delegated to organize the party in their respective districts. The new organization apparently was to be modeled on that of the Italian Fascist party, and members of the proposed Parliament were to be elected from its ranks. The Government's plans for a return to constitutionalism, as outlined by the Minister of Finance, called for a parliament with limited legislative powers, responsible to the President, who would appoint and dismiss Cabinet Ministers. No concrete steps toward the partial abandonment of the dictatorship were reported by the end of the year.

The movement for the restoration of the monarchy in Portugal was strengthened during the year by union of the followers of Dom Manoel II, who was deposed as King of Portugal by the republican revolution of 1910, and of Prince Nuno Duarte, 23-year-old pretender to the throne, in support of the candidacy of the latter. Engrossed in literary activities, Dom Manoel showed little desire to leave the seclusion of his London palace and to return to Portugal even as King. Prince Duarte, on the other hand, was active in the monarchist movement. He was reported to have entered Portugal

in secret a number of times, despite the ban against his presence, and to have presided at royalist meetings.

THE COLONIES. Charges that slavery or forced labor were practiced in Portuguese Africa were investigated during the year by Dr. Oliveira Santos, former colonial governor, whose report was forwarded to the League of Nations and to the governments of all English-speaking countries. It was said to contain documentary evidence refuting the charges. Criticism of Portuguese colonial administration was believed responsible for the resignation of Col. Bento Roma. Governor-General of Angola (see ANGOLA). A demand for complete autonomy under Portuguese sovereignty for the colonies of Angola, St. Thomas, Cape Verde, Guinea, and Mozambique was issued in a manifesto of the National African party on August 12.

FOREIGN AFFAIRS. The traditional friendly and intimate relations between Portugal and Great Britain were somewhat strained during the year due to the Government's alleged discrimination against foreign shipping, the cancellation by the Government of an English firm's contract in Portugal, the alleged ill-treatment of an English ship's officer in Angola, and other unpleasant incidents. These developments were accompanied by further steps in the direction of a rapprochement with Spain. The Government was officially informed on August 6 that the arbitration court at Lausanne had awarded Portugal 48,000,000 gold marks (about \$11,520,000) from Germany for damages to Portuguese African colonies during the World War.

PORTUGUESE EAST AFRICA, or **MOZAMBIQUE.** A colony of Portugal, occupying the east coast of Africa between Tanganyika Territory and the Union of South Africa. Area, 293,436 square miles; total population (1927), 3,514,612, including 35,570 Europeans and Asiatics and 3,479,042 natives. The colony is divided into the State-administered province of Mozambique (area, 194,953 square miles; population, 3,225,289) and the territory of Manica and Sofala administered from Beira by the Mozambique Company under royal charter (area, 98,483 square miles; population, 289,323). Lourenço Marques (population 37,307) is capital of the province, and a leading port. Other ports are Mozambique, Beira, and Porto Amelia. The chief products are sugar, maize, cotton, and minerals. For 1928, imports into the province totaled 13,308,200 escudos gold; exports, 11,877,039 escudos gold. Imports and exports of the chartered colony in 1927 were 5,418,176 and 2,511,805 escudos gold, respectively. Revenue and expenditure of the province for 1928-29 were estimated at 322,483,961 escudos (1 escudo exchanged for approximately \$0.05 in 1927 and \$0.044 in 1928). In the chartered colony for 1928, receipts totaled about 64,758,535 escudos and expenditures about 44,570,427 escudos. In 1927 there were 440 miles of railway. Governor in 1930, Lieutenant-Commander Carlos de Almeida Pereira. See **PORTUGAL** under *History*.

PORTUGUESE GUINEA, g'i'nê. A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagoz, together with the island of Bolama on which is situated the capital, Bolama. Area, estimated at 13,940 square miles; population (1928), 343,961. The principal port is Bissau. The chief products are

wax, rubber, ivory, hides, and oil seeds. The imports in 1928 were valued at 5,319,294 escudos; exports at 2,903,195 escudos (1 escudo exchanged at about \$0.044). For 1929-30 the estimated Government receipts were 23,484,500 escudos and the estimated expenditures, 23,367,864 escudos. See **PORTUGAL** under *History*.

PORTUGUESE WEST AFRICA. See **ANGOLA**.

POST, MELVILLE DAVISSON. An American lawyer and author, died in Clarksburg, W. Va., June 23, 1930. He was born in Harrison Co., W. Va., Apr. 19, 1871, and was graduated from West Virginia University with the A.B. degree in 1891 and the LL.B. degree in 1892. On being admitted to the bar he formed a partnership with Col. John T. McGraw, Democratic National Committeeman. In 1892 he was a presidential elector, voting for Grover Cleveland and serving as secretary of the Electoral College. In 1898 he was chairman of the Democratic Congressional Committee for West Virginia. He also acted during 1914-15 as chairman of the advisory committee of the National Economic League on the question of efficiency in the administration of justice. In addition to his legal and political activities he was well known as a mystery and detective story writer. His books include: *The Strange Schemes of Randolph Mason* (1896); *The Man of Last Resort* (1897); *Dwellers in the Hills* (1901); *The Corrector of Destinies* (1909); *The Gilded Chair* (1910); *The Nameless Thing* (1912); *Uncle Abner* (1918); *The Mystery at the Blue Villa* (1919); *The Sleuth of St. James's Square* (1920); *The Mountain School Teacher* (1922); *Monsieur Jonquelle* (1923); *Walker of the Secret Service* (1925); *The Man Hunters* (1926); and *The Revolt of the Birds* (1927).

POST OFFICE. See **UNITED STATES**.

POTASH. The potash industry throughout the world was generally prosperous during 1930, with improvements taking place in the product and the treatment of by-products as well as in the organization and operation of plants, including facilities for loading and transportation. In Germany there was an estimated reduction of about 10 per cent in German potash exports, declining from the value of 6,013,000 marks in 1929 to 5,284,000 marks in 1930. The reason for the decline was the decrease in the fertilizer imported by Poland, declining from 8,370,000 marks to 1,840,000 marks in 1930. Czechoslovakia's imports declined by over 2,000,000 marks, but Holland, the United States, Denmark, Belgium, and Norway increased their takings. It will be recalled that potash producers in France and Germany act together in a combine.

In the United States the American potash industry in 1930 was estimated to have produced somewhat more than 100,000 tons of potash salts, equivalent to about 59,000 tons of actual potash, comparing with 107,820 tons of potassium salts, equivalent to 61,590 tons of potash (K₂O) in 1929. Substantial plant enlargements were under construction in 1930, which were estimated to increase the output of American operators by about 50 per cent. New enterprises were reported in the Texas and New Mexico fields, and the prices from American plants followed the level of the German-French combine fixed in 1929.

Imports of potash fertilizers in 1930 included muriate of potash, 273,211 tons valued at \$9,928,102, as against 230,966 tons valued at \$8,224,661 in 1929; manure salts, 361,688 tons valued at

\$5,047,089 in 1930 as against 390,828 tons valued at \$5,113,085 in 1929; crude sulphate of potash, 86,257 tons valued at \$3,947,479 in 1930, as against 79,510 tons valued at \$3,647,839 in 1929. See FERTILIZERS; GEOLOGY; CHEMISTRY, INDUSTRIAL.

POTASSIUM. See FERTILIZERS; CHEMISTRY, INDUSTRIAL.

POTATOES. The 1930 potato production of 27 countries reporting to the International Institute of Agriculture, Rome, was estimated at 4,527,051,000 bushels, a decrease of 5.6 per cent from the yield in 1929 but an increase of 8.1 per cent above the annual average of the five years 1924-28. The potato area of those countries was 25,807,000 acres and only 0.8 per cent below the area of 1929 and 2.8 per cent above the average for the five-year period. The European crop, usually about 90 per cent of the world's yield, was reported as smaller than the record crop of 1929 but larger than the harvests in 1926, 1927, and 1928. A number of European countries reported yields in 1930 well above the average for the five years 1924-28. The leading producing countries, not including the United States, reported yields as follows: Germany, 1,627,885,000 bushels; Poland, 1,063,713,000 bushels; Czechoslovakia, 300,491,000 bushels; Spain, 154,153,000 bushels; Belgium, 101,097,000 bushels; England and Wales, 102,331,000 bushels; the Netherlands, 94,716,000 bushels; and Canada, 81,933,000 bushels.

The production of Germany represented an increase of 11 per cent over the yield of 1929 and was the largest crop since the war. Potatoes are largely fed to livestock in Germany and their use in view of the shortage of feed grains was encouraged by the Government this year. The Polish crop was more than 100,000,000 bushels below the 1929 yield. Czechoslovakia in 1930 produced the smallest crop since 1926 and England and Wales since 1916. France, not included in these estimates, during the past six years produced from 400,000,000 to 600,000,000 bushels but the 1930 crop suffered from wet weather and was injured to some extent by rot. The 1930 acreage of the Soviet Republics was reported as 13,171,000 acres compared with 14,683,000 acres harvested in 1929 and producing 1,758,157,000 bushels.

The potato crop of the United States in 1930 was estimated by the Department of Agriculture at 361,090,000 bushels produced on 3,394,000 acres, the rate per acre being 106.4 bushels. In 1929 the yield was 359,048,000 bushels, the area 3,338,000 acres, and the average acre-yield 107.6 bushels. The average farm price on Dec. 1, 1930, was only 90.4 cents per bushel compared with \$1.309 the year before. Computed at this rate, the value of the 1930 crop was \$326,457,000 and of the 1929 crop \$469,837,000. All States reported potato production and the leading ones and their yields were as follows: Maine, 46,120,000 bushels; New York, 29,116,000 bushels; Idaho, 25,038,000 bushels; Pennsylvania, 23,166,000 bushels; Minnesota, 21,350,000 bushels; Wisconsin, 18,056,000 bushels; Michigan, 15,254,000 bushels; Colorado, 15,050,000 bushels; and Virginia, 14,583,000 bushels. The average yield per acre ranged from 50 bushels in Delaware to 240 bushels in Maine. Only five States reported an average yield per acre of 200 bushels or more and 16 States between 100 and 200 bushels. The highest acreage, 322,000 acres, was reported for Minnesota. For the fiscal year ended June 30, 1930, the United States ex-

ported 2,386,000 bushels of potatoes valued at \$3,228,000 and the imports for the year were 360,361,000 pounds with a value of \$7,029,000.

During the year the Federal Farm Board approved plans for the development of central marketing programmes for potatoes as presented by coöperative associations handling the product. The Interstate Early Potato Committee organized in 1928 was continued for another three years to study and make recommendations on acreage stabilization, credit facilities, substitute crops and enterprises, and market coördination. See HORTICULTURE.

POULTRY. See LIVESTOCK.

POULTRY DISEASES. See VETERINARY MEDICINE.

POWER DEVELOPMENT. See POWER PLANTS, STEAM TURBINES; WATER POWER.

POWER PLANTS. The number of public utility power plants in the United States, of over 100 kilowatts capacity, was 2863 private and 1010 municipal with a total rated capacity of 33,860,000 kilowatts. Of this nearly 73 per cent were steam, over 35 per cent hydro and 2 per cent internal combustion engines. New capacity added during 1930 was approximately 2,000,000 kilowatts.

The total output of all central stations during 1930, according to the U. S. Geological Survey, was 96 million kilowatt hours. Of this 18.7 per cent was consumed in transmission losses and company use, about 15 per cent was sold for domestic use, 21 per cent went to small retail customers, 52 per cent was used by large manufacturing plants and the remainder was taken up by railways and municipal lighting.

Thirty-nine million tons of coal, 8,646,000 barrels of fuel oil, and 121 billion cubic feet of natural gas were burned in public utility power plants during 1930, and the average fuel consumption, reduced to coal equivalent, was 1.63 pounds per kilowatt hour. This represents just one-half the corresponding figure for 1919; or expressed differently, the average efficiency of steam power plants had just doubled in 11 years.

The total capacity of private industrial power plants in the United States, according to the Census returns, was over 19,000,000 horse-power capacity of which 16,931,000 horse power was steam, 1,598,000 horse power water power and 1,170,000 horse power internal combustion engines. No figures were available as to the fuel consumption.

In public utility stations the trend toward large high-pressure units continued, there being in service or nearing completion at the end of 1930 in the United States over a dozen plants operating at 1200 to 1400 pounds steam pressure. Several were also in service in Europe. Taking advantage of recent advances in metallurgy the trend also covered higher steam temperatures, several of the new stations being designed to operate at 825° to 850° F. In Europe the St. Denis Station of the Société de Électricité de Paris was putting in three 50,000 kilowatt steam turbines to operate at 840° to 920° F. The urge toward reduced unit investment costs had led to greater concentrations of power in single units, simplification of layout, and in one case an outdoor plant without a building.

The year saw new records established in power-plant efficiency. Powerton Station in Illinois for one month operated at 12,455 B.t.u. per kilowatt hour and averaged 12,610 B.t.u. for a period of

six months. The new 1200-pound Gilbert Station at Holland, N. J., operated at a minimum figure of 11,866 B.t.u. per kilowatt hour and the Long Beach Station at Long Beach, Calif., which burned natural gas and oil averaged 12,850 B.t.u. per kilowatt hour for a year. These economies were exceeded by the mercury boiler and turbine operating on a binary cycle at the Hartford Electric Light Company, Hartford, Conn., which operated for ten months on an average of 10,310 B.t.u. per kilowatt, and included several days at 9800 B.t.u. See **BOILERS**.

Another interesting development of 1930 was the completion of the first floating power plant designed solely to produce power for outside use. The steamship *Jacona*, with a generating capacity to 20,000 kw., was placed in service by the New England Public Service Company of Augusta, Me. In its first application it was tied to a dock at Bucksport, Me., where a large tidewater paper mill was in the course of construction. This mill would require 20,000 horse power, which was to be supplied by the *Jacona* until the Wyman Dam plant at Bingham was completed. None of the power of this ship was available for propulsion. It was to be towed from port to port as the need arose.

Among large industrial establishments many new plants were installed to operate at 400 and 600 pounds steam pressure, some at 800 pounds and several at 1200 pounds or greater. Notable among these was the new installation at the Ford Motor Company in Detroit which consisted of a 110,000 kilowatt vertical turbine and boilers to operate at 1200 pounds. The Dow Chemical Company at Midland, Mich., was installing a 1200-pound unit and the 1800-pound Philip Carey installation near Cincinnati, Ohio, was about to go in service. A number of high-pressure industrial plants, mostly of smaller size, were in operation in Europe.

Interconnection between utility and industrial power plants, embodying the interchange of power and the supply of steam for process, was gaining favor. In some cases this idea had been exemplified by the building of high-pressure power plants by the utility to supply power and exhaust steam to large industrials and feed the excess power into the utility system. In other cases there was a direct exchange of surplus power as needed between the industrial power plant and the utility establishment.

PRAIRIE PROVINCES. The name applied to the three Canadian Provinces of Manitoba, Saskatchewan, and Alberta. See **CANADA** and articles on respective Provinces.

PRATT INSTITUTE. A nonsectarian educational institution in Brooklyn, N. Y.; founded in 1887 and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1930 autumn enrollment was 5094, distributed as follows: Arts, 1848; household science, 920; science and technology, 2301; library school, 25. There were 181 members on the faculty and 12 special lecturers. The library contained 143,000 volumes. President, Frederic B. Pratt, A.M., LL.D.

PREHISTORIC MAN. See **ARCHÆOLOGY**.

PRESBYTERIAN CHURCH. The Presbyterian Church, with the Reformed churches, rests

on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. The distinctly Presbyterian bodies of the United States are derived for the most part from bodies in Great Britain, but are in many respects similar to the Reformed churches in the United States, sprung from parent bodies in other parts of Europe, and particularly in Holland. The following organizations in the United States bear the Presbyterian name: The Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); United Presbyterian Church of North America; Cumberland Presbyterian Church; Cumberland Presbyterian Church, Colored; Reformed Presbyterian Church; Reformed Presbyterian Church, General Synod; Associate Synod of North America, also known as the Associate Presbyterian Church; and the Associate Reformed Presbyterian Synod. The Presbyterian churches of the United States have general affiliations with the Alliance of Reformed Churches throughout the World Holding the Presbyterian System and also with the General Council of the Presbyterian and Reformed Churches in America, a similar organization of purely American scope.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. This is the largest body of the denomination and is represented by churches in every State of the Union and by official mission stations in Alaska, Cuba, Porto Rico, and foreign lands. In 1930 the churches in the United States were organized into 46 synods and 293 presbyteries. Statistics for the year ending Mar. 31, 1930, showed a total communicant membership of 1,984,108. The Sunday-school enrollment totaled 1,596,030. As a result of the movement on foot to dissolve churches having a nominal existence and to combine churches where possible, the number was decreased by 34, giving a total of 9327, including 52 churches organized during the year, as against 92 which were dissolved. The number of ministers in 1930 was 9987. Contributions during the year amounted to \$63,048,063. Of the total income, \$49,296,831 was used for congregational expenses, while \$13,313,475 was devoted to benevolences, including \$4,114,784 given to the board of national missions, \$3,565,968 to the board of foreign missions, \$881,723 to the board of Christian education, and \$360,689 to the board of pensions for current needs.

The 1930 meeting of the general assembly of the Presbyterian Church in the United States of America was held in Cincinnati, O., May 29-June 4. The Rev. Hugh Thomson Kerr, D.D., LL.D., of Pittsburgh, was elected moderator for 1930-31. The assembly approved progress already made in negotiations for union with the Methodist and Protestant Episcopal (q.v.) communions, and voted for definite steps for organic union with the United Presbyterian and the Dutch Reformed denominations. At a meeting in Pittsburgh, Pa., on Nov. 13, 1930, the basis for the latter plan of union was determined by representatives of the Presbyterian Church in the United States of America, the Presbyterian Church in the United States (South), the United Presbyterian Church of North America, the Reformed Church in America, and the Reformed Church in the United States. See articles on **REFORMED CHURCHES**.

The assembly also took steps to strengthen the Presbyterian ministry educationally, to instruct the ruling eldership of the church in its duties, and to place the denominational colleges on a more secure footing for the promotion of Christian education. It gave women members equal rights with men for ordination as ruling elders, and continued its special commission on marriage, divorce, and remarriage to promote higher ideals in marriage relationships and to bring to the assembly in 1931 a more complete report based on further study and research. The denomination maintains 52 colleges and 13 theological seminaries. Its official organ is the *Presbyterian Magazine* (monthly). Privately-owned Presbyterian periodicals are the *Presbyterian Advance*, the *Presbyterian Banner*, and the *Presbyterian* (all weekly). The chief permanent officer is the stated clerk, who in 1930 was the Rev. Lewis Seymour Mudge, D.D., LL.D., 514 Witherspoon Building, Philadelphia.

PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1930 of 17 Synods and 92 Presbyteries, with 3564 organized churches, 2409 ministers and 457,855 members. The ruling elders numbered 15,238 and deacons 17,790. Contributions for the year were: Current expenses, \$9,737,577, a gift of \$21.28 per capita; and benevolences, \$4,570,258, a gift of \$9.99 per capita. In 1930 the church was supporting 427 missionaries in Africa, Brazil, China, Japan, Korea, and Mexico; these missionaries were assisted by 3452 native workers. In the six countries there were 50,979 church members and 81,115 Sunday-school members. The church maintains four theological seminaries, one training school for lay workers (white) one training school for lay workers (colored), 18 colleges, 13 junior colleges, 12 secondary schools, 19 mountain schools, two Mexican mission schools, and 15 orphans' homes and schools. The church publishes the *Presbyterian Survey*, which is the medium of communication of all departments with the membership of the church. Privately owned papers of the denomination are the *Christian Observer*, *Presbyterian Standard*, and *Presbyterian of the South*.

The General Assembly of the Presbyterian Church in the United States met in Charlottesville, Va., May 22, 1930. This assembly had before it the reports of two *ad interim* committees on organic union. After a full consideration of all the papers, reports, and recommendations, the assembly adopted the following on the matter of organic union with all Presbyterian Churches in the United States:

Without in any sense committing our assembly to organic union, but being unwilling to close the door to further discussion of this important question, we direct the moderator to appoint a committee consisting of one member from each synod, with the moderator as chairman in addition, in order that it may continue conferences with representatives of the Churches holding the Presbyterian and Reformed System with the view of placing before the assembly of 1931 any information they may secure or plans evolved concerning union with such churches.

The moderator, the Rev. T. W. Currie, D.D., was made chairman of this *ad interim* committee. The assembly also continued its *ad interim* committee on union with the Associate Reformed Presbyterian Church. A meeting of the assembly was to be held at the School of the Ozarks, Hollister, Mo.,

May 28, 1931. The offices of the general assembly are located at 729 Kirby Bldg., Dallas, Texas. The Rev. J. D. Leslie, D.D., was stated clerk, and the Rev. E. C. Scott assistant stated clerk in 1930.

PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED. A branch of the Presbyterian Church formed by the union of the Associate and the Associate Reformed churches, effected in Pittsburgh in 1858. It represents the earlier covenanter and secession movements of the denomination in Scotland, from which it inherited whatever was distinctive in their views and usages. In organization and government it is in general accord with other Presbyterian bodies.

The general assembly convened in Des Moines, Iowa, May 28, 1930. On that date there were in the United States 11 synods, 57 presbyteries, 886 congregations, 920 ministers, 5093 ruling elders, and a church membership of 172,126. The total membership, including missionary fields, was 240,551. The Sabbath-school enrollment was 202,232, while the young people's societies numbered 1118 with a membership of 31,542. Contributions during 1930 totaled \$6,346,108, and missionary contributions \$2,227,253.

Among the chief important matters before the Des Moines assembly were: The enactment of the pension plan for ministers; and the approval of the report of the committee on Presbyterian unity, which contained the following:

(a) That we approve organic union with other Presbyterian and Reformed Churches on the basis of the existing standards of the uniting churches.

(b) That our representatives be instructed to cooperate with committees of other Presbyterian and Reformed Churches to prepare a complete plan to make this organic union effective, to be submitted for adoption to the properly constituted authorities of these churches.

The denomination supported 447 men and women in four foreign mission fields and 365 men and women in homeland missions. It carried on medical work in 28 foreign hospitals and dispensaries; conducted educational work in 448 schools at home and abroad; maintained nine colleges and four theological seminaries at home and abroad; and reached 38,899 young men and women in its schools and colleges, from which more than 6000 were graduated. The official organ of the church is the *United Presbyterian*, a church-owned, yet independent, weekly, published in Pittsburgh. The moderator of the general assembly in 1930 was the Rev. Thos. C. Atchison, D.D., of Lawrence, Mass., and the stated clerk was the Rev. D. F. McGill, D. D., LL.D., of Bellevue, Pa.

PRIMITIVE METHODIST CHURCH. See METHODISTS.

PRIMO DE RIVERA Y ORBANEJA, GEN. MIGUEL, MARQUIS DE ESTELLA. A Spanish soldier and former dictator and premier of Spain, died in Paris, Mar. 16, 1930. He was born in Cadiz, Jan. 8, 1870. During the Spanish-American War, he served in Cuba and in the Philippines. He was in Morocco during 1909-13 and was military governor of Cadiz in 1915-17. In 1922 he became military governor of Barcelona. The following year, in September, General Primo de Rivera overthrew the Spanish Government and became dictator of Spain. At this time, Spain was in a state of unrest because of labor union strikes and

dissatisfaction with the conduct of the campaign against the Moors in the Spanish protectorate in Morocco. Once begun by General Primo de Rivera, the revolution met with little opposition. King Alfonso invited Primo de Rivera to take charge of the government and by royal decree dissolved parliament, Sept. 14, 1923. The people of Spain, too, welcomed the Dictator. As president of the military directorate, Primo de Rivera met with severe criticism, but he succeeded in establishing a strong government. In his own story of his dictatorship, written after his resignation, he listed among his achievements a share in completing successfully the Spanish campaign in Morocco in 1926, the restoration of order in Spain itself, the issuing of a new penal code, strengthening of naval bases, and reforms in education. In 1925 the military directorate was abolished and a civil form of government restored, in which Primo de Rivera was premier. Though no longer a military ruler, Premier Primo de Rivera retained his power as dictator of Spain. In spite of a temperate use of this power, both the King and the people began to tire of the rule of one man. This feeling manifested itself positively early in 1929 in the revolutionary movement along the southern and eastern coasts, conducted by officers of the Artillery Corps who were aided by a few naval officers and by José Sanchez Guerra, a former Conservative premier of Spain. In March of 1929, the students of Madrid conducted a protest strike to show their disapproval of certain government measures, with the result that, on the failure of the strike, the University of Madrid and, later, other universities were closed for a time by the Premier. With each further evidence of revolt, there was a corresponding tightening of the reins of the dictatorship. Realizing that the end of his rule was near, General Primo de Rivera resigned the premiership of Spain, Jan. 28, 1930, and went into voluntary exile in Paris. See *SPAIN* under *History*.

PRINCE EDWARD ISLAND. An island in the Gulf of St. Lawrence, constituting one of the Maritime Provinces of Canada. The smallest of the nine Provinces, it has an area of 2184 square miles and a population estimated on June 1, 1930, at 85,800 (88,651 in 1921). Capital, Charlottetown, with 12,347 inhabitants. In 1928, births totaled 1806; deaths, 952; marriages, 466; public-school enrollment, 17,214. The percentage of illiteracy is approximately half that of Canada and the United States. About 90 per cent of the population are engaged in farming and 94.2 per cent of the farmers own their own farms.

Agriculture, stock raising, fishing, and silver-fox breeding are the chief industries. In 1929, field crops from 545,763 acres were valued at \$16,940,400, and the fisheries output totaled \$1,366,428, a 14 per cent increase over 1928. The value of fur-bearing animals on farms in 1928 was estimated at \$4,500,000. In the same year the gross value of output of 277 industrial establishments, employing 2035 persons, was \$4,445,160. Exports to other countries (1928-29) amounted to \$956,045 and imports for consumption to \$1,808,713. For the fiscal year ended Dec. 31, 1929, ordinary revenues totaled \$1,083,571 and expenditures were \$1,033,315. The bonded indebtedness in 1928 was \$2,185,000. There were 276 miles of railway line; daily steamship communication was maintained with the mainland.

Government is administered by a lieutenant-governor and a legislative assembly of 30 mem-

bers, elected for four years. In the Dominion general election of July 28, 1930, the Province returned 3 Conservatives and 1 Liberal to the House of Commons at Ottawa. The Legislature elected in July, 1927, included 24 Liberals and 6 Conservatives. Prince Edward Island was the last Canadian Province to retain prohibition, a plebiscite held July 18, 1929, giving a majority of 3438 in favor of continuing the existing temperance law. Lieutenant-Governor in 1930, Frank R. Heartz; Premier and Attorney-General, A. C. Saunders. See *CANADA*.

PRINCETON UNIVERSITY. A nonsectarian institution of higher learning for men in Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1930 was 2527, of whom 2277 were undergraduates and 250 were graduate students and fellows. The faculty numbered 336; there were also 31 assistants and 36 administrative officers. In addition to several promotions and reappointments, André Maurois of Paris was appointed visiting lecturer in French Literature; C. W. E. Miller of Johns Hopkins, visiting professor of Greek; Wilhelm Kroll of Breslau, visiting professor of classical philology; Paul Laumonier of Bordeaux, visiting professor of modern languages; L. F. Moody, professor of hydraulic engineering; and DeWitt C. Poole, chairman of the advisory board of the new school of public and international affairs.

Losses by death included Professor-emeritus T. W. Hunt, of the department of English who had served under five administrations at Princeton, and Prof. Fred Neher of the department of chemistry. Retirements included Prof. George B. McClellan of the department of economics, formerly mayor of New York City, and Prof. W. B. Scott of the department of geology. Prof. Karl Compton of the department of physics resigned to become president of the Massachusetts Institute of Technology.

The endowment in 1930 was \$23,211,911; the total income, \$2,739,793; and the total expenditure, \$2,739,635. Bequests during 1930 included one of \$500,000 from Thomas D. Jones, of the class of 1876, for salaries. A gift of \$189,000 was received from the Textile Alliance, Inc., for research in pure science; and one of \$300,000 from John D. Rockefeller, Jr., for the endowment of the industrial relations section of the department of economics. Contributions amounting to \$14,500 were received for financing for five years the Benjamin Strong collection on foreign public finance. New buildings completed in 1930 were the T. N. McCarter Theatre, Dickinson Hall, the Rothschild Memorial Arch, Walker Hall, and the Class of 1903 Hall. The last two are dormitories bringing the total number of dormitories up to 24, housing 1900 students on the campus.

A school of public and international affairs was organized in 1930 to train men to enter public life or public administration, or to engage in international business, or to enter journalism, the law, or the consular and diplomatic service. The degree of bachelor of science was discontinued, and the degree of bachelor of arts was hereafter to be given to all graduating students, whether majoring in science or in the humanities, with the exception of students in the school of engineering who would continue to receive the degree of bachelor of science in engineering.

In place of the Philadelphian Society, founded over a century ago, an experimental organization called the Student-Faculty Association was

formed, through which undergraduates and members of the faculty would work together informally in social, religious, and campus activities. The approved activities of the Philadelphian Society, however, were maintained, such as the Princeton summer camp for city boys, the work at the New Jersey State Home for Boys, the Grenfell Club for work in the Grenfell Mission, Labrador, and the school of public affairs at Yenching University, Peking. A significant step in the development of the library was the founding of an organization known as the Friends of the Princeton Library, forming a coherent group which, as opportunity arose, was to be watchful for the interests of the library. The library in 1930 contained 646,000 volumes, exclusive of pamphlets, broadsides, and manuscripts. President, John Grier Hibben, Ph.D., Litt.D., LL.D.

PROHIBITION. On January 13 the National Commission on Law Enforcement and Observance appointed in May, 1929, delivered to President Hoover its preliminary report on Prohibition. The report declared that while the commission was not yet in a position to deliver a final statement, it had reached certain conclusions. Concerning observance the report said: "It is impossible wholly to set off observance of the Prohibition act from the large question of the views and habits of the American people with respect to private judgment as to statutes and regulations affecting their conduct." The report went to say that the violations of law could not be studied without giving weight to the attitude of the American people, and the Commission enumerated those factors which in American history lay behind present-day opposition to the Prohibition laws, as follows: the attitude of the pioneer toward such legislation; the Puritan objection to offensive administration; the conception of natural rights that has always been a part of the American tradition; the right of revolution that has been part of the American heritage; and finally "the many historical examples of large-scale public disregard of laws in our past." As to enforcement, the report said: "There are not reliable figures to show the size of the problem. But the reported arrests for the last fiscal year of upward of 80,000 persons from every part of Continental United States indicate a staggering number of what might be called focal points of infection." The report went on to point out the great size of the American frontier and the length of water coasts which had to be watched. It said: "Thus there are about 18,700 miles of main line of the Continental United States at every point of which infection is possible. . . . To deal with an enforcement problem of this size and spread, the Federal government can draw only on the portion of the personnel of three Federal services whose staffs aggregate about 23,000. Approximately one-tenth of this number is in the investigative section of the prohibition unit. Of the remaining 20,000 only a small proportion of the personnel is available for actual preventive and investigative work. The remainder is engaged in work far different from prohibition."

The report also pointed out that there was a variety of administrative difficulties that stood

in the way of enforcement of the law. To remove these difficulties and to facilitate governmental activity the report recommended the following: (1) The transfer of investigation and the preparation of cases to the Department of Justice. (2) The codification of Federal legislation applicable to enforcement of prohibition. (3) Provisions for making padlock injunctions more effective. (4) Provisions for relieving congestion in the Federal courts.

The report did not favor a great enlargement of the number of Federal judges and also, too, went on record as opposing the creation of a new kind of Federal courts. It devoted considerable attention to outlining ways and means of dealing with minor violations of the Volstead Act largely with the end in view of clearing away the congestion in the Federal courts because of liquor cases. One suggestion of interest made by the Commission was that Congress enact specific and lighter penalties for "casual and slight violations" to permit United States commissioners to dispose of such cases without necessity of resorting to the courts.

President Hoover in submitting the Commission's report to Congress accompanied it with a message in which he called for the enactment of legislation to provide the administrative and judicial reforms recommended by the Commission. The Presidential message outlined the following specific recommendations: (1) Reorganization of the Federal court structure so as to give relief from congestion. (2) Concentration of responsibility in detection and prosecution of prohibition violations. (3) Consolidations of the various agencies engaged in prevention of smuggling of liquor, narcotics, other merchandise, and aliens over the frontiers. (4) Provision of adequate court and prosecuting officials. (5) Expansion of Federal prisons and reorganization of parole and other practices. (6) Specific legislation for the District of Columbia. The President in closing his message said:

I believe that the administrative changes made above will contribute to cure many abuses. Beyond these immediate questions are others which reach deeply into the whole question of the growth of crime and the enforcement of the laws. The causes of crime, the character of criminal laws, the benefits and liabilities that flow from them, the abuses which arise in them, the method by which enforcement and judicial personnel is secured, the judicial procedure, the respective responsibility of the Federal and State governments to these problems, all require furthestmost consideration and investigation, which will require time and earnest research as to the facts and forces in action before sound opinions can be arrived at upon them.

By December the Law Enforcement Commission was not yet prepared to deliver its final report.

A statement from the Department of Justice division concerned with Prohibition enforcement showed a steady enlargement of the number of dry law offenders coming into the Federal courts. For the fiscal year ending June 30, this statement said there were 206 more Prohibition cases instituted than in the preceding fiscal year. Too, there was a total of 27,709 jail and prison sentences imposed, which was an increase of 5107 over the preceding year. There were 4286 more cases pending at the close of the year than at the close of 1929. A total of 52,347 cases was terminated, with 73 per cent of convictions. Of the several cases arising under the Prohibition act the Department of Justice declared that 8801 places were padlocked for periods ranging from

three months to a year, representing an increase of 2498 over 1929. Padlock proceedings were begun in 11,882 cases, an increase of 1056 over 1929. Only 16 per cent of the cases terminated were dismissals, the others resulting in judgments in favor of the Government. The largest number of seizures of foreign vessels during any one year since 1927 was also reported. There were seized by custom officials and the coast guard a total of 29 foreign craft of which 12 were forfeited.

ADMINISTRATION. The first act growing out of the presidential recommendations, as based on the law enforcement Commission's report, was the transfer of the Prohibition machinery from the Department of the Treasury to the Department of Justice. This was done by the so-called Williamson Act, making provision for the transfer as of July 1. The following is a summary of the new duties imposed upon the Attorney-General's office by this Act: (1) Investigation of violations of the national Prohibition law and of the internal revenue laws "for the purpose of enforcing penal provisions thereof." (2) Apprehension and prosecution of offenders of these laws. (3) Making all seizures and the enforcement of all forfeitures under these laws. (4) The determination of liability for internal taxes and penalties "if a violation of the national prohibition law is involved." (5) In conjunction with the Secretary of the Treasury, laying down regulations relating to industrial alcohol permits. In May, complying with the mandate of this Act, the Prohibition Bureau was transferred from the Department of the Treasury to the Department of Justice. Towards the end of June Attorney General Mitchell appointed Col. Amos W. W. Woodcock as the first director of the Bureau of Prohibition of the Department of Justice. Colonel Woodcock had been formerly United States Attorney at Baltimore in a State which has no enforcement law of its own and here out of 11,000 liquor violation cases since 1922 he succeeded in attaining 8000 convictions. Dr. James M. Durant, head of the old Prohibition Bureau in the Department of the Treasury, remained on as head of a new Bureau of Industrial Alcohol in the same Department. Attorney General Mitchell indicated that it was the intention of his department to cooperate particularly with those States possessing enforcement statutes of their own with a view towards outlining clearly the rôles the States were to play in the enforcement process. It was declared by the two departments concerned that both would work in complete harmony in each of the 12 prohibition districts.

In the summer Prohibition Administrator Woodcock indicated the general lines of his enforcement policy in the following statement:

Our objective is against the sale, the commercial manufacture, and the commercial transportation of intoxicating liquor. We will not have our agencies following the course of least resistance and wasting their time upon pitiful, picayunish non-commercial cases. I think the Prohibition laws can be successfully enforced against commercial operations. We propose to make these our objectives and not to dissipate our energies in other fields. I shall insist that a steady pressure be maintained against these commercial violations. We will exert a steady unrelenting pressure against the outlaw liquor traffic until it is driven from the land, or our last drop of energy expended.

The Woodcock programme included the following specific measures: (1) A promise to see that the Prohibition law would be enforced "fairly,

honestly, earnestly, and lawfully." (2) Organization of agents on a civil service basis. (3) A district administrator, deputy administrators and a United States attorney in each district. (4) A force of 200 special agents directly responsible to Mr. Woodcock himself for the purpose of investigating the larger and more far-reaching conspiracies. (5) A system of daily reports from all districts. (6) A training school for investigators. (7) Request for appropriations to allow of the addition of 500 men to the present staff of 2700. (8) The creation of a division of research to discover facts about the prohibition enforcement as distinguished from propaganda. (9) An attempt to encourage State and local officials to "assume their proper share of enforcing Prohibition policies." (10) Suggestions to the judges throughout the country that they confer to overcome the lack of uniformity in sentences for prohibition violations in order to promote respect for the law.

CONGRESSIONAL HEARINGS. In March the House Judiciary Committee conducted a series of hearings relating to Prohibition that attracted prominent wets and drys from the whole country. More than two score witnesses were called by the wets and as many by the drys, each side being allowed seven days for the presentation of its case. For the drys appeared the following persons, among others: Horace D. Taft, educator; Josephus Daniels, Secretary of the Navy under President Wilson; E. C. Drury, former Prime Minister of Ontario, Canada; Commander Evangeline Booth, of the Salvation Army; Mrs. Ella A. Boole, President of the National Women's Christian Temperance Union; Mrs. Thomas A. Edison; Mrs. Henry Ford; Mrs. Henry W. Peabody; Samuel Crowther, magazine writer; Dr. Daniel A. Poling, General Director of the J. C. Penney Foundation. The drys presented the following arguments among others:

That the rate of decrease in commitments of all crimes was 37.7 per cent. That American youth was drinking less to-day than ever before. That American women are determined that the benefits of Prohibition shall be continued. That the old-time saloon has been driven out forever. That enforced abstinence has saved more than 100,000 lives in nine years from Bright's Disease and other alcoholic disorders. That American workmen are saving or constructively spending from \$2,000,000,000 to \$6,000,000,000 annually that was formerly being expended in saloons. That Prohibition is so important a reform that 100 years will not be too long to experiment with it. That Prohibition is the law of the land and should be observed by all law-abiding citizens. That beer and wine would be only the opening wedge for the return of the saloon. That the restoration of the legal sale of liquor, even under State control and with moderate restrictions, would lead to the violation of all restrictions.

Among the leading spokesmen for the wet side were: Col. Grayson M. P. Murphy, New York banker; W. W. Atterbury, president of the Pennsylvania Railroad; Pierre S. Du Pont; Walter W. Liggett, a magazine writer; former Senator William Cabell Bruce, of Maryland; William H. Stayton, chairman of the Board of the Association Against the Prohibition Amendment; Channing Pollock, playwright; Owen Johnson, author; Frederick R. Coudert, Sr., New York lawyer; Nicholas Murray Butler, President of Columbia University; the Reverend Dr. John A. Ryan, of the Catholic University of America; Henry H. Curran, president of the Association Against the Prohibition Amendment. The arguments that the advocates of prohibition repeal presented may be summarized as follows:

That Prohibition has caused a steady increase in crime during the last 10 years. That American youth is drinking more to-day than ever before. That American women are convinced of the failure of Prohibition. That in place of the old-time saloon there now exists the uncontrolled speakeasy. That the insurance statistics for 19,000,000 policy holders show an increase of 600 per cent in deaths from alcoholism in the last 10 years. That the economic status of the American workmen has not been changed by prohibition. That the kitchen has now become the saloon. That the Eighteenth Amendment is contrary to the spirit of the Constitution. That the last 10 years have shown that it is impossible to enforce Prohibition.

PROHIBITION ENFORCEMENT. During the fiscal year 1929-30 the Bureau of Prohibition of the Treasury Department reported that prohibition agents had made 68,173 arrests, had seized 8633 automobiles, and 64 boats. As a result of the activities of these agents prohibition cases against 72,673 were terminated in the Federal Courts and these resulted in 54,085 convictions of which number 22,405 were given jail sentences. The fines imposed amounted to \$6,678,733. The Bureau during the year devoted a considerable part of its energies to working with formulas for completely denatured alcohol. According to the annual report of the Secretary of the Treasury:

Substantial and important results were obtained in eliminating working formulas from certain lines of industry, thus reducing diversion and assisting the legitimate industry to secure denatured alcohol to be adapted to its needs. . . . There are at present only two completely denatured alcohol formulas authorized and the reports received from the field offices indicate that practically no completely denatured alcohol is being diverted for illegal purposes. . . . After considerable research during the past year a petroleum distillate known as calothetate was required as a denaturant for ethyl acetate. This denaturant, in conjunction with restrictive measures relating to ethyl acetate, has practically eliminated the diversion of this product for illegal purposes.

The Bureau also reported that considerable success was being met with in the handling of the problem of industrial alcohol. Each industrial alcohol plant was being allotted a fixed quota of the total alcohol to be produced with the proviso that only 40 per cent of the full quota could be produced during the first six months of the calendar year. Thus, overproduction of alcohol was being checked and unstable conditions in the industry eradicated.

The Attorney General's office in its report for the fiscal year 1930 declared that the liquor smuggling business as conducted on the high seas apparently had witnessed a considerable revival during the year. This was indicated by the number of foreign vessels seized while engaged in this illegal occupation. Thus, in 1930, 29 vessels were seized as compared with 17 in 1929, 22 in 1928, 31 in 1927, 33 in 1926 and 35 in 1925. The Canadian government dealt a severe blow to border traffic when it amended its export act in May, 1930, and outlawed the direct clearance of liquor from Canada to the United States. According to the Attorney General: "The natural result of this restrictive legislation was to drive some additional professional smugglers to the high seas where their activities would be more likely to succeed."

During the fiscal year 1929 the American Government made one additional convention to its already large list of treaties which allowed American officers to board, search and seize suspected foreign liquor ships on the high seas in close proximity to the American shores. The new treaty was with the Government of Japan and was proclaimed on Jan. 15, 1930. The addition of Japan

to the roll raised the total of these international Prohibition agreements in effect to 14.

REFERENDUM PLAN. Towards the end of the year, there was considerable discussion among dry groups as to the desirability of sponsoring a national referendum for the purpose of eliciting public opinion on the question of Prohibition repeal. However, before the year was over it was ascertained that most of the organizations interested in prohibition had gone on record as opposed to holding such a referendum. The Methodist Board of Temperance, Prohibition and Public Morals on December 9 unanimously passed a resolution submitted by its general secretary, Dr. Clarence True Wilson, against a referendum on the Eighteenth Amendment.

JUDGE CLARK'S DECISION. On December 16 the whole Prohibition question again became an excited subject for debate when Judge William Clark, sitting in the New Jersey Federal District Court, handed down a decision in which he found that the adoption of the Eighteenth Amendment had been invalid and that, therefore, the Amendment was void. Judge Clark's opinion was based on the argument that the ratification of the Amendment by the State legislatures was not in conformity with the method prescribed by the amending Article of the Constitution (Article V), affecting the transference of power from the individual States to the United States. According to Judge Clark, amendments of this type require the approval of constitutional conventions duly elected for this purpose by the peoples of the separate States. It was immediately announced that the decision would be directly appealed to the Supreme Court and that a final ruling from the highest tribunal might be expected in the spring of 1931. The Federal Prohibition authorities declared that Judge Clark's decision would have no effect on the enforcement of the law in New Jersey in view of the fact that other Federal judges in New Jersey were not bound by the decision. See UNITED STATES under *Judiciary*.

SUPREME COURT. In the spring, the U. S. Supreme Court handed down a series of important decisions affecting Prohibition enforcement. One of these decided that the buyer of bootleg liquor was not a criminal under the Eighteenth Amendment and the Volstead Act. Another decision handed down in the same term found that kegs, bottles, corks, and all the other materials entering into prohibited liquor making could be lawfully seized as contraband. This decision was given by a unanimous court with Mr. Justice Holmes delivering the opinion. Justice Holmes' opinion for the court concluded with the following statement:

As the purpose of the Prohibition act was to suppress the entire traffic, the act should be liberally construed to the end of this suppression, and the court so directs. The decisions under the revenue acts have little weight as against legislation under the afloat of the Eighteenth Amendment. We are of the opinion that the word was used in this looser way and that if the empty containers and the other objects seized were offered for sale in such a mode as purposely to attract purchasers who wanted them for the unlawful manufacture, as we interpret the word, they were designed for that manufacture and could be seized.

LITERARY DIGEST POLL. In May the *Literary Digest* (New York) completed a poll of nearly 5,000,000 Americans on the Prohibition question. It will be recalled that in 1922 this same magazine conducted a similar inquiry among a large group of Americans. The results of the 1930 poll showed

the following: (1) That 30.5 per cent of the voters favored the continuance and strict enforcement of the Eighteenth Amendment and the Volstead Act. (2) That 29.1 per cent favored modification of the Volstead Act to permit the sale of light wines and beer. (3) That 40.4 per cent favored repeal of the Eighteenth Amendment altogether. In other words, the total of those who expressed themselves as wishing to see either repeal of the Eighteenth Amendment or modification of the Volstead Act to allow of the sale of light wines and beer was 69.5 per cent. It is true that a series of charges was made against the poll that might throw its findings into question if regarded from an absolute basis. It was said that the pool reached more urban dwellers than rural dwellers; it was not in position to check the votes of repeaters; that friends of the Prohibition law ignored the polls and that, therefore, the vote would favor the friends of repeal.

However, it is possible to make a comparison of this poll with that of 1922 which, too, was under the same limitations. In the two polls it was found that the industrial States in the East and the North were opposed to the Prohibition law. Too, that in the dry sections the sentiment for the continuance of the law was at the best only holding its own; whereas in those sections op-

posed to the law the wet sentiment had made great gains over the eight years. In Kansas, for example, the percentage of those favoring enforcement was 58.3 in 1922 as against 57.7 in 1930. In Oklahoma the percentage in favor of enforcement was 50.4 in 1922 and 50.9 in 1930. In New York City, however, the percentage in favor of either modification or repeal was 70.5 in 1922 and had grown to 80.9 in 1930. In Illinois the percentage advocating either modification or repeal was 62.6 in 1922 and 75.5 in 1930. In Massachusetts the figure had grown from 62.1 in 1922 to 71.8 in 1930. In the country as a whole in 1922 the proportion favoring modification or repeal was 60.8 per cent and by 1930 this proportion had increased to 69.5 per cent.

The accompanying table shows the final report of the *Literary Digest* Prohibition poll.

REPEAL. Among the outstanding advocates of repeal were Dwight W. Morrow, canvassing for the election of the United State Senatorship from New Jersey, and Franklin Roosevelt, seeking reelection as Governor of New York State. Mr. Morrow was particularly outspoken in his statement that Prohibition enforcement had fallen down as a governmental policy. Mr. Morrow agreed that Prohibition was succeeding in States where there was official and popular cooperation but that enforcement had failed in those States where the people and their officials were refusing their cooperation with the Federal agents. In these States, said Mr. Morrow: "There exists resentment against the attempt to impose a control which the prevailing conscience of the people does not accept." Mr. Morrow was opposed to the saloon and declared that an amendment to the Volstead Act would not accomplish anything. He declared himself, therefore, as in favor of the repeal of the Eighteenth Amendment and the substitution for it of an amendment which would restore to the States the power to determine their policy toward the liquor traffic. Mr. Morrow's statement was made on May 15 with the result that he went before the Republican primaries of New Jersey as an outspoken wet. He had no difficulty in obtaining the nomination from his dry rival, Congressman Franklin Fort. Mr. Morrow's statement was given wide attention in the public press and his success as former Ambassador to Mexico and his availability as presidential timber made politicians in the Republican party carefully scrutinize the reaction that his remarks brought. The *New York World*, for instance, declared:

Spoken by Mr. Morrow himself, with all the prestige of his reputation as a wise and reasonable man, a man of character, of principle and of distinguished service to his country, the speech may very well become the first decisive move in the direction of a real solution of a most difficult and challenging problem before this country.

It was commonly said that Mr. Morrow had taken his place as the outstanding leader of the wet wing of the Republican party. Governor Roosevelt's declaration for repeal of the Eighteenth Amendment was no less plain-spoken. The line taken by Governor Roosevelt's recommendation was almost similar to Mr. Morrow's proposal. Thus, the Governor wrote in an open letter to United States Senator Wagner:

The force and effect of the Eighteenth Amendment can be eliminated, of course, only by a new constitutional amendment. This would supersede and abrogate the Eighteenth Amendment and substitute therefor a new constitutional provision. That is clear. The fundamental

FINAL REPORT OF THE LITERARY DIGEST
PROHIBITION POLL—1930

| State | For enforce- ment | For modifi- cation | For repeal | Total |

of a new amendment must be the restoration of real control over intoxicants to the several States. The sale of intoxicants through States agencies should be made lawful in any State of the Union where the people of that State desire it, and conversely the people of any State should have the right to prohibit the sale of intoxicants if they so wish within its own borders.

It was interesting to observe that a number of prominent spokesmen for the dry cause in Congress failed to obtain the renomination of their parties in the primaries precedent to the election. Representative Grant M. Hudson, of Michigan, was defeated for the Republican nomination by a wet. Louis C. Cramton, also of Michigan and a Republican member of the house since 1913, failed in the primaries also. In Washington Representative John F. Miller lost the Republican nomination to a wet. The wets, too, were pleased to report that Senator Burton K. Wheeler, of Montana, formerly a dry, had been converted to the wet cause.

In the gubernatorial election in New York State the outstanding issue was the wet-dry struggle. The Democratic party platform declared unequivocally for the repeal of the Eighteenth Amendment and the Volstead Act and advocated the restoration to each sovereign State "of the fundamental right to determine for itself whether alcoholic beverages may be manufactured, sold or transported within its borders." On the other hand, the Republican party platform, on which Charles A. Tuttle, former United States Attorney for New York ran, was less straightforward. It declared that as long as the Prohibition law remained on the statute books it should be obeyed. The platform pointed out that the abolition of the saloon could be placed at the door of national Prohibition. But, said the platform:

The evil in national Prohibition lies largely in the compulsion sought to be placed upon the States which do not desire the Prohibition system. We favor the restoration to each State of the authority to deal with the liquor problem in accordance with the wishes of its citizens. To this end we favor the repeal of the Eighteenth Amendment provided that simultaneously and as a part of the new amendment a prohibition is adopted outlawing and forbidding everywhere in the United States the saloon system and its equivalent, the private traffic in intoxicating beverages for private profit, and further, guaranteeing Federal coöperation and assistance to States which have Prohibition in whole or in part.

STATISTICS. According to Dr. Frederick L. Hoffman, statistician of the Prudential Life Insurance Company, the mortality of alcoholism in the United States registration area had risen 300 per cent since 1920, the first year of Prohibition. Dr. Hoffman's figures show that there was a death rate of 4.0 per 100,000 population for 1928 as against 1.0 for 1920. Deaths from cirrhosis of the liver for 1928 reached 7.5 per 100,000 population as compared with 7.1 in 1920. New York State led 17 important States with an alcoholic death rate of 7.5 for 1928 or 3.5 per 100,000 more than the average for the country. Massachusetts came next with 6.0 per 100,000 population. Dr. Hoffman contrasted the American mortality rate with those of other countries. The rate for England and Wales in 1928 was 0.3; for Scotland, 1.0; for the Irish Free State, 0.5; for Northern Ireland, 0.6; for Italy, 2.4; for Australia, 1.7; for Spain, 1.9; for Denmark, 1.4; for New Zealand, 1.11; for Canada, 2.3; for Holland, 0.23. In 1929 in New York City Dr. Hoffman found that the death rate from alcoholism for the 5 boroughs was 11.2 per 100,000 and the average for 9 years ending 1929 was 8.2. The following

table presents figures for deaths from alcoholism and cirrhosis of the liver in the United States registration area for the period 1910-1928:

| | Deaths | | Rate per 100,000 | |
|--------------|------------|------------------------|------------------|------------------------|
| | Alcoholism | Cirrhosis of the liver | Alcoholism | Cirrhosis of the liver |
| 1910 | 2,909 | 7,455 | 5.4 | 18.9 |
| 1911 | 2,875 | 8,310 | 4.9 | 14.0 |
| 1912 | 3,183 | 8,176 | 5.3 | 18.5 |
| 1913 | 3,744 | 8,497 | 5.9 | 18.4 |
| 1914 | 3,257 | 8,526 | 4.9 | 13.0 |
| 1910-14 | 15,968 | 40,964 | | |
| 1915 | 2,945 | 8,439 | 4.4 | 12.6 |
| 1916 | 4,161 | 8,799 | 5.8 | 12.3 |
| 1917 | 3,907 | 8,567 | 5.2 | 11.4 |
| 1918 | 2,190 | 7,794 | 2.7 | 9.6 |
| 1919 | 1,867 | 6,704 | 1.6 | 7.9 |
| 1920-24 | 11,281 | 34,187 | | |
| 1920 | 900 | 6,241 | 1.0 | 7.1 |
| 1921 | 1,611 | 6,598 | 1.8 | 7.4 |
| 1922 | 2,467 | 6,977 | 2.6 | 7.5 |
| 1923 | 3,148 | 7,027 | 3.2 | 7.2 |
| 1924 | 3,155 | 7,344 | 3.2 | 7.4 |
| 1920-24 | 11,281 | 34,187 | | |
| 1925 | 3,694 | 7,549 | 3.6 | 7.3 |
| 1926 | 4,109 | 7,591 | 3.9 | 7.2 |
| 1927 | 4,372 | 8,008 | 4.0 | 7.5 |
| 1928 | 4,627 | 8,630 | 4.0 | 7.5 |
| 1910-28 | 58,621 | 147,322 | | |

According to an elaborate series of estimates compiled by the Association Against the Prohibition Amendment, the United States was spending annually \$2,848,000,000 for 1,110,000,000 gallons of beer, wine, and spirits. The Association also estimated that the country was losing annually because of Prohibition (that is to say, from losses on excise taxes and because of the cost of Prohibition enforcement) a total of \$1,867,839,670. The Association made its estimates on the basis of bootleg prices in 30 communities, with estimated reductions for homemade brews, and reached its figure on the basis of the production of such materials as hops, grapes, corn sugar, cane and beet sugar, molasses, corn meal, grain mash, and alcohol, first deducting the amounts used in legitimate industry. The Association made its estimates on the basis of an expenditure of \$11 per gallon for alcoholic spirits; \$2.30 per gallon for wine, and 50¢ per gallon for beer. The Association's report says:

We believe that \$2,500,000,000, exclusive of revenue, is a generous estimate of what we would have been spending to-day if there were no Prohibition. We can find no basis for the sweeping claim that we should now be spending from \$3,000,000,000 to \$7,000,000,000 for drink if there were no Prohibition.

The Prohibition Bureau through its director, Colonel Woodcock, disagreed with these estimates and presented as its own the declaration that "the possible production of illicit liquor of all classes in the United States for the fiscal year ending June 30, 1930 was 876,320,718 gallons or approximately 7 gallons to each person in the United States." The Bureau pointed out that in 1914, which was the last year of normal full production of legal liquor, there was an actual legitimate withdrawal of 2,256,272,765 gallons. In other words, according to the bureau, Americans to-day were consuming only about 40 per cent of the alcohol withdrawn in 1914.

THE ASSOCIATION AGAINST THE PROHIBITION AMENDMENT. In addition to the report cited above this organization kept up a steady stream of agitation looking towards repeal of the Eight-

eenth Amendment. During the year there were printed by the Association the following pamphlets: *The Last Outposts of Prohibition in Canada*; *The Bratt System of Liquor Control in Sweden*; *Finland's Prohibition and Echo of Volsteadism*; and *England's Solution of the Liquor Problem*.

Concerning England the report had this to say: There was a rapid and steady decline of intoxication over a period of years and that convictions for intoxication declined from 188,877 in 1913 to 65,166 in 1927 and 55,642 in 1928. Also, the annual drink bill has declined from \$2,285,000,000 in 1920 to \$1,402,000,000 in 1928. The consumption of spirits has declined from 31,660,000 gallons in 1914 to 12,881,000 gallons in 1927. Beer has gone down from 34,130,000 barrels in 1913 to 20,819,000 barrels in 1927. Wine has risen from 10,630,000 gallons in 1913 to 16,628,000 in 1927. The number of public houses has been reduced from 99,478 in 1905 to 78,803 in 1928. The following factors have contributed towards the growth of temperance in England: The high price of liquor, reduced hours of sale, great growth of recreational facilities, outdoor sports, and popular education. The report goes on to say:

A noteworthy feature of the English liquor system is that it has accomplished such impressive results without resorting to harsh or unjust measures. Licenses have been, and are being, extinguished, not through confiscation, but with compensation to the owners of redundant houses. The people have not suffered from arbitrary legislation. The licensing justices, with a comprehensive law for guidance, have been enabled to use their own common sense, and have not been bound by rule of thumb. On the whole the system has set in motion a progressing social reform without coercion of the public or undue pressure.

The debate over the success of Canada's drink plan apparently continued in the Dominion. Ernest C. Drury, former premier of Ontario, pointed out that the Canadian system of liquor control was "a dismal failure." According to Sir Henry L. Drayton, Chairman of the Ontario Liquor Control Board, Canada had achieved "true temperance." According to Mr. Drury, effective control in Canada was impossible. Women and children were being exposed to drinking because the home was taking the place of the saloon, and crime and drunkenness were on the increase. Mr. Drury declared that liquor law infractions jumped from 7472 in 1918 to 15,263 in 1928. In Ontario under province control the sales of liquor were tremendous and were on the increase. In the year 1928, \$48,995,000 worth of liquor was sold in a province of approximately 3,000,000 population. Arrests for drunkenness increased from 11,370 in 1923 to 15,931 in 1928. The figures for jail commitments were 8036 in 1924 and in 1928, which was the first full year of government control, they were 23,786. Sir Henry L. Drayton declared that the government sale system in Ontario was an effective move toward temperance. Prohibition in the province, he declared, had proved a failure in place of the programme of moral suasion there was substituted a programme of legislative force which could not work. Under government control, he declared, the total consumption of liquor in the whole dominion in 1928 was 2,500,000 bottles less than it had been in 1916 and this despite the fact that Canada had gained more than 1,750,000 in population.

PROHIBITION'S FUTURE. During 1930, 10 years after the adoption of Prohibition in the United States, many American newspapers devoted their

columns to a review of the success of the experiment. Many commentators agreed with Frank Kent, of the *Baltimore Sun*, that "the relative strength of the wets and drys is approximately what it was 10 years ago." *The New York Times* tried to draw up a balance of what had happened since the Volstead Act became law. The following items it placed to the credit of Prohibition: In some parts of the country there was an economic gain and, undoubtedly, drinking among workingmen had decreased. Money spent for liquor had gone into savings or an improved standard of living. Particularly noticeable was the abolition of the old-style saloon. Said *The New York Times* on this point: "That source of social demoralization and political corruption has been got rid of—or at least driven into subterranean hiding—by national prohibition. This must stand high in any listing of the benefits brought by it." On the other side of the ledger the *Times* presented the following: Prohibitionists in 1920 did not count on the possibilities of smuggled liquor. They also were not aware of the possibilities of an immense production of alcohol for beverage purposes in the home. They could not foretell the size of official corruption which was to take place particularly in the hands of the police and in the agents of the Federal government. The Prohibitionists of 1920 counted too much on the educative forces that were to wean the growing generation from the drink habit. Said the *Times*:

It was confidently expected that millions of youthful Americans would soon be coming forward into citizenship that had never tasted liquor. Older people might still proceed in their sinful ways but the rising generation would soon outnumber and supersede them. What really took place, however, may be inferred from the admissions made at the National Convention of the Anti-Saloon League. There it was recognized frankly that millions of boys and girls under prohibition had fallen into drinking habits before unknown in people of their age . . .

ELECTION RETURNS. The election returns in November indicated that the wets had made sizable gains in both the Senate and the House. Political commentators estimated that the wet bloc in the House won an additional 43 seats, making a total of 134. In the Senate five anti-prohibition votes were added. These were Dwight W. Morrow, from New Jersey; J. Hamilton Lewis, from Illinois; R. H. Bulkley, from Ohio; Marcus A. Coolidge, from Massachusetts; and J. H. Metcalf, from Rhode Island. In the Senate, the wets were put at 18 and the drys at 78. Three referenda were held, viz: in Illinois, in Rhode Island, and in Massachusetts. In Illinois, for the third time, this State voted decisively in favor of the repeal of the Eighteenth Amendment, the majority being 300,000. Here three propositions were submitted to the electorate, for repeal of the Eighteenth Amendment, for modification of the Volstead Act, and for repeal of the State enforcement act. All were carried, the heaviest vote and the heaviest majority being recorded on the first question.

In Rhode Island there was a vote of almost 4 to 1 in favor of repeal of the Eighteenth Amendment, 172,215 voting wet and 48,845 dry. In Massachusetts the electorate voted to repeal the State enforcement act by a vote of 641,967 to 367,165. In the lower House of Congress the elections indicated that Connecticut had elected a complete wet slate, counting the majority floor leader, John Q. Tilson. It was apparent, too, that

Illinois had increased its wet membership in the House by 5, that New York had increased its wet representation in the House by 4, Louisiana by 1, Ohio by 4, Maryland by 2, Michigan by 2, New Jersey by 2, Pennsylvania by 7, Rhode Island by 1, Wisconsin by 2. See FINLAND, PANAMA, and SWITZERLAND under History.

PROTESTANT EPISCOPAL CHURCH. A religious denomination representing the Anglican communion in the United States, of which the Church of England is the parent church, and which was brought to America by the Jamestown colonists in 1607. The first American service from its Book of Common Prayer, however, was held in the year 1579, on the first Sunday after Trinity, on the Pacific coast near the present site of San Francisco, when the Rev. Francis Fletcher, chaplain of the fleet under command of Sir Francis Drake, conducted service, preached a sermon, and celebrated Holy Communion. The Virginia colony was permanently established with regular ministrations of the church in 1607, and, despite the absence of a colonial episcopate, the church, under English clergymen, maintained a firm foothold for 170 years. In 1785 the first American bishop was consecrated in Scotland, and three years later two more were consecrated. The church completed its organization at a convention in Philadelphia in October, 1789, at which the constitution and name were adopted and the Book of Common Prayer was set forth.

In 1930 the total number of communicants was 1,287,431, an increase of 20,415 over the preceding year. There were also 6304 clergy, an increase of 14 over the preceding year, and the 15 theological seminaries of the church reported an increase of 46 in the number of candidates for the ministry. The total contributions to all causes within the church amounted to \$45,944,896, a decrease of \$60,595 over the preceding year. There were more than 5000 church (Sunday) schools under the direction of 58,548 teachers, with an enrollment of 483,413 pupils.

Operating on a balanced budget, the church in 1929 reported total expenditures amounting to \$3,684,260. Of this sum, the total expenditure for missions, domestic and foreign, was \$2,799,121, divided in practically even amounts between the two fields. The foreign-mission field included Japan, China, Liberia, Mexico, the Philippines, Alaska, Hawaii, Brazil, the Canal Zone, Cuba, Porto Rico, Haiti, the Dominican Republic, the Virgin Islands, and Palestine; in addition, there were establishments in 10 important European centres. Domestic missionary activities included work among the foreign born, Indians, Negroes, mountaineers, mill workers, in addition to a wide range of social service. American missionaries abroad numbered, men and women, respectively, 173 and 213; native staff abroad, 962 and 723; American missionaries in the United States, 524 and 140; native staff in the United States, 117 and 18, making a total of 2870 persons. During the year, 71 new missionaries were appointed. The church also maintains five colleges.

The national council is assisted in its work by a group of cooperating agencies, including: the Woman's Auxiliary; the Brotherhood of St. Andrew; the Daughters of the King; the Guild of St. Barnabas (for nurses); the Girls' Friendly Society in the United States (for girls and young women); the Young People's Fellowship (for young men and women); the Church Mission of Help; the Seamen's Church Institute; and the

American Church Institute for Negroes. Official periodicals are the *Spirit of Missions*, *Church at Work*, *Findings in Religious Education*, and *Bulletins* of the national council, together with material dealing particularly with each department of the council. Several independently owned publications make an important contribution to the life of the church: *The Living Church*, *The Churchman*, *The Witness*, *The Southern Churchman*, weeklies; *American Church Monthly* and *The Chronicle*, monthlies. In addition, there are 80 monthly diocesan publications in the home field and a score of others in the mission field.

On account of the special meeting of the House of Bishops on Mar. 26, 1930, in Chicago, occasioned by the death of the Presiding Bishop, the Rt. Rev. Charles Palmerston Anderson, D.D., Bishop of Chicago (q.v.), the usual annual meeting of the House of Bishops scheduled for the autumn of 1930 was not held. On the call of the Senior Bishop of the Church, the Rt. Rev. William Andrew Leonard, D.D., Bishop of Ohio, the House of Bishops met late in March in St. James's Cathedral, Chicago, and elected as Presiding Bishop the Rt. Rev. James DeWolf Perry, D.D., Bishop of Rhode Island. Bishop Perry was to serve as Presiding Bishop until the meeting of the General Convention in September, 1931.

The year 1930 was marked by the death of eight bishops, besides that of the Presiding Bishop: the Rt. Rev. William Andrew Leonard, D.D., Bishop of Ohio, and, at the time of his death, Senior Bishop of the Church, who was succeeded by his coadjutor, the Rt. Rev. Warren Lincoln Rogers, D.D.; the Rt. Rev. Arthur C. A. Hall, D.D., the venerable Bishop of Vermont and an outstanding theologian, who was succeeded by his coadjutor, the Rt. Rev. Samuel Babcock Booth, D.D.; the Rt. Rev. Sidney Catlin Partridge, D.D., Bishop of West Missouri, and for many years a missionary in the Orient where from 1900 to 1911 he was the first Missionary Bishop of Kyoto, Japan; the Rt. Rev. James H. Darlington, D.D., Bishop of Harrisburg; the Rt. Rev. Beverley D. Tucker, D.D., Bishop of Southern Virginia, who was succeeded by his coadjutor, the Rt. Rev. Arthur C. Thomson, D.D.; the Rt. Rev. Herbert Shipman, D.D., junior Suffragan Bishop of New York; the Rt. Rev. Charles Lewis Slattery, D.D., Bishop of Massachusetts; and the Rt. Rev. Sheldon M. Griswold, D.D., Bishop of Chicago, who was succeeded by his coadjutor, the Rt. Rev. George Craig Stewart, D.D.

New members of the House of Bishops consecrated during 1930 included: The Rt. Rev. Hayward S. Ablewhite, D.D., Bishop of Marquette, who succeeded the Rt. Rev. Robert LeRoy Harris, D.D., resigned; the Rt. Rev. Cameron J. Davis, D.D., Bishop Coadjutor of Western New York; the Rt. Rev. Charles K. Gilbert, D.D., Suffragan Bishop of New York, who succeeded the late Bishop Shipman; the Rt. Rev. Robert B. Gooden, D.D., Suffragan Bishop of Los Angeles; the Rt. Rev. Frederick D. Goodwin, D.D., Bishop Coadjutor of Virginia; the Rt. Rev. Henry W. Hobson, D.D., Bishop Coadjutor of Southern Ohio; the Rt. Rev. Benjamin T. Kemmerer, D.D., Bishop Coadjutor of Duluth; the Rt. Rev. S. Harrington Littell, S.T.D., Missionary Bishop of Honolulu; the Rt. Rev. William Scarlett, LL.D., Bishop Coadjutor of Missouri; the Rt. Rev. Elmer N. Schmuck, D.D., Missionary Bishop of Wyoming; the Rt. Rev. Henry K. Sherrill, D.D., Bishop of Massachusetts; the Rt. Rev. Robert Nelson Spen-

cer, D.D., Bishop of West Missouri; the Rt. Rev. George Craig Stewart, D.D., Bishop of Chicago; and the Rt. Rev. Harwood Sturtevant, D.D., Bishop Coadjutor of Fond du Lac. The year 1930 also saw the translation of the Rt. Rev. James Craik Morris, D.D., Bishop of the Panama Canal Zone, to the Diocese of Louisiana in succession to the Rt. Rev. Davis Sessums, D.D., who died on Christmas Eve, 1929.

In June, 1930, official representatives of the Protestant Episcopal Church, the Methodist Episcopal Church, and the Presbyterian Church in the United States of America met in Atlantic City to discuss questions of Christian morality looking toward organic unity. The Protestant Episcopal Church was represented by the Bishops of California and of Newark, and several representative priests and laymen. Commenting upon the results of the conference, the Bishop of California, the Rt. Rev. Edward L. Parsons, D.D., said:

There was even greater cordiality and interest in the purpose of this conference than I believe was anticipated; and it disclosed also a rather unexpected unanimity in the approach of these various communions, so far as their official representatives are concerned, to the questions brought up for discussion. On the whole I think we made sufficient progress to warrant us in feeling that none of the problems which we discussed interposes an obstacle in the way of approaches that may be made toward organic unity.

The Lambeth Conference was attended by 60 American bishops. See ENGLAND, CHURCH OF. The headquarters of the national council are in the Church Missions House, 281 Fourth Avenue, New York City.

PRUSSIA, *prüsh'ä*. A constituent republic of the German Republic. Formerly a kingdom of the German Empire, it was proclaimed a republic Nov. 13, 1918. Capital, Berlin. Area, Apr. 1, 1925, 113,038 square miles, as compared with 135,134 square miles before the World War; population, according to the census of 1925, 38,120,178 as compared with 40,165,219 in 1910. The movement of population in 1928 was: Births, 749,499; deaths, 473,964; marriages, 362,017. The chief cities, with their populations in 1925, are Berlin, 4,024,165; Cologne, 700,222; Breslau, 599,770; Frankfurt-on-Main, 540,115; Essen, 470,524; Dortmund, 455,556; Düsseldorf, 432,633; and Hanover, 425,274. Public elementary schools in 1926 enrolled 4,169,481 pupils and the private elementary schools, 13,925.

The chief crops, with their yield in metric tons in 1928, were: Wheat, 2,344,023; rye, 6,439,326; summer barley, 1,864,223; oats, 4,923,400; potatoes, 28,532,590; hay, 9,699,731. In the same year the vineyards yielded 8,889,031 gallons of wine. Livestock on Dec. 1, 1928, included 10,350,000 cattle, 2,386,100 sheep, 13,804,600 swine, and 2,552,300 horses. The value in Reichsmarks (1 Reichsmark equalled about \$0.238) of the chief minerals produced in 1928 were: Coal, 2,122,540,073; lignite, 373,893,835; iron ore, 48,629,820; and salt, 10,799,796. Railways in the republic Jan. 1, 1928, totaled 20,869 miles. Government receipts and expenditures for 1929-30 were estimated to balance at 4,201,608,350 Reichsmarks; the public debt on Apr. 1, 1929, was 381,575,995 Reichsmarks. Legislative power rests with the Diet and State Council and executive power with the Ministry, which is appointed by the Prime

Minister elected by the Diet. Prime Minister in 1930, Otto Braun (Socialist).

HISTORY. Effective June 1, 1930, the State of Prussia increased the urban real estate tax 100 per cent in order to cover a deficit of 115,000,000 marks in its budget for the fiscal year 1930-31. The increase was put into force through an emergency decree as the Diet failed to obtain a quorum to enact the necessary legislation. The extremist trend shown in the national elections for the Reichstag of Sept. 14, 1930, induced stubborn efforts on the part of Communists and Fascists to oust Herr Braun's Social Democratic administration, which was supported by the Centrists and Democrats. Premier Braun's response was the appointment on October 22 of Carl Severing as Minister of the Interior to succeed Professor Heinrich Waentig. One of the ablest German Socialist administrators, Herr Severing had organized the crack Prussian police force and was formerly Reich's Minister of Interior in the Müller Cabinet. A firmer policy toward the Right and Left radicals on the part of the State Government was indicated by his appointment. See GERMANY.

PSYCHIATRY. See PSYCHOLOGY; CRIME.

PSYCHICAL RESEARCH. The year was very typical of psychical research: a little useful and permanent work was done, amid much controversy and recrimination, most of it of a deplorably personal kind. The useful work was as usual in the mental phenomena (clairvoyance, telepathy); the disputations as usual in the field of the physical phenomena.

The most important event of the year was undoubtedly the Fourth International Congress for Psychical Research held in Athens in May under the presidency of Prof. Hans Driesch (Leipzig), the biologist and philosopher. Papers were read at the Congress, in addition to its President, by Professors Oesterreich (Tübingen), K. C. Schneider (Vienna), Th. Wereide (Oslo), Mikuska (Czechoslovakia), by Dr. A. Tanagra (who organized the Congress), Baron von Winterstein, Countess Wassilko Serecki, by the representatives of the Society for Psychical Research, Sir Oliver Lodge, W. H. Salter, and Theodore Besterman, and by others. The *Transactions* of the Congress were published in December under the editorship of the last named. The usual differences of opinion were vigorously stressed at the Congress. Unfortunately the discussions were largely devoted to arguments of a theoretical nature, bearing on the explanation and interpretation of the facts. The merits of the facts themselves were not inquired into by anybody but Mr. Salter and Mr. Besterman, with the support of Professor Driesch. Their criticisms, however, were badly received and very little hesitation was shown by the delegates to the Congress in accepting as proven practically all the phenomena, physical and mental, studied by psychical research.

Nevertheless, the marked difference between the evidential standard attained by the mental and the physical phenomena respectively remains as striking as ever. This difference was given very forcible expression in the presidential address delivered by Dr. Walter Franklin Prince to the Society for Psychical Research, which was published both in the Society's *Proceedings* and as a *Bulletin* of the Boston Society for Psychic Research. The election of Dr. Prince, who was Research Officer of the latter Society, as President of the S. P. R., marks the cordial relations that

have always existed between serious students of psychical research in England and America. Under the title of "The Aetiology of a 'Psychical' Legend" Dr. Prince contributed to the *Journal* of the S. P. R. a valuable analysis of the apocryphal legend that Lincoln emancipated the slaves under spirit influence, through a "child" medium. Dr. Prince's investigation shows that the mediumistic message was couched in the most general terms and was not delivered until after Lincoln had given unmistakable indications of his intention. Incidentally the "child" was a grown woman, and the legend is full of other inaccuracies.

One of the more sensational events of the year was the resignation of Sir Arthur Conan Doyle (q.v.), the creator of "Sherlock Holmes," and the so-called apostle of spiritualism, from the Society for Psychical Research. He issued circulars to all the members of the Society to follow his lead (about one-half of 1 per cent accepted his advice), and gave as the cause of his withdrawal a review written in the Society's *Journal* by Mr. Besterman of the Millesimo sittings (see below). About this review Sir Arthur expressed himself very positively, but after his death later in the year there was published in an American paper a letter from him, of a date earlier than the printing of the review in question, in which Doyle announced his intention of attempting to split the S. P. R. as soon as he could find a suitable opportunity.

The phenomena of Millesimo made no progress during the year. Signor Bozzano and others continued their fervid polemics in favor of the genuineness of these phenomena, but without success. It appeared that the Marquess Centurione Scotti, who was the medium responsible for the very remarkable Millesimo phenomena, had abandoned his mediumship.

Another well-known mediumship received a severe blow during the year, that of Mrs. Crandon (Margery) of Boston. Members of the S. P. R. were entitled, on suitable application, to the use of the séance-room at the S. P. R. for their own investigations. Such an application was made on behalf of Margery, who accordingly in the last weeks of 1929 gave a small number of demonstration sittings to a number of people selected by Dr. Crandon (no critics of the Margery mediumship were invited). It is a condition however of the loan of the séance-room that the Society's Honorary Research Officer should be present. As a result of this Margery was for the first time discovered in apparent fraud in such a way that the facts could not be escaped by the most ingenious dialectic. At the end of the year the report of these sittings, which was to appear in the *Proceedings* of the S. P. R., had not been published, so that detailed comment best may be reserved. But, in brief, the facts are as follows.

The phenomenon produced by the Margery mediumship which had been most emphasized by its supporters was that of the thumb-prints supposed to be produced at the sittings by Margery's dead brother Walter. The procedure was as follows. The medium was controlled in such a way as supposedly to make it impossible for her to touch the articles required for the production of the thumb-prints. This was achieved by strapping Margery's wrists and ankles with surgical tape to the arms and legs of the armchair in which she was seated. In front of Margery (but *en hypothesis* out of her reach) was placed a plain wooden table made to Dr. Crandon's specifications. On the

table were placed two basins. A handkerchief or similar object was placed with one end in each basin. One basin contained cold water. The sitting was then ready to begin. At the command of the voice of Walter, which was supposed to be produced in a supernormal manner, and, usually, in a dim red light, hot water was poured into the second basin and in it a piece of Kerr dental wax was placed. Complete darkness was then asked for and under those circumstances Walter produced his (occasionally some other) thumb-print on the wax. The piece of wax so impressed was then pulled back into the cold water by means of the handkerchief, and left to harden. In due course the lights were turned on and the impression on the wax, which was now again perfectly hard, was examined.

It will be easily understood that the vital point in the whole procedure is, under the particular conditions described, that the medium should not have access to the table, and *a fortiori* to the basin and to the piece of wax in it. The sitters are of course supposed to control each other. It is to be noted also that it is only possible to make an impression on the wax while the wax is soft, that is, so long as it is in hot water or immediately after. In other words, under the procedure described, it is impossible for the medium to make an impression on the wax with her own finger if the control of her is adequate. For she is strapped to her chair at the beginning of the sitting, when the piece of wax has not yet been softened, and she remains strapped to her chair until the end of the sitting, when the piece of wax has long since hardened again. (The possibility of the fraudulent introduction of pieces of wax can be ruled out in the incident to be referred to, as the piece was marked during the sitting.)

Now comes the crucial observation. At one of the sittings in the S. P. R. séance-room, a piece of wax marked by the Honorary Research Officer (Dr. Woolley) was found on examination after the sitting to have on it the normal fingerprint of Margery. This proves conclusively that at a time when the medium was supposed to have no kind of access to the piece of wax used in the experiment, she not only theoretically had such access, but evidence exists that she in fact touched the piece with her hand. It is impossible here to go into the question of the manner in which such access was obtained. It is enough to say that experiments were made, reproducing the conditions of the Margery sittings, and the possibility of access has been established.

BIBLIOGRAPHY. Publications during the year of value were few. The Society for Psychical Research established an F. W. H. Myers Memorial lecture, of which the first was delivered by Sir Oliver Lodge, on *Conviction of Survival*. Dr. Prince's *Pseudo-Prophecies and Pseudo-Sciences* is a valuable piece of historical analysis. Mr. Carrington's *The Story of Psychic Science* is useful but uneven. Under the title of *Okkultismus und Biologie* are collected essays by the late Dr. Gruber. *The Science of Life* by H. G. Wells, Julian Huxley, and G. P. Wells forms a notable exception to works on biology, in that it contains a full discussion of the phenomena of psychical research. Mr. Price's report on *Rudi Schneider* would be valuable if it were possible to accept it at its face value. Miss Dallas's *Comrades on the Homeward Way* is a sincere restatement of the spiritualistic position. Mr. Besterman published *Some Modern Mediums*.

PSYCHO-ANALYSIS. See **PSYCHOLOGY.**

PSYCHOLOGY. NOTES AND NEWS. The American Psychological Association held its thirty-eighth annual meeting at the University of Iowa, Iowa City, Iowa, on December 29, 30, and 31. The event of principal interest was the dedication of the new psychological laboratory at that institution. The laboratory was installed in a portion of the former university hospital, which contained more than 300 private rooms, offices, etc. The space was shared with the departments of philosophy, speech, and child welfare. These departments were given a library in common. Sixty or more rooms were made available for graduate work in psychology. Very little reconstruction was necessary, as the private rooms and small wards made excellent research rooms. Special dedication exercises were held at which short addresses were made by five eminent psychologists.

At the business meeting the election of Prof. Walter S. Hunter, of Clark University, as the president for the year 1931 was announced. The members voted to suspend for one year the by-laws of the association which call for a meeting in December and to meet on September 10, 11, and 12 in Toronto. The result of this experiment would determine whether or not the time of meeting should be permanently changed from December to September.

Thirteen sessions were held for the presentation of 65 scientific papers, one session being devoted to reports from 10 graduate students. There were four round-table discussions on Methodology and Procedure, in the case of Behavior Problems of Children, Personality, Emotions, and the Pre-school Child. Of the regular meetings, one each was devoted to General Problems, Educational Psychology, Mental Tests, Child Psychology, Aesthetics, Abnormal Psychology, College Personnel, and Clinical Psychology; and two to Experimental and two to Animal Psychology. Professor H. S. Langfeld, retiring president of the Association, delivered the presidential address on "A Response Interpretation of Consciousness."

The first International Congress of Mental Hygiene was held in Washington, D. C., on May 5 to 10. Representatives from 53 countries were present, the total enrollment being more than 4000. Forty-five major problems were offered for discussion at 51 sessions, in which there were more than 300 speakers. All printed communications appeared in English, French, and German, although reports were made in seven different languages. The topics covered a wide range from a general consideration of the whole hygiene movement to specialized problems of adolescence, pre-school children, marital relationships, delinquency, etc. One of the most interesting aspects of the congress was a report of mental hygiene activities in 48 different countries by representatives of those countries. This made possible for the first time a world view of the mental hygiene movement. The action of the congress of greatest permanent significance was the establishment of the International Committee for Mental Hygiene, for the international development and coordination of mental hygiene activities, and for the holding of international congresses in the future.

The publication of the "Proceedings of the Ninth International Congress of Psychology" (1930), held at Yale University in September, 1929, af-

forded an interesting study of recent psychological activities and interests both in America and in foreign countries. (See *Psychological Bulletin*, 1930, vol. 27, pp. 658-663.) The largest proportion of the 442 papers, of which abstracts were published, were in the field of Tests and Measurements. Applied Psychology included the largest number of foreign contributions. All but two of the papers on Animal Psychology were American. These were Russian studies of the conditioned reflex. Both in America and Europe objective methods of investigation exceeded the introspective by nine to one. In America the experimental studies just about equaled in number the discussions of theory and methodology, while in the foreign papers the latter exceeded the former two to one. Also in America interest in gross behavior was four times as frequent as interest in the facts of consciousness, while in all foreign countries the latter was twice as frequent as the former. Among the Americans behaviorism or objectivism was the dominant systematic point of view, while among the foreign psychologists no such dominant interest appeared.

The Psychological Corporation (headquarters, New York City) announced its sponsorship of a nation-wide experimental study of English usage. Special attention was being directed to the elimination of all unnecessary and obsolete rules which create confusion in the study of the language. Special tests covering 100 different phases of usage for the fifth grade and above had been prepared and were made available in October. Schools throughout the country were invited to engage in the study.

The seventh International Conference of Industrial Psychology was announced to be held in Moscow in 1931, with Dr. I. Spielrein, of the Institute for the Protection of Labor, as president.

Mental Hygiene (July, 1930) reported that Soviet Russia had established a Mental Hygiene Commission under the People's Commissariat of Public Health of the Union of Soviet Socialist Republics. Its work was to be carried on in connection with the Moscow State Neuropsychiatric Dispensary. An attempt was to be made to develop a powerful mental hygiene movement in connection with their efforts to build a socially new man. A series of booklets was to be issued under the name *Mental Hygiene*, which would eventually grow into a magazine.

Announcement was made of the establishment of an Institute for Industrial Psychology at Geneva, under the auspices of the Commission romande de Rationalization. The institute contained three divisions, namely, vocational guidance, psychotechnics, and medicine.

The first number of the journal of orthopsychiatry, *A Journal of Human Behavior*, appeared in October. It was under the editorship of Lawson G. Lowrey, and intended to be published quarterly. The journal was to be devoted entirely to problems of human behavior.

Professor F. C. Bartlett was appointed full professor of experimental psychology in Cambridge University. This was the first professorship in psychology to be established in either Oxford or Cambridge, and was an event which every psychologist, wherever he may be, regarded with pride.

It was announced that the first International Congress of Religious Psychology would be held in Vienna, Austria, from May 26 to May 31, 1931.

The establishment of a lectureship in honor of William James at Harvard University was announced as a gift of the late Edgar Pierce. The first incumbent of the lectureship was John Dewey. There were no restrictions upon the topics to be covered in the lectureship, other than that they should fall within the fields of philosophy and psychology.

A new journal of psychology was launched in Poland, known as *Kwartalnik Psychologiczny* (Quarterly Journal of Psychology) under the editorship of Stefan Blackowski, of Poznan. Success of the publication was guaranteed through a government fund known as the "Fund for National Culture." Its pages were to be open to contributions from foreign psychologists. Of the five original articles in the first number two were Polish. One of the most important features was the series of abstracts of articles from foreign publications. The editors announced also a section on book reviews and short notes. Original articles were to be followed by abstracts in French and German.

Dr. James McKeen Cattell, distinguished American psychologist, was awarded a gold medal by the Society of Arts and Sciences for his contributions to science. This was one of the two awards made each year by the society for outstanding achievements in science.

The fourth International Congress for Individual Psychology was held in Berlin, September 25-28. It was opened with an address by Dr. Alfred Adler.

The National Institute of Industrial Psychology (England) announced the formation of a Scottish Division of the Institute with headquarters at Glasgow.

Dr. Carney Landis, formerly associate professor of psychology at Wesleyan University, Middletown, Conn., was appointed research associate in psychology at the New York State Psychiatric Institute and Hospital, Medical Centre, New York City. This appointment of a psychologist on the staff of such an institution indicated the growing recognition of the contribution which the psychologist could make toward the understanding of mental abnormalities.

Dr. K. S. Lashley, professor of psychology at the University of Chicago, was elected to membership in the National Academy of Sciences.

One of the unique events of the year was the appearance of the first volume of a *History of Psychology in Autobiography* (edited by Carl Murchison, Clark University Press). It contained the personal and professional histories of 15 psychologists, seven from America and the other eight from foreign countries. Succeeding volumes were promised in the near future. The intimate glimpses of the early development and training of these men of science proved of great interest and value to students of psychology.

GENERAL AND THEORETICAL PSYCHOLOGY. A comprehensive survey of the field of general and theoretical psychology was presented in the *Psychologies of 1930* (Clark University Press). This was the second of a series of five-year surveys of the fields of theoretical psychology, the first of which appeared in 1925. In general the case for the various "schools" of psychology was presented by a champion of the school, for instance, the Configuration Psychologies by Koehler, Koffka, and Sander, and Hormic Psychology by McDougall. Exceptions to this rule occurred in the case of Associationism, Functionalism, and

Act Psychology, which received a historical treatment. The most striking changes made in the second volume were the introduction of a section on the Russian Psychologies, contributed by I. P. Pavlov, A. L. Schniermann, and K. N. Kornilov; the introduction of a section on Factor Psychology, contributed by Charles Spearman; and the introduction of a section on Analytical Psychologies, containing three reports by P. Janet, J. C. Flugel, and Alfred Adler. All these additions increase the value of the book, from which no important theoretical development was excluded. A general section included a series of topics that did not fall within the limits of any other group. John Dewey contributed a section on "Conduct and Experience"; T. L. Kelley on "The Inheritance of Mental Traits"; C. Spearman on "Normality"; and L. T. Troland on "Motivation." Although the various schools were actively at work and showed no signs of consolidation there was at the same time a feeling of mutual interest and coöperation, rather than futile antagonism. The great body of psychologists remained a compact group in spite of evident internal difference.

Of considerable historical interest was the posthumous publication of *Systematic Psychology: Prolegomena*, by E. B. Titchener (New York, 1929), edited by one of his colleagues. Professor Titchener had planned a Systematic Psychology which was to be his crowning achievement. Begun in 1917, the project was cut short by his death. The book dealt chiefly with his views concerning science in general and the relation of the science of psychology to it. Somewhat less than half of it consisted of reprints of portions of his system, taken from the scientific journals. Although it was unfortunate, indeed, that one so eminently qualified to systematize the science could not have lived long enough to complete it, psychologists were grateful for the publication of this fragment.

MENTAL TESTS. Emphasis continued to fall in 1930 upon the so-called non-intelligence tests, such as tests of mechanical ability, character traits, interests, and other factors in personality. The report of one of the investigations of the Committee on Scientific Problems of Human Migration, of the National Research Council, appeared under the title *Minnesota Mechanical Ability Tests* (The University of Minnesota Press). This was a volume of 586 pages dealing with the construction, standardization, and administration of tests for mechanical ability. The problem was undertaken by the above committee because such a large proportion of the working population of the United States was engaged in some form of mechanical work, and because such a large part of this group, presenting particularly difficult employment problems, was represented by immigrant groups.

In addition to the presentation of the tests themselves, the book contained a section on the nature of mechanical ability, its distribution, and the effects of environmental influences upon its manifestations. In appendices were to be found a manual of directions for giving and scoring the tests, an exposition of statistical methods used in the research, many pages of raw data, and an extensive bibliography. The book gave promise of serving as a model for the construction, standardization, and use of aptitude tests. Particular attention was directed to the process of validation of the tests, perhaps the most vital aspect of

test construction. The validation technique there devised was one of the outstanding contributions of the work.

The status of character measurement was indicated in the final report of the Character Education Inquiry which appeared in *Studies in the Organization of Character* (Macmillan, New York), by Hugh Hartshorne and Mark A. May. This was the third volume of *Studies in the Nature of Character*, sponsored by the Institute of Social and Religious Research. The two earlier volumes were *Studies in Deceit* and *Studies in Service and Self Control*. The book presented a careful study of social intelligence and social attitude, tests for measuring them, the factors that influenced them, and their changes with age, physical and emotional condition, etc. There was also a discussion of the organization of character, and a series of conclusions drawn from the whole character inquiry. Of these, two were of general interest, namely: that "prevailing ways of teaching ideals and standards probably do little good and may do harm when the ideals set before the pupils contradict the practical demands of the very situations in which the ideals are taught"; and that "contradictory demands made upon the child by the varied situations in which he is responsible to adults not only prevent the organization of a consistent character, but actually compel inconsistency at the price of peace and self-respect." A thorough reconsideration and reorganization of methods of character training was therefore called for.

The investigators supported the conclusions of earlier workers in this field, in that they found so-called character traits highly specific. That is to say, they did not discover such a trait as trustworthiness, but a collection of specific behavior attitudes which could be subsumed under that name. Each of these would require a separate test. At best one would have to administer a series of tests to get a sampling of such behavior attitudes, in order to make an estimate of trustworthiness.

A third trend in the field of tests was indicated in the "Neurotic Inventory" by L. L. Thurstone and T. G. Thurstone (*Journal of Social Psychology*, 1930, vol. 1, pp. 3-30). The inventory was a further refinement of earlier tests intended to evaluate the personality and particularly to disclose any tendencies toward instability. It was on the basis of similar earlier tests that individuals were classified into introvert type and extrovert type, into ascendant type and submissive type, etc. The technique elaborated by these investigators was receiving a widespread trial, particularly in the United States, in the hope of a better understanding of personality problems, particularly in the realm of education.

Stanford University continued to be the centre for the measurement of interest. Progress was made in the number of occupations for which interests could be detected, in the reliability of the tests, and in the knowledge of the stability of the interests measured. A research committee of the National Vocational Guidance Association took a census of the status of interest measurement and outlined a series of about 50 problems requiring investigation (see *Personnel Journal*, 1930, vol. 9, pp. 126-183). Among these were: the dependence of interest upon training and environmental factors; the relation between interest and achievement; the development of objective tests of interest; improving the inventory

type of test, by checking against personal histories; developing norms, etc.

In Russia an attempt was being made to develop a system of vocational tests upon the conditioned reflex theory, in which an important factor would be the speed with which conditioned responses could be formed. The significance of such speed differences as a vocational index had not been determined.

SOCIAL PSYCHOLOGY. The year 1930 marked the appearance of the first three volumes of the monumental work *Encyclopædia of the Social Sciences*, edited by E. R. A. Seligman (New York), which when completed was to consist of 15 volumes. This work was the outcome of a recognition of the interdependence among the various disciplines comprised within the name social science, such as economics, sociology, law, anthropology, penology, psychology, education, ethics, etc. The encyclopædia was intended to be both a dictionary and a handbook. The arrangement was alphabetical, with some articles as long as 20,000 words. It was distinctly international in its scope, and gave promise of becoming an authoritative source of information and a record of progress for the scholar as well as an interesting assemblage of facts and principles for the intelligent layman.

The first number of the *Journal of Social Psychology*, devoted to political, racial, and differential psychology, appeared in February, 1930. This was a quarterly journal edited by John Dewey and Carl Murchison (published by the Clark University Press). The journal was intended to be international in its atmosphere. It had an international editorial board with representatives from England, Germany, France, Italy, and Russia. Each article printed in English in the journal was followed by abstracts in French and German. There were 23 main articles in the first volume. Of these one came from Germany, one from Russia, and one from Japan; the remaining 20 were from American authors.

One of the studies of most social significance during the year was reported in the third volume of *Genetic Studies of Genius*, entitled "The Promise of Youth" (Stanford University Press). In 1921-22 approximately 1500 children whose intelligence was at least 40 per cent above the average (I.Q. above 140) were selected for intensive study. A great variety of measurements was made, including physical, motor, intellectual, social, economic, etc. These children came to be known as potential geniuses. As a group they were consistently far above the average in all respects. The study reported in "The Promise of Youth" was a follow-up of these children after a lapse of about six years. The most important conclusion was that for the group as a whole the picture did not greatly change. What was true of the children at the earlier date was likewise true at the later date. When individual cases were studied, however, striking changes were noted, sometimes in the direction of increased, and sometimes of decreased intelligence. The investigators concluded, after taking many disturbing factors into account, that there occur "genuine changes in intellectual growth that cannot be accounted for on the basis of general health, educational opportunity, or other environmental influences." It was further concluded that I.Q. of boys tends to remain constant, and that of girls to decrease. On the other hand, study of

school grades showed that girls maintained a superiority in school marks. For some reason, "girls make a far better showing per unit of intelligence than boys do in the matter of class marks." All of the above findings promised fruitful application in the realm of social psychology. (For character studies having a social implication, see *Mental Tests*.)

EDUCATIONAL PSYCHOLOGY. The most important developments in the field of educational psychology came from the laboratories dealing with the problems of the very young child, particularly the Institutes at the Universities of Minnesota and California, and Columbia, Yale, and George Washington in America, and the laboratory of Karl and Charlotte Buehler in Vienna. Studies revealed the great significance of the first few years of life in the development of personality, and the rapid changes that occur even from week to week in the realm of motor control, and the formation of habits. The need for the creation of correct habits of food-taking, elimination and rest in the first few months of life was emphasized. It was demonstrated in several of these laboratories that it was possible to establish standards of normality, and to measure changes due to growth during the first year. The results of the Vienna studies were presented in *The First Year of Life*, by C. Buehler (New York). A different approach to the mental life of the child was made by Piaget in his study of the development of language, reasoning ability, conceptions of cause and effect, etc. Results were obtained by questioning groups of children. (See *The Child's Conception of Physical Causality*, J. Piaget [New York]; also *The Child's Conception of the World*, by the same author.) A good survey of the mental development of the child was presented in *Child Psychology* by M. W. Curti (New York). It was limited to the normal child, and treated the periods of infancy, early and middle childhood, and adolescence.

Numerous special problems of the school child received intensive study, such as disabilities in the various special school subjects, special methods of teaching, etc. For an introduction to one of these fields, see W. S. Gray, "Summary of Reading Investigations" (*Elementary School Journal*, 1930, vol. 30, pp. 450-467 and 496-509).

For tests and measurements which comprised a large proportion of the activities in educational psychology, see *Mental Tests*.

ABNORMAL PSYCHOLOGY. The work in the field of abnormal psychology continued to fall within the intermediate zone between what is normal and what is abnormal. Slight deviations from normality have rightly been the objects of psychological interest. Personality and its aberrations engaged the majority of investigators. The discussion of methods of measurement (see *Mental Tests*) vied with theoretical discussions of personality traits. Feelings of inferiority, fears, personality changes during adolescence, the introverted and extroverted personality types as affected by sex and age were objects of study. The personality of the college student engaged the attention of a number of investigators, doubtless because of the importance of this factor in academic success. Earlier theories of the basis of personality were applied to the solution of particular problems, as in the relation between physique and criminal behavior, and in the use of the chemical theory of temperament to explain

introversion and extroversion. Specimens of such studies were to be found in the *Journal of Abnormal and Social Psychology*, for 1930.

Interest in psychoanalytic work did not wane appreciably. The most interesting document that appeared during the year was *The Structure and Meaning of Psychoanalysis as related to Personality and Behavior*, by W. Healy, A. F. Bronner and A. M. Bowers (New York). They attempted the difficult but important task of a systematic presentation of the psychology of Freud, together with the modifications which his system has undergone at the hands of his students and others. The construction of this volume facilitated the separation of the original from the modifications by printing on the left hand pages the "orthodox theories and fact-findings of psychoanalysis, and on the right hand pages, "accessions and modifications of theory and practice." The authors were forced into a sympathetic attitude toward Freudian psychology as a result of their contacts with behavior problems at the Judge Baker Foundation (Boston).

Systematic treatments of the field of Abnormal Psychology were not lacking. In *Psychology, Normal and Abnormal* (New York), J. W. Bridges attempted to provide a much needed textbook of psychology for the medical student. In the belief that normal psychological processes can be most easily understood from their exaggerations in the abnormal, he offered the student his normal and abnormal psychology within the limits of a single volume.

A more theoretical and systematic work on the subject was *Abnormal Psychology: Its Concepts and Theories*, by H. L. Hollingworth (New York). The book was unique in that it was written strictly from the psychological point of view, concerned itself with an exposition of the theories that had been evolved to explain abnormalities, and reduced the presentation of case studies to a minimum. The author throughout the book introduced his own conception of reintegration as a means of interpreting and simplifying the whole structure of mental abnormality.

ANIMAL PSYCHOLOGY. Research in animal psychology showed three main trends during 1930. Of most general interest was the investigation of heredity as a determiner of behavior. E. C. Tolman ("The Inheritance of Maze Learning Ability in White Rats," paper presented at meeting of American Psychological Association) tested a large group of unselected white rats for maze learning ability. He then selected the bright rats and the dull rats as the ancestors of a bright and dull strain, respectively. When carried through five generations an increasing divergence of ability occurred between the two groups, which the investigator attributed to the factor of selection. On the other hand, William McDougall ("Second Report on a Lamarckian Experiment," *British Journal of Psychology*, 1930, vol. 20, pp. 201-218) carried a strain of rats through 23 generations, training each generation to escape from a maze in a certain fashion. The rats of succeeding generations displayed increasing facility, which was attributed to the transmission of acquired characteristics rather than selection. "If continuance of the experiment, combining training with strongly averse selection, should result in steadily increasing facility, the reality of Lamarckian transmission will have been demonstrated."

The problem of the nature of the learning proc-

ess and the function of "insight" versus "trial and error" learning occupied the attention of experimenters. For example, F. T. Perkins and R. H. Wheeler ("Configurational Learning in the Goldfish," *Comparative Psychology Monographs*, 1930, vol. 7, No. 1) found that goldfish manifested real insight in solving simple problems, and that their behavior could not be explained through chance reactions. Similar results had been obtained earlier in experiments on the white rat.

The third line of investigation had to do with the problems of localization within the nervous system of such functions as perception of form and brightness, and learning and reasoning reactions. The work of Lashley was most significant in this field. Although his findings were apparently clearly established for such lower animal forms as he investigated, the possibility of extending his conclusions to the human being met with some doubt. For a survey of the work of Lashley, see *Brain Mechanisms and Intelligence*, (University of Chicago Press, 1921); also "Basic Neural Mechanisms in Behavior," *Psychological Review*, 1930, vol. 37, pp. 1-24.

The new psychological laboratory opened at Columbia in 1930 included an unusually well-equipped animal laboratory. Facilities were provided for the study of various problems in many animal species, from the simplest forms up to higher monkeys. Research in perception, learning, and motivation was in progress.

The status of research on the conditioned reflex mechanism and the interpretations built upon it was reported by I. P. Pavlov in "A Brief Outline of the Higher Nervous Activity" (*Psychologies of 1930*, Clark University Press, 1930, pp. 207-229).

PUBLIC AFFAIRS, INSTITUTE OF. An organization inaugurated in 1927 at the University of Virginia for the purpose of advancing the popular understanding of public questions and stimulating in the public mind a more vital interest in public matters, particularly the domestic problems of the United States. The attendance at the 1930 session, held from August 3 to 16, consisted of 340 registered members and 338 registered visitors from 24 States, the District of Columbia, Panama, Mexico, China, and Guatemala. Membership in the institute is open to men and women who have taken part in public life and to those who are interested in any phase of public affairs.

The programme of the 1930 session was planned in accordance with the announced purpose of the institute to limit its discussions primarily to a study of governmental problems of national, State, and local concern and to certain economic and social conditions underlying them. It consisted of eight round tables, dealing with the following subjects: "Administration of Public Business"; "Business and Government"; "Consumers Credit in America and Its Relation to Present and Future Prosperity"; "The Country Church and World Affairs"; "The Economic and Industrial Development of the South"; "National Country Life Questions"; "Our Latin-American Relations"; "Reorganization of State Government."

Speakers and topics at the evening sessions were as follows: "Addresses of Welcome," Dr. Edwin A. Alderman and the Hon. John Garland Pollard; "The Role of the Social Sciences in an Advancing Civilization," the Hon. Frank O. Lowden; "Government as Umpire Only," Julius H.

Barnes; "The Federal Farm Board—Its First Year," Carl Williams; "The American Policy in Nicaragua," Dr. Charles C. Batchelder; "The New Régime in Colombia," Prof. J. Fred Rippey; "Jeffersonian Ideas of Religious Freedom," Dr. Walter Maier; "Is Democracy a Failure?" Will Durant; "Holding Companies and Regulation," Martin J. Insull; "Basic Requirements of an Effective Democracy," Norman Thomas; "Country Church and World Democracy," Dr. Arthur W. Hewitt; "Law Enforcement as Related to the Eighteenth Amendment," Mrs. D. Leigh Colvin; "Commercial Aviation," Edward S. Evans; "Religion and Public Affairs," Bishop Francis J. McConnell; "The Gospel According to Christ's Enemies," Dr. J. Stuart Holden. The invited speakers, in addition to those who gave evening addresses, numbered 96.

The 1931 session of the institute was to be held from June 28 to July 11. The officers of administration were: Dr. Edwin Anderson Alderman, president of the University of Virginia; Dr. Charles Gilmore Maphis, dean of the summer quarter and director of the institute; Eleanor McKenney Gibson, secretary of the institute; and an advisory board composed of 25 prominent educators and recognized leaders in public affairs, selected from all sections of the United States and from the two leading political parties. Headquarters are at the University of Virginia, Charlottesville, Va.

PUBLIC FINANCE, UNITED STATES. The outstanding feature of Federal finance during the year 1930 was furnished by the aftermath of the panic. The large income-tax receipts of the preceding few years had been the outgrowth both of very active business, and also of great profits made on the stock exchange. During the year 1930, revenues tended to fall off fairly steadily, due to the shrinkage of this large business volume and the fact that stock-exchange operations pretty generally yielded a loss rather than a profit. By mid-year, it was plain that the measure which had hastily been passed at the end of 1929, just after the panic, making a cut in income taxes to the extent of about \$160,000,000 was unwise, and that it would be necessary to restore the old rates, if not to raise them. Two new and great causes of expenditures, moreover, made their appearance during the year—one the continuous draft by the Farm Board on the \$500,000,000 which Congress had set aside for it, the other the necessity of making appropriations to furnish relief for persons in drought-stricken regions who required aid to provide seed for the planting of 1931 as well as in some cases food and clothing to meet immediate emergency requirements.

Total ordinary receipts for the year indeed were rather larger than the preceding year, amounting to \$4,177,941,702, but it should be remembered that this was for the fiscal year ending June 30 so that it did not actually represent the conditions for the calendar year. Of the total amount so indicated, customs furnished about \$587,000,000, or a slight falling off as compared with the preceding year while income taxes were nearly \$80,000,000 higher, and internal revenue about \$20,000,000. These returns reflected the profitable transactions that had occurred in 1929 before the stock market collapsed. As compared with expenditures, incomes were about the same, there being a surplus of slightly under \$184,000,000 as compared with a surplus of slightly more

than that figure the preceding year. The changes which had occurred tended to "even themselves out," so far as net results went, in spite of the minor reductions caused by the falling off in the first two income-tax installments of the calendar year 1930, due to the reduction in rates which had already been made. There was no change in the payment of debt installments by foreign governments, while the policy of collecting back taxes, and keeping such collections as nearly up to date as possible was well maintained.

for the year was but little changed, increased revenue offsetting increased expenditure. Up to the middle of the year, this persistence of a surplus was taken by many to show that the Government could still further reduce its tax levels, inasmuch as the cut of December 1929 apparently left the net revenue in about the same position as it had been a year earlier. Such expectation was doomed to disappointment later in the year. The surplus thus actually earned was as usual applied to the retirement of public debt (in the

ORDINARY RECEIPTS, FISCAL YEARS 1920 TO 1929

[On basis of daily Treasury statements (unrevised)]

| Year ending June 30— | Customs | Income and profits taxes | Miscellaneous internal revenue | Miscellaneous revenues, including Panama Canal Proceeds from foreign obligations | All other | Total |
|-------------------------|---------------|-----------------------------|-----------------------------------|--|---------------|-----------------|

The high level of customs duties was in some measure due to the importation of goods in large quantities with the intention of anticipating the new tariff which was adopted by Congress in the late spring. The material increase in rates of duty on many articles therein provided led to considerable anticipation of later needs for imported goods. After the tariff had been adopted, there was a corresponding tendency to decline in the volume of customs receipts.

FEDERAL EXPENDITURES. Total expenditures were larger than the year before, amounting to \$3,994,000,000 an increase of about \$146,000,000. This as already explained had been due to Farm Board appropriations some of which had become effective during the fiscal year ending June 30. Drought appropriations did not make their appearance until the session of Congress had opened in December, 1930. The tendency of Federal outlays in general, apart from these extra or unusual requirements, continued to be toward stabilization, as in former years, although the new pension policy in Congress aroused alarm in many minds, due to the apparent probability of heavy drafts upon the Treasury. The measure providing for these drafts, of course, showed only the beginning of their influence during the period here under discussion.

THE SURPLUS. As already noted, the surplus

ORDINARY RECEIPTS, EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS, AND SURPLUS 1920 TO 1930

[On basis of daily Treasury statements (unrevised)]

| Fiscal year | Total ordinary receipts | Expenditures chargeable against ordinary receipts | Surplus |
|-------------|----------------------------|--|---------------|
| 1920 .. | \$6,694,565,388 | \$6,482,090,191 | \$212,475,197 |
| 1921 .. | 5,624,932,960 | 5,538,209,189 | 86,723,771 |

| 1930 .. | 4,177,941,702 | 3,994,152,487 | 183,789,215 |

amount of about \$183,000,000) while the balance was carried to the general fund. However the total surplus measured as a percentage of incomes was less than 5 per cent.

PUBLIC DEBT SITUATION. Public debt issues for the year amounted to \$3,722,970,170 while retirements were \$4,468,859,619. The gross debt at the end of the year was \$16,185,308,299 as compared with \$16,931,197,747 at the opening or a curtailment of \$745,889,448. This reduction as usual was chiefly drawn from sinking fund payments, a small balance, however, being taken as already explained from the surplus. The preliminary statement of the public debt of the United States Dec. 31, 1930, as made upon the basis of the daily Treasury statement, is shown on page 662.

Financially speaking the year was without any very striking features except for the steady reduction of rates of interest. The high rates which had prevailed in the open market during the preceding year and which had resulted in the establishment of correspondingly high rates for public and other borrowings had given way just at the close of 1929 to much lower figures. During the year 1930 Federal reserve discount rates were reduced in New York to a figure at the close of the year of only 2 per cent with the result that corresponding cuts occurred in the amount which the government found it necessary to pay for its accommodation. Other than this reduction of interest, the financing programme of the Government was little more than a repetition of former years. The following statement made by the Secretary of the Treasury in his annual report to Congress in December furnishes a brief review of actual transactions:

In the course of the year six regular issues of Treasury certificates of indebtedness, in the aggregate amount of about \$2,100,000,000, matured on quarterly tax-payment dates. There was the customary concentration in the Treasury's receipts around these dates. As is usual under such circumstances, the Treasury's requirements on a given quarterly tax-payment date were determined on the basis of the estimated excess, over current receipts, of maturing Treasury obligations and of ordinary expenditures for the subsequent quarter. Until the mid-December financing in 1929, it had been the practice to

provide for the full quarterly requirements, so determined, through an issue of certificates of indebtedness, the proceeds of which were left on deposit with the purchasing banks until required by the Treasury to meet its current expenditures. This procedure was followed in providing for requirements for the quarter beginning September 15, 1929, but thereafter certificates were not invariably issued to meet the total estimated requirements between quarterly tax-payment dates. Instead they were issued in somewhat smaller amounts and were supplemented by subsequent sales of Treasury bills for cash. Four regular issues of Treasury certificates of indebtedness, in the aggregate amount of \$1,814,062,000, and four supplementary issues of Treasury bills, in the aggregate amount of \$312,024,000, were made during the fiscal year.

TREASURY FINANCE. The year 1930 brought no serious change in general Treasury finance. None of the long-term issues already outstanding matured and there was consequently no necessity for the undertaking of any large operations although plans were understood to be in the making for

the retirement of the issues whose recall might take place under the loan contracts from and after the year 1932. These plans still had to be developed in full. On the whole the year was thus a comparatively quiet period of transition in which Treasury offerings of short-term certificates were well received because of the doubt felt concerning almost all other securities, while the cost of Treasury financing was largely reduced by reason of the continuous shrinkage in interest rates. One noteworthy development during the year which came as a result of the alteration in money market conditions already referred to was the pronounced advance in Government bond quotations. According to the Secretary of the Treasury:

The decline in money rates in this country in the autumn of 1929 had resulted in an outward movement of about \$100,000,000 of gold before the end of the year. Beginning in January, however, there was a net inflow of gold, reflecting chiefly imports from South America

and the Orient, and by the end of June the country's stock of gold was higher by \$200,000,000 than a year earlier. In July and August gold moved outward again, chiefly to France and Canada, but these gold exports did not result in firmer conditions in the money market, since their effect was counterbalanced in July by a decline in the domestic demand for currency and in August by open market purchases of securities by the reserve

banks. In the autumn member bank indebtedness at the reserve banks, at a level below \$200,000,000, showed a decrease of about \$800,000,000 from the year before.

Reflecting decline in the demand for credit in the security market and also in the demand by trade and industry, together with an inflow of gold from abroad and the easy money policy of the Federal reserve system, money rates in the summer and early autumn of 1930

NOTE.—If trust fund receipts and expenditures are excluded on the basis of figures used in the Budget, the surplus for the fiscal year 1930 would be \$186,480,561.44; for 1931 the estimated deficit, \$178,995,657; and for 1932 the estimated surplus, \$30,685,281.

^a See note ^c.

^b See note ^c.

^c Since July 1, 1930, figures opposite the caption "Department of Justice" include expenditures on account of the Bureau of Prohibition. Prior to that date such payments were included under the caption "Treasury Department."

^d See note ^c.

^e Prior to Aug. 1, 1930, figures opposite the caption "Veterans' Administration" represent payments made for account of the Veterans' Bureau only. After that date they include payments for account of the Veterans' Bureau and also those of the character formerly made by the Bureau of Pensions and for account of the National Homes for Disabled Volunteer Soldiers previously included under Interior Department and War Department, respectively.

^f Includes \$523,090.98 accrued discount on war-savings securities of matured series.

^g Excess credits, deduct.

^h The difference between amounts of above charges and amounts appropriated are due to working balances required for use in making authorized payments from the fund. Receipts on account of this fund are credited against expenditures.

ⁱ Includes \$216,000 on account of appropriation from the general fund and \$97,282.13 on account of salary deductions and earnings. Beginning with the fiscal year 1931 this item will represent only the amount appropriated from the general fund, the receipt from deductions and earnings being used as credits against (deductions from) expenditures.

were at the lowest levels of the postwar period. At the end of September the open market rate on 90-day bankers' acceptances was 1½ per cent and on prime commercial paper 3 per cent, compared with 5½ per cent and 6½ per cent, respectively, a year earlier, and 2 per cent and 3-¾ per cent at the low point in the middle of 1924. Open market rates on time loans secured by stocks and bonds as collateral were quoted at 2½-2¾ per cent, compared to 9-9¾ a year before, and an average of 2.6 per cent for the last week of July, 1924. Rates charged customers were on the average about 1½ per cent below the high point reached in October, 1929, and at the lowest level since 1921.

BUDGET ESTIMATES. Budget estimates for the years 1930-32 are presented on page 663. From them it will be perceived that substantial increases were expected each year in general appropriations while incomes from customs were expected to run about the same with internal revenue losing rather more than about 7 per cent in 1931 and again increasing in 1932. The effect of the situation, according to estimates, was calculated as a deficit of some \$180,000,000 in 1931, while a small surplus of \$32,000,000 was expected to be restored in 1932. Apparently "the end of the surplus" so often and so erroneously predicted was about to be reached, the surplus itself being restorable only through larger tax rates than hitherto. Nevertheless at the close of the year, it was still believed that a restoration of the rates, which had been cut at the end of 1929, to their preceding level would suffice to put the Treasury back upon an even basis although probably with nothing to spare. No movement for the relief of overburdened taxpayers in the higher "brackets" was proposed or initiated.

LEGISLATION, NEW AND PROPOSED. Except as to the tariff, to which reference has already been made and which had probably effected a change of 1125 items, generally upward, no actual legislation of importance was adopted with reference to revenue matters during the course of the year. The studies of the Appropriations Committee during the late autumn and early winter were directed to the question how far a restoration of old income tax rates would be necessary, but no definite action had been taken up to the close of the year. After the opening of the new Congress in December, when it appeared likely that an extra session might be necessary in the spring, discussion of tariff matters was revived and there appeared to be a possibility of revising some of the more extreme rates of duty enacted in the measure of 1930. Reviewing the legislative situation at the opening of the session Mr. Mellon made only minor recommendations for legislation or renewed those than of former years.

PURDUE UNIVERSITY. A State technological institution in Lafayette, Ind.; founded in

1869. The main purpose of the institution has been to train men for service in the fields of engineering, agriculture, and applied science and women in the fields of home economics and general science. The enrollment for the autumn of 1930 was 4589, of whom 3881 were men and 708 women; registration in the 1930 summer session was 704. There were 416 members on the faculty. The endowment amounted to \$340,000, and the income for 1930-31 was \$3,278,870. The library contained 96,240 volumes. During 1930 several new buildings were erected, including a chemistry building, pharmacy building, and mechanical engineering laboratory. Important gifts received included: \$20,000 from Mrs. W. F. M. Goss to establish the William Freeman Myrick Goss Memorial Library; \$100,000 from David E. Ross, a member of the board of trustees; and a substantial sum from J. K. Lilly, also a member of the board, to establish 17 fellowships in pharmacy and science. President, Edward C. Elliott, Ph.D., LL.D.

PUTNAM, ARTHUR. An American sculptor, died in Paris, France, May 27, 1930. He was born in Waveland, Miss., Sept. 6, 1873, and was educated at Kemper Hall, Davenport, Iowa. Although entirely self-taught, he was one of the ablest and best of animal sculptors. In 1906 he exhibited at the Paris Salon and was highly praised by Rodin and other French sculptors. In 1915 he won the Gold Medal at the Panama-Pacific International Exposition in San Francisco. His work was marked by a knowledge of the habits and character of the animals of the Southwest, supplemented by a careful study of anatomical structure, which enabled him to interpret their natural quality. His principal works are: "Snarling Jaguar" (Metropolitan Museum, New York City); "The Death" (Museum of Fine Arts, Boston); "The Foot-Print" (Mills College); and "The Cave Man," "Tiger Love," "Mates," "Puma and Deer," and "Sleeping Puma" (California Palace of the Legion of Honor, San Francisco).

PUTNAM, GEORGE HAVEN. An American publisher, died in New York City, Feb. 27, 1930. He was born in London, Apr. 2, 1844, of American parents, by whom he was brought to the United States while a child. He attended the Columbia Grammar School in New York City and studied at the Sorbonne in Paris and at the University of Göttingen. He returned to the United States to serve with the 176th New York Volunteers in the Civil War from 1862 to 1865, during which time he rose from private to the rank of major. He was a military prisoner at Libby Prison and at Danville, Va. After the war, he entered the publishing house founded by his father, George Palmer Putnam, in New York City, at whose death in 1872 he became president of the firm, the name of which was changed from George Putnam & Son to G. P. Putnam's Sons. Through a branch office in London, he kept in close touch with English authors and publishers. In 1887 he organized the American Copyright League, originated by his father in 1851, and was secretary of the organization during its struggle to gain international copyright, which resulted in the passage of the Copyright Law of 1891. For this work, he was decorated by France with the cross of the Legion of Honor. Mr. Putnam wrote *Authors and Publishers* (1883); *Question of Copyright* (1891); *Authors and Their Public in Ancient Times* (1893); *The Artificial Mother*

(1894); *Books and Their Makers in the Middle Ages* (1896); *The Censorship of the Church of Rome and Its Influence upon the Production and the Distribution of Literature* (2 vols., 1907); *Abraham Lincoln—the People's Leader in the Struggle for National Existence* (1909); *George Palmer Putnam* (1912); *Memories of My Youth* (1914); *Memories of a Publisher* (1915); *Some Memories of the Civil War* (1924).

QUEBEC, kwëbëk'. The largest Province in Canada; bounded on the west by Hudson Bay and Ontario, on the north by Hudson Strait, on the east by Labrador, and on the south by New Brunswick, the United States, and southern Ontario. Area, 594,434 square miles; population, according to the census of 1921, 2,361,199, of whom 357,295 were of British origin, and 1,899,277 of French origin; estimated June 1, 1930, 2,734,600. Capital, Quebec. The chief cities with their populations, according to 1927 municipal statistics, are Montreal, 989,835; Quebec (the capital), 131,000; Hull, 27,087; Verdun, 46,477; Three Rivers, 35,000; and Sherbrooke, 26,300. Births in 1928 numbered 83,621; deaths, 36,632; marriages, 19,126. Quebec had 8125 schools of all kinds in 1927, with 605,491 pupils and 23,399 teachers. All schools are sectarian.

Agriculture is the basic industry, there being 6,893,000 acres under cultivation. In 1929, field crops from 7,051,605 acres were valued at \$153,664,000. Mineral production in 1929 reached a record figure of \$46,454,820 (\$37,037,420 in 1928), due chiefly to the increased output of copper, asbestos, and gold. The Province supplies more than 85 per cent of the world's asbestos. With a forest area of 187,500 square miles, Quebec in 1928 produced 2,018,566 tons of pulp wood, valued at \$67,467,328, or more than half of the total Dominion output. Fur production in 1927-28 was valued at \$3,500,194.

At the end of 1928, there were 7231 manufacturing establishments; the net value of production for the year increased \$46,369,820 over 1927 to a new high total of \$502,581,419. The hydraulic horse power installed on Jan. 1, 1930, totaled 2,595,430, as compared with 5,727,162 for the whole of Canada. Total exports from the ports of the Province in 1929 were \$417,586,970 and the imports for consumption were \$320,549,122. For the fiscal year ended June 30, 1930, ordinary provincial revenues amounted to \$43,585,140 and ordinary expenditures to \$39,374,910. There were over 4870 miles of railway lines and a total highway mileage of 32,354 miles at the beginning of 1930. Of the highways, 12,502 miles were improved and 4874 miles were trunk roads. The Montreal Harbor Bridge, connecting the city with communities south of the St. Lawrence River, was opened May 24, 1930 (see BRIDGES). A total of 815 overseas vessels of 3,727,849 net tons entered the port of Montreal during the 1930 season.

Quebec is governed by a lieutenant-governor and a responsible ministry, assisted by a legislative council of 24 members, appointed for life by the Lieutenant-Governor, and a legislative assembly of 85 members elected for five years.

In the election of May 10, 1927, 75 Liberals and 10 Conservatives were elected to the Legislative Assembly. In the Dominion general election of July 28, 1930, the Province returned 25 Conservatives, 37 Liberals, and 1 Independent to the House of Commons at Ottawa. Lieutenant-Governor in 1930, Henry George Carroll; Premier, Attorney-General, and Minister of Municipal Affairs, L. A. Taschereau. See CANADA.

The return to Canada of large numbers of French Canadians who had migrated to the New England and other American States was reported during 1930 by the provincial Minister of Colonization. The Quebec Liquor Commission reported a profit of \$9,560,000 for the year ended June 30, 1930.

QUEEN'S-CHICORA COLLEGE. A college for women in Charlotte, N. C., founded in 1867; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1930 was 376. There were 38 members on the faculty. The library contained 12,500 volumes. President, William H. Frazer, D.D., Litt.D.

QUEENSLAND. A state of the Australian Commonwealth, occupying the northeastern quarter of the continent. With an area of 610,500 square miles, it is second in size after Western Australia; the population, Mar. 31, 1930, was estimated at 934,643, as compared with 755,972 at the census of 1921. During 1929, there were 18,486 births, 8309 deaths, 6169 marriages, and a net immigration of 4005, making a total increase of 14,182. Capital, Brisbane, with 318,631 inhabitants (Jan. 1, 1930).

State schools in 1928 numbered 1733 and the average daily attendance was 112,588. There were also 187 private schools, with 24,487 pupils. Queensland University at Brisbane had 588 students (1929). Stock raising, agriculture, and manufacturing are the chief industries. The total area under cultivation in 1929-30 was 1,921,675 acres and the total value of agricultural production the same year was £13,803,792. Leading crops are sugar cane, corn, wheat, cotton, and hay. Preliminary figures for the gross values of other industries were: Manufacturing, £18,631,000; pastoral, £17,218,000; dairying, poultry, and bee keeping, £7,987,000; forestry and fisheries, £2,475,000; mining, £1,952,000; total £60,613,000 as compared with £63,744,000 in 1927-28. In 1929, there were 19,975,752 sheep (wool production, 150,108,044 pounds), 5,122,063 cattle, and 493,101 horses. Mineral production in the same year was estimated at £1,707,179 (coal, £1,197,862). The value of direct overseas imports in 1929-30 was estimated at £11,540,080 and of overseas exports, £18,822,608. State revenue for the fiscal year 1928-29 totaled £16,736,188 and expenditure, £16,902,145. The gross state debt on June 30, 1930, was £112,623,979. State railways in operation in 1928-29 extended 6447 miles, the gross earnings were £7,569,000, and the operating expenses, £6,203,000. There were 274 miles of private railways.

Executive power is vested in a governor, who acts through a responsible ministry, and legislative power in a legislative assembly of 72 members elected for three years. Governor in 1930, Sir T. H. J. C. Goodwin; Premier, Chief Secretary, and Vice President of the Executive Council, A. E. Moore, who headed a coalition Government of Nationalists and Country Progressives. See AUSTRALIA for other developments in 1930.

QUICKSILVER. The quicksilver market of 1930 was marked by diminished production and also consumption, the latter figure being estimated at less than 100,000 flasks. Also there was a gradual decline in price from \$122 in January to \$104 in December, with European quotations of about £22 at the close of the year. A Spanish-Italian cartel controlled, as in previous years, the European production, and figures of output were not forthcoming. Mines in Italy and Spain were either closed or operating on a limited scale, while in Russia quicksilver properties were in process of development. The production of quicksilver in Mexico picked up during the latter part of the year. In the United States production decreased markedly and was estimated at less than 19,000 flasks, as compared with 23,682 flasks in 1929, with an apparent consumption of about 25,000 flasks, as compared with 37,974 flasks during the preceding year. Financial conditions affected several mining properties in the United States, with a notable decrease of production in Nevada from 4764 flasks in 1929 to 3300 in 1930.

The production of quicksilver in the United States in 1929 amounted to 23,682 flasks of 76 pounds each, according to the U. S. Bureau of Mines. The calculated value of the production, using the average price of mercury during the year, was \$2,892,638. This was the largest domestic production since 1918 when 32,450 flasks were produced, but was only about 73 per cent of the average annual production from 1850 to 1921, inclusive. The incentive to produce was greater in 1929 than during the period 1850 to 1921 as the average quoted price was approximately \$122 a flask compared with \$48 a flask for the period 1850 to 1921. California again led the mercury-producing States in production in 1929 with an output of 10,139 flasks, Nevada was second with 4764 flasks, followed by Oregon with 3657 flasks. Washington produced 1397 flasks, and Texas, Arizona, and Alaska, together, 3725 flasks. In addition to the above 171 flasks of mercury were produced in Nevada from gold and silver pan-amalgamation tailings.

In 1929, 14,292 flasks (1,086,221 pounds), valued at \$1,447,142, were imported, compared with 15,378 flasks, valued at \$1,572,017, in 1928. Of the quantity imported in 1929, 9412 flasks were received from Spain, 1249 flasks from Belgium, 892 flasks from Italy, 701 flasks from Germany, 323 flasks from France, 1209 flasks from Mexico, 493 flasks from Canada, and 13 flasks from Peru. In 1930 imports were 223,686 pounds valued at \$295,829.

R-101, DESTRUCTION OF. See AERONAUTICS.

RACIAL STUDIES. See ANTHROPOLOGY.

RACING. The 1930 racing season, while characterized by increased attendance and interest in the sport, was notable chiefly for the emergence of Gallant Fox, three-year-old son of Sir Gallahad III and Marguerite, as one of the greatest thoroughbreds of racing history. Owned by William Woodward, trained by James Fitzsimmons, and ridden by Earl Sande, Gallant Fox won \$308,275 during 1930 and raised his total winnings to \$340,665, breaking all previous records for both earnings in one year and earnings by a single horse. Commencing his phenomenal victories by defeating Crack Brigade in the Wood Memorial, he then finished first in the Preakness, the Dwyer, at a mile and a half, the Arlington American Classic, at a mile and a quarter, the Saratoga Cup, at a mile and three-quarters, the Lawrence

Realization, at a mile and five-eighths, and the Jockey Club Gold Cup at two miles. His single defeat of the year came when Jim Dandy, a 100-to-1 shot, passed him in the mud at Saratoga to win the Travers. At the end of the season Gallant Fox was retired to the stud.

By capturing the \$120,000 Futurity at Belmont Park, George D. Widener's Jamestown, son of St. James, won general recognition as the outstanding two-year-old of the season. Jamestown met one defeat during the year, losing to G. A. Cochran's Epithet in the Hopeful at Saratoga. Harry Payne Whitney's Equipose won the \$50,360 Pimlico Futurity. Vander Pool and Twenty Grand were other leading two-year-olds, the latter setting a world's record for his class of 1:36 flat for the mile in the Kentucky Jockey Club Stakes. The leader in the older division was Sun Beau, owned by Willis Sharpe Kilmer. Tourist II won the Grand National steeplechase, after Arc Light had been disqualified.

Aga Khan's horse Blenheim, H. Wragg up, won the British Derby. Iliad, a length behind, was second, and Diolite third. The Oaks was won by Rose of England, Lord Glanely's filly, the Ascot Cup by Bosworth, and the Grand National by Shaun Goilin. The Grand Prix de Paris held at Langechamp, France, on June 29, 1930, was won by M. Henriquet's filly, Commanderie, who led Chateau Bouscaut, winner of the French Derby, by a length and a half. A short time before the Grand Prix, Commanderie won first place in the French Oaks.

HARNESS RACING. Hanover's Bertha, star three-year-old filly of the Hanover Shoe Farms, and May E. Grattan, owned by J. C. Thompson of New York, were the outstanding trotter and pacer, respectively, of the year. Hanover's Bertha annexed the Hambletonian Stakes, the Kentucky Futurity, and five other major races, winning a total of \$60,087. She established a world's record for one mile of 1:59½ for three-year-old trotters. Protector was the outstanding two-year-old trotter of the year. May Grattan won the \$25,000 Pacing Derby at Kalamazoo and the \$10,000 events at Windsor and Avon. A fund of \$250,000 was subscribed during the year to rehabilitate harness racing. Nearly 1600 harness race meetings were held during the year, with approximately 5,000,000 spectators and \$5,000,000 offered in purses, according to estimates.

RACKETEERING. See CRIME.

RACQUETS. The United States in 1929-30 successfully defended the International Racquets Cup against an invading British team headed by Lord Aberdare, winning five games out of six. Lord Aberdare and Dr. H. W. Leatham, of England, however, captured the national amateur doubles title, while Stanley G. Mortimer of Tuxedo, N. Y., defeated Clarence C. Pell, of New York, for the national amateur singles championship. Pell eliminated Lord Aberdare in the final to win the Tuxedo Gold Racquet for the 12th time. The English player fulfilled his ambition of winning the American court tennis crown, defeating Frank P. Frazier, of Boston, in the final. He also won the Canadian racquets singles, and with Dr. Leatham, the Canadian racquets doubles. Charles Williams, of Chicago, retained world's racquets championship.

The defeat of Jay Gould and William C. Wright, of Philadelphia, by Frazier and George W. Wightman, of Boston, in the court tennis amateur doubles championship final attracted wide atten-

tion in racquets circles. Pierre Etchebaster, of France, retained both the world's professional and the United States national professional court tennis titles. The United States lost to England in the international Bathurst Cup matches in London, while E. M. Baerlein again captured the English court tennis championship.

In squash racquets, the national amateur championship was regained by Herbert N. Rawlins Jr., of New York. Boston won the national amateur team title, the United States captured the international Lapham Trophy from Canada, and the national women's singles title was garnered by Mrs. George W. Wightman, of Boston. In squash tennis, the world's open title remained with Frank Ward, of the New York city A. C. Harry F. Wolf, of the same club, captured the national amateur Class A title, while the Class B and Class C championships went to Howell Van Gerbig, of the Fraternity Club, and Frederick J. Walters Jr., of the Princeton Club, respectively. A change in the dimensions and markings of squash tennis courts was introduced by the National Squash Tennis Association at the beginning of the 1930 season. The new courts corresponded closely with squash racquets courts.

RADBURN, N. J. See CITY AND REGIONAL PLANNING.

RADCLIFFE COLLEGE. A nonsectarian college for women in Cambridge, Mass.; founded in 1879. The enrollment for the autumn of 1930 was 1077, distributed as follows: Regular students, 758; graduate students, 287; special students, 32. Instruction was given to the students of the college by 300 teachers from Harvard University. The productive funds amounted to \$4,826,448, and the income, including tuition, for college purposes, was \$541,000. The library contained approximately 67,000 volumes, exclusive of pamphlets. In the fall of 1930 a lecture and recitation building costing approximately \$700,000, was opened to accommodate all classes, with the exception of those in science and music. The college also received assurance of a grant of \$500,000 from the General Education Board for the construction of a laboratory for chemistry and physics. President, Ada Louise Comstock, A.M., Litt.D., L.H.D., LL.D.

RADIOBEACONS. See LIGHTHOUSES.

RADIO COMMUNICATION. Radio communication, including broadcasting in 1930, showed a general trend toward improvement and development, rather than any startling innovations. For the first time the possession of radio equipment figured in the United States decennial census returns, and one of the questions asked was whether the individual or his family possessed a radio set. Wider interest than ever was manifested in the programmes broadcast to the radio listeners, and it was generally admitted that there was improvement in the material sent out. Studio work was improved, and especially in the New York studio of the National Broadcasting Company, where a number of technical improvements were installed. During the year there were a number of important international broadcasting arrangements scheduled, which attracted general attention and which promised to become an even more important feature. It was realized that American listeners were anxious to hear notable utterances from European speakers of prominence, and considerable attention was paid to the words of King George V, the Prince of Wales, and noted British and French statesmen and others,

widely distributed through the United States.

The desire to use greater power of transmission on the part of a number of the leading broadcasting companies was also one of the tendencies of the year, and a number of corporations petitioned the U. S. Radio Commission to increase their power 50 kilowatts, which would afford a greater area for the broadcasting stations.

Another notable development of the year was the successful synchronization or operation of two or more broadcasting stations, such as those at Des Moines (WHO) and Davenport (WOC), which received the approval of the engineers of the U. S. Radio Commission, and arrangements were completed for synchronizing four important stations of the National Broadcasting Company, so as to get more efficient and uniform distribution.

Radio communication between the General Electric short-wave station at Schenectady and New Zealand and Australia also was a feature of the year, and a conversation between Adolph S. Ochs of *The New York Times* and Rear Admiral Richard E. Byrd, U. S. N., was carried on when the latter reached Dunedin, New Zealand, from Little America. A conversation between Kingsford-Smith at Schenectady and his mother at Sydney, Australia, a few hours after the east-to-west flight across the Atlantic was terminated, was another event of the year. Round-the-world short-wave broadcasts were conducted via Holland, Java, Australia, and Schenectady.

During the year increased attention was paid to the broadcasting of classic concerts, and arrangements were secured whereby the rendering of music by some of the best orchestras at leading cities was effectively broadcast. Also a considerable advance was made in educational broadcasting and further work was planned in that field.

The U. S. Bureau of Census in its census of manufactures taken in 1930 revealed that in 1929 the total output of radio receiving sets (tube type not including tubes) involved 4,938,099 sets valued at \$250,602,162. In 1927 the total number of radio receiving sets was 1,978,057 with a total value of \$95,162,393. Combination phonograph and radio sets in 1929 totaled 152,106 with a value of \$22,193,702, as against 31,342 sets valued at \$6,416,402 in 1927. Transmitting sets manufactured in 1929 were 2243 valued at \$5,788,077, as against 1093 valued at \$2,233,483 in 1927. There were manufactured in 1929, 3,301,314 loud speakers valued at \$30,279,287, as against 2,458,785 sets valued at \$18,838,751 in 1927, and transformers to the number of 5,204,505 valued at \$9,478,891 in 1929, as against 4,116,046 valued at \$5,447,403 in 1927. The manufacture of radio accessories and parts, including kits, amplifiers, power packs, microphones, controls, eliminators, head sets, etc., in 1929 were valued at \$57,027,008, as against \$54,591,302 in 1927. See also EDUCATION under Radio.

RADIO FOG SIGNALS. See LIGHTHOUSES.

RADIUM. In 1930 the U. S. Bureau of Mines, together with the U. S. Geological Survey, at the request of the Committee on Mines and Mining of the U. S. House of Representatives submitted reports in reference to the reestablishment of a radium industry in the United States. These reports stated that any effort to resume and develop the production of radium from the Colorado-Utah ore areas should be considered in connection with the joint production of vanadium and radium, and that the situation was rather more complicated than appeared on the surface. In 1929

and 1930 deposits of radium bearing ores were found in Canada and were subjected to tests. Those found in the Wilberforce district of Central Ontario were about to be exploited by the Ontario Radium Corporation. Near Hunter Bay, McTavish Arm, Great Bear Lake, below the Arctic Circle, well-developed veins containing radium ore were found, but the district is inaccessible except by airplane. No further work was done on radium deposits previously found in Australia. The world's supply in 1930, as in previous years, was made available by the Belgian monopoly treating ores from Africa. The imports into the United States of radium salts in 1930 totaled 260 grains valued at \$924,852, as against 165 grains valued at \$579,085 in 1929. See CHEMISTRY, INDUSTRIAL.

RAILROADS. See RAILWAYS.

RAILWAY ACCIDENTS. The U. S. Interstate Commerce Commission, in its Accident Bulletin No. 98 covering the calendar year 1929, reported a grand total of 6496 persons killed on American railways and 76,995 injured. This may be compared with 6509 killed and 85,561 injured in 1928. The total number of passengers killed in train accidents was 36, which may be compared with the low record for 1927 when 10 were killed. In train service accidents in 1929, 61 passengers were killed and 2101 injured, as against 67 killed and 2055 injured in 1928. The total number of employees killed in train and train service accidents was 1069 and 21,970 were injured in 1929, as against 962 killed and 23,591 injured in 1928. In non-train accidents 279 employees were killed and 38,120 injured in 1929, as against 281 killed and 46,101 injured in 1928. The casualties for "other persons," which include passengers carried on contract, such as, for example, newsdealers, employees not on duty, and miscellaneous persons, both trespassers and non-trespassers, totaled 4966 killed and 10,886 injured in 1929, and 5099 killed and 10,337 injured in 1928. The foregoing statistics were for train and train service accidents. Adding to the above those killed in non-train accidents, the grand total for "other persons" in 1929 would have been 5048 killed and 12,534 injured, as against 5181 killed and 11,842 injured in 1928. Of course among "other persons" must be included the very large number of deaths and injuries at highway grade crossings, these in 1929 aggregating 2485 killed and 6804 injured, of which 210 were reported as having subsequently died in 1929, as against 2568 killed and 6666 injured in 1928.

The total amount of damage to cars, locomotives and roadways because of collision and derailments in 1929 was \$19,375,760, as against \$19,558,441 in 1928. The 1929 damage included: Collisions, \$4,645,176; derailments, \$13,137,632; other train accidents, \$1,592,952.

Among the important railway accidents in the United States during 1930 were the following:

January 20. In a derailment of a passenger train of the Louisville & Nashville at Trafford, Ala., the locomotive was overturned, several cars wrecked, the engineer killed, and 54 persons injured, 47 of whom were passengers. The cause was undiscovered.

January 22. The driver of a school bus, together with nine of the ten pupils inside the vehicle, were killed in a grade-crossing accident at Berea, Ohio, on a four-track line of the New York Central.

February 23. A passenger train of the Chicago, North Shore & Milwaukee was derailed in a grade-crossing collision with an automobile at Kenosha, Wis., causing the death of 14 persons and injury to 129 others.

March 7. Collision between the two sections of train No. 9 of the Central of Georgia Railway at Zellobee, Ga., resulted in injury to 65 persons, including 56 passengers.

April 11. Passenger train No. 7 of the Atchison, Topeka & Santa Fe ran into a motor bus stalled on a crossing at Isleta, N. Mex., the bus being demolished and the driver and 21 passengers killed.

August 31. In a derailment of the Texas Special of the St. Louis-San Francisco near St. Louis, Mo., six persons were killed and 11 were injured. Rocks had been piled on the rails, probably by small boys who were in the vicinity at the time.

Among the notable railway accidents in other parts of the world during 1930 were the following:

January 10. Twelve persons were killed and 14 injured in a wreck at Clutterbuckganj, India.

March 10. Eight persons were killed and 26 injured near São Paulo, Brazil.

April 7. An explosion aboard a train near Oita, Japan, caused the death of 20 persons.

June 1. In a derailment near Montereau, France, six persons were killed and 30 injured.

June 27. In the vicinity of Sudbury and Capreol, Ont., Canada, three trains of the Canadian National Railways were derailed by washouts and 13 persons were killed.

June 30. Twenty-two persons were killed and 28 were injured in a wreck near Leningrad, Russia.

July 3. Sixteen persons were killed in a wreck at Sasso, Italy.

August 3. Eight persons were killed in an express train crash at Braga, Portugal.

August 14. In a collision between two express trains near Bucharest, Rumania, 11 persons were killed and 17 injured.

September 7. Four persons were killed and 42 injured in a wreck at Dacca, India, caused by the removal of bolts from plates binding the rails.

October 29. In a derailment of an express train at Perigueux, France, 13 persons were killed and 25 injured.

November 26. A freight train, composed mostly of circus equipment, was derailed on the Aguascalientes division of the National of Mexico near Rivera, resulting in the death of 20 persons. Following the derailment two tank cars of gasoline exploded, and many of the animals in the circus cars were burned to death.

The railways of Great Britain for 1929 reported 417 persons (including 80 passengers) killed and 25,364 (including 5522 passengers) injured. In addition 327 trespassers and suicides were killed and 131 trespassers injured. The number of passengers killed in actual train accidents was only three, which was lower, with the exceptions of 1923 and 1925, than in any year since 1920. It is of interest to note that there were 281 collisions, compared with an average of 251 for the five years 1920-24. The number of derailments remained remarkably uniform, while the progressive decrease in respect of broken rails and axles was maintained. Casualties due to accidents at public road level crossings amounted to 16 killed and 29 injured, of which 15 deaths and eight cases of injury were those of pedestrians. Under the heading of "Movement Accidents" (exclusive train accidents), passenger casualties showed an increase of three killed and 465 injured compared with the year 1928. In the case of railway servants the figures showed an increase of four killed and 151 injured. Of other persons, excluding trespassers and suicides, the number of fatalities was five more, and of injured seven more, than in 1928. The list of passenger casualties caused by falling out of carriages totaled 35 killed and 51 injured, an increase of 17 compared with the figures for 1928. The liability to accident in this direction during 1929 was one in about 20,000,000 passenger journeys, including those made by season ticket holders. Two cases of death and eight of injury were caused by trespassers coming into contact with the live rail of electrically operated railways; all the victims were young children.

RAILWAYS. In its annual report to Congress for 1930, the Interstate Commerce Commission

recommended that the railways be allowed to retain earnings in excess of 6 per cent on their valuations, and that other means of transportation, such as inland waterways and bus lines, be subjected to regulation by the Commission in the same way that the steam railways were subjected to regulation. This may well mark the end of one trend and the beginning of another in the history of the regulation of railways in the United States. It indicates a recognition on the part of the Commission of their responsibilities and of the fact that, insofar as steam railways are concerned, a policy of purely negative repression did not fulfill the entire responsibilities of such a body as the Interstate Commerce Commission.

Another phase of this change was shown in the earnings of the railways themselves. With occasional outstanding exceptions, the problem of railroad development in the United States has been one largely of providing adequate facilities for doing an ever-increasing business economically. On the other hand, 1930 was in general a year of severe depression. With the railways it was more than that. The period of expansion which began with the building of the first mile of railway in the United States had come apparently to a definite end.

As the man on the job, say the division superintendent, saw it, it now became of paramount importance to move a smaller amount of freight and passenger business with greater economy. Heretofore it had been of paramount importance to get the business moved. There was always pressure brought to bear to make the division superintendent do his work, that is get trains over the line, as economically as possible. But whereas heretofore a division superintendent's main hope of making a reputation for himself lay in getting passenger trains through on time, cleaning up his freight yard, keeping his cars and locomotives moving, now the emphasis was placed on saving money.

The easiest place to save money in the management of a railroad is in maintenance of way. It is interesting to look at the policy pursued by some of the railways in regard to maintenance of way. It is a little safer to take the figures for the first nine months of the year rather than the whole twelve months' figures, because in this way "window dressing" which may take place in October, November, and December will not be reflected in the figures. Most railroad men, familiar with conditions throughout the United States, would probably agree that the Atchison, Topeka, & Santa Fe had been, for the last ten years at least, maintained, that is, repaired and renewed adequately, if not extravagantly, regardless of expense. In the first nine months of 1930, the Atchison, Topeka, & Santa Fe itself, operating 9630 miles, spent \$22,264,661 for maintenance of way, a decrease of 10 per cent. Compare this with the Pennsylvania Railroad, operating 10,878 miles. It spent in the nine months of 1930, \$54,403,773, a decrease of 14 per cent as compared with the first nine months of 1929. Neither of these railways were under the necessity of drastically cutting maintenance of way expenditures in order to continue to pay the same dividend rate, namely, 10 per cent in the case of the Atchison, Topeka, & Santa Fe, and 8 per cent (\$4 per \$50 par value share) in the case of the Pennsylvania.

It is interesting to compare these figures with those of a railway company which appeared actually to be face to face with the necessity for

cutting its newly established 8 per cent dividend rate on its common stock. The Southern Railway began the payment of dividends on its common stock only four years ago. It was paying 8 per cent in 1930. In that year the South felt the effects of the general depression very severely. Both agriculture and manufacturing were affected. The depression was thus made doubly hard on the Southern Railway. The Southern Railway, operating 6731 miles of railway, spent \$15,651,927 for maintenance of way in the first nine months of 1930, a decrease of only between 3 and 4 per cent from the amount spent in 1929. Apparently what happened was this. The Southern Railway management kept its head even under very trying circumstances. In the opinion of the management, some saving could be made in maintenance, but a drastic saving was apparently considered to be false economy. In the case of the Santa Fe and of the Pennsylvania Railroad there was a greater margin for saving, and the management availed themselves of this margin of safety by making larger savings in 1930 in maintenance of way.

NEW CONSTRUCTION. In 1930 there were 513 miles of new railway completed. This compared with 666 miles completed in 1929 and with 6026 miles completed in 1902, in which year the greatest mileage completed was shown by the records kept since 1893 by the *Railway Age* (New York).

The *Railway Age* in this connection stated:

As in previous years, the major projects among the new lines fell into three classifications: Those which were built to furnish new traffic routes; those to provide shorter lines or easier grades along existing routes; and those which were projected to develop new territory or industrial centers.

Typical of the first classification was the extension by the Atchison, Topeka & Santa Fe, of the line of the former Kansas City, Mexico & Orient from Paisano, Mex., to Presidio, 65 miles, which not only provides a new route to the City of Mexico, but to the central sections of that country and which will eventually bring the Pacific ports on the west coast of Mexico, several hundred miles nearer to the eastern sections of the United States. Another project of this character is the new line, approximately 200 miles long, between Klamath Falls, Ore., and Keddle, Cal., which is being built by the Great Northern and the Western Pacific to provide a new route from the Northwest into San Francisco and from Oregon and Northern California points to the East.

The most prominent in the second class is the co-ordinated construction which is being carried out by the Chicago, Milwaukee, St. Paul & Pacific and the Rock Island & Pacific, between Trenton, Mo. and Birmingham, to provide a joint line into Kansas City, of easy grades, light curvature, and less mileage.

Notable examples of lines constructed to develop new territory or to reach industrial centers includes the Texas & Pacific line to Lovington, N. M., 73.5 miles; the 20-mile extension, in Oklahoma, of the Beaver, Meade & Englewood; the two lines in Oregon, aggregating 27 miles, completed by the Spokane, Portland & Seattle, and the extension by the Seaboard Air Line of the Prince George & Chesterfield, 16 miles, into Hopewell, Va.

In all probability the most important piece of new mileage built in 1930 was the extension of the Pittsburgh & West Virginia east to a connection with the Western Maryland at Connelville, Maryland. This was important because it completed the final gap in a main trunk line from Chicago to the Atlantic Ocean. It was the completion of this gap which proved the final, insurmountable barrier to the Gould scheme of having a truly transcontinental railway under one financial control. It will be remembered that this scheme envisaged the Western Pacific starting at San Francisco and connecting with the Denver & Rio Grande at Salt Lake City, the Denver & Rio Grande ran from Salt Lake City across the Rocky Mountains to Pueblo, Colorado, where it connected

with the western terminus of the Missouri Pacific, which took it as far as Chicago. From Chicago to Toledo, the Gould system had the Wabash. From Toledo to a point not far west of Pittsburgh, it had the Wheeling & Lake Erie. It got into Pittsburgh over the Pittsburgh & West Virginia. The Western Maryland, which ran from Connellsville to Baltimore, was already owned jointly by the Goulds and the Rockefellers. Now in 1930 that most expensive link across the Alleghenies from the Pittsburgh & West Virginia to Connellsville was completed. This was a major piece of railway building in the completion of the railway map of the United States.

One other major expenditure, which deserves mention, is in the nature of a betterment of existing facilities, rather than an extension of new facilities. This is the beginning of the rebuilding of the Broad Street station of the Pennsylvania Railroad at Philadelphia. On June 29, 1930, the Pennsylvania began the electric operation of all suburban and local passenger trains between Philadelphia, Pa., and Trenton, N. J., 33 miles. Electric operation was extended on July 20 to include suburban and local passenger trains on the Schuylkill division from Philadelphia to Norristown, Pa., 17 miles.

CONSOLIDATION. Although actually given to the public in the last two weeks of 1929, the plan for the proposed consolidation of the more than 1000 railway companies of the United States into 21 systems, as worked out by the Interstate Commerce Commission, belongs properly to the year 1930. In brief, this plan lays down a general scheme which presumably will be controlling in any actual consolidations which may be carried out. It will be remembered that the Interstate Commerce Commission had not been given the power by Congress to compel consolidations. On the other hand, consolidations, if they violate the Anti-trust Act as interpreted by the courts, will become legal if they meet the approval of the Interstate Commerce Commission. For this reason the plan outlined by the Interstate Commerce Commission was of importance.

In briefest outline, the plan was as follows: New England is divided into two systems—(1) a system based on the Boston & Maine with the Delaware & Hudson added to it; (2) a system based on the New York, New Haven & Hartford, with the New York, Ontario & Western added to it, giving the system an outlet to the Great Lakes, and the Lehigh & Hudson and the Lehigh & New England added to it, giving the system an entrance into the Pennsylvania coal fields. The so-called trunk-line territory, which may roughly be thought of as the New York to Chicago territory, is divided between four systems, namely, the Interstate Commerce Commission's System No. 3, the New York Central and its subsidiaries, the Interstate Commerce Commission's System No. 4, the Pennsylvania Railroad and its subsidiaries, the Interstate Commerce Commission's System No. 5, the Baltimore & Ohio, and the Interstate Commerce Commission's System No. 6, which includes the Erie, the Chesapeake & Ohio, the Nickel Plate (the right name of which is the New York, Chicago and St. Louis), and the Pere Marquette.

System No. 7 is made up of the Wabash, the Lehigh Valley, the Western Maryland, the Wheeling and Lake Erie, and the Pittsburgh & West Virginia, and to this trunk-line system is added the Seaboard Air Line, making it (System No. 7) both a trunk-line and a southeastern system.

Beside this hybrid System No. 7, the Southeast has System No. 8, made up of the Atlantic Coast Line, the Louisville & Nashville, and some others. There is also in the Southeast, System No. 9 which is based on the Southern Railway and is extended into Florida by the addition of the Florida East Coast Railway.

The Mississippi Valley and the wheat country west of Chicago is to be served by two systems, System No. 10, based on the Illinois Central, to which is added the Minneapolis & St. Louis and the St. Louis-Southwestern, and System No. 11, which is based on the Chicago & North Western, to which is added the Chicago & Eastern Illinois and the Mobile & Ohio.

The Northwest has two systems, System No. 12 being a combination of the Great Northern and the Northern Pacific. System No. 13 is founded on the Chicago, Milwaukee, St. Paul & Pacific and some short lines.

The Chicago, Burlington & Quincy, with its already controlled line, the Colorado and Southern, is made into System No. 14, competitive with System No. 15, which is founded on the Union Pacific, to which is added the Kansas City Southern.

Of course the Southern Pacific is a system of itself, System No. 16, and the Atchison, Topeka & Santa Fe is also a system of itself, System No. 17.

The Southwest is divided between two systems, the Missouri Pacific, to which is added the Denver & Rio Grande and the Western Pacific, together making system No. 18, and system No. 19, a combination of the Chicago, Rock Island & Pacific Railway and the St. Louis-San Francisco Railway.

The two remaining systems are unimportant. One is made up of the Canadian National lines in the United States and the other the Canadian Pacific line in New England and the Canadian Pacific's controlled line, the Minneapolis, St. Paul and Sault Ste. Marie.

On December 30, President Hoover announced that an agreement had been reached by which the railroads in official classification territory—that is, between New York and Chicago, excluding New England and extending as far south as the coal fields of West Virginia—by which these railways were to be grouped among four large systems.

The agreement was made by President W. W. Atterbury, President of the Pennsylvania Railroad, P. E. Crowley, President of the New York Central Railroad, J. Van Sweringen, Chairman of the Board of the Chesapeake & Ohio, and representing the so-called Nickel Plate interests, and lastly, Daniel Willard, President of the Baltimore & Ohio. The four systems, excluding New England, were to be based on (one) the New York Central Railroad, to which was added the Delaware, Lackawanna & Western, (two) The Pennsylvania Railroad, (three) the so-called Nickel Plate, which takes in the Chesapeake & Ohio, the Erie, the New York Chicago & St. Louis, and to which was added the Lehigh Valley Railway and the Pittsburgh & West Virginia Railway, (four) the Baltimore & Ohio, to which was added the Reading Railway and the Central Railroad of New Jersey.

President Hoover, in making the announcement, added: "Of course, the agreement is subject to the independent approval of the Interstate Commerce Commission." If the President persuaded himself that this was true in spirit as

well as in letter, he did more than the average intelligent man could do to persuade himself of the fact.

The Interstate Commerce Commission had devised a comprehensive plan, outlined above, for the consolidation of the railways of the United States and had set out a Wabash system which was to include the Lehigh Valley and the Pittsburgh & West Virginia. The agreement reached between the four railway presidents and carrying, presumably, President Hoover's approval, gave the Lehigh Valley and the Pittsburgh & West Virginia to the Nickel Plate system, and left out the Wabash completely. Politics and human nature being what they are, the practical effect of President Hoover's going over the heads of his own appointees, ditched, it was believed, the carefully worked out, comprehensive plan which very high-minded experts, after years of study, had devised. It might be well to mention here that the Interstate Commerce Commission plan was primarily the work of Commissioner Claude R. Porter. There was a tendency on the part of many to consider this action of President Hoover as the grossest kind of interference with the work of one's subordinate by one who knew very little about the complexities of the question involved.

RECEIVERSHIPS. The only important receivership during the year 1930 was that of the Seaboard Air Line, which was placed in receivers' hands in December. The general business depression, and especially the very severe depression following the boom in Florida, was the cause of the Seaboard receivership.

LEGAL DECISIONS. There were no very important legal decisions affecting railways during the year 1930.

CARS AND LOCOMOTIVES ORDERED. Quoting again from the *Railway Age*, which in its annual statistical number gives the results of a very careful compilation, the number of locomotives ordered was 555 comparing with 1395 ordered in 1929. The number of freight cars ordered was 49,496, comparing with 124,140 ordered in 1929. The number of passenger cars ordered was 885, comparing with 2458 ordered in 1929. The number actually built, according to the *Railway Age*, was, locomotives 1023, freight cars 77,097, passenger cars 1514.

RAINFALL. See METEOROLOGY.

RANDOLPH-MACON WOMAN'S COLLEGE. An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South; founded in 1893. The enrollment for the autumn of 1930 was 775. The faculty numbered 61. The endowment amounted to \$1,202,935, while the income for the year was \$278,678. The library contained over 35,000 volumes. During 1930 construction of Presser Hall, the new music building, named in honor of the Presser Foundation of Philadelphia, was completed at a cost of \$130,000, half of which sum had been met by the foundation. President, Dice Robins Anderson, Ph.D., LL.D.

RAPID TRANSIT. The first New York subway, a pioneer rapid transit development in the United States, was also practically the last great "pick and shovel" job. Subway design had not changed greatly from the excellent standards adopted in New York some 25 years previously, but subway construction methods were almost completely revolutionized. Recognizing these im-

portant changes the *Engineering News-Record* (N. Y.) published a complete series of articles during the year on the new methods of subway construction. The old plan of open cut and cover construction disappeared, of course, with the last work, the lower Broadway-Brooklyn extension, of the first subway. On this section the scheme of decking over the street and excavating under this deck, thus maintaining traffic at all times, appeared for the first time. Later years, particularly just after the World War, witnessed an extensive replacement of hand labor by machines. The steam, or rather compressed air, shovel appeared in the subway excavation and later the hoisting of spoil to street level for loading gave way to the present system of ramps which permit the motor trucks to descend into the excavation and to be loaded directly by the excavating machines. The most recent developments, which were described in these articles, have to do primarily with the new methods of sheeting and shoring the excavation and supporting the decking during construction—all clever and interesting devices which have been evolved from the experiences of a new group of engineering-contractors—the subway builders of New York.

NEW YORK. The subways previously built in New York City and those proposed make a most complicated network. Satisfactory progress was made during the year in constructing the new line described in previous YEAR BOOKS. Indeed subway construction in New York had become almost an everyday matter and attracted but little attention. The Fourteenth Street crosstown line was delayed somewhat due to the failure of the contractor, but remarkable progress was made on the Houston Street line. This latter construction was carried out largely in open cut. Private property was condemned, houses torn down, the subway was being built, and later new buildings would be erected over much of the line.

Negotiations also were under way looking toward the centralization of operation in municipal hands by securing control for the city of the old Interborough Rapid Transit lines. While the five-cent fare agitation had subsided somewhat it seemed reasonably certain that New York will have a trial at least of municipal operation with a five-cent fare and with the taxpayers meeting the operating deficit.

CHICAGO. Plans were completed for the first section of the Chicago subway—a four-track line, 3½ miles long and estimated to cost about \$45,000,000. Construction was certain to be very difficult with bad soil conditions and several under-river crossings.

PHILADELPHIA. Bids were opened September 15 for a new subway extension on the old Market Street line. The work involved the demolition of the old Market Street Bridge and its replacement by a tunnel under the Schuylkill River.

TORONTO, CANADA. Public subway projects for Toronto were defeated both in 1911 and in 1915. The City Council, however, asked the Toronto Transportation Co. to make a report and proposals for a subway system.

TOKYO, JAPAN. The first two sections of the Tokyo subway were expected to be in operation as the year came to a close. Work on the third section was under way. See 1928 YEAR BOOK. See **TUNNELS**; ILLINOIS under *Political Events*.

RATEAU, AUGUSTE. A French engineer, died in Paris, Jan. 14, 1930. He was born in Royan, Oct. 13, 1863, and was educated in Cognac, study-

ing later at the École Supérieure des Mines in Paris. In 1886 he was given the rank of inspector of mines and in 1888 was appointed professor in the mining school at Saint-Etienne. About 10 years later, he returned to Paris as professor of electrical engineering in the École Supérieure des Mines. His early work in mine ventilation was the foundation for his work on steam turbines and turbo-blowers. In 1896 he patented his form of multi-stage impulse turbine and in 1900, at the Paris Exhibition, he displayed complete designs for a turbine installation of a torpedo boat. He founded the Société Rateau in 1903, a workshop for machine construction which grew into an organization employing some 3000 workmen with branches in all European countries. He also experimented with compound centrifugal air compressors and fitted turbine superchargers to aero engines and to marine Diesel engines. M. Rateau was elected to the Académie des Sciences in the Institut de France. His publications include *Études sur les turbines à vapeur*; *Théorie des turbo-machines et des hélices propulsives*; *Théorie du vol des aéroplanes*.

RATIONALIZATION. See GREAT BRITAIN under *Industry and Shipping*.

RAWLE, ral, FRANCIS. An American lawyer, died in Philadelphia, Pa., Jan. 28, 1930. Born in Freedom Forge, Pa., Aug. 7, 1846, he was graduated from Harvard in 1869 and was admitted to the Pennsylvania bar in 1871. One of the organizers of the American Bar Association in 1878, he served as treasurer until 1902, and as president in 1902-03. In 1887 he was a delegate from the United States to the London meeting of the Association for the Reform and Codification of the Law of Nations. He wrote *Car Trust Securities* and "Life of Edward Livingston" in *Lives of Secretaries of State*. He also revised three editions of Bouvier's *Law Dictionary* (1883, 1898, 1913).

RAYON. According to the *Textile World* (New York), the world production and consumption of rayon showed increases in 1930 over the previous year. The grand total for 1930 was 426,700,000 pounds, as against 404,155,000 pounds in 1929. The estimated consumption was 388,500,000 pounds, showing an excess in production for the year. In the United States, which produced 119,000,000 pounds in 1930, there was for the first time a decline in output, compared with 123,130,000 pounds in the previous year. The Viscose Company with 45,000,000 pounds (62,000,000 in 1929) was the leading producer, followed by the Du Pont Rayon Company with 18,500,000 pounds (24,600,000 in 1929). The 1930 production of 119,000,000 pounds may be compared with 9,000,000 pounds in 1920. Consumption in the United States declined even more sharply than did production, amounting to approximately 105,000,000 pounds, as against 132,000,000 pounds in 1929. Imports in 1930 were estimated at less than 6,000,000 pounds, as against nearly 16,000,000 pounds in 1929. An interesting feature of the year was the development of a considerable rayon industry in Japan, which had captured a large part of the market for this material in Asia. In Great Britain the production of rayon, yarn, and waste was estimated at 48,770,000 pounds, as against 56,900,000 pounds in 1929. The accompanying table, also from the *Textile World*, indicates the world production of rayon by the four different processes in the years 1929 and 1930.

WORLD PRODUCTION OF RAYON BY PROCESSES [In thousands of lbs.]

| Process | 1929 | Per cent | 1930 | Per cent |
|-----------------|---------|----------|---------|----------|
| Viscose | 387,865 | 87 | 373,525 | 88 |
| Acetate | 25,168 | 6 | 30,100 | 7 |
| Cupra | 18,216 | 4 | 14,145 | 3 |
| Collodion | 11,671 | 3 | 8,930 | 2 |
| Total | 442,420 | 100 | 426,700 | 100 |

WORLD PRODUCTION AND CONSUMPTION OF RAYON—1930 From Textile World [In thousands of lbs.]

| | Production | Imports | Exports | Estimated consumption |
|--------------------------|------------|---------|---------|-----------------------|
| Belgium | 12,500 | 1,750 | 6,750 | 7,000 |
| Great Britain | 49,700 | 675 | 6,600 | 42,400 |
| France | 41,600 | 2,450 | 17,975 | 23,000 |

REALISM. See PHILOSOPHY.

RECALL. See MUNICIPAL GOVERNMENT.

RECLAMATION, UNITED STATES. The U. S. Reclamation Bureau published a report by a special board, appointed in 1929 by President Hoover to study western irrigation projects. The report was based on a study of 22 plants, both Federal and private, and proposes two important changes in reclamation policy. Critics of the work of the Reclamation Bureau, established under President Roosevelt in 1902, had pointed out that Federal funds had been sometimes used to build projects which could never be expected to return even the low interest rate contemplated in the Reclamation Act. The report calls attention to the fact that Federal funds were being used for flood protection and river and harbor work, and that there was equal reason for their expenditure on the development of public lands. It was held that at least ample provision was necessary to encourage and take care of the needs of settlers in the early years of such projects while they were developing the raw lands into productive farms. The minimum capital expenditure is put at \$5000 for each settler—a sum which the settler can seldom command but which must be expended before the land becomes even self-supporting. The establishment of a reclamation credit institute was therefore recommended.

Noting that under the existing system there was a tendency for each State, through its political officers, to attempt to get as much Federal aid as possible and to ask for the development

of lands which were not economically suited to reclamation, the report proposed active participation by the States in the financial and other responsibilities of construction. This, it was believed, would check use of Federal funds for the development of low-grade land.

To the many opponents of recent reclamation policy this report did not offer very much consolation or probability of reduced expenditures. That the existing situation was bad could not be doubted and it seemed probable that in the future some such plan as that of State participation, as proposed, was essential to a reasonable use of Government funds.

RIVER DES PERES, ST. LOUIS. The River des Peres, which roughly parallels the old city limits of St. Louis, Mo., and drains into the Mississippi, was turned into a huge storm-water channel and conduit involving extensive and unusual construction features. A large part of the new channel is open concrete-lined canal on which construction was begun in 1926. For over four miles, however, the construction consists of a closed concrete-arch conduit. Part of this is single tube design but a considerable section is of double, or twin, arch form. The arch conduits are of large size, up to 32 feet in span, and the construction was difficult and was carried out with a typically modern construction plant.

ZUIDER ZEE, HOLLAND. The first results of this huge undertaking were demonstrated during the year when the polder, or diked area, just inside the Island of Wieringen, on the North Holland Peninsula, was drained. Some 27 square miles of new land was thus recovered from the sea. The next step in the work would be the completion of the main 18½-mile dike across the Zuider Zee to Friesland. The project has been described in previous YEAR BOOKS.

EGYPT. The beginning of a second raising of Aswan Dam, greatly increasing the storage, is noted under DAMS. As thus increased in size the Aswan Dam will back up the water of the Nile for 230 miles above Aswan to Wadi Halfa on the Sudanese border. Stored behind this new dam will be the stupendous total of 4,000,000 acre feet of water—1320 billion gallons.

In connection with this new work it is interesting to note the other irrigation works below Aswan which serve to divert the Nile flow to the irrigation works.

RED CROSS, AMERICAN NATIONAL. A semi-governmental organization chartered by Congress in January, 1905. The charter designates its obligations as follows: "To furnish volunteer aid to the sick and wounded of armies in time of war . . . to perform all duties devolved upon a national society by each nation which has acceded to the treaty of Geneva . . . to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy . . . to continue and carry on a system of national and inter-

national relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods and other great national calamities, and to devise and carry on measures for preventing same."

On June 30, 1930, there were 3550 chapters of the American Red Cross. Service work for enlisted men and disabled veterans and their dependent families was carried on by 2941 chapters, the national organization spending \$870,608 for this purpose in addition to the expenditure on the part of chapters. Service to ex-service men and their families included assistance in filing death and disability claims for Federal and State benefits, such as compensations, bonus, etc., and social or financial aid while adjustment of claims was pending. Recreation and other service was conducted in 64 Government hospitals, including those of the Veterans' Bureau, Army, Navy, and Department of the Interior.

The year brought many opportunities to the Red Cross for rendering service, as there were 108 disasters, 102 of which were in the United States and its insular possessions. Contributions of funds were made to six foreign Red Cross societies for the relief of victims of major disasters. Communities in 38 States were affected, several States being forced twice to request relief.

Beginning Aug. 15, 1930, the Red Cross undertook drought relief operations in the form of seed distribution, \$450,000 being the initial allotment. Rye, wheat, and oats seed were given for five-acre plantings, in 245 counties of six States, to provide feed for winter pasturage and crops in the spring. Garden seed was also distributed. This programme went forward in close coöperation with the county agricultural agents and home demonstration agents. The seed distribution came to a virtual end in November, with efforts continued through the chapters toward the alleviation of distress among families in the drought-stricken areas.

Outstanding among the year's disasters were the Nashua (N. H.) fire, the Frost (Texas) tornado, and the Santo Domingo hurricane. The latter involved assistance by airplane, the only means of immediate access to the island. For domestic disaster relief the national organization spent \$958,110 and the chapters spent \$20,598, making a total of \$978,708. For insular and foreign operations in disaster relief, \$105,166 was expended. Total expenditures of the national organization and chapters for the year ending June 30, 1930, were \$9,250,000; this sum included the \$1,083,875 spent in disaster relief. The membership of the Red Cross was 4,130,966 adults, while 6,930,849 children were enrolled in the American Junior Red Cross.

Enrollment of Red Cross Nurses, acting as a reserve for the Army and Navy and other governmental nursing services, and for call during emergency, totaled 51,047, of whom approximately 27,000 were on the active list. The Red Cross employed an average of 824 nurses each month in public-health work. Home hygiene and care of the sick certificates were issued to 32,626 graduates of this course; first-aid certificates issued numbered 74,437, a total of 424,928 to date; life saving members enrolled were 52,798, with 273,202 enrolled to date. Garments for disaster victims, etc., numbered 192,051; surgical dressings, 3,495,137; volumes transcribed into Braille for the blind, 2038. Welfare service was provided

for an average of 12,486 families each month in communities where no other agency existed for such work.

National headquarters of the American National Red Cross are located at 17th and D Streets, N. W., Washington, D. C., with branch offices in St. Louis and San Francisco. Judge John Barton Payne continued as chairman of the organization's central committee, in which are vested all powers of control, management, and administration. For relief of draught sufferers see AGRICULTURE.

REED COLLEGE. A nonsectarian, liberal college of arts and sciences for men and women in Portland, Ore., founded in 1911. The enrollment for the autumn term of 1930 totaled 379, of whom 190 were men and 189 women. These were distributed as follows: Freshmen, 141; sophomores, 103; juniors, 75; seniors, 50; special students, 8; graduate students, 2. (No students are accepted for graduate study unless they are Reed College alumni and assistants.) The faculty numbered 32, with 8 graduate assistants. The productive funds for 1929-30 amounted to \$1,870,205, while the income for the year was \$96,270. The library, housed in the new Eric V. Hauser Memorial Library, contained approximately 40,000 volumes. President, Norman Frank Coleman, LL.D.

REFORMED CHURCHES THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF. An organization formed in London, England, in 1875 with the one great purpose, to encourage comity, cooperation, and efficiency in the accomplishment of Christian work. In 1930 there were 106 churches connected with the alliance. The members and adherents of the Presbyterian and Reformed churches throughout the world numbered about 60,000,000, including members of the Evangelical Church in Germany. The general secretary in 1930 was the Rev. W. H. Hamilton of Edinburgh, Scotland, and the American secretary was the Rev. Henry B. Master, D.D., whose offices are at 1012 Witherspoon Building, Philadelphia. A general council of the alliance was to be held in Belfast, North Ireland, in 1933.

REFORMED CHURCH IN AMERICA. Composed originally of settlers from Holland and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with elements from many other nationalities. It adheres to the doctrines of the Belgic Confession and the Heidelberg Catechism: in 1839 it indorsed the Westminster Catechism. The form of government is of the Presbyterian type, with four classes of officers: Ministers, teachers (or professors), elders, and deacons. Administratively the church is divided into consistories, classes, provincial synods, and the general synod, the latter operating through a board of direction. In 1930 the Reformed Church in America reported 738 churches, 842 ministers, 87,002 families, 159,325 communicants, and approximately 200 foreign and 235 domestic missionaries. The church maintained foreign missions in Japan, China, India, Arabia, and Mesopotamia, the latter jointly with the Presbyterian Church in the United States of America and the Reformed Church in the United States. The value of property used for purposes of wor-

ship was placed at more than \$38,000,000 in the Federal census of religious bodies of 1926. The church maintains seminaries in New Brunswick, N. J., and Holland, Mich., and also Hope College in Holland, Mich., Central College in Pella, Iowa, and the Northwestern Junior College in Orange City, Iowa. Schools are conducted for Indians in Oklahoma and New Mexico, for the mountain people of Jackson County, Ky., and for Negroes in Brewton, Ala. Rutgers University in New Brunswick, N. J., is historically affiliated with the denomination, although entirely independent of ecclesiastical control. The official periodical of the denomination is the *Christian Intelligencer*. At the session of the general synod in June, 1930, the Rev. Milton J. Hoffman, D.D., of New Brunswick, N. J., was elected president.

REFORMED EPISCOPAL CHURCH. A denomination formed in December, 1873, by clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It was the outcome of an intense discussion over sacerdotal and ritualistic tendencies. As indicated in its name, the denomination held that it supported the principles of the Anglican Church of the time of the Reformation, and of the Protestant Episcopal Church as organized after the American Revolution. The denomination maintains a theological seminary in Philadelphia, Pa., and from that city issues a periodical, the *Episcopal Recorder*. Statistics for 1930 were: Churches, 86; ministers, 91; church members, 25,300; and Sunday-school enrollment, 26,000. The triennial general council of the denomination was held in Philadelphia, May 21-23, 1930, at which time the revision of the Prayer Book was adopted. The Rev. Joseph E. Kearney was elected a Missionary Bishop and consecrated for the special missionary jurisdiction of the South. Bishop Robert Westly Peach, D.D., of Philadelphia, was Presiding Bishop.

RENSSELAER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical training of men in Troy, N. Y.; founded in 1824. In 1930 there were 1709 students enrolled for the autumn term, distributed as follows: Civil engineering, 486; mechanical engineering, 299; electrical engineering, 476; chemical engineering, 211; business administration, 81; biology, 27; physics, 20; chemistry, 21; architecture, 59; specials, 7; graduate students, 22. The teaching staff numbered 130. The productive funds amounted to \$5,697,000, and the income for the year to \$708,000. The total value of the property of the institute, including market value of securities and value of buildings and equipment, was more than \$10,000,000. The gifts for endowment during the year amounted to \$262,300. The library contained 20,174 bound volumes and 21,400 pamphlets. During 1930 a building for the school of architecture, costing approximately

\$400,000, and an extension to the shop building for the department of mechanical engineering, costing approximately \$100,000, were under construction. President, Palmer C. Ricketts, E.D., LL.D.

REORGANIZED CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS. See LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.

REPARATIONS. The second Reparation Conference, held at The Hague, Jan. 3 to 20, 1930, achieved, temporarily at least, the "general liquidation of the financial questions raised by the World War and the subsequent Treaties of Peace" which the Young Committee of 1929 declared necessary to the financial and economic rehabilitation of Europe. Fourteen agreements were signed by representatives of 21 Governments: viz., Austria, Belgium, Bulgaria, Czechoslovakia, France, Germany, Great Britain, Australia, Canada, India, New Zealand, South Africa, Greece, Hungary, Italy, Japan, Yugoslavia, New Zealand, Poland, Portugal, and Rumania. The agreements provided not only for the definite settlement of Germany's reparation liabilities and for the constitution of the Bank for International Settlements, as proposed in the Young Plan, but also for the settlement of the reparation liabilities of Austria, Hungary, and Bulgaria, and for the consolidation or cancellation of the so-called "liberation" debts of Czechoslovakia, Yugoslavia, Poland, and Rumania.

AGREEMENT WITH GERMANY. The agreement with Germany provided for the putting into force of the Young Plan as modified by The Hague Agreements of Aug. 31, 1929 (see 1929 YEAR BOOK) and Jan. 20, 1930. The Young Plan fixed for the first time the total reparation liabilities of Germany (at about 37,000,000,000 gold marks, or \$9,000,000,000) and the annual payments to be made, rising from 1,641,600,000 Reichsmarks in 1930-31 to 2,352,700,000 Reichsmarks in 1965-66 and then falling to 897,800,000 Reichsmarks in 1987-88, when reparation will have been made in full. The German payments were to be made to and distributed by the Bank of International Settlements (see below). The annuities were identical with those fixed in the original Young Plan, except that the amounts due to the United States were omitted, direct payment of these having been provided for in a separate agreement. The Young annuities were made a definite and fixed obligation of Germany, secured by her commercial credit. Germany was granted the right, in case of need, to postpone the payment of about two-thirds of each annuity for a period of not more than two years. Payment of the remainder (amounting to 612,000,000 Reichsmarks annually) was to be unconditional. Disputes as to the application or interpretation of the Young Plan were to be settled by the World Court.

The revised Young Plan, signed by 15 nations on January 20, officially went into effect May 17, 1930, after the Bank of International Settlements in Basle, Switzerland, had been officially constituted. The other conditions to the inauguration of the Young Plan—ratification by Germany, France, Belgium, Great Britain, and Italy, and the enactment of requisite laws by Germany—had been previously fulfilled. In fact, however, Germany commenced paying the Young annuities, in place of those provided under the Dawes Plan, on Sept. 1, 1929. Under a compromise agreement reached at the first Hague Conference

in August, 1929, the Agent General for Reparation Payments loaned back to the German government the subsequent surpluses paid over and above the Young annuities. After the January Hague Agreements, this system was abandoned and Germany (commencing February 1) paid the actual Young annuities, with the understanding that if the Young Plan did not come into force she would make up the deficit.

With the official inauguration of the Young Plan, France commenced the evacuation of the Third Zone of the Rhineland, and the Reparation Commission and all other agencies of foreign control over Germany established by the Dawes Plan and the peace treaties were abolished, in accordance with The Hague Agreements. On May 17, S. Parker Gilbert, the American Agent General for Reparation Payments under the Dawes Plan, turned over some 150,000,000 marks to the Bank of International Settlements and ended his work in Berlin. The Reparation Commission terminated its existence on May 19, its last official act being the burning of German bonds equivalent to nearly \$40,000,000,000, representing promises to pay extracted from Germany in 1921 and at the inauguration of the Dawes Plan in 1924. The Young Plan scaled down the total of German reparation payments to slightly less than \$9,000,000,000. For the agreement as to distribution of the German annuities among the creditor nations see the 1929 YEAR BOOK.

The final agreement upon the Young Plan at the second Hague Conference was reached only after three crises had threatened to terminate the negotiations. The first issue, raised by Premier Tardieu of France, concerned the method by which a possible German default was to be determined. It was finally agreed that the Permanent Court of International Justice should judge whether or not Germany had willfully defaulted and that in case of an affirmative decision the creditor states would then recover "full liberty of action." Another obstacle was encountered in settling the question of payment of arrears in case of a moratorium as provided in the Young Plan. It was agreed that payments delayed because of one moratorium must be settled before another moratorium could be granted. The third issue involved the Allied demand that Germany float no other long-term foreign loans until the first reparation loan was placed. The Germans demurred, pointing out their immediate need of additional foreign funds. Under the compromise effected, the proposed reparation loan was increased from \$200,000,000 to \$300,000,000, and the German government was given the option of receiving one-third of the proceeds.

Dr. Hjalmar Schacht, president of the Reichsbank, alarmed the conference on January 13 by announcing that he would refuse to allow the Reichsbank to perform the duties of a bank of emission under the Young Plan, or to subscribe to the capital of the proposed Bank for International Settlements. He was forced to capitulate, however, when the German delegation, of which he was not a member, arranged to secure subscriptions to the capital of the International Bank from a Government-controlled bank and the Prussian State Bank.

CONCURRENT MEMORANDUM. The "concurrent memorandum" attached to the Young Report by the Young Committee was confirmed by an agreement signed by representatives of Belgium, France, Great Britain, Greece, Italy, Portugal,

Rumania, and Jugoslavia at the January session of The Hague Conference. The memorandum set forth the amount of the Young annuities required to cover annual outpayments on war debts owed by the creditor Powers to the United States, and provided that two-thirds of every reduction of the American claim on the Allies during the first 37 years shall be passed on to Germany. The total amount of any relief during the last 22 years will be credited to Germany. The average annual payment of Germany to her creditors under the Young Plan is \$495,000,000 for the 58-year period, while the average annual payments of her creditors to the United States totals \$325,000,000.

AGENT-GENERAL'S REPORT. The final report, issued June 15, 1930, by S. Parker Gilbert, Agent-General for Reparation Payments, under the Dawes Plan, placed the total of the five annuities paid by Germany at 7,970,000,000 marks (\$1,896,860,000) on which there was an interest gain of 23,000,000 marks (\$5,474,000), which more than covered the total expenses of his office, amounting to 17,500,000 marks (\$4,165,000). In addition, the Agent-General transferred to the creditor nations a further sum of 306,000,000 marks (\$72,828,000) during the transition period from Sept. 1, 1929, the end of the fifth Dawes Plan year, to May 17, 1930, the date of the inauguration of the Young Plan. This left a cash balance of about 15,000,000 marks (\$3,570,000) when Mr. Gilbert ended his duties as custodian for the creditor powers. Deliveries in kind during the fifth year under the Dawes Plan, totaled 1,200,000,000 marks (\$285,600,000).

THE INTERNATIONAL BANK. The Bank for International Settlements, in substantially the form outlined in the Young Report (see 1929 YEAR BOOK), opened for business at Basle, Switzerland, following the issuance of its capital shares on May 20, 1930. The first official meeting of the board of directors was held May 12. The location of the bank was agreed upon in a treaty signed at The Hague between Switzerland, on the one hand, and Belgium, France, Germany, Great Britain, Italy, and Japan on the other.

The bank has two main functions—to collect and distribute reparation payments in accordance with the Young Plan, and to promote general international financial and economic stability. It is authorized to facilitate the transfer of reparation payments by giving Germany temporary credits, by financing deliveries in kind, or by investing marks in German enterprises. In case Germany suspends her conditional payments, or reports serious difficulty in meeting them, the bank is authorized to convene the special advisory committee provided for in the Young Plan. The statutes prohibit it from issuing notes or engaging in the acceptance business. The depositors are all national central banks or private banks and the clients are all depositors.

The capital of the bank is fixed at 500,000,000 Swiss francs (about \$96,500,000) and is divided into 200,000 shares, at least 112,000 shares of which must be paid in. The requisite shares were issued and subscribed on May 20 simultaneously in Paris, London, Berlin, Brussels, Rome, Tokyo, and New York, where, in each case, 16,000 shares were offered, and in Amsterdam, Stockholm, and Zurich, each of which was allotted 4000 shares. The operation netted the International Bank about \$18,000,000 in cash, representing subscriptions of \$68,000,000. In some markets the shares were retained by the central banks. In others, as

in New York, they were distributed among banking institutions. In still others, as in Paris, they were sold to the public.

Gates W. McGarrah, an American banker, was chosen the first president, and Pierre Quesnay, a Frenchman, general manager. A German, Dr. Ernst Huelse, was named deputy general manager. Other officers selected were: Vice presidents, Sir Charles Addis of Great Britain and Dr. Melchior of Germany; general secretary, Signor Pilotti of Italy; head of the investment department, Paul van Zeeland, of Belgium; deputy to President McGarrah, Leon Fraser, second American director on the board.

One of the first major operations of the International Bank was the flotation of a Young Plan loan of slightly more than \$300,000,000, with the unconditional German reparation annuities as security. The loan was successfully launched on June 12 and 13, 1930, in nine of the world's money markets—New York, London, Paris, Rome, Berlin, Brussels, Stockholm, Amsterdam, and Zurich. The allotments of the respective countries was as follows: the United States, \$98,250,000; Germany, 36,000,000 Reichsmarks; Belgium, 35,000,000 belgas; France, 2,515,000,000 francs; Great Britain, £12,000,000; Holland, 73,000,000 florins; Italy, 110,000,000 lire; Sweden, 110,000,000 kronor; and Switzerland, 92,000,000 Swiss francs. Of the total proceeds of the loan \$100,000,000 was allotted to Germany and the remaining \$200,000,000 was divided among the reparation creditors sharing in the unconditional German annuities.

The statement of the bank as of Aug. 31, 1930, is on page 677. It does not include service on international loans for which the bank is trustee.

NON-GERMAN REPARATION. The settlement of the non-German, or so-called Eastern European reparation problem, was worked out in principle at the second Hague Conference and in detail at a subsequent conference in Paris, which ended with an agreement signed Apr. 28, 1930. The settlement involved the reparation obligations of Austria, Hungary, and Bulgaria, and the claims and liabilities of the Succession States of the former Austro-Hungarian Empire (Czechoslovakia, Jugoslavia, and Rumania). In the interest of a general settlement, the Great Powers agreed to sacrifice a large proportion of their shares in the prospective reparation payments.

The settlement with Austria absolved her of all financial obligations arising under the Armistice of Nov. 3, 1918, and the subsequent peace treaties, with the exception of a special arrangement entered into with Italy. In settlement of this, Austria agreed to pay Italy some 23,000,000 crowns, the payments to commence in 1943 and run until 1966. Control of the Reparation Commission over Austrian finances was ended. Finally, the agreement provided for the cessation of the liquidation of the property of Austrian nationals in the creditor states.

Bulgaria's reparation debt, fixed at 2,250,000,000 gold francs by the Treaty of Neuilly and reduced to 550,000,000 gold francs in 1923, was further reduced at The Hague to a total of 420,243,808 gold francs, payable over a period of 35 years commencing Apr. 1, 1930. The annuities were made payable to the Bank for International Settlements and were subject to the transfer protection clause agreed to when the Refugee Settlement Loan of 1926 was issued under the auspices of the League of Nations. Disbandment of the Inter-Allied Commission for Bulgaria and

the termination of Bulgaria's relations with the Reparation Commission were provided for also.

The agreement with Hungary involved unusual difficulties, which were solved in principle only at an all-night session on the eve of the adjournment of the January Hague Conference. Hungary's reparation charges and other treaty obligations up to 1943 were fixed in 1924 in connection with the issue of the Hungarian Reconstruction Loan under League of Nations auspices. This schedule, calling for payments rising from 7,000,000 to 14,000,000 gold crowns annually, was confirmed at The Hague, but the payments are to be made to the Bank for International Settlements, instead of the Reparation Commission, whose relationship with Hungary was ended. For the period 1944 to 1966 Hungary agreed to pay 13,500,000 gold crowns annually in final settlement of all treaty claims, but those payments were to be utilized by the creditor Governments to insure settlement of claims of Hungarian nationals whose properties were liquidated by the Succession States. Further liquidation of Hungarian property in the Succession States under the Economic Clauses of the Treaty of Trianon was ended, but existing agreements for the settlement of pre-war debts were to continue in force.

The settlement at The Hague of the problem of the Hungarian "optants" in Rumania and the other Succession States removed one of the principal obstacles to the peace of central Europe.

For six years the question had been before the Council of the League of Nations in one form or another, without solution. As later modified at the Paris Conference on Eastern Reparations, The Hague agreement provided for the establishment of two funds, known as "A" and "B" Funds, from which approved Hungarian claims were to be met, the Succession States being freed of further liability. The two funds were to be constituted from: (1) payments or restoration of properties by the Succession States under their national legislation; (2) the shares of Belgium, France, Great Britain, Italy, Japan, and Portugal in the payments to be made by Hungary up to 1943 inclusive; and (3) all payments to be made by Hungary after 1943. In addition, France, Italy, and Great Britain agreed to contribute jointly an average of 3,300,000 gold crowns annually.

"A" Fund, amounting to a maximum of 240,000,000 gold crowns (reduced to 219,500,000 gold crowns at Paris), was set aside to meet claims, approved by mixed arbitral tribunals, of Hungarian nationals whose properties had been expropriated in connection with the agrarian reforms enacted in Rumania, Czechoslovakia, and Jugoslavia. "B" Fund, amounting to a maximum of 100,000,000 gold crowns, was to compensate for the seizure or liquidation of other Hungarian properties, such as those of the Hapsburg Archdukes, the Church properties, etc. The com-

promise effected was without prejudice to the legal view of either side as regards the legality of the expropriations under the Treaty of Trianon.

The remaining problems disposed of involved the so-called Czechoslovakia "liberation debt" of £30,000,000 and the distribution of non-German reparation receipts. The Czechs had postponed payments on the liberation debt, which was advanced by the Allied governments, pending settlement of a number of counter-claims. At The Hague it was agreed that Czechoslovakia should pay 37 annuities of 10,000,000 marks (£500,000) each in full settlement of her liabilities.

In accordance with a promise made by the British, French, and Italian governments at the August, 1929, session of The Hague Conference, the agreement reached in January assigned to Greece: (1) the Bulgarian payments from Apr. 1, 1927, to Apr. 1, 1930, inclusive, which had not yet been distributed; (2) 76.73 per cent (instead of the Spa Conference share of 12.7 per cent) of subsequent payments by Bulgaria and by Hungary up to 1943. Small allocations of the Bulgarian and Hungarian payments were made to the other Succession States and the balance was distributed in the percentage fixed by the Spa Agreement. The Czechoslovak annuities were distributed among the creditor governments other than Rumania, Czechoslovakia, and Jugoslavia, on the Spa percentage basis. Shares of Belgium, the British Empire, France, Italy, Japan, and Portugal in Hungarian reparation up to 1943, and the whole of the Hungarian annuities from 1944 to 1966 were diverted to Funds "A" and "B." Finally, the liabilities of the Succession States for public properties in the ceded territories of the old Austro-Hungarian Empire were cancelled, as were all claims for "liberation debts" incurred by Jugoslavia, Rumania, Poland, and Czechoslovakia, except the payment agreed to by Czechoslovakia. See GERMANY under *History*.

REUNION, RA'ŋ'nyōn'. An island colony of France in the Indian Ocean, situated 420 miles east of Madagascar. Area, 970 square miles; population at the census of 1926, 186,637, of whom 180,694 were French citizens. St. Denis, population 23,390 in 1926, is the capital and Pointe des Galets, the chief port. Sugar and rum, production of which was 50,122 metric tons and 1,086,158 gallons, respectively, in 1928, are the leading

products. Others are coffee, manioc, tapioca, vanilla, and spices. Imports in 1928 totaled 152,906,000 francs; exports, 118,107,000 francs. The budget for 1929 balanced at 48,573,728 francs, while the public debt was 1,399,998 francs. There are about 80 miles of railway. The governor is assisted by a privy council and an elected council-general. The island sends one representative to the French Senate and two to the Chamber of Deputies. Governor in 1930, M. J. Repiquet.

RHODE ISLAND. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 687,497. According to the State census of 1925, it was 679,260, as compared with 604,397 at the United States Fourteenth Census in 1920. The capital is Providence.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|-----------|-------------|
| Hay | 1930 | 39,000 | 48,000* | \$1,071,000 |
| | 1929 | 45,000 | 64,000* | 1,394,000 |
| Corn | 1930 | 9,000 | 378,000 | 416,000 |
| | 1929 | 9,000 | 378,000 | 529,000 |
| Potatoes | 1930 | 2,000 | 380,000 | 437,000 |
| | 1929 | 2,000 | 250,000 | 450,000 |

* Tons.

Farms in the State numbered 3366 in 1930, as against 3911 in 1925 and 4083 in 1920.

MINERAL PRODUCTION. The total value of the mineral products of the State was \$4,045,849 for 1928, as against \$4,251,137 for 1927. The decline was mainly due to a smaller total value for the clay products of 1928, which totaled \$1,462,055; those of 1927 had totaled \$1,802,772. The production of stone of divers grades attained 1,278,190 short tons for 1928, as against 1,197,870 for 1927; the yearly value of this product was \$2,203,863 for 1928 and \$1,992,558 for 1927. There was a considerable production of raw clay in excess of the quantity used in the State's own clay products. The only other native mineral produced in excess of \$40,000 a year was sand and gravel.

FINANCE. State expenditures in the year ended Nov. 30, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$6,977,781 (of which \$475,857 was for local education); for conducting public-service enterprises, \$17,248; for interest on debt, \$882,774; for improvements, \$5,157,805; total, \$13,035,608 (of which \$4,442,115 was for highways, \$921,011 being for maintenance and \$3,521,104 for construction). Revenues were \$15,471,248. Of these, property and special taxes afforded 56.4 per cent; departmental earnings and compensation to the State for officers' services, 3.8; sale of licenses, 34.1 (in which was included the gasoline sale tax, totaling \$1,441,128). Of funded State debt there was outstanding on Nov. 30, 1929, \$22,616,500, of which \$6,523,000 was for highways; net of sinking fund assets, the debt was \$18,331,647. On assessed property with a valuation of \$1,393,742,141 were levied in the year State taxes of \$1,254,368.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 195.77; 13.73 miles of track were built in 1930.

EDUCATION. A building programme characterized as the most extensive in the history of the State was in progress during the year in its school system. Changes were made in the organization of the State Department of Education; three directors were appointed, to deal respectively with vocational education, adult education, and problems of research and survey. Progress was made at the Rhode Island College of Education in connection with a movement to lengthen the course for intending teachers to four years.

CHARITIES AND CORRECTIONS. The control of State institutions, penal, reformatory and for mental treatment, as well as that of five administrative departments promoting the welfare of divers classes of individuals, rested in 1929 in the State Public Welfare Commission. This body, as created by an act of 1929, consisted of three unpaid appointive members. With regard to the State institutions, it had as its executive officer a Director of State Institutions (L. A. Halbert). Its Children's Bureau, placing children in homes, had 1084 children so placed. Its Mothers' Aid Department dispensed aid to 375 families. Its Probation Department, keeping an officer in every court in the State, worked to keep families together and supervised 1566 adult and 704 juvenile probationers. The Bureau for the Blind instructed blind persons in trades in their own homes. The Psychological Bureau determined the intelligence levels of individuals to be instructed in institutions. The State institutions of care or custody, with their inmates as of Oct. 30, 1930, were: State Hospital for Mental Diseases, 171; State Infirmary (for the old and infirm), 903; Rhode Island State Prison and Providence County Jail, 703; Women's Reformatory, 37; Oaklawn School (girls), 32; Sockanosset School (boys), 179; State Home and School (neglected and dependent children not yet in foster homes), 226; Exeter School for the Feeble-minded, 525.

LEGISLATION. The State Legislature at its annual session amended the State inheritance tax law with regard to the allocation of the proceeds. A bill was passed to require that the question of Prohibition be submitted to the voters at the November election for a State-wide referendum. Unable to defeat such a bill, the Republicans in the lower house, with support from the advocates of Prohibition, put it through in a form requiring that the referendum be on the question of "retaining," instead of "repealing" the Prohibition law.

POLITICAL AND OTHER EVENTS. A writ of mandamus, sought by the State of Rhode Island, to compel a Federal Judge to turn over to the State Superior Court for trial a Federal Prohibition agent charged with having entered a dwelling without a search warrant, was denied by the U. S. Supreme Court on January 8. Thus was defeated a movement in the State to bring such Federal agents under the jurisdiction of its courts. The Democratic State convention adopted on October 1 a platform calling for repeal of the Eighteenth Amendment and for reform of the State constitution. It named former Senator Gerry candidate for the U. S. Senate and Theodore Francis Green candidate for Governor. The Republican State convention renominated Jesse H. Metcalf for U. S. Senator and Norman S. Case for Governor.

ELECTIONS. The State elected the entire Republican ticket on November 4, but at the same time

voted its disapproval of the Eighteenth (Prohibition) Amendment to the United States Constitution. United States Senator Jesse H. Metcalf, Republican, was reelected, defeating former Senator Peter G. Gerry, Democrat, by 112,374 votes to 109,615 (unofficial total). Governor Norman S. Case, Republican, was likewise reelected, obtaining 112,318 votes, to 108,643 (unofficial) for Green, Democrat. Other Republican State officers elected were James G. Connolly, Lieutenant-Governor; E. L. Sprague, Secretary of State; G. C. Clark, General Treasurer; and B. M. McLyman, Attorney-General. The Legislature remained Republican in both branches. In the referendum on the question submitted by the Legislature: "The Eighteenth Amendment to the Constitution of the United States—shall it be retained?", the vote was "No" in the proportion of more than 3 to 1. Two Republicans and one Democrat were elected to the House of Representatives.

OFFICERS. Governor, Norman S. Case; Lieutenant-Governor, James G. Connolly; Secretary of State, Ernest L. Sprague; Treasurer, George C. Clark; Comptroller, Albert E. Godfrey; Attorney-General, Benjamin M. McLyman.

JUDICIARY. Supreme Court: Chief Justice, Charles F. Starns; Associate Justices, Chester W. Barrows, John S. Murdock, Elmer J. Rathbun, John W. Sweeney.

RHODESIA, rō-dē'zhī-ā or -zī-ā. A British territory in south central Africa, extending northward from the Transvaal to the borders of the Belgian Congo and Tanganyika Territory. It is divided into Northern Rhodesia and Southern Rhodesia by the Zambezi River; Southern Rhodesia comprises the districts of Matabeleland and Mashonaland.

NORTHERN RHODESIA. In 1911 this region was formed from the former provinces of Northeast and Northwest Rhodesia. Area, 287,950 square miles. The permanent European population in December, 1928, was 7536; the native population a year earlier was estimated at 1,261,972. Capital, Livingstone. The chief crops are corn, cotton, wheat, tobacco, fruits, and rubber, and the minerals include gold, copper, zinc, and lead. The total value of all minerals mined in 1928 was £903,680 (£360,337 in 1927). In 1930, six companies with capital of \$38,668,000 were developing copper deposits in Northern Rhodesia estimated to contain 20,000,000 tons. Imports in 1928 totaled £2,422,841 and exports, £860,704. The chief exports are live animals, lead, copper, corn, flour, hides and skins, and tobacco. In 1928-29, revenues totaled £541,576 and expenditures, £525,168. Expenditures for 1929-30 were estimated at about £547,000. The administration consists of a governor and executive council and a legislative council, partly official and partly elected, the official members having the majority. Governor in 1930, Sir J. C. Maxwell, appointed Aug. 31, 1927.

SOUTHERN RHODESIA. The area of Southern Rhodesia is estimated at 149,000 square miles. The population at the census of May, 1926, totaled 873,647 (39,174 Europeans and 834,473 natives); estimated June 30, 1929, 1,032,703 (including 47,663 Europeans). Capital, Salisbury, with 22,000 inhabitants.

The principal crops are maize, tobacco, ground-nuts, legumes, and fodders. Fruit cultivation is expanding and the livestock industry is of major importance. The value of the total mineral output in 1928 was £4,448,300 (£4,238,300 in 1927). Im-

ports in 1928 amounted to £8,435,000 and exports to £8,004,000. Gold bullion, tobacco, asbestos, food-stuffs, cattle, chrome, and coal are the chief exports. For the fiscal year ended Mar. 31, 1929, revenues totaled £2,330,000 and expenditures, £2,208,525. For 1929-30, the estimated revenue was £2,353,000 and the estimated expenditure, £2,364,386. The public debt Mar. 31, 1929, was £6,145,881. At the end of 1928, there were 2525 miles of railway. A survey of a railway route from Rhodesia to Walvis Bay in Southwest Africa was authorized by Premier Moffat in 1930.

Executive power is vested in a governor aided by an executive council; legislative power in an elected legislative assembly. Governor and Commander-in-Chief in 1930, Sir Cecil H. Rodwell, appointed August, 1928; Premier and Secretary for Native Affairs, H. U. Moffat.

A customs union between Southern Rhodesia and the Union of South Africa was renewed in 1930. The South African Minister of Finance announced that the agreement was in anticipation of "some measure of eventual political union or federation." Resolutions condemning the British government's White Paper on East Africa and demanding withdrawal of the Government's instructions for carrying out the new native policy set forth in the White Paper were adopted at a meeting of white settlers and farmers in Rhodesia a Lusaka early in August. See KENYA and SOUTH AFRICA. UNION OF.

RICE. The world rice situation in 1930 showed a recovery from the heavy production of the crop year 1928-29 as stocks in surplus countries were reduced and prices towards the latter part of the commercial year indicated some improvement. The production of the crop year 1930-31 of nine rice-growing countries reporting to the International Institute of Agriculture, Rome, was placed at 1,313,527,000 bushels. The estimated yields of some of these countries were as follows: Japan 578,567,000 bushels, Java and Madura 260,913,000 bushels, and Italy 31,920,000 bushels. India in the crop year 1929-30 produced 2,364,777,000 bushels. These yields are in terms of rough rice of 45 pounds per bushel. Statistics of the world's rice production are generally incomplete as data on the large production of China are seldom available.

In the United States, as reported by the Department of Agriculture, a total area of 900,000 acres was harvested and the yield was estimated at 41,367,000 bushels, an increase of 905,000 bushels over the crop of 1929 but over 1,000,000 bushels below the average of the past four years. The average yield per acre was 43.1 bushels compared with 46.6 bushels in 1929. The drought which characterized the year was not seriously injurious to the crop, although in some sections there was a shortage of water for irrigation. On the basis of an average farm price of 76.4 cents per bushel on December 1, the total value of the crop was \$31,923,000 as compared with 97.7 cents per bushel and a total value of \$39,536,000 in the preceding year. The crops of the five States included in the estimates were as follows: Louisiana, 17,676,000 bushels; Texas, 8,463,000 bushels; Arkansas, 7,912,000 bushels; California, 7,271,000, and Missouri, 45,000 bushels. The average yields per acre were 36, 45.5, 46, 66.1 and 45 bushels respectively. The total yields of Texas and California were approximately a million bushels above the 1929 yield while Louisiana produced 1,000,000 bushels less than in the previous year.

The exports of rice by the United States in the fiscal year ended June 30, 1930, amounted to 234,535,000 pounds valued at \$9,598,000, a decrease of 78,870,000 pounds below the exports of the preceding fiscal period. In addition to the rice grain 54,373,000 pounds of rice flour, rice meal, and broken rice were exported which was 24,906,000 pounds less than the quantities shipped abroad the year before. The imports for the fiscal year 1930 were recorded as follows: cleaned rice, 20,946,000 pounds; uncleaned rice, 7,005,000 pounds; patna rice, for use in canned goods, 2,176,000 pounds; and rice flour, rice meal, and other rice products, 1,085,000 pounds. These quantities were all under those imported the year before. The Federal rice-grading service in charge of the Department of Agriculture was extended during the year in Arkansas and Texas.

RICE INSTITUTE. A coeducational institution for higher education in Houston, Texas; opened in 1912. The enrollment in the autumn of 1930 was 1369, and the faculty numbered 95. The plant equipment and productive funds of the institution were estimated at \$15,000,000, and the income from endowment for the fiscal year 1929-30 was in excess of \$600,000. The library contained approximately 81,100 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

RICKETS. See FOOD AND NUTRITION.

RIDGE, WILLIAM PETT. An English novelist, died in Chislehurst, Kent, Sept. 29, 1930. Born in Chartham, near Canterbury, in 1860, he was educated in the Birkbeck Institution. He was best known for his humorous stories of lower-class life in London. His books include: *A Clever Wife* (1895); *Secretary to Bayne, M. P.* (1897); *Mord Em'ly* (1898); *A Breaker of Laws* (1900); *Lost Property* (1902); *The Wickhamses* (1906); *Thanks to Sanderson* (1911); *The Remington Sentence* (1913); *The Happy Recruit* (1914); *The Kennedy People* (1915); *The Amazing Years* (1917); *Top Speed* (1918); *Bannerton's Agency* (1921); *Miss Mannering* (1923); *Just Like Aunt Bertha* (1925); *The Two Mackenzies* (1928); *The Slippery Ladder* (1929); *Eldst Miss Collingwood* (1930).

RIFLE SHOOTING. See SHOOTING.

RIISER-LARSEN, HJALMAR. See POLAR RESEARCH.

RIKER, ANDREW LAWRENCE. An American inventor and engineer, died in Fairfield, Conn., June 1, 1930. He was born in New York City, Oct. 22, 1868, and attended Columbia University. His first important invention was the locomobile, on which was based his electric tricycle (1884), a four-wheeled electric motor car (1895), and a gasoline car (1902). In 1899 his electric motor car established a world's speed record of one mile in 63 seconds on Long Island, which was held for ten years for electric cars, and in 1908 a racing automobile that had been developed from his early gasoline car won the Vanderbilt Cup race. He was among the first to manufacture electric trucks and other vehicles. He was president of the Riker Electric Motor Company and of the Ventilouvre Company, and from 1902 to 1920 was vice president and chief engineer of the Locomobile Company of America. In 1915 he was appointed a member of the Naval Consulting Board, acting as chairman of the committee on internal combustion engines. He was also first president of the Society of Automotive Engineers, and in 1900 received a medal from the French government for meritorious achievement in automobile design.

RIO GRANDE RIVER. For boundary commission's recommendations for straightening of channel, see **MEXICO** under *History*.

RIVOIRE, révwär, ANDRÉ. A French poet, dramatist, and critic, died in Paris, Aug. 19, 1930. He was born in Vienne (Isère) May 5, 1872, and attended the Lycée de Lyon and Lycée Henri IV. From 1897 to 1912 he was secretary of the editorial board of the *Revue de Paris*. He also acted as dramatic critic for *L'Echo de Paris* and *Le Temps*. His verse was noted for its grace, delicacy, and freedom from the affectations of the Symbolists. Among his poetical works are *Les vierges* (1895); *Berthe aux grands pieds* (1899); *Le songe d'amour* (1900); and *Le chemin de l'oubli* (1904), which was crowned by the Academy. His dramas include: *La peur de souffrir* (1899); *Il était une bergère* (1905); *Le bon roi Dagobert* (1908); *Mon ami Teddy* (with Lucien Besnard, 1910); *Pour vivre heureux* (with Yves Mirande, 1912); *L'Humble offrande* (1916); *Roger Bontemps* (1920); *Juliette et Roméo* (1920); *La belle Angevine* (with Maurice Donnay, 1922); *Les baisers de Panurge* (1926); and *Pardon, Madame* (with Romain Coolus, 1930). In English appeared *The Little Shepherdess* (1915). He was an officer of the Legion of Honor.

ROADS AND PAVEMENTS. Stimulated by desire to relieve the financial and industrial depression and also by increasing unemployment, large sums of money were provided for highway construction in 1930 and still larger sums were appropriated for 1931. This action was taken by Federal and State governments and counties while cities and villages increased their usual street-paving work. Congress increased Federal aid to State highway construction by \$50,000,000 a year, bringing the total to \$125,000,000, first effective for the year 1930-31. As this money had to be matched by State appropriations and most of the State legislatures were not in session in 1930, Congress authorized \$80,000,000 for advances to the several States, against their Federal-aid allotments, to be repaid by 1936. Of the \$724,000,000 of funds announced by President Hoover on Dec. 23, 1930, as having been provided for public works, \$220,000,000 was allocated to highway construction, including the regular Federal-aid appropriation, enlarged to \$125,000,000, the \$80,000,000 advance to the States and special allowances for use in drought-afflicted States. More than 90 per cent of the \$220,000,000 was to be specifically allotted to the several States, most of it for the construction of the Federal-aid highway system.

It should be understood that the actual road construction by Federal aid, matched dollar for dollar by State funds, is done by the several States, but the location, design and construction of the roads, and of the bridges included, is subject to the approval of the Secretary of Agriculture, represented by the Bureau of Public Roads. The authorized permissible length of the Federal-aid system totals 206,000 miles, including extensions authorized by Congress in 1928. This is 7 per cent of the road mileage certified by the several States, plus recent increased allowances equal to the mileages of the designated system in each State lying within national forests, Indian and other reservations—the Federal government now paying the entire cost of road improvements on public lands whereas formerly the States in which

those lands are located paid half the cost of improving such roads if they were a part of the Federal highway system.

Of the 206,000 miles of roads just mentioned 86,218 had been improved with Federal aid on June 30, 1930, including some still under "stage construction." In the fiscal year 1929-30 7317 miles were finished and at the close of the year about 2200 were under stage construction or reconstruction. Reconstruction extended to only some 20 miles. It was the first reconstruction work since Federal aid began but it would increase yearly thereafter, because of the increasing age and mileage of the Federal-aid system.

There was a temporary decline in Federal-aid construction in 1929-30, because in the earlier years of the work the Federal appropriations were not matched by the States, so the money piled up, to become available later. When the lag was taken up less Federal aid was available than before, until the addition of \$50,000,000 a year, already mentioned.

Besides the Federal-aid roads, some of the States spent huge sums in highway improvement. Due in part to the drive for public works construction late in 1929 and on into 1930, road improvement for the first ten months of the year, in all the 48 States, totaled 38,217 miles, an increase of 5715 miles over the full year 1929, according to a report made to the Association of Highway Officials by its executive secretary. The 38,217 miles were thus divided: paved surface, 12,500; low-type surface, 15,763; graded and drained, 9951. Of a total of 3,024,223 miles of roads of all kinds, 662,435 had some kind of surfacing on November 1. Large State road-bond issues voted at the November elections were \$83,000,000 by New Jersey and \$75,000,000 by Louisiana.

The amount of road construction by counties and towns and of street paving in cities during the year was unknown, but it was certain that this work, combined with State highway work, makes up a large percentage of the total yearly bill for public works construction in the whole country. That only a beginning had been made appears from the figures given above, showing that for the 48 States only a fifth of the highways had been improved, while of that only a good start had been made towards so-called permanent surfacing. In the cities, too, including many of large to medium size, only a good start had been made towards satisfactory pavements. How best to finance road and street construction was a problem receiving much attention. In municipalities, first costs were met by assessments on abutting real estate and by bond issues, supplemented by taxation. The same was more or less true for counties. For State road construction the Association of State Highway Officials, at its November convention, adopted a revised code of principles, first as to road classification and second as to financing and general administration. A summary of this code is given in *Engineering News-Record*, Nov. 27, 1930, p. 852. In part the summary reads:

All public roads should be classified as: (1) primary roads, comprising the federal-aid and State systems; (2) secondary roads, comprising the principal county trunk or State-aid highways; and (3) third-class roads, comprising purely local or township roads.

State and federal funds for new construction should be devoted first to primary highways and should be expended by or under the supervision of the State highway department. Secondary highways should be financed by local general taxes and State aid. Third-class roads should be financed by local general taxes, but special assessments on adjoining land may be justified to defray a portion

of the cost. Improvement districts to raise funds by special assessment may properly be organized where special benefits result from extraordinary highway undertakings in congested districts; this practice should be limited to conditions that are not average or normal and does not apply to rural districts.

In financing state roads general principles may be set down as follows: (1) States in the initial stage of highway development should issue bonds to defer that portion of the annual charge for construction which would overburden either property or the road user; (2) States where the original construction programs are well under way can in the main finance new construction from current funds, utilizing bond issues to defer the costs of special projects; (3) States where original construction is largely completed are concerned chiefly with maintenance and reconstruction and should depend on current funds except in cases of emergency. State bonds should be serial, maturing over 30 years, and bonds for political subdivisions of the state should mature over 20 years and also be serial. Maturities should be scheduled so that annual payments will be as nearly uniform as practicable.

Sound financing requires that the retirement of State bonds, as well as the interest on them, be provided for by motor-vehicle license fees and gasoline taxes, but these payments should be guaranteed by the full taxing power of the State as a provision against failure of these levies and to secure a lower rate of interest.

A fixed charge should be made for each class and weight of motor vehicle, in the form of a license fee in lieu of all personal property taxes or in the form of a combination license fee and personal property tax. The total rate of such a tax, however, as well as the gasoline tax (which is not to be in lieu of a license or property tax) should be as uniform in the several States as practicable, consistent with State constitutions, road-bond obligations or road needs. The State should be the sole agency levying special taxes on the motor vehicle or the highway user.

All motor-vehicle funds including personal property taxes should be used for highway purposes.

Toll bridges should be built only when it is impossible to finance them by any other method. If toll bridges are constructed the construction should be financed by the State or political subdivision and the bridge made free as soon as the financial obligations of interest and original investment are met.

See AGRICULTURE, UNITED STATES DEPARTMENT OF; AUTOMOBILES; for highways of other countries see articles on each under *Communications*.

ROBERTSON, JAMES WILSON. A Canadian agriculturist and educator, died in Ottawa, Ont., Mar. 20, 1930. Born in Dunlop, Ayrshire, Scotland, Nov. 2, 1857, he was educated in Scotland before going with his parents in 1875 to Canada, where he engaged with his father in farming and the management of cheese factories. He was professor of dairying at Ontario Agricultural College in Guelph from 1886 to 1890, a part of which time (1888-90) he was also non-resident lecturer on dairy husbandry at Cornell University in Ithaca, N. Y. During 1890-95 he was dairy commissioner for the Dominion of Canada and agriculturist to the Central Experimental Farm in Ottawa and, from 1895 to 1904, he was commissioner of agriculture and dairying for the Dominion. In 1902 he was appointed one of the governors of the Victorian Order of Nurses in Canada, having previously (1897) served as honorary secretary of a committee for founding the order. He was principal of the Macdonald College at Saint Anne de Bellevue in Quebec from 1905 to 1910, becoming in the latter year chairman of the Royal Commission on Industrial Training and Technical Education. He became chief commissioner of the Boy Scouts of Canada in 1919 and chairman of the executive committee of the Canadian Red Cross Society in 1920. He was a frequent lecturer on educational and agricultural subjects and was the author of *Conservation of Life in Rural Districts* (1911).

ROBERTSON, THORBURN BRAILSFORD. A British biochemist, died Jan. 25, 1930. He was born in Edinburgh in 1884 and was educated at the University of Adelaide, South Australia. In 1904

he went to the United States as a research student in the University of California, where, in 1905-07, he became assistant in physiology and in 1916 professor of biochemistry and pharmacology. After a year (1918-19) at the University of Toronto as professor of biochemistry, Professor Robertson returned to the University of Adelaide to become professor of biochemistry and general physiology. After he was appointed chief officer in charge of investigations on the nutrition of animals for the Commonwealth Council for Scientific and Industrial Research, he gave up his teaching but continued as a member of the senate at the University of Adelaide. He was one of the founders of the *Australian Journal of Experimental Biology and Medical Science* and, in addition to numerous papers in scientific journals, he wrote *The Universe and the Mayonnaise, and Other Stories for Children* (1914); *The Physical Chemistry of the Proteins* (1918); *Principles of Biochemistry* (1920, 2d ed., 1924); *The Chemical Basis of Growth and Senescence* (1923).

ROCHESTER, UNIVERSITY OF. A nonsectarian institution of higher education for men and women in Rochester, N. Y., founded in 1850. It consists of three schools—the college of arts and sciences, composed of a college for men and a college for women; the Eastman School of Music; and the school of medicine and dentistry. A school of nursing is also maintained in conjunction with the Strong Memorial Hospital, the property of the university. The new River Campus of the college for men, completed and occupied for the first time in September, 1930, was formally dedicated on October 10-12. It comprises 11 colonial buildings, in addition to five fraternity houses already constructed, on a campus of 87 acres on the banks of the Genesee River in the outskirts of the city. The old campus of 24 acres was rededicated to the exclusive use of the college for women, with buildings remodeled and renovated.

The enrollment for the autumn session of 1930, exclusive of extension division and special music students, totaled 1678, distributed as follows: Arts and science, 1125, of whom 654 were men and 471 were women; bachelor of music course, 395; medicine and dentistry, 158. For the summer session, 927 were enrolled in the arts college and 382, in the music school. There were 1546 in the extension division. The faculty had 377 members, distributed as follows: College of arts and science, 135; school of music, 74; and school of medicine and dentistry, 168, of whom 84 were on full time. The productive funds as of June 30, 1930, amounted to \$29,082,941, and the total resources, including land, buildings, equipment, and endowment, were approximately \$50,000,000. The main library contained 136,405 volumes; the Sibley musical library, 31,702 volumes; and the school of medicine library, 23,159 volumes. President, Rush Rhees, DD., LL.D.

ROCHESTER MEMORIAL ART GALLERY. See ART MUSEUMS.

ROCKEFELLER FOUNDATION, THE. An institution chartered in 1913 "to promote the well-being of mankind throughout the world," and in 1929 merged with the Laura Spellman Rockefeller Memorial, forming a new organization which received from the two consolidating corporations all their assets and assumed all their obligations. Its plan of work provided for cooperation toward the advancement of knowledge in the fields of public health, the medical sciences, the natural sciences, the social sciences,

and the humanities. During the year 1930 approximately \$16,500,000 was expended by the foundation for work in the five fields in which its interests lie.

INTERNATIONAL HEALTH DIVISION. The governments of 39 States of the United States and 43 foreign countries were assisted in projects for improving public health conditions. This aid included participation in studies of yellow fever, malaria, hookworm disease, tuberculosis and respiratory diseases; in campaigns for the reduction of yellow fever in Brazil; in demonstrations of malaria and hookworm disease control and of local health work; and in the development of essential services of State and National health departments. Assistance also was given toward the advancement of the work of the health organization of the League of Nations, and special provision was made for epidemiological investigations in several States of the United States.

THE MEDICAL SCIENCES. Grants for the advancement of medical education were made in the form of endowments or contributions toward construction programmes or development of departments, or toward maintenance of a number of institutions, including the following: Albany Medical College, Albany, N. Y.; University of Rochester, Rochester, N. Y.; University of Montreal, Canada; University of Lyon, France; University of Paris, France; University of Breslau, Germany; University of Sydney, Australia; All-India School of Hygiene and Public Health, Calcutta, India; Graduate School of Hygiene and Public Health, University of the Philippines, Manila; National Central University College of Medicine, Woosung, China; Peiping Union Medical College, Peiping, China; Shanghai Union Medical College, China; Shantung Christian University, China; Chulalongkorn University, Bangkok, Siam.

A number of grants for fluid research funds or special research projects in medical schools were made to groups or departments engaged in research important to the advancement of medical knowledge. Among the institutions receiving such aid were the following: Stanford University, California (fluid research fund, research in diseases of the kidneys); University of California (chemical aspects of vitamins and hormones); Yale University (fluid research fund, dental pathology); the Johns Hopkins University (study of obstetrical records); Harvard University (physiology and physical chemistry); Cornell University (rôle of internal secretion glands in relation to growth and inheritance); Columbia University (medical mycology, studies on nutrition in Porto Rico); Trudeau Foundation (tuberculosis); University of Rochester (fluid research fund, diathermy studies); University of Pennsylvania (living tissue study); University of Toronto (pediatrics); McGill University (surgery); Tuberculosis Study Clinic, Jamaica. B. W. I. The Rockefeller Foundation also granted and itself administered approximately 100 fellowships in medicine for graduate students to enable them to study in countries other than their own. In addition, funds were given to the National Research Council (Washington), the Medical Research Council of Great Britain, the *Notgemeinschaft der Deutschen Wissenschaft*, and the Hungarian Scholarship Council for the support of fellows in medicine, of their own selection.

In addition to assistance to institutions of nursing education the foundation made grants

during the year toward studies of hospital service and the training of executives for such service; toward the work of the Committee on the Cost of Medical Care; to the United Hospital Fund Committee on Dispensary Development for transferring its activities to permanent agencies; to the National Medical Association of China for the development of plans for merging the different medical associations of China; and to the China Medical Board, Inc.

THE NATURAL SCIENCES. In the field of the natural sciences contributions toward endowments, building programmes, apparatus and equipment, maintenance, general development, etc., were made to the following universities and scientific institutions: Hopkins Marine Station, Stanford University, Calif.; Scripps Institution of Oceanography, University of California; California Institute of Technology, Pasadena; Field Museum of Natural History, Chicago; Woods Hole Oceanographic Institution, Mass.; Harvard University, Cambridge; University of Minnesota; University of Washington, Seattle; Alaska Agricultural College and School of Mines, Fairbanks; Bermuda Biological Station for Research; University of Vienna, Austria; Research Institute of Experimental Biology, Carlsberg Foundation, Copenhagen, Denmark; Henry Herbert Wills Physics Laboratory, University of Bristol, England; Davy-Faraday Research Laboratory, Royal Institution of Great Britain, London; Marine Biological Stations, Roscoff and Banyuls-sur-Mer, France; University of Munich, Germany; Kaiser Wilhelm Institutes for Cell Physiology and Physics, Berlin-Dahlem, Germany; Observatory at Johannesburg, Union of South Africa; Fukien Christian University, Foochow, China; Tsing Hua University, Peiping, China; Yenching University, Peiping, China; Keio Gijuku University, Tokyo, Japan; Tohoku Imperial University, Tokyo, Japan; Chulalongkorn University, Bangkok, Siam; Bishop Museum, Hawaii.

In addition, contributions toward the advancement of knowledge in the field of the natural sciences were made through specific appropriations for research to the following institutions and organizations: Smithsonian Institution, Washington, D. C. (experiments in radiation); University of Chicago (research in biological sciences, experiments in light velocity); the Johns Hopkins University (biological research, chemical research); Harvard University (astronomy); Washington University, St. Louis, Mo. (fluid research fund); Princeton University (geology); University of North Carolina (natural sciences); National Research Council (research aid fund); National Research Fund of the National Academy of Sciences; II Physikalisches Institut, University of Vienna, Austria (atomic disintegration); University of Freiburg, Breisgau, Germany (physical chemistry); Kaiser Wilhelm Institute of Physical Chemistry and Electrical Chemistry, Berlin-Dahlem (colloid chemistry); Royal Hungarian Joseph Technical University of Budapest, Hungary (chemistry of carbohydrates); Bishop Museum, Hawaii (Polynesian anthropology); Australian National Research Council (anthropological studies); human paleontological research carried on by investigators in Asia.

THE SOCIAL SCIENCES. Research programmes were aided in the following institutions or organizations: University of California (public ad-

ministration); President Hoover's Conference on Unemployment, and Research Committee on Social Trends; Association for the Study of Negro Life and History, Washington, D. C.; Harvard University (industrial hazards, international law, crime and criminal justice in Boston, economic research); Columbia University, New York (Council for Research in the Social Sciences, compensation for automobile accidents); Economic Foundation, New York City; National Bureau of Economic Research, New York City; Social Science Research Council, New York City; Fisk University, Nashville, Tenn. (social sciences); University of Toronto (child study and parent education); McGill University, Canada (fluid research fund); Austrian Institute for Trade Cycle Research, Vienna (cyclical fluctuations); National Institute of Industrial Psychology, London (general research programme); Notgemeinschaft der Deutschen Wissenschaft (anthropological study of the German people); Institute of Pacific Relations (international programme of research in the social sciences); University of Hawaii (sociological research).

Contributions were also made toward endowments, buildings, apparatus and equipment, maintenance, etc., in the following universities, institutions or organizations: Institute of Human Relations, Yale University; Committee on Cost of Medical Care, Washington, D. C.; National Catholic School of Social Service, Washington, D. C.; American University, Washington, D. C.; Commission on Interracial Cooperation, Atlanta, Ga.; Department of Anthropology, University of Chicago; Graduate School of City Planning, Harvard University; Laboratory of Anthropology, Santa Fe, N. M.; School of Citizenship and Public Affairs, Syracuse University, New York; American Law Institute, New York City; Cities Census Committee, New York City; National Institute of Public Administration, New York City; University of Virginia, Charlottesville, Va.; Canadian National Committee for Mental Hygiene, Toronto, Canada; Institute of Economics and History, Copenhagen, Denmark; Institute for Comparative Research in Human Culture, Oslo, Norway, general budget; Post-graduate Institute of International Studies, Geneva.

THE HUMANITIES. In this field the foundation made grants to the following universities and institutions: University of Chicago (studies in comparative philology); the Johns Hopkins University (fluid research fund); University of North Carolina (toward financing the University Press); British Museum, London (toward expenses of a new edition of its catalogue); American Library in Paris (general budget); Bibliothèque Nationale, Paris (purchase of journals and for expenses incurred in printing its general catalogue); American School of Classical Studies, Athens (fellowships in archaeology for workers excavating the Athenian Agora); American Schools of Oriental Research, Jerusalem and Bagdad (endowment and current expenses). During the year library commissions from the Universities of Oxford and Cambridge, Eng., visited libraries in the United States and Canada as guests of the foundation. Grants in aid of research were also made to the American Council of Learned Societies and to a number of individuals engaged in humanistic studies.

Headquarters of the Rockefeller Foundation are at 61 Broadway, New York City. The presi-

dent of the organization in 1930 was Max Mason, Ph.D., who assumed office on Jan. 1, 1930.

ROGERS, ROBERT WILLIAM. An American Orientalist, died in Chadds Ford, Pa., Dec. 12, 1930. He was born in Philadelphia, Pa., Feb. 14, 1864, and attended the Universities of Pennsylvania, Johns Hopkins, Haverford, and Leipzig. After serving as professor of English Bible and Semitic history at Dickinson College during 1890-92, he was appointed to the chair of Hebrew and Old Testament exegesis at Drew Theological Seminary, which he continued to hold until his retirement in 1929. His publications include: *Outlines of the History of Early Babylonia* (1895); *A History of Babylonia and Assyria* (2 vols., 1900; 8th ed., rev., 1915); *The Religion of Babylonia and Assyria* (1908); *Cuneiform Parallels to the Old Testament* (1912); *The Recovery of the Ancient Orient* (1912); *History and Literature of the Hebrew People* (1917); and *History of Ancient Persia* (1929).

ROLLINS COLLEGE. A nonsectarian, co-educational institution of higher learning in Winter Park, Fla., founded 1885. The enrollment for the fall term of 1930-31 totaled 425, of whom 59 were seniors, 70 juniors, 98 sophomores, 175 freshmen, 2 graduate students, 5 specials and 16 unclassified. The full-time faculty members numbered 48 and the complete staff of special lecturers and part-time faculty members brought this total to approximately 70. The productive endowment funds of the college amounted to approximately \$1,250,000, yielding an income of about \$67,500 per annum. The income from other sources amounts to about \$150,000 annually in addition. The library contained 32,450 volumes. During 1930 three new dormitory units were completed, in a Spanish-Mediterranean type of architecture especially suitable for this locality. Also during the year gifts aggregating approximately \$900,000 for endowment purposes were received. Some of the special features at Rollins are the "Winter School," the Institute of Statesmanship, and the religious conference held under the auspices of the Federal Council of the Churches of Christ in America. President, Hamilton Holt, LL.D., Litt.D., L.H.D.

ROLSHOVEN, JULIUS. An American painter and teacher, died in New York City Dec. 7, 1930. Born in Detroit, Mich., in 1858, he studied with Hugo Crola at the Düsseldorf Academy, with Löfftz in Munich, and with Fleury and Bouguereau in Paris. He founded the Rolshoven life class in Paris in 1890 and a similar class in London in 1896. "The Chioggia Fishing Girl" and two of his etchings are in the Cincinnati Museum, and "The Refectory of San Damiano, Assisi" is on exhibition in the Detroit Institute. He also is represented in the Minneapolis, Brooklyn, and Santa Fé (N. M.) Museums.

ROMAN CATHOLIC CHURCH. Four important Encyclicals were sent out to the world by Pope Pius XI, during 1930. The first urged the promotion and wider use of the Spiritual Exercises; the second, a review of the principal events of the Jubilee year, which was extended to June; the third, on the Christian education of youth (January 11) and the respective parts the State and the Church must take in it; and the fourth (April 22), commem-

orating the fifteenth centenary of the death of St. Augustine. A letter (February 8) to Cardinal Pompili suggested world-wide reparation services for "the horrible and sacrilegious wickedness perpetrated in Russia against God and souls." On May 4 in approving the decree for the canonization of Cardinal Bellarmine, the Pope delivered a glowing eulogy of the Jesuits and their work. Cardinal Robert Bellarmine, S.J., and the eight Jesuit North American martyrs, Isaac Jogues, René Goupil, John Lalonde, John de Brébeuf, Gabriel Lalemant, Anthony Daniel, Charles Garnier, and Noel Chabanel, were canonized June 29; Catherina Thoma, a Spanish canoness, and Lucia Filippini, Italian foundress of a teaching congregation of Sisters, were canonized June 22. Cardinal Rouleau of Quebec and a number of American and Canadian bishops and Jesuits attended the canonization ceremony of the North American martyrs. Theophilus da Corte of the Franciscan Order was also canonized.

On June 30 five new cardinals were created at a consistory and in an allocution the Pope reviewed the affairs of the Church in the world, stressing "events which caused sorrow and anxiety," especially the trouble in Malta (q.v.) with the British government over church administration, and proselytizing in Rome. In his Christmas address to the cardinals (December 24) he deplored the "universal financial and economic uneasiness" and made an earnest plea for "a better social and international arrangement inspired by greater justice and Christian charity." He wished peace to all the world, the peace "of Christ, not a sentimental, confused and indiscreet pacifism," and announced a coming encyclical on "Christian marriage, its conditions, needs and the present-day evils affecting the family and society."

In 1930 the dioceses of the world numbered 1251, an increase of five; the Vicariates Apostolic were 261, an increase of six. The Holy See had diplomatic representatives accredited to 35 nations. Twelve countries had ambassadors and 24 ministers plenipotentiary at the Vatican. During the Jubilee year there were 543 pilgrimages to Rome with 126,992 members. Of these 21 were from North America with 3175 members.

THE CARDINALS. Of the five new cardinals created June 30, three were prelates attached to the Roman Curia and two holding residential sees. They were the Most Rev. Francesco Marchetti-Selvaggiani, Titular Archbishop of Seleucia, Secretary of the Sacred Congregation of the Propagation of the Faith; the Most Rev. Raffaello Carlo Rossi, Titular Archbishop of Thessalonica, Assessor of the Consistorial Congregation; the Rt. Rev. Giulio Serafini, Titular Bishop of Lampsacus, Secretary of the Sacred Congregation of the Council; the Most Rev. Leme da Silveira Cintra, Archbishop of Rio de Janeiro, Brazil, and the Rt. Rev. Achille Liénart, Bishop of Lille, France. Eight cardinals died during the year, reducing the membership of the Sacred College to 29 Italians and 30 non-Italians. The deceased cardinals were: Carlo Perosi (February 22); Merry del Val (February 26); Calvalcanti (April 18); Luçon (May 28); Vanutelli (July 9); Casanova y Marzo (October 23); Charost (November 7); Mistrangelo (November 7). Cardinal Pacelli succeeded Cardinal Gasparri as Secretary of State February 10.

THE HIERARCHY. Bishops Sebastian G. Messmer of Milwaukee, Wis., died August 4, and Austin Dowling of St. Paul, Minn., November 29.

Rt. Rev. Ferdinand Brossart, retired Bishop of Covington, Ky., died August 6, and the Rt. Rev. Aurelius Stehle, O.S.D., Archabbot of St. Vincent's, Latrobe, Pa., died February 13.

Bishop Samuel A. Stritch of Toledo was appointed Archbishop of Milwaukee, November 12. Bishop Francis J. L. Beckman of Lincoln, Neb., was appointed Archbishop of Dubuque, January 23; Mgr. J. H. Schlarmann of Belleville, Ill., Bishop of Peoria, April 19; the Rev. Louis B. Kucera of Protovin, Iowa, Bishop of Lincoln, Neb., June 24; the Rev. Dr. Edwin V. O'Hara, Director of the Rural Life Bureau, N.C.W.C., Bishop of Great Falls, Montana, August 5, succeeding Bishop Mathias C. Lenihan, resigned and named titular Archbishop of Preslav. Mgr. James Cassidy, V.G., of Fall River, Mass., was named auxiliary of that see March 26; Rev. Thomas J. Emmet, S.J., Vicar Apostolic of Jamaica, B.W.I., July 10, succeeding Bishop J. N. Dinand, resigned; the Rev. Joseph Espelage, O.F.M., of Cincinnati, Ohio, Vicar Apostolic of Wuchang, China, and Rev. Thomas Wade, S.M., of Providence, R. I., Vicar Apostolic, of the Solomon Islands, and the Rev. John J. Norris, S.M., Apostolic Prefect in Korea April 13. The Rev. Francis Liou, the eleventh native Chinese priest so honored, was named Bishop and Vicar Apostolic of Fenyang July 14. The Internunciature at Haiti was raised to the rank of Nunciature and a new Nunciature was created for Santo Domingo. Archbishop Fietta, Internuncio to Central America, was made Nuncio to the two West Indies republics.

The annual meeting of the hierarchy at Washington, November 11-13, was attended by three cardinals, eight archbishops and 53 bishops. The administrative committee in formal resolutions urged coöperation with the National Administration for the betterment of economic conditions and called attention to and urged application in every field of business and civic life of the Christian principles of justice and charity particularly as set forth in the Encyclical *Rerum Novarum* of Leo XIII and the bishops' reconstruction programme and joint pastoral letter of the bishops of the United States of 1919. The committee stated that every bishop in the United States through agencies at his command, particularly charity and aid organizations, was doing his utmost to relieve the condition of the unemployed.

STATISTICS. The Catholic population of the United States, Alaska, and Hawaii, according to the *Official Directory* for 1930, was 20,203,702, an increase of 90,944 over the previous year. The administration of the Church was devolved on 16 archbishops (four of them cardinals); 102 bishops; and 26,925 priests (of these 9052 were members of the regular orders), an increase of 151 and 421 respectively. There were 18,166 churches, increase 230; 135 seminaries, with 16,300 students, increase 1614; 219 men's colleges; 743 women's schools. Parish schools numbered 7225 with pupils 2,248,571; orphan asylums 329 with inmates 51,523; hospitals 624; homes for aged 142.

Vatican statistics estimated that there were 341,430,900 Catholics in the world, divided up geographically: America, 109,097,000; Europe, 208,882,000; Asia, 16,536,900; Africa, 5,330,000; Australia, 1,585,000. In England and Wales there were 2,206,255, an increase of 31,571 for the year. There were 22,740 in the British army. The Institute of Social and Religious Research in its

survey found that three out of every 10 adult church members in the United States were Catholics. There were 211,437 Negro Catholics, and 3049 were made converts during the year.

Representatives of the 40 Provinces, into which the Jesuit order all over the world, with its 21,678 members, is divided, were received by the Pope at the Vatican on September 30. They were attending a convention in Rome on business of their order. There are seven of these Provinces in the United States: New York—Maryland, New England, Chicago, St. Louis, New Orleans, and two on the Pacific coast, San Francisco, which takes in California, Nevada, Utah, Arizona, of the old Province, and a new one (established December, 1930) to include Oregon, Montana, Washington and Idaho. There were 719 Jesuits on the Pacific coast. They served nine Indian missions in the northwest and 17 mission stations in Alaska and had nine missionaries in China. Ten per cent, or 2590 of the whole order, were laboring on foreign missions.

The official figures of the Sacred Tribunal of the Rota showed that during 1929 the matrimonial cases dealt with numbered 58. In only 20 of these was a decree of nullity returned. In 28 of the cases the parties were poor and paid no fees; and of the 30 who paid, only eight secured nullity decrees, the remaining 22 marriages being declared valid. In the cases of the poor parties 12 marriages were declared null and the others valid.

EDUCATION. Reports prepared by the Executive Secretary of the Department of Education of the National Catholic Welfare Conference showed that there were in the United States 89 Catholic colleges for women and 73 for men. In this number were included 14 universities with undergraduate schools. The enrollment of collegiate grade was 86,306 with 6333 instructors. Of the latter 47 per cent were members of religious teaching communities. The total valuation available of 124 of these institutions was \$240,939,095. A total of 2,640,000 students began the scholastic year 1930-31 in 10,481 Catholic institutions. They were divided into 2,283,000 pupils in 7811 elementary schools; 228,000 students in 2235 high schools; 102,000 students in 171 colleges; 9000 students in 77 normal schools; and 18,000 students in 187 seminaries.

A biennial survey 1926-28 gave a total of 2,201,942 pupils attending 7664 elementary schools, an increase of 90,382 pupils and 215 schools. The teachers employed increased from 55,155 to 59,013. The attendance was divided into 646,535 boys and 676,465 girls.

CONGRESSES AND CONVENTIONS. The Thirtieth International Eucharistic Congress was held at Carthage, Africa, May 7-10 with Cardinal Lepicier officiating as the Pope's Legate. More than 20,000 pilgrims from all over the world, including deputations from the United States, with 8 cardinals, 100 bishops, and several thousand priests, attended and revived the glories of this ancient city of the Church and home of the early Christian martyrs. At Omaha, Neb., the sixth National Eucharistic Congress, under the auspices of the Priests' Eucharistic League of the United States, was held September 23-25. The Pope sent a special letter which was read by the Apostolic Delegate, Mgr. Biondi, and four archbishops, 40 bishops, and several thousand priests, with 20,000 laymen, participated. President Hoover sent a cordial greeting. The general

theme of the discourses of the Congress was "The Blessed Eucharist, by Divine Institution, the Source and Centre of Christian Life." An International Eucharistic Congress, directed by the Pope, was to be held in 1932, at Dublin, Ireland.

Other notable assemblages were the Fourth National Convention of the Catholic Alumni Federation at Washington, April 25-27; the Diamond Jubilee National Convention of the Central Verein at Baltimore, August 17-20; the Catholic Students' Spiritual Leadership Convention at Chicago, June 20-22; the Forty-eighth Convention of the Supreme Council of the Knights of Columbus (q.v.) at Boston, August 19-21; the Tenth Annual Convention of the National Council of Catholic Men at Kansas City, Mo., October 19-21; the National Conference Catholic Charities at Washington, September 28-October 2. The International Union of the Catholic Women's League, representing 63 national organizations, met in Rome, May 20 and advocated a modesty in dress code; the International Catholic Press Congress held its sessions at Brussels with 244 delegates representing 28 countries September 2-5.

MISSIONS. The official returns to the Congregation for the Propagation of the Faith showed that in June, 1927, the missionaries distributed in 374 ecclesiastical divisions, in 81 countries, and hailing from 51 different nations totaled 46,174 persons; or, 12,952 priests, 5110 Brothers, 28,112 Sisters. There were 281 bishops in mission lands and a total Catholic population of 13,345,373. The churches and chapels numbered 45,826 and the schools 31,418 with 1,521,710 pupils; hospitals, 691; orphanages, 1525; homes for aged, 299; leper asylums, 81; other institutions, 134. In Europe, particularly in Scandinavia and in the south-eastern areas of the continent, the congregation cares for 1,041,399; in India and Burma 2,172,340; in Indo-China 1,237,339; in China 2,373,677; in the Japanese Empire 206,754; in Malasia and Oceania 596,534; in Africa 3,202,993, while in the missionary regions of the Americas 2,280,541.

The Society for the Propagation of the Faith, in the United States, sent to Rome, during 1929, for mission support, \$1,382,263, the largest contribution from any nation. The Catholic Church Extension Society received during the year \$1,500,971 for home mission purposes.

In China, despite war conditions, there has been an increase of 47,637 Catholics for the period July 1928-29. Foreign priests in China numbered 2011 and the native clergy 1371. Of the 96 mission territories, 13 were in charge of native priests. See also MEXICO and MALTA under *History*.

BIBLIOGRAPHY. In the books of the year were included: William Thomas Walsh, *Isabella of Spain*; Myles V. Ronan, *The Reformation in Ireland*; Most Rev. A. Goodier, *The Public Life of Our Lord*; M. C. Darcy, S.J., *Thomas Aquinas*; Hartmann Grisar, S.J., *Martin Luther*; Francis X. Talbot, S.J., *Richard Henry Tierney*; Hilaire Belloc, *Wolsey*; Selden P. ROSS, BENNETT BATTLE. An American chemist and educator, died in Miami, Fla., Apr. 4, 1930. He was born in Tuskegee, Ala., Dec. 25, 1854, and was graduated from the Alabama Polytechnic Institute in 1881. From 1884 to 1887 he was an assistant chemist at this institution, receiving the degree of M.Sc. in 1886. In 1887 he was called to Louisiana State University as professor of chemistry, where he remained until 1893 when he returned to Alabama Polytechnic Institute as professor in the chemistry department. From 1908 to 1921 he was dean of the college of agricultural sciences at this institute, and from 1921 until the time of his death, dean of the department of science. He was also acting president during the greater part of 1919-20 and had served as State chemist of Alabama since 1893. During 1895-96 he was president of the Association of Official Agricultural Chemists of the United States and during 1926-27, president of the Association of Feed Control Officials of the United States. He was also chairman of the Alabama section of the American Chemical Society, 1913-15, and was a member of the council, 1915-16, 1919-22, and 1925-30. He was the author of several bulletins and papers on the chemistry of sugars, fertilizers, and so forth, and was co-author of *Chemistry in Agriculture* (1926).

ROTARY CLUBS. Organizations established for the purpose of developing the highest ideal of unselfish service; of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and nations in which they live; and of advancing international peace and goodwill through a fellowship of business and professional men of all nations united in the ideal of service. Membership in the clubs is limited to one representative of each business, profession, or institution in a community.

The 1930 convention of Rotary International was held June 23-27 in Chicago, the home of the first Rotary club, in honor of the organization's twenty-fifth anniversary. There were 11,019 Rotarians and members of their families present, representing Rotary clubs in 51 countries. The convention adopted a resolution accepting, on behalf of the Rotary clubs in the United States, the opportunity for service offered in the Government's campaign to eliminate illiteracy. The 1931 convention was to be held in Vienna, Austria, June 22-26.

On Nov. 15, 1930, Rotary International consisted of 3387 clubs, with an approximate member-

ship of 155,000. There were 2422 clubs in the United States, 106 in Canada, 340 in Great Britain and Ireland, and 519 in other parts of the world. Officers for 1930-31 were: President, Almon E. Roth, Palo Alto, Calif.; first vice-president, William deCock Buning, The Hague, the Netherlands; second vice-president, Smith L. P. Free, Masterton, New Zealand; third vice-president, Clinton P. Anderson, Albuquerque, N. M.; secretary, Chesley R. Perry, Chicago; treasurer, Rufus F. Chapin, Chicago. Headquarters of Rotary International are at 211 West Wacker Drive, Chicago, with a branch office at 74 Bahnhofstrasse, Zurich, Switzerland.

ROUSSEAU, KEAR ADMIRAL HARRY HARWOOD, U. S. N. An American naval officer, died at sea July 24, 1930. He was born in Troy, N. Y., Apr. 19, 1870, and was graduated from the Rensselaer Polytechnic Institute in 1891. After serving as draftsman and engineer for private companies in New York and Pittsburgh, he was appointed a civil engineer in the U. S. Navy, with the rank of lieutenant, in 1898. He was assigned as an engineer to the Bureau of Yards and Docks of the U. S. Navy Department in Washington in 1899, and in 1903 became engineer of public improvements at the Mare Island Navy Yard, Calif. He was appointed chief of the Bureau of Yards and Docks in 1907, and in the same year became a member of the Isthmian Canal Commission. He was engineer in charge of the design and construction of the canal terminals, including dry docks, ship-repair shops, piers, coaling and fuel-oil plants, breakwaters, and floating cranes, during 1914-16, and for this service was promoted, through special act of Congress, to the rank of rear admiral in the Civil Engineers Corps. During 1917-19 he was manager of the shipyard-plants division of the Emergency Fleet Corporation, and during 1918-20, vice-chairman of the Port Facilities Commission of the U. S. Shipping Board. He had been a member of the Commission on Navy Yards since 1916, director of the Naval Petroleum Reserves since 1927, and chief coordinator of the Federal Coordinating Agencies since 1928. At the time of his death he was on the way to the Canal Zone to inspect the Panama Railroad, of which he was director.

ROWING. The Eastern colleges definitely demonstrated their rowing supremacy over crews from the Far West at the intercollegiate regatta at Poughkeepsie, N. Y., June 26, 1930, when the Cornell varsity crew won in 21 minutes, 42 seconds for the first time since 1915. Syracuse followed three lengths behind, with Massachusetts Institute of Technology, California, Columbia, University of Washington, Pennsylvania, and Wisconsin trailing in the order named. The Navy shell was swamped and did not finish the race. The junior varsity race was also won by Cornell and the freshman race by Syracuse, with Cornell second.

Yale won the annual race at New London from Harvard, 20 minutes, 9½ seconds, the Carnegie Cup in a three-cornered race with Cornell and Princeton, and the Blackwell Cup against Columbia and Pennsylvania. Columbia won the Childs Cup for the third year in succession. The Harvard junior and freshmen crews won from Yale at the New London regatta. Princeton excelled among the American college lightweight crews,

but was defeated in the British Henley in July, as was the Kent School crew. At the American Henley on the Schuylkill, the Penn A. C. established a new record for the course of 6:22½. Penn A. C. later entered a regatta in Belgium, but was defeated. In England, the Oxford-Cambridge race was won by Cambridge. London Rowing Club won the Grand Challenge Cup at the Henley Regatta, Brasenose College (Oxford) captured the Visitors' Challenge Cup, and J. S. Guest, of Toronto, Canada, the Diamond Sculls.

Other title holders of 1930 were: World's professional, Ted Phelps, of England; American national senior singles, William G. Miller, Philadelphia; national senior quarter-mile, Algernon Fitzpatrick, Philadelphia; national senior doubles, E. J. McGreal and W. E. Garrett Gilmore, Philadelphia; national senior quadruple sculls, Bachelors Boat Club, Philadelphia; national senior eight-oared, Springfield (Mass.) Rowing Association.

RUBBER. Few industries suffered more from the world-wide depression during 1930 than rubber, and the market price of plantation ribbed smoked sheets was the lowest known in history, while other grades suffered proportionately.

IMPORTATIONS OF CRUDE RUBBER INTO THE UNITED STATES BY MONTHS FOR YEAR ENDED DEC. 31, 1930

[Estimated net weights—long tons. Compiled by the Rubber Manufacturers Association, Inc.]

| Month | Plantations | Paras | Africans | Centrals | Guayule | 1930 | Total all grades 1929 | 1928 |
|-----------------|-------------|-------|----------|----------|---------|---------|--------------------------|---------|
| January | 46,404 | 747 | 76 | 10 | 125 | 47,362 | 52,305 | 46,243 |
| February | 42,785 | 788 | 66 | 14 | 75 | 43,728 | 64,538 | 29,445 |
| March | 44,334 | 894 | 37 | 15 | 150 | 45,430 | 53,824 | 40,894 |

| November | 31,367 | 378 | 16 | 4 | ... | 31,765 | 40,621 | 34,720 |
| December | 34,302 | 593 | ... | ... | ... | 34,895 | 43,542 | 46,840 |
| Total * | 479,625 | 7,172 | 337 | 198 | 1,011 | 488,343 | 561,454 | 446,421 |

* 3,822 Tons liquid latex reduced to dry weight included in this total.

Plantation ribbed smoked sheets quoted at 15½ cents per pound in January, 1930, reached the high for the year of 16½ cents in February, declining to 7½ cents on October 1 and closing in December at 8½ cents, as compared with a high of 26½ cents and a low of 15½ cents for 1929. There was an ample supply of crude rubber and with a limited demand prices fell for the raw material and were considerably lower for finished products as well.

The world production of rubber in 1930 was estimated at about 800,000 tons or over 50,000 tons less than in 1929. The consumption in 1930

was estimated at 858,000 tons, due in part to the decline in the production of automobiles. See AUTOMOBILES. Stocks on hand at the beginning of 1930 were estimated for the United States at 105,138 tons and 73,319 tons for the United Kingdom. Both of these amounts increased until at the end of the year the United States had a stock of 202,246 tons on hand and in transit overland, and 56,035 tons afloat for the United States ports, making a total of 258,281 tons. In the United Kingdom the total stock at the end of the year was estimated at 116,000 tons, or an increase of 42,681 tons in the year.

Imports of crude rubber into the United States in 1930, according to the Bureau of Foreign and Domestic Commerce, totaled 1,089,829,613 pounds valued at \$140,641,134, as against 1,262,938,646 pounds valued at \$240,966,170 in 1929. In 1930 British Malaya, with exports to the United States valued at \$97,242,790, was the leading source of supply, followed by Ceylon, \$13,353,366; Netherland East Indies, \$26,316,480; and Brazil, \$2,044,774. The accompanying table indicates the various grades of rubber entering the United States. Most of these shipments are received at the Port of New York, the total for 1930 amounting to 418,662 long tons out of an aggregate of 479,625 tons.

The consumption of rubber in the United States

during 1930 was 372,029 tons, as compared with 466,475 tons in 1929, with a consumption in December of but 21,403 tons, which was the smallest figure since December, 1921, for American manufacturers. The American automobile industry in 1930 used 82 per cent of the rubber, so that a comparison of this industry with previous years is significant. The production of tires in 1930 was estimated at 53,000,000 casings. There were no important cuts in prices, as the rubber used had been acquired at far higher cost than the prevailing figures but substantial reductions were looked for during the year 1930.

PRODUCTION AND SHIPMENT OF CASINGS, TUBES, SOLID AND PNEUMATIC TIRES

[Statistics from 80 per cent of American manufacturers. Statistical Department, The Rubber Manufacturers Association]

| | 1930 | | 1929 | | 1928 | |

| Total inner tubes | 41,936,060 | 43,952,234 | 55,062,886 | 56,473,303 | 60,134,881 | 57,845,189 |
| Solids and cushions | 204,280 | 250,738 | 409,344 | 427,779 | 508,223 | 512,602 |

According to a preliminary tabulation of data collected in the U. S. Census of Manufactures taken in 1930, establishments in the United States engaged wholly or principally in the manufacture of rubber products consumed, in 1929, 441,343 long tons of crude rubber, costing \$200,451,421, and 198,379 long tons of reclaimed rubber, costing \$26,223,061. These figures represented increases in quantity of 21.2 per cent and 12.9 per cent, respectively, as compared with 364,057 long tons of crude rubber and 175,774 long tons of reclaimed rubber reported for 1927, the last preceding census year. Stocks of crude rubber on hand increased from 45,733 long tons at the close of 1927 to 48,644 long tons at the close of 1929, and stocks of reclaimed rubber decreased from 16,581 long tons to 13,378 long tons for the same period. The quantities and costs of other important materials consumed in the rubber industries in 1929 were as follows: Carbon black, 163,037,612 pounds, at a cost of \$12,676,825; zinc oxide, 129,847,125 pounds, \$8,886,432; sulphur, 59,301,917 pounds, \$1,293,165; tire fabrics, 270,444,035 pounds, \$122,267,337; hose and belting duck, 34,335,673 pounds, \$12,503,375; other cotton fabrics, 65,900,833 pounds, \$27,552,210; other fabrics, \$11,280,682.

According to the same Census of Manufactures, the total shipments or deliveries in 1929 of rubber goods other than tires, inner tubes, and boots and shoes by manufacturers in the United States were valued at \$320,374,129 (at f.o.b. factory prices), an increase of 2.1 per cent as compared with \$313,750,086 reported for 1927, the last preceding census year. The principal items in the 1929 output were as follows: Rubber heels and soles (including composition or fibre), 338,471,665 pairs, valued at \$26,676,065; rubberized fabrics, \$28,782,758; rubber belting, 45,347,145 pounds, \$26,391,406; rubber hose, 272,276,827 feet, \$37,678,779; rubber packing, washers, gaskets, liner strips, etc., \$10,377,989; hard-rubber goods, \$15,647,816; reclaimed rubber, 365,943,329 pounds, \$24,627,431; druggists' and medical sundries (except rubber gloves), \$10,683,406; rubber flooring, mats, and matting, \$12,602,637; tire sundries and repair materials, \$23,632,057.

In view of the fact that rubber products are indispensable for all civilized nations, the various countries of the world were enacting legislation to encourage local development of rubber manufactures and, as a result, the United States rubber manufacturing industry was meeting with constantly increasing competition, not only from such manufacturing nations as the United Kingdom, Canada, Germany and Japan, but in Argentina, Italy, Soviet Russia, and Australia. During 1930 the United States was able to maintain its market for tires in Germany, Hungary, Sweden, Austria, Denmark, and Czechoslovakia. Previous to 1930, the United States led in the exports of rubber footwear. In that year Japanese exporters became first in the world markets, while, as in other fields, European competitors were active and also British Malaya. Notwithstanding the superior quality of United States rubber footwear, as was true for other American rubber products, it suffered on a price basis in world markets with European and Oriental products.

In 1930 the exports of rubber goods from the United States were valued at \$62,423,293, or a decline of 23 per cent from the total of 1929, \$80,721,664, and 16 per cent decrease from 1928 when the value of exports was \$74,471,433. The dis-

tribution and value of United States exports of rubber goods for the years 1929 and 1930 are shown in the accompanying table.

| Item | 1929 | 1930 |
|-------------------------------|--------------|--------------|
| Automotive rubber goods . . . | \$43,092,441 | \$35,283,779 |
| Rubber footwear | 14,192,296 | 9,081,854 |
| Mechanical rubber goods . . . | 8,251,624 | 6,210,758 |
| Miscellaneous rubber goods . | 15,185,303 | 11,847,402 |
| Total | \$80,721,664 | \$62,423,293 |

RUBIO, ORTIZ. See MEXICO under *History*.

RUDOLPH, ROBERT LIVINGSTON. Presiding Bishop of the Reformed Episcopal Church and Bishop of the Synod of New York and Philadelphia, died in Dorset, Vt., Sept. 16, 1930. He was born in New York City, Dec. 29, 1865, and was graduated from New York University in 1892 and from the Reformed Episcopal Theological Seminary in 1896. He attended Princeton Theological Seminary during 1894-95 and the University of Erlangen in 1905. On ordination as a deacon in 1895 and as a presbyter the following year, he became assistant rector of the First Reformed Episcopal Church in New York City. In 1903 he was appointed professor of dogmatic theology and Christian ethics at the Reformed Episcopal Theological Seminary in Philadelphia, and in 1909 was consecrated Bishop of the Synod of New York and Philadelphia. In 1923 he was elected presiding bishop and president of the general council of the Reformed Episcopal Church. He also served as dean of the Reformed Episcopal Theological Seminary from 1925 until his death. The D.D. degree was conferred on him by New York University in 1906.

RUGGLES TRUST. See UNIVERSITIES AND COLLEGES.

RUINS. See ARCHÆOLOGY.

RUMANIA. A constitutional monarchy forming the largest and northernmost of the Balkan States; bounded on the south by the Danube River and Bulgaria; on the east by Russia and the Black Sea; on the north by Poland, Czechoslovakia, and Hungary and on the west by Yugoslavia. Capital, Bucharest; reigning sovereign in 1930, Carol II (see below under *History*).

AREA AND POPULATION. Before the World War Rumania had an area of 53,849 square miles and an estimated population of 7,904,104 (1915). New territories acquired by the peace treaties of 1919 increased the area to 122,282 square miles and the population to 17,393,140. The estimated population in December, 1928, was 17,903,000. The birth rate for 1928 was 35.9 per 1000 of population and the death rate, 20.2. The chief cities, with their estimated populations in 1927, are: Bucharest, 875,000; Chisinău (Kishinev), 175,000; Cernați (Czernowitz), 175,000; Galati, 130,000; Ploieti, 115,000; Timișoara, 110,000; Iași (Jassy), 100,000; and Cluj (Klausenburg), 100,000.

EDUCATION. Primary education is free and compulsory, except in districts where there are no schools. In 1927-28, there were 14,123 elementary schools, with 1,600,098 pupils; 924 secondary schools, with 185,780 pupils; and 15 higher educational institutions, with 30,892 pupils. The four universities, with the enrollment in 1928, were: Iași (Jassy), 3584; Cluj (Kolozsvar), 1980; Bucharest, 7532; Cernați (Czernowitz).

PRODUCTION. The economic wealth of Rumania is chiefly agricultural, with over three-fourths

of the population deriving a livelihood from the soil. The area devoted to cereals, the leading crops, was 38 per cent of the national territory in 1929. The total area under cultivation (1928) was 31,509,000 acres, or 43 per cent of the national territory. An additional 10,019,000 acres were permanent meadow and pasture; 1,516,000 acres were devoted to trees, shrubs, and bushes, and 17,851,000 acres to woods and forests. Under the agrarian reform act of June 21, 1921, some 15,000,000 acres of land have been expropriated from large landowners and distributed among the peasants. In 1929, nearly 90 per cent of the land was held by proprietors of less than 250 acres. See AGRICULTURE.

Production of the chief crops in 1929, with comparative figures for 1928 in parentheses, was (in metric tons): Wheat, 2,714,847 (3,551,590); rye, 323,351 (300,579); barley, 2,737,114 (1,046,575); oats, 1,359,292 (932,768); maize, 6,100,000 (2,536,937). Exports of cereals and cereal by-products in 1929 were estimated at \$48,908,000. Sugar beets, rape seeds, flax, potatoes, and wine are other leading products. The value of all crops in 1928 was \$409,220,000 (\$410,019,000 in 1927). The 1929 harvest was the best since the World War, but due to low prices failed to relieve the agricultural depression. The total of the five principal grain crops in 1930, while below that of 1929, was slightly above the average annual production for the period 1924-28. Livestock on Jan. 1, 1929, included 4,436,000 cattle, 12,801,000 sheep, 1,945,000 horses, 2,832,000 swine, and 386,000 goats. More than 200,000 head of cattle and hogs, valued at \$10,919,000, were exported in 1929.

Rumania in 1929 ranked second to Russia among European oil-producing countries and sixth among the countries of the world. Crude-oil production increased to 4,827,000 metric tons in 1929 from 1,787,000 tons in 1913. About 97 per cent of the crude-oil output is refined in Rumania. Production of other leading minerals in 1928 was: Coal, 395,000 metric tons; lignite, 2,640,000 tons; iron ore, 84,000 tons; salt, 340,000 tons. Antimony and copper are also worked. Forest products are the third important source of economic wealth, the lumber industry comprising 498 sawmills, with an invested capital of \$11,792,000 and 45,000 workmen in 1927. Lumber exports in 1929 totaled about \$25,401,000. Flour milling, brewing, and distilling are other industries. The value of all industrial products in 1928 was about \$370,956,000. Industry was generally depressed in 1929 and 1930 and this, with the similar condition of agriculture, provoked considerable political unrest.

COMMERCE. Rumania's foreign trade balance showed marked improvement in 1929, the adverse balance being reduced to about \$5,800,000 from \$31,350,000 in 1928. Imports for consumption totaled 29,896,700,000 lei (about \$176,390,000, computed at the 1929 exchange rate of 1 lei for \$0.0059), as compared with 32,145,100,000 lei in 1928. Domestic exports were valued at 28,914,900,000 lei (about \$170,596,000), as against 26,919,300,000 lei in 1928. Larger exports were due chiefly to increases of about 19 per cent and 17 per cent, respectively, in the value of petroleum products and cereal shipments. The tonnage of exported cereals increased by 59 per cent, reflecting the lower market prices abroad. Cotton textiles, ores, metals and

metal manufactures, machinery, wool, wool manufactures, and vehicles were the chief imports and cereals, petroleum products, lumber, cattle, and animal products the leading exports. Germany and Austria were the most important countries in Rumanian trade. The trend toward a favorable trade balance continued in 1930, preliminary returns showing decreased imports and increased exports.

FINANCE. The budget for 1930 was estimated to balance at 37,450,000,000 lei (about \$224,700,000), but collections for the first half of the year fell 30 per cent short of the estimates. The budget estimates for 1929 balanced at 38,300,000,000 lei. Actual revenue, however, amounted to only 33,738,000,000 lei. The deficit for the year totaled about 1,000,000,000 lei, according to preliminary returns, as compared with a deficit of 4,903,000,000 lei in 1928. On Jan. 1, 1930, the total public debt of Rumania stood at 145,330,000,000 lei, of which 121,601,000,000 lei was held abroad. An \$8,000,000 loan was extended to the Rumanian government in 1930 by the International Telephone and Telegraph Corporation in return for a concession to take over and develop the telephone system formerly operated by the state. The unit of currency is the leu (plural, lei), which was officially stabilized at \$0.00598 on Feb. 7, 1929.

COMMUNICATIONS. The railways, which are state owned, comprised 7102 miles of line in 1928. They were operated at a loss of 1,239,340,223 lei (about \$7,436,041) in 1929. Passengers carried during the year totaled 37,198,828, freight, 21,556,691 tons; and operating revenues, \$64,711,940; all the figures were substantially lower than in 1928. The railway construction programme adopted in 1929 was modified in 1930 to provide for more rapid construction of fewer lines. Rumanian highways in 1928 totaled 67,160 miles, of which 36,405 miles were macadam, 5643 miles gravel, 20,791 miles plain dirt roads, and the remaining 4320 miles unclassified. Of the macadam roads, less than one-third were in good condition. Legislation providing a modern system of road administration and finance was adopted in October, 1929, and in 1930 work was under way on the reconstruction of the 96-mile Bucharest-Brasov highway and the rebuilding of 84 steel bridges destroyed during the World War. When turned over to the International Telephone and Telegraph Company in 1930 (see above under *Finance*), the telephone system consisted of 23,000 miles of line connecting about 63,000 telephones. The telegraph system remained under state operation.

In 1929, a total of 1920 vessels of 3,022,000 net tons called at Constantza, Rumania's leading port, as against 1154 vessels of 2,476,000 net tons in 1928. Extensive improvements to the port were made in 1929.

GOVERNMENT. Under the constitution of Mar. 28, 1923, which nationalized all forests and subsoil, executive power is vested in the King and a council of ministers, the King having a suspensive veto over the laws passed by parliament; and legislative power is vested in a senate of 170 members and a chamber of 347 members. The Senate is composed of life members and various officials; the deputies in the lower Chamber are elected by all tax-paying citizens 21 years of age. King Carol II assumed the throne June 8, 1930, succeeding his young son, Mihai (Michael)

I, who had ruled through a regency council composed of Prince Nicholas, the Patriarch Mgr. Miron I. Cristea, and Constantine Saratzeanu, President of the Court of Appeal (see below under *History*). The Maniu Cabinet, representing the National Peasants' party, appointed Nov. 11, 1928, was composed as follows: Prime Minister, Dr. Julius Maniu; Foreign Affairs, George Mironescu; Interior, Dr. Alexander Vayda-Voevod; Agriculture, M. Ion Mihailache; Education, Professor Costakescu; Finance, Dr. Mihai Popovici; Justice, M. Nizescu; Public Health, M. Sever Dan; Labor, M. Raducanu; War, General Cikoski; Industry and Commerce, M. Mirto; Fine Arts, M. Aurel Vlad; Public Works and Communications, M. Halippa; Minister for the Banat, M. Bocu; for Transylvania, M. Nizescu; for the Bukovina, M. Saveanu.

HISTORY

CAROL'S RETURN. A dynastic drama which interested and amused the world opened on the evening of June 8, 1930, when Prince Carol stepped from an airplane at a flying field near Bucharest, ending his five years of exile in France. Within 48 hours Parliament had proclaimed him King and head of the House of Hohenzollern-Sigmaringen. The army and the peasant masses acclaimed him with high enthusiasm. Convoked in extraordinary session, Parliament repealed the law of Jan. 4, 1926, by which Carol was excluded from succession to the throne.

The return of the prodigal son of Dowager Queen Marie had important national and international implications, despite the touch of *opéra bouffé* associated with the event. Premier Maniu, leader of the National Peasant party, admitted in Parliament June 14 that Carol's return had been accomplished with the previous consent of the Government. Likewise Carol enjoyed the support of his brother, Prince Nicholas, and the other members of the Regency Council, which since July 20, 1927, had ruled the country on behalf of Carol's nine-year-old son, King Michael. In spite of noteworthy progress in national rehabilitation, the Maniu Government had been losing prestige steadily as a result of the economic depression. The coalition upon which the Premier's régime depended showed signs of dissolution. The Liberal Opposition, which controlled the National Bank and most of the capital of the country, was increasing its effort to overthrow the Ministry. And finally, the authority and prestige of the Regency Council was steadily waning. A dangerous political crisis appeared inevitable in the event of the death or resignation of one of the Council members, with the possibility that Soviet Russia would seize upon the opportunity to reannex Bessarabia. The Government accordingly placed Carol on the throne as the most expedient way of meeting the threatened crisis. His return meant the eclipse, at least temporarily, of the conservative and financially-powerful National Liberals, who under the Bratianu brothers and with the alleged aid of Dowager Queen Marie, had ruled the country for 60 years previous to the establishment of the Maniu Government on Nov. 9, 1928.

Premier Maniu resigned with his entire Cabinet the day after Carol's return to Bucharest, but reassumed the Premiership June 13, the interim Cabinet having been headed by George Mironescu, Dr. Maniu's Minister for Foreign Affairs. The Premier's position became increasingly untenable,

however, as the economic depression became more and more acute. Dissension among his supporters and the failure of King Carol's effort to effect a reconciliation with Queen Helen added to Maniu's difficulties. On October 6 he resigned again. M. Mironescu, who was called by King Carol to form a Cabinet, announced the new Ministry as follows on October 10: Premier and Foreign Minister, George Mironescu; Interior, Ion Mihalache; Finance, Mihai Popovici; Justice, Gregory Junian; Agriculture, Virgil Madgearu; Railways, Voicu Nitescu; Education, Professor Costatescu; Trade and Commerce, M. Manolescu; Public Works, M. Hacieanu; War, General Condescu; Bessarabia, Pan Halippa.

CAROL'S POPULARITY DECLINES. The King's failure to effect a reconciliation with his divorced wife, Princess Helen of Greece, the mother of Michael, from the first tended to undermine his popularity with his people. As a conciliatory gesture, Carol issued a decree June 12 proclaiming Helen Queen of Rumania. He prepared also to secure the annulment of their divorce. The Queen remained adamant and early in December the failure of the long-drawn-out negotiations was confirmed. Carol then announced his intention of seeking another consort. At the same time, it was reported that the King had made financial settlements with his morganatic wife, Mme. Zizi Labrino, and with his companion, Mme. Magda Lupescu, whom he deserted to return to Rumania. Queen Helen had become the most popular member of the royal family and her refusal to accept the King's advances lost for him much of the popular enthusiasm aroused by his spectacular return. It also caused Carol to postpone his coronation, which had been fixed provisionally for October, until the following year.

The death on December 22 of Vintila Bratianu (q.v.), last of the powerful Bratianu triumvirate, who had led his adherents of the Liberal party in determined opposition to Carol's assumption of the Crown, appeared to open the way for a more harmonious and stable government. His nephew, George Bratianu, head of the pro-Carolist section of Liberals, stood in line for the leadership of the entire Liberal party.

OTHER INTERNAL AFFAIRS. The reparation settlement reached at The Hague and at Paris (see *REPARATIONS AND HUNGARY* under *History*) was acclaimed as a victory for Rumania by Premier Maniu at a special commemorative session of the Chamber on Jan. 21, 1930. The Young Plan, he said, absolved Rumania of obligations for reparation payments, and for indemnification of the Hungarian optants, the Hapsburg archdukes, and the private railways of the territories annexed to Rumania in 1919. In the municipal elections of Feb. 6, 1930, the National Peasant party won 1833 seats, or 82 per cent of the total; the Liberals, 316 seats; and various minor parties, 80. A recrudescence of anti-Semitism spread throughout the country following the election of Prof. Alexander Cuza, anti-Semitic leader, in a parliamentary by-election in the spring (see *Jews*).

The engagement of Princess Ileana to Count Alexander von Hochberg was dissolved March 5. A subsequent tour of the Near East by Queen Marie and Princess Ileana was interrupted at the request of the British Government, which feared a longer stay in Palestine would provoke hostile demonstrations.

FOREIGN AFFAIRS. Although Rumania had benefited to a large degree by the peace treaties of

1919 and was allied with France, Poland, and the Little Entente, she appeared in 1930 to be wavering between support of France or Italy in the struggle between the two continental Powers for hegemony in the Balkans. An Italian-Rumanian commercial treaty was signed at Rome Feb. 25, 1930, accompanied by eulogies of the cultural bonds between the two countries. Premier Maniu, however, acknowledged Rumania's gratitude for French support at the reparation negotiations and in June he lined up with the other members of the Little Entente in warning Hungary that any effort by Prince Otto to emulate Carol's coup d'état would be considered a breach of the peace treaties. The return of Carol introduced an uncertain element into Rumania's international relations, and Europe followed his actions with interest to determine whether he would turn toward Italy or France. Up to the end of the year, he had given no definite indication of his policy in this respect.

On October 20, the Rumanian secret police announced the discovery of a widespread Soviet espionage organization, following the arrest of 140 alleged agents in espionage centres in Bucharest, Jassy, Klausenburg, and Kronstadt. For more than a year, it was charged, the organization had been forwarding information concerning Rumania's political and military activities to Moscow via Vienna. Concentrations of Soviet military forces along the Bessarabian border early in the year and the subsequent movement of two Russian cruisers through the Bosphorus into the Black Sea aroused apprehension in Rumania and led to military and naval preparations to resist a possible Russian attack.

A tariff war broke out between Rumania and Greece in September and Greek ships were forbidden to cast anchor in Rumanian ports. A commercial treaty concluded with Great Britain provided for the admission of British goods to Rumania at the lowest rates of the existing or future Rumanian tariffs. Mutual most-favored-nation treatment between the United States and Rumania was guaranteed by a provisional agreement signed August 20. See *LITTLE ENTENTE*, *JUGOSLAVIA*, *HUNGARY*, *ITALY*, and *RUSSIA* under *History*; also *REPARATIONS*.

RUM ROW, **RUM RUNNING**, ETC. See **PROHIBITION**.

RURAL SOCIOLOGY. See **AGRICULTURAL EXPERIMENT STATIONS**.

RUSSELL SAGE FOUNDATION. An institution established by Mrs. Russell Sage as a memorial to her husband, and incorporated by the Legislature of the State of New York in 1907 "for the improvement of social and living conditions in the United States of America." The members of the staff of the foundation study social conditions and methods of social work; interpret the findings; make the information available by publications, conferences, and other means of public education; and in various ways stimulate action for social betterment.

CHARITY ORGANIZATION. This department studies and publishes in the field of social work and family welfare. During 1930 it published the addresses and papers of Mary E. Richmond, its former director, in a book entitled *The Long View*. The department also worked on plans to meet the unemployment situation during the winter of 1930-31.

INDUSTRIAL STUDIES. This department studies human relations and conditions in industry for

the purpose of providing data for constructive action. Its activities in 1930 centred upon the subject of labor's participation in management; the problem of unemployment and its statistical measurement; labor statistics in general and the development of more adequate data from official sources; and the international aspects of these problems of industrial relations. It also investigated the influence of unemployment upon crime for the National Commission on Law Observation and Enforcement.

LIBRARY. The library of the foundation in 1930 contained 30,371 bound volumes and 101,541 pamphlets and reports. It published bibliographies on coöperative housing, rural life from the aspects of the social worker, prison libraries, books on social subjects published during 1929, juvenile delinquency, leaders in social adventure.

RECREATION. This department assists in the social organization of leisure time and in bringing about adequate provision for all forms of wholesome recreation, outdoor and indoor, urban and rural. From its study in 1930 it advised on the location of approximately 100 new playgrounds and 3550 acres of new park lands in the \$30,000,000 programme of New York City. It also studied school community centres and prepared reports on several phases of child health and protection for the White House conference.

REMEDIAL LOANS. This department protects small loan borrowers from extortion and urges the passage and enforcement of adequate laws for the regulation of small-loan business, and encourages formation of credit unions. It gave consideration to 34 bills affecting small loans introduced in 11 State legislatures in 1930; made studies and surveys of the operation of the Uniform Small Loan Law in the many States where it had been adopted and in the four States where the rate under such law had been reduced by former legislatures; and published a statistical study of 10,000 small loans made in 109 cities in 17 States.

STATISTICS. This department conducts statistical investigations and advises concerning the planning and conduct of statistical inquiries. It has compiled monthly statistics in the field of family-case work over a period of five years and developed a standard statistical practice among the 58 agencies reporting these data. A report on salaries of staff members in 264 family-case-work agencies was published in 1930 under the title *Salaries and Vacations in Family Case Work*. Comprehensive statistics of outdoor relief were collected and distributed from 380 agencies in 79 cities of over 100,000 population in the United States and Canada.

SURVEYS AND EXHIBITS. The department studies and occasionally engages in community projects involving the collection, interpretation, and educational use of facts; advises with those facing practical problems in these fields; and spreads, chiefly through its publications, the information and experience thus gained. During the year two reports for the Regional Plan of New York and Environs were completed.

DELINQUENCY AND PENOLOGY. As consultant on these subjects, this department responded during the year to requests for advice from several States, as well as from India, Japan, South Africa, Vancouver, and Panama, as to improved methods in dealing with criminals, including legislation, and also as to building plans and administration of various correctional institutions.

The trustees of the foundation in 1930 were: Robert W. de Forest, president; Lawson Purdy, vice-president and treasurer; Frederic A. Delano, John H. Finley, Mrs. Frederic S. Lee, Dwight W. Morrow, Mrs. Finley J. Shepard, Harold T. White, and John M. Glenn, who was secretary and general director of the foundation. Shelby M. Harrison was vice general director. Headquarters are at 130 East Twenty-second Street, New York City.

RUSSIA. A republic comprising the greater part of the former Russian Empire; officially entitled the Union of Soviet Socialist Republics. Capital, Moscow.

AREA AND POPULATION. According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics is 8,144,228 square miles. The population as of Jan. 1, 1930, was estimated by the Central Statistical Board at 158,500,000. The population, according to the census of 1926-27 was 147,013,600, including 71,024,300 males and 75,989,300 females. In 1914 the population of the same territory was 138,200,000.

The Union of Soviet Socialist Republics is composed of seven constituent republics with their respective populations at the census of 1926 as follows: Russian Socialist Federated Soviet Republic, 100,858,000; Ukrainian Socialist Soviet Republic, 29,020,300; White Russian Socialist Soviet Republic, 4,983,900; Transcaucasian Federation, 5,850,700; Turkoman Socialist Soviet Republic, 1,030,500; Uzbek Socialist Soviet Republic, 5,270,200. The Tadzhik Socialist Soviet Republic, with about 822,600 inhabitants, was established in 1929 out of territory formerly included in the Uzbek Republic (see SOVIET (CENTRAL ASIA)). The Russian Socialist Federated Soviet Republic contained 76 per cent of the population and 94 per cent of the area of the Union. It comprised eleven autonomous republics, twelve autonomous areas, with further subdivisions into provinces, counties, districts, and townships. The other constituent republics embrace similar subdivisions of autonomous republics and areas, established mainly along racial or national lines.

Population of the principal cities at the census of 1926: Moscow, 2,124,500; Leningrad, 1,614,008; Kiev, 513,789; Baku, 452,808; Odessa, 420,888; Kharkov, 417,342; Rostov-on-Don, 308,284; Tashkent, 323,613; Tiflis, 292,973; and Saratov, 215,276.

EDUCATION. Public education in the Soviet Union is a charge against the seven constituent republics and against the localities concerned. Local appropriations are in the aggregate several times those of the republican governments. Total appropriations for education were upwards of \$1,000,000,000 for 1929-30. During the three previous years the expenditures were as follows: 1926-27, \$317,200,000; 1927-28, \$425,330,000; 1928-29, \$738,510,000. Statistics for elementary and secondary schools are shown in the accompanying table.

SOVIET EDUCATION STATISTICS

| | Elementary | | Secondary | |
|--------------|------------|------------|-----------|---------|
| | Schools | Pupils | Schools | Pupils |
| 1913-14..... | 104,600 | 7,235,988 | 1,700 | 563,480 |
| 1926-27..... | 108,424 | 9,903,439 | 1,708 | 784,871 |
| 1927-28..... | 116,873 | 10,502,964 | 1,819 | 805,369 |
| 1928-29..... | 120,012 | 11,101,372 | 1,793 | 813,127 |

There were 134 universities with 155,300 students in 1928-29, as compared with 137 universities with 143,100 students in 1927-28. In 1928-29 there were 109 workers' faculties (higher training schools for workers) with 60,200 students, as compared with 105 workers' faculties with 54,700 students in 1927-28. An average of over 50,000 schools for adult illiterates was maintained during the years 1925-28. In 1928-29, there were 2,700,000 pupils. The campaign to abolish adult illiteracy is conducted largely under voluntary auspices, particularly by the labor organizations. Among the general population (above seven years) illiteracy decreased by one-third in the six years preceding the census of 1926-27, which revealed that 65.4 per cent of the males and 36.7 per cent of the females were literate.

During 1930 there was a notable expansion of the schools for training skilled workers and engineers to take their places in industrial development under the Five-Year Plan. Universal, compulsory education for children of eight, nine, and ten years was introduced Oct. 1, 1930, for the first time in Russian history. Schools in the Soviet Union are conducted in 35 languages among the minor nationalities.

NATURAL RESOURCES. The immense natural resources of Russia have been only partly surveyed. Undeveloped water-power resources were estimated at 62,380,000 horse power, of which nearly two-thirds are in Asiatic territory. Coal reserves were placed at 474,673,000,000 tons, oil reserves at 2,884,000,000 tons, peat, 265,000,000,000 tons; iron, 2,782,000,000 tons, exclusive of the recently surveyed area in the Kursk district, where deposits were estimated at from 20,000,000,000 to 30,000,000,000 tons. Copper reserves in the Urals are estimated at 85,000,000 tons. Reserves of bauxite are 8,000,000 tons. Deposits of sulphur aggregating several million tons were discovered in the Kara-Kum Desert in central Asia, supplementing the former reserves of 500,000 tons in the Kerch Peninsula. Potash deposits estimated at over 1,500,000,000 tons were discovered in the West Ural region in 1927. Large fields of gold and platinum are situated in Siberia. Other minerals include silver and lead ores, pyrites, graphite, phosphate rock, chromic ores, salt, asphalt, asbestos, mica, zinc, uraninite. The forest area covers upward of two billion acres. Resources of fish and furs are enormous.

PRODUCTION, ETC. Land and natural resources are held in trust by the government for the general population, and may not be acquired by private title. Every citizen is entitled to secure land for cultivation, the form of tenure being that of perpetual leasehold. Natural resources are exploited by State trusts, by mixed companies, under concession, in which the State has a participating interest; or by private companies.

The adoption by the Soviet Congress in May, 1929, of an ambitious five-year plan for economic development was considered the most important constructive step since the revolution. (For summary of the plan, see 1929 YEAR BOOK). With the completion of the Five-Year Plan, such basic indicators of national economy as iron, steel and coal production, electric power output, and freight operations in the Soviet Union would be about 20 per cent of these indicators in the United States in 1929. The Soviet Union is a country thrice the size of the United States with approximately 30 per cent more population.

At the close of the fiscal year 1928-29 it was announced that the industrial plan for the year had been exceeded. The plan called for an increase in output of 21.4 per cent. The actual increase was 23.4 per cent. The socialized development of agriculture was also well above the programme. In view of this progress the "control figures" for 1929-30 were revised upward on the basis of completing the Five-Year Plan in four years. In the original plan the increase of the industrial output for 1929-30 was set at 21.5 per cent. It was revised to 31.5 per cent. The actual result, 24.2 per cent, while comfortably above the original plan, was well below the ambitious new goal. Many factors contributed to keep the advance below the "control figures." These included the increasing shortage of labor, particularly in the ranks of skilled workers; the large labor turnover because of the shortage; the difficulties of the transport system in fulfilling the demands imposed by the rapid industrial growth; the world-wide economic depression which particularly hit the prices of exports of grain and other raw materials. As a result of two years under the Five-Year Plan the industrial output was increased about 56 per cent. The original schedule called for an increase of 47.5 per cent. The output for 1930 was double that of 1913. The production of large-scale industry in the calendar year 1930 was valued at 16,884,000,000 rubles, or 23 per cent more than in 1929 (1 ruble was worth \$0.514 in Russia).

In agriculture the programme of "socialization" made great progress in 1930. Thirty per cent of the peasant holdings were pooled in large-scale collective farms and in addition 4,200,000 hectares (1 hectare equals 2.47 acres) were sown in the large-scale highly-mechanized State grain areas. The productivity of the "socialized sector" ranged from 10 to 20 per cent greater than that of the individual farms.

The harvest of 1930 was decidedly the best since the revolution. Total sown area was 130,400,000 hectares, as compared with 120,400,000 in 1929. The grain harvest was estimated by the new federal Commissar for Agriculture, in October, as 20 per cent above the yield of 76,250,000 metric tons in 1929. The sown area in grain was 102,614,000 hectares, compared with 98,262,900 hectares in 1929. The prewar sowings to grain were 102,700,000 hectares with a crop estimated at between 75,000,000 and 80,000,000 metric tons. Grain exports before the war averaged about 11,000,000 tons. They were negligible in 1928 and 1929, but were resumed in the fall of 1930, the export surplus being estimated at from one-fourth to one-third of the prewar average.

In both cotton and sugar beets the sown area in 1930 was 50 per cent greater than in 1929, with commensurate increase in yields. The total cotton crop for 1930 was estimated at 1,294,000 metric tons (unginned) from 1,525,000 hectares, as compared with 976,000 metric tons from 1,036,000 hectares in 1929. Other technical crop yields for 1929, in metric tons, follow: Sugar beets, 8,400,000; flax, 427,700; hemp 520,300; sunflower seeds, 2,112,000. Livestock showed a marked falling off in 1930. During the winter of 1929-30 local authorities in many places in excessive zeal, used coercive methods to force peasants into the collectives. Many of these peasants slaughtered their livestock rather than turn it over to the collectives, and this condition continued until the central authorities, early in

March, ordered that coercive methods cease. Livestock estimates for the spring of 1930 were: Horses, 31,158,400; cattle, 52,591,700; sheep, 89,859,900; hogs 12,182,700. Butter and cheese factories in 1930 were estimated at 8000. The yield of Soviet fisheries in 1929 was 890,000 tons, about half of which was supplied by the waters of the Volga-Caspian region. See COTTON; AGRICULTURE under *World Agriculture*.

The sum of \$1,920,950,000 was expended for capital construction in industry in 1929-30, as compared with \$864,685,000 the previous year. The funds are derived from profits, depreciation account, and government budget appropriations.

Workers employed in large-scale state industry in August, 1930, were 2,625,000, an increase of 269,000 over the same date of the previous year. According to the *Economic Review of the Soviet Union* for Sept. 1, 1930, unemployment decreased from 1,741,000 on April 1, 1929, to 1,081,000 on April 1, 1930, and to 900,000 on June 1, 1930. A labor shortage was reported in the fall of 1930, and the Government withdrew the benefits of unemployment insurance from persons who habitually refused work. Expenditures for unemployment relief were placed at 152,000,000 rubles in 1929 and 135,000,000 rubles in 1930.

Two major construction projects were completed during 1930. The Turkestan-Siberian railway, connecting the Soviet cotton belt in central Asia with the grain and timber districts of Siberia, was finished a year and a half ahead of the original plan. Construction of the tractor plant at Stalingrad, which will have an eventual capacity of 50,000 tractors annually, was also completed in the spring, ahead of schedule. Satisfactory progress was made in the construction of the dam on the Dnieper River, in the Southern Mining District of the Ukraine, where the largest hydro-electric power station in Europe will be erected. At the end of September, Col. Hugh L. Cooper of New York, chief supervisory engineer, reported that the difficult work of laying the foundations had been completed and the work was proceeding according to schedule.

Production of coal by the United Coal Industry in 1929-30 was 46,651,000 metric tons, as compared with 40,570,000 metric tons in 1928-29 and 28,356,000 tons in 1913. Russia ranked third among oil-producing countries, with a production of 17,066,000 metric tons in 1929-30, as compared with 13,700,000 in 1928-29 and 9,215,911 in 1913. Output of electric power in 1929-30 was 8000 million kilowatt hours, as compared with 6465 in 1928-29. The output for 1929-30 was estimated at five times the prewar output. Production of iron ore for 1929-30 was 10,148,000 metric tons, as compared with 7,120,000 in 1928-29 and 8,689,000 in 1913. Statistics of iron and steel production, in thousands of metric tons, are as follows:

IRON AND STEEL PRODUCTION

| | 1929-30 | 1928-29 | 1913 |
|-------------------|---------|---------|-------|
| Pig Iron | 4,982 | 4,018 | 4,206 |
| Steel | 5,552 | 4,723 | 4,247 |
| Rolled Iron | 4,440 | 4,018 | 3,509 |

The output of both agricultural and industrial machinery showed large advances in 1929-30, the former being four and a half times the prewar figure. In the lighter industries substantial increases were made generally, except in the cotton-textile industry, the output of which was lower

than in 1928-29, owing to shortage of raw material. During the year costs of production in industry were cut down 7.1 per cent, which was better than the previous year but only 60 per cent of the schedule. On Oct. 1, 1930, it was announced that two-thirds of all industrial workers were working under the new five-day week. Under this system each worker has one rest-day in five, the rest-days being arranged on a stagger system so that the machinery works every day. On Oct. 1, 1930, it was announced that the seven-hour day, which was being introduced gradually, applied to 45.2 per cent of the workers.

Membership in the coöperatives was reported as upwards of 50,000,000 on Oct. 1, 1929. These organizations conduct many industrial enterprises, especially in the food industry. They are responsible for about two-thirds of the retail trade of the country and conduct 10 per cent of the foreign trade. The Consumers' Coöperatives, with a membership of 33,465,000 as of Oct. 1, 1929, operated 100,462 retail stores.

COMMERCE. The foreign trade turnover for recent years is shown in the accompanying table:

RUSSIAN FOREIGN TRADE, 1925-30

| | Exports | Imports | Total |
|-------------|---------------|---------------|---------------|
| 1924-25 ... | \$296,125,000 | \$370,800,000 | \$666,925,000 |
| 1925-26 ... | 348,447,000 | 389,546,000 | 737,995,000 |
| 1926-27 ... | 396,807,500 | 366,989,000 | 763,796,500 |
| 1927-28 ... | 398,564,000 | 486,523,000 | 885,087,000 |
| 1928-29 ... | 458,350,000 | 431,055,000 | 889,405,000 |
| 1929-30 ... | 516,117,550 | 550,351,660 | 1,066,469,210 |

Foreign trade turnover in 1913 was \$1,490,495,000. The country then included Poland, Finland, and the border states. Foreign trade operations are a government monopoly regulated through the Commissariat for Trade in accordance with the needs of the national economy as a whole. In 1930 nine-tenths of Soviet imports were of a productive nature. The volume of annual imports is determined on the basis of the surplus of Russian products available for export.

The principal Soviet exports are oil products, timber, furs, grain, dairy products, flax, manganese ore, and sheep casings. The principal imports are industrial and agricultural machinery, cotton, and other raw materials. The principal countries taking Soviet exports in 1928-29 were: Germany, 24 per cent; United Kingdom, 22; Persia 8.4; Latvia 8; France 5. The principal countries furnishing Soviet imports were: Germany, 22.5 per cent; United States, 18.3; Persia, 7.6; United Kingdom, 5.3; China, 4.10. Soviet exports to and imports from six principal countries in 1928-29 and 1929-30, in thousands of rubles (the ruble was worth 51.46 cents in Russia), are shown in the accompanying table.

SOVIET FOREIGN TRADE BY COUNTRIES
[In thousands of rubles]

| | 1928-29 | | 1929-30 * | |
|------------------|---------|---------|-----------|---------|
| | Exports | Imports | Exports | Imports |
| Germany | 208,537 | 188,465 | 214,254 | 234,389 |
| England | 192,503 | 44,338 | 238,158 | 160,000 |
| United States .. | 38,469 | 152,925 | 44,579 | 280,360 |
| Persia | 74,061 | 63,766 | 61,189 | 47,355 |
| Latvia | 69,994 | 15,312 | 70,083 | 14,907 |
| France | 43,139 | 30,425 | 44,705 | 33,956 |

* Preliminary.

Final trade figures for 1929-30 placed total exports at 1,002,270,000 rubles and imports at 1,068,742,000 rubles, or increases of 14.1 and 27.9, respectively, over 1928-29. The balance of trade,

which was favorable by 41,293,000 rubles in 1928-29, showed an unfavorable balance of 66,472,000 rubles in 1929-30. The volume of the trade turnover in 1929-30 increased almost 50 per cent over the preceding year, but the gain in values was much less due to international price declines, especially of raw materials. Lumber and lumber products were the principal export line in 1929-30. Oil, which had been first in 1928-29, dropped to second place, followed by furs, wheat, textile piece goods, and flax, in the order named. The leading imports in 1929-30, in the order of value, were: Industrial equipment and parts, tractors and parts, cotton, ferrous metals, iron and steel manufactures, electrical equipment and supplies, wool, and agricultural machinery and parts. In the calendar year 1930 Soviet trade across European frontiers showed a gain of 19.3 per cent over 1929 and was one-third less than in 1913.

The principal Soviet imports from the United States during 1930 were agricultural machinery and equipment, industrial and power-plant equipment, cotton, non-ferrous metals, automotive equipment and office supplies. According to the figures of Soviet trade organizations in the United States, purchases of American products for shipment to the Soviet Union in 1929-30 (Soviet fiscal year ending September 30) were \$149,223,000, as compared with \$107,651,000 the previous year. Purchases of agricultural equipment were \$63,530,000, an increase of 125 per cent over the previous year; purchases of industrial and power-plant equipment were \$50,420,000, an increase of 77 per cent. Cotton purchases were \$17,213,000 as against \$32,175,000 the previous year. The principal Soviet exports to the United States are furs, manganese ore, pulp wood, spruce lumber, precious metals, sheep casings, flax and tow, hides and skins, and bristles. The sales of Soviet products in the United States in 1929-30 were only about one-fifth the purchases. Sales were valued at a total of \$31,017,000, as compared with \$30,749,000 sold in the previous year.

Figures of the U. S. Department of Commerce for the six-year period ended Dec. 31, 1930, showed a favorable balance for the United States in American-Soviet trade of \$355,417,000. During the first six months of 1930 the Soviet Union was the sixth largest foreign customer of the United States. In 1929 it stood sixteenth on the American export list. Figures of the Department of Commerce for the years 1925 through 1930 are given in the accompanying table.

SOVIET-AMERICAN TRADE, 1925-30

| | American exports to U. S. S. R. | American imports from U. S. S. R. | Total |
|-------------|---------------------------------|-----------------------------------|---------------|
| 1925 | \$ 68,900,000 | \$13,200,000 | \$ 82,100,000 |
| 1926 | 48,900,000 | 14,100,000 | 64,000,000 |
| 1927 | 64,900,000 | 12,800,000 | 77,700,000 |
| 1928 | 74,100,000 | 14,000,000 | 88,100,000 |
| 1929 | 84,700,000 | 22,500,000 | 107,200,000 |
| 1930 | 114,356,000 | 23,839,000 | 138,195,000 |
| Total | \$455,856,000 | \$100,439,000 | \$557,295,000 |

* Including flour valued at \$20,000,000 purchased because of the poor harvest of 1924.

FINANCE. Soviet currency was placed on a gold basis by the end of June, 1924. The budgets of Soviet fiscal years, ending September 30, in millions of rubles (1 ruble equaled \$0.515 in Russia), are shown in the table on the next page.

Revenue from taxes in 1929-30 amounted to 5,951,000,000 rubles; the income from state properties and enterprises was 1,882,000,000 rubles; from state loans, 1,212,000,000 rubles; from transportation and communication, 3,363,000,000 rubles. Expenditures for administrative purposes in 1929-30 totaled 1,354,000,000 rubles; for

SOVIET BUDGET OPERATIONS
[In millions of rubles]

| | 1926-27 (actual) | 1927-28 (actual) | 1928-29 (actual) | 1929-30 (actual) |
|------------------|---------------------|---------------------|---------------------|---------------------|
| Revenues | 5,201.3 | 6,950.9 | 8,112.4 | 12,527 |
| Expenditures . . | 5,151.3 | 6,747.6 | 7,864.1 | 12,246 |

financing the national economy, 4,211,000,000 rubles (2,179,600,000 rubles in 1928-29). Of the total expenditure for the development of state enterprises, 2,135,000,000 rubles went to industry, 852,000,000 rubles to agriculture, and 211,000,000 rubles for the construction of new railroads. The expenditure upon the army and navy in 1928-29 was 874,701,000 rubles. The total public debt as of April 1, 1930, was placed at 3,019,700,000 rubles (\$1,555,146,000).

Currency circulation Oct. 1, 1930 was 4,263,900,000 rubles, as compared with 2,642,200,000 rubles Oct. 1, 1930. During the year ending Sept. 30, 1930, the gold fund of the State Bank increased 93 per cent. The rapid increase in currency circulation during the year was terminated October 1, after which a period of note-reduction was inaugurated. Savings deposits Sept. 1, 1930, 722,000,000 rubles (462,400,000 on Sept. 1, 1929).

As the supply of foreign capital was inadequate (amounting to only \$25,750,000 in 1929) and the earnings of Soviet economic enterprises were still insufficient to finance industrial expansion, capital was "pumped" from private sources into socialized economy by means of the budget system. The Commissariat of Finance reported that of the combined net budget for 1927-28 totaling 6,131,900,000 rubles, the private sector paid 72.2 per cent of the revenues and received 5 per cent of the expenditure, while the socialized sector contributed 27.8 per cent and received 95 per cent. The private share in the total national income dropped from 54.5 per cent in 1926-27 to 46.8 per cent in 1928-29 and 38.6 per cent (estimated) in 1929-30. However, the total national income was rapidly increasing—from 25,000,000,000 rubles in 1927-28 to nearly 29,000,000,000 in 1928-29 and to 35,000,000,000 rubles (estimated) in 1929-30.

TRANSPORT. In 1930 the railway system of the Soviet Union comprised 79,934 kilometers (49,774 miles) of line, as compared with 77,128 kilometers the previous year. Railway operations in 1929-30 aggregated 132,956,000,000 ton-kilometers of freight, as compared with 106,748,000,000 in 1928-29. A total of 234,000,000 tons of freight and 510,200,000 passengers were carried in 1929-30, or increases of 33.8 and 50 per cent, respectively, over the figures for 1928-29. Plans for a complete reorganization and modernization of the railways, which proved inadequate to handle the rapidly increasing demands under the Five-Year Plan, were made in 1930. Ralph Budd, president of the Great Northern Railway of the United States, was engaged by the Soviet Railway Administration to study its railway problems and make recommendations for reorganization.

The Turkestan-Siberian Railway, extending 890 miles from Semipalatinsk in Southern Siberia

to Lugovaya on the Kirghiz border and forming the eastern side of the railway triangle linking Russia proper, Siberia, and central Asia, was officially completed on May 1, 1930, nearly a year and a half ahead of schedule. The total cost of the project to May 1 was 175,000,000 rubles (\$90,000,000). In all 1452 miles of track were laid in slightly over three years, there being 1260 miles of main line and 186 miles of sidings. The cheap importation of grain and lumber from Siberia was expected to leave the population of Soviet Central Asia free to devote themselves to the cultivation of cotton on a much greater scale and to supply all the needs of the Soviet textile industry. The railway also made possible the exploitation of rich mineral, grazing, and fruit lands in Kazakhstan over an area of about 480,000 square miles.

In 1930, there were 26,000 kilometers (16,120 miles) of airplane lines in regular operation, as compared with 17,400 kilometers during the previous year. The first direct radio-communication service between the United States and Soviet Russia was opened Nov. 13, 1930. See *AERONAUTICS under Air Transport*.

GOVERNMENT. A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. Several changes in the structure of the Council of People's Commissars (the executive cabinet of the Soviet Government) were effected in 1930. The Commissariat for Trade was replaced by a Commissariat for Internal Trade and a Commissariat for Foreign Trade. A federal Commissariat for Agriculture was established. The Central Statistical Board became attached as a bureau in the State Planning Commission, and its chairman ceased to have a seat in the Council. Several changes in the personnel of the Council were made, as the chief of which Maxim Litvinov became Commissar for Foreign Affairs, succeeding Georgiy Chicherin, who retired in the summer after several years of absence on account of ill-health.

Toward the close of 1930 the Council of People's Commissars was composed as follows: Chairman, Alexei I. Rykov; vice-chairmen, J. E. Rudzutak, V. V. Schmidt, V. V. Kuybyshev; Commissar for Army and Navy, K. E. Voroshilov; for Internal Trade, A. J. Mikoyan; for Foreign Trade, A. P. Rozengoltz; for Foreign Affairs, Maxim Litvinov; for Transportation, M. L. Rukhimovich; for Posts and Telegraphs, N. K. Antipov; for Finance, G. F. Grinko; for Labor, A. M. Tsikhon; for Agriculture, Y. A. Yakovlev; for Peasants' and Workers' Inspection, (unfilled); Chairman of Supreme Economic Council, G. K. Ordjonikidze. The chairmen of the Central Executive Committee were: M. J. Kalinin, G. J. Petrovsky, A. G. Chervyakov, Ganzanfar Mussabekov, Netyrbay Aitakov, Faizulla Khodzhayev. These chairmen of the Central Executive Committee are the presidents of the constituent republics. Josef Stalin, General Secretary of the Russian Communist party, was the most powerful political figure in the country.

HISTORY

FOREIGN RELATIONS. Although 1929 had ended auspiciously with the resumption of diplomatic relations with Great Britain and the temporary settlement of the dispute with China over the Chinese Eastern Railway, the year 1930 proved a troubled one in Soviet foreign relations. Three waves of anti-Russian agitation swept the cap-

italist nations during the year, threatening adverse repercussions upon the Soviet Union's diplomatic and economic relations. The success of the entire Communist programme, including the industrialization of Russia and the socialization of agriculture, was directly dependent upon machinery, expert personnel, technique, and methodology obtainable only from the capitalist world. The anti-Soviet agitations were therefore rightly considered as threatening the failure of the Five-Year Plan.

They were provoked by the alleged anti-religious policies of the Soviet Government, the increasing competition and alleged "dumping" of Soviet products in world markets, and the charges leveled at leading political figures in Western Europe during the trial in November of Russian engineers accused of fomenting a counter-revolutionary conspiracy. Russia's apparent alignment with Italy in support of revision of the Versailles Treaty aroused the antagonism of France and her allies and increased the general tension in Europe. Relations with Finland and Poland became seriously strained, and hopes for a permanent settlement of the dispute over the Chinese Eastern Railway proved premature.

RELIGIOUS CONFLICT. Pope Pius XI on Feb. 2, 1930, issued a formal appeal for the support of the Governments and people of Christian nations in protesting against what he called "the horrible and criminal sacrileges" in Russia. He charged the Soviet Government with closing hundreds of churches on the preceding Christmas, forcing church members to work on that day, suppressing Sunday schools, and compelling office employees to sign a declaration of formal apostasy and hatred of God, under pain of deprivation of their ration tickets. The Archbishop of Canterbury and certain other Anglican bishops, the French Protestant Federation, Bishop William T. Manning of the Protestant Episcopal Diocese of New York, and various Evangelical and Jewish organizations joined in formal protests and prayers in behalf of their co-religionists in Russia. In France, Germany, and particularly in Great Britain, powerful pressure was exerted in favor of the severance or modification of diplomatic relations with Russia, but without apparent result.

Denials that Christians or Jews were being persecuted on religious grounds were immediately forthcoming from the Metropolitan Sergius, head of the Russian Orthodox Church; Dr. Joseph A. Rosen, head of the Russian agency of the American Society for Jewish Farm Settlements; and from Soviet officials. Premier MacDonald, declaring the anti-Soviet agitation in Great Britain to be "inspired by politics as much as by religious toleration," instructed Sir Esmond Ovey, British Ambassador to Russia, to investigate the charges. Sir Esmond's report, published toward the end of April, stated that "there is no religious persecution in Russia in the strict sense of the term 'persecution,' and no case has been discovered of a priest or any one else being punished for the practice of religion." The report pointed out, however, that Christianity was being effectively stifled by adverse legislation and social ostracism.

The charges of religious persecution were linked with the Soviet Government's campaign to "collectivize" Russian agriculture, which gained impetus in the fall of 1929. Collectivization, or the pooling of small peasant holdings in large collective farms, was bitterly opposed by the kulaks, or more prosperous peasants. In some sections,

the kulaks fought the movement by arson and the murder of Communist agents. Thousands of peasants slaughtered their livestock, rather than turn the animals over to the collectives. A number of village priests, accused of joining in the anti-Government conspiracies of the kulaks, were executed or jailed.

The tension created both in Russia and the Western countries by the collectivistic campaign was eased when Josef Stalin on March 2 formally deplored excesses committed in the application of the Government's policies. Subsequent decrees gave effect to his demand for moderation on the part of Communist party members in promoting the agricultural and anti-religious policies of the Kremlin. The atheist societies abandoned many of their plans for anti-religious demonstrations at Easter and on April 18 the trade-union leaders announced that the Easter Days (April 19, 20, and 21) would be observed as holidays in all factories and shops in which the five-day week had not been established.

SOVIET "DUMPING." A second crisis in Russia's relations with the capitalist world occurred in September, when large exports of the new Russian wheat harvest lowered the price of that commodity in the world market. Resentment at the Soviet Government's export policy had been accumulating throughout the summer, as increasingly large quantities of low-priced Russian raw materials continued to invade the markets of Europe and America. In the United States, the manganese, pulpwood, and lumber producers had repeatedly protested against competitive imports from Russia (see **FORESTRY** under *Lumber Situation*). On September 19, Secretary of Agriculture Hyde accused the Soviet Government of selling large quantities of wheat short on the Chicago Exchange for the purpose of causing economic distress and political unrest among American farmers. The charge was reiterated throughout Europe that the Soviet Government was dumping its products abroad far below the cost of production in order to ruin the industries of other countries and thus create revolutions. Soviet authorities replied that the first result of such a policy would be to cause economic ruin and political disturbance in Russia. The tendency of impartial observers was to discount the charges of revolutionary motives. The success of the Five-Year Plan, it was pointed out, depended upon large imports of productive machinery and the hiring of hundreds of foreign technicians and engineers. Lacking foreign credits, these could be paid for only by Russian exports and the Government was accordingly compelled to dispose of all products, after meeting the minimum requirements of the Russian population, at whatever price they would bring on foreign markets. Entering markets already glutted with unsold stocks of domestic merchandise and suffering from the world economic depression, the Russian exports precipitated the collapse of various local industries.

At the suggestion of former Premier Herriot, France took the lead in a movement for the economic boycott of Russia. A decree promulgated by the French Cabinet October 3 established Government control of the quantity and price of Russian imports through a licensing system. Belgium, whose flax and match industries had been hard hit by Russian competition, followed suit on October 25. The way for a general economic alliance of Western Europe against Soviet Russia was further prepared by regional conferences in central

Europe, the Balkans, and Scandinavia. A bill to place an embargo on Russian imports was introduced into the United States Congress in December. A financial boycott terminating the short-term credits obtained by Russia in the European money markets also loomed as a possibility.

Germany and Italy, however, refused to fall in line with the boycott movement. On the contrary, the opposition of these powers to French hegemony in Europe as sustained by the Versailles Treaty dictated a course which appeared to be leading toward the formation of an economic and possibly a political entente with Russia (see ITALY, GERMANY, and FRANCE under *History*). In August, Italy and the Soviet Government concluded a trade treaty under which the Italian Government guaranteed 75 per cent of credits advanced on Russian purchases by Italian merchants. Although failing in its major aim of closer economic integration between German and Russian industry, a mixed Russo-German commission early in the year concluded a trade agreement under which the German Government assumed a similar guarantee up to 65 per cent. Litvinov, the Commissar for Foreign Affairs, in pressing his plan for progressive disarmament among the nations at the sessions of the Preparatory Disarmament Commission in Geneva in November, proved to be in full accord with the German thesis on disarmament. Russian and German interests were identical, also, with regard to such other vital issues as the Versailles Treaty, the proposed Pan-European federation, and reparations. Yet the bourgeois and democratic government of Germany remained cool toward proposals for closer cooperation with Soviet Russia and Fascist Italy.

THE MOSCOW TRIAL. Soviet relations with France were further disturbed by accusations leveled at former Premier Poincaré, Foreign Minister Briand, Sir Henri Deterding, Col. T. E. Lawrence and other leading French and British figures during the trial in Moscow in November and December of eight highly-placed Russian engineers. The engineers were charged with conspiring to use their important technical posts to sabotage industry and create unemployment and unrest in order to prepare the ground for an emigré invasion with foreign support. At their trial, the engineers threw themselves upon the mercy of the court and confessed that they had plotted with Russian emigrés in Paris and other European capitals, who were said to have received promises of foreign backing. The foreigners named categorically denied the charges, and the French press renewed its agitation for the severance of diplomatic relations with Russia. In Great Britain, the view was expressed that the trial was arranged by the Soviet Government in an effort to avoid responsibility for the increasing difficulties of the internal economic situation and to spur the Russian masses to new efforts to complete the Five-Year Plan. The Soviet leaders had declared that the contemplated advance in industrial production had been seriously handicapped by the activities of the conspirators. On December 7, the Soviet court sentenced five of the engineers to death and three to ten years' imprisonment each. The following day, it was announced that all five of the death sentences had been commuted to ten years' imprisonment and the ten-year sentences of the other defendants reduced to eight years.

OTHER FOREIGN RELATIONS. War between Russia and Poland seemed fairly imminent in April,

1930, following the discovery of a bomb in the Soviet legation in Warsaw, the appointment of an aggressively anti-Soviet Polish Cabinet, and the espousal of the Pope's anti-Soviet campaign by the Polish Government. In a stern note delivered April 29, Russia accused Poland of deliberately attempting to precipitate war, but on May 1, following Polish explanations, the Soviet Government expressed itself convinced that Poland was not implicated in the attempt on the lives of its legation staff. As in preceding years, the activities of Communists in India, Germany, Finland, France, French Indo-China, China, and Rumania served as a constant irritant to the relations of the Soviet Government with these nations (see each under *History*; also COMMUNISM). A trade treaty was concluded with Great Britain April 6, under which Soviet commercial agents in England were accorded diplomatic immunity while Russia pledged itself not to engage in propaganda hostile to British interests. The Soviet Government refused to accept responsibility for the Communist International, however, and the latter's activities drew forth repeated protests from Great Britain.

Russian policy toward the United States, which had been in general conciliatory due to the desire for American recognition and credits, changed noticeably following the temporary embargo placed on Russian products by the Treasury Department and the none-too-cordial treatment accorded Amtorg officials by the Congressional committee under Representative Fish, appointed to investigate Communist activities in the United States. High Soviet officials gave plain warning that they would transfer their business to other countries if further obstacles were placed in the way of their trade with the United States. That the U. S. State Department had placed a virtual embargo on the export of military airplanes, arms, and ammunition to Russia became known in June when it vetoed plans of a Baltimore airplane factory to sell 20 bombing planes to the Soviet Government at a cost reported at about \$2,000,000.

Tewfik Bey, Turkish Foreign Minister, received an enthusiastic reception upon his visit to Moscow in October. The visit was regarded as significant in view of the apparent rapprochement of Italy and Russia and the fact that commerce between Italy and Russia, in case of a Franco-Italian war, would be dependent upon the friendly attitude of Turkey. See GREECE and TURKEY under *History*.

INTERNAL AFFAIRS. The most significant development in the internal situation in 1930 was the success of Stalin's policy of collectivization (see above under *Production*). The superior production of the collective and state farms, as compared with the individual peasant farms, seemed to refute the contention of Bukharin, Rykov, Tomski, and other Right Wing leaders that the "socialized sector" in farming was being extended too rapidly. This demonstration of the practicability of his programme enabled Stalin to emerge with heightened prestige and power from the biennial Congress of the Communist party, which opened at Moscow July 25. The Government's Five-Year Plan not only received the unqualified approval of the convention, but it was decided to speed it up in order to achieve its objectives in four years instead of five. Rykov and Tomski publicly recanted their "Right heresy" before the convention. The shakeup effected in the ranks of high Govern-

ment officials at the convention (see above under *Government*) further consolidated Stalin's dominance.

Progress in industry was less rapid than in agriculture. Some of the new plants were slow in starting production. The dearth of skilled labor was heavily felt, and the international economic depression as well as the difficulties in foreign trade interposed further obstacles. As the year moved toward a close there were increasing signs of privation and suffering among the industrial population of Russia. This was accompanied by a general slackening in the efficiency of labor, an increasing labor turnover, and a lowering of both the quality of production and the quantity of output per worker, as compared with the control figures of the Five-Year Plan. The commodity scarcity and high prices led to the virtual repudiation of paper money in some sections of the country and a return to barter. Hoarding by the people lowered the quantity of metallic money in circulation.

The Government's determination to force through the Five-Year Plan at whatever odds was evidenced in the increasing activity of the secret police and the drastic punishment meted out to those suspected of sabotage or obstruction. Forty-eight persons, including several high officials, were executed on September 24 and on October 4 the arrest of 300 Social Democrats was reported. Earlier in the year, decrees were issued tightening the discipline of labor; and Communist "labor battalions" were mobilized for service in industries where the output failed to meet the quotas allotted in the Five-Year Plan. A decree of the Soviet Central Executive Committee issued December 17 prohibited the changing of jobs by any employed person except with the formal permission of the authorities. Persons registered in Labor exchanges who refused jobs offered to them were to be stricken off the list, i.e., deprived of the privilege of buying food, clothing, and other necessities, for six months. Engineers and skilled workers were subject to transfer to other vicinities at any time without their consent. Another decree of December 22 revised the entire system of food distribution and provided that only those who worked and gave complete support to the Government might eat.

The difficulties encountered in industrialization emboldened Right and Left opponents of Stalin in November to protest once more at the dictator's policies. Secure in his power at the Communist convention, Stalin had retained Rykov in the Politburo (political bureau) and Tomski and Bukharin in the central committee of the Communist party. On December 19, the long-drawn conflict between Stalin and the leaders of the Right wing reached its climax with the dismissal of Rykov as President of the Council of People's Commissars and his expulsion (on December 21) from the Politburo. The defeat of the Right leaders gave Stalin complete control of the Russian Communist party, which in turn controlled the Soviet Government. Stalin had held no official connection with the Government since his resignation from the obsolete Commissariat of Nationalities in 1923. On December 25, however, he accepted membership in the Council of Labor and Defense, one of the three interlocking directorates of the Soviet Government. Rykov's post as president of the Council of People's Commissars was given to Vyacheslav Molotov, one of Stalin's right-hand men, who had been assistant secretary

of the Central Executive Committee of the Communist party since 1922 and a member of the Political Bureau. Another Stalinite, G. K. Ordzhonikidze, succeeded Rykov on the Political Bureau.

During 1930 some changes of policy affecting internal trade were inaugurated. A credit reform was introduced to simplify the system of credit operations between and among state and coöperative organizations and make the State Bank the focus for financing such operations. The large annual fairs, including that of Nizhni-Novgorod which had a trade turnover of \$150,000,000, were abolished, as outmoded under modern conditions. Under the socialized organization of the country private trade had declined. In retail trade the coöperatives handled nearly 65 per cent of the turnover, private traders about 6 per cent, and the stores of the state trusts the remainder. Wholesale trade was conducted principally by the state trusts and the coöperatives.

During the year both the system of state industrial organizations and the banking credit system were reorganized in the interests of greater simplification and efficiency. The fiscal year was changed to accord with the calendar year instead of ending September 30. The card-ration system was continued in the cities even after the good harvest of 1930 in order to curb speculation and assure an orderly distribution. The powerful labor organizations in the cities were reported to favor it. Though in September, 1928, the Soviet Government announced the extension and liberalization of the policy of granting concessions to foreigners, and opened new fields to such concessionaries in various industries, in building construction, and in municipal public services, the concession steadily yielded place to the "technical assistance contract," under which foreign specialists were engaged to assist in the economic development of the Soviet Union. In the autumn of 1930 there were over 100 of such contracts in operation, nearly half of them with important American corporations and engineering firms. By the end of summer about 800 American engineers were working in the Soviet Union and several hundred American foremen and skilled workers were employed in the new Soviet plants. Though there were 270 foreign applications for concessions in 1928-29, the number in operation did not tend to increase. Only 59 were reported as of October 1, 1929, of which four were American.

LENA GOLDFIELDS CASE. A development which attracted considerable attention in industrial circles was the withdrawal in 1930 of the British Lena Goldfields, Ltd., from the exploitation of rich mineral concessions in Russia obtained in 1925. An arbitration court composed of one Englishman and one German subsequently (September 2) awarded the company damages of \$65,000,000 against the Soviet Government on the ground that it had prevented the company from carrying out the terms of its concessions. The Soviet Government, which had withdrawn its representative from the arbitral commission, refused to recognize the validity of the award. It contended that the termination of the company's activities in Russia while its difficulties with the Government were being arbitrated had ended the jurisdiction of the arbitration commission provided for under the terms of the concession.

Lena Goldfields, Ltd., was one of the largest concessionaires in Russia. Its officials testified that they had invested \$17,000,000 in mining

projects in Siberia and the Urals up to the beginning of 1929, and employed from 14,000 to 15,000 persons. It was charged that with the beginning of the Five-Year Plan in 1929, the Government's conciliatory attitude changed to one of obstruction and hostility which forced the company to abandon the enterprise. Russia charged that the company had violated the concession agreement by failing to maintain the contract-schedule of operations, to invest the amount of outside capital agreed upon, or to pay the Government any share in the profits after 1929.

BIBLIOGRAPHY. Among the more authoritative works on Russia published during the year are: William H. Chamberlin, *Soviet Russia* (Boston, 1930); Dr. E. J. Dillon, *Russia Today and Yesterday* (New York, 1930); Louis Fischer, *The Soviets in World Affairs* (New York, 1930); Saul G. Bron, *Soviet Economic Development and American Business* (New York, 1930); A. Yugoff, *Economic Trends in Soviet Russia* (London, 1930); Leon Trotsky, *My Life* (New York, 1930); George Vernadsky, *A History of Russia* (Yale University Press, 1930); Maurice Hindus, *Humanity Uprooted* (New York, 1927). For an analytical study of Russian economic conditions see the special Russian edition of the *London Economist* for Nov. 1, 1930; also Bruce C. Hopper, "The Soviet Touchstone: Industrialization" in *Foreign Affairs* (New York) for April, 1930.

RUSSIAN LITERATURE. See **PHILOLOGY**, **MODERN**, under *Slavic*.

RUTGERS UNIVERSITY. A nonsectarian institution of higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The university consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, and New Jersey College for Women. The registration for the autumn of 1930 was 2859, of whom 1135 were registered at the college for women. Enrollment in the 1930 summer session was 1832. Of the 290 members on the faculty, 174 were professors and 116 instructors. The endowment funds amounted to \$4,350,000, and the income for the year, exclusive of the State agricultural experiment station, amounted to \$2,873,000. Lands, buildings, and endowments had a total valuation of more than \$17,600,000. The library contained 173,000 volumes. In 1930 the trustees established a new school of chemistry, with Dr. William T. Read as dean. Three new dormitories on the Bishop campus were also erected at a cost of \$450,000, and a gymnasium to cost \$650,000 was under construction. Acting President, after the resignation of Dr. John M. Thomas, Philip M. Brett, A.B., LL.B.

RYALL, WILLIAM BOLITHO. See **BOLITHO (RYALL), WILLIAM**.

RYE. The world's rye production in 1930, excepting the Soviet Republics, was a little below the high yields of 1929 and 1925. The production of 29 countries reporting to the International Institute of Agriculture, Rome, was estimated at 992,244,000 bushels, about 1 per cent below the yield in 1929 but over 12 per cent above the average annual yield for the five years 1924-1928. The 1930 rye area was 2.7 per cent above that of the preceding year and 3.4 per cent above the annual average for the five-year period. According to the data available the world's rye production is still below the annual average of the five years 1909-

1913, which was about 1,000,000,000 bushels. The production of the leading countries in 1930, not including the United States, was reported as follows: Germany, 303,445,000 bushels; Poland, 272,430,000 bushels; Czechoslovakia, 68,047,000 bushels; and France, 20,255,000 bushels. For 1928, the last year for which data are available, the Soviet Republics reported a yield of 755,831,000 bushels. Argentina, leading in rye production in South America, reported a yield of 4,401,000 bushels in the crop year 1929-1930. The Canadian production in 1930 was estimated at 22,287,000 bushels, nearly 10,000,000 bushels above the preceding crop.

The Department of Agriculture estimated the 1930 rye crop of the United States at 50,234,000 bushels, an increase of 8,323,000 bushels or nearly 20 per cent above the low yield of 1929 but 1.2 per cent below the average production of the previous 10 years. The area in rye was 3,722,000 acres, compared with 3,331,000 acres in 1929, being nearly 12 per cent more. The average yield, 13.5 bushels per acre, was approximately the same as the annual average for the 10 years 1919-1928. The average farm price on Dec. 1, 1930, was 41.6 cents per bushel compared with 86.4 cents the year before and computed on this basis the value of the crops for the two years was \$129,137,000 and \$166,613,000, respectively.

Among 35 States reporting rye production the yields of the leading States were estimated as follows: North Dakota, 13,134,000 bushels; Minnesota, 7,197,000 bushels; South Dakota, 5,800,000 bushels; Nebraska, 4,995,000 bushels; Wisconsin, 2,960,000 bushels; and Michigan, 2,565,000 bushels. The average yields per acre for these States were 11, 17.3, 14.5, 15, 15.5, and 15 bushels, respectively. The yields were above average in nearly all of the Atlantic and North Central States and below in most of the South Central and Western States. While the rye crop did not suffer extensively from the drought of the year the extremely hot weather caused the production of some shrunken grain.

The exports of rye from the United States for the fiscal year ended June 30, 1930, amounted to 2,538,000 bushels of grain and 10,000 barrels of flour, much below the exports of the year before, and the lowest in 14 years. No imports were recorded. As reported to the Department of Agriculture 4,158,000 acres of rye were sown in the fall of 1930, an increase of 4.1 per cent over the area sown in the fall of 1929.

SAAR BASIN. A section of the German Rhineland, which, under Article 45 of the Versailles Treaty, was awarded to France for exploitation of its coal fields, as compensation for the destruction of the coal fields in northern France by the German armies. Area, 726 square miles; population (1927), 770,030. In 1929, coal production totaled 13,500,000 metric tons (13,106,718 in 1928); pig iron, 2,104,940 tons (1,936,184); steel, 2,208,909 tons (2,073,051). The Saar is administered by a commission appointed by the League of Nations, pending a plebiscite in 1935 to determine its future. In 1930, negotiations for its early return to Germany were under way. See **FRANCE** and **GERMANY** under *History*; **LEAGUE OF NATIONS**.

SAFETY AT SEA. In the annual report of the U. S. Steamboat Inspection Service, made by Supervising Inspector General D. N. Hoover for the fiscal year 1930, attention was called to the increase of its personnel. With the addition of

45 new assistant inspectors to the organization's staff more frequent reinspections of vessels not heretofore properly covered would be made possible. For many years, it was pointed out, excursion and ferry steamers in addition to an annual inspection had been subjected to three separate reinspections. This same system henceforth was to be applied to all passenger vessels both foreign and American.

Pointing out that existing boiler rules were a tentative revision sponsored by the Steamboat Inspection Service, Mr. Hoover declared that these had received general commendation by interests competent to judge. These rules, which were being reviewed by a special committee of eminent engineers, would, when made permanent by law, surpass the marine boiler rules of any other nation, he believed.

The importance of enacting legislation covering motor-boat inspection and officering was again emphasized and it was recommended that the Steamboat Inspection Service be given authority to examine operators of these craft as to their vision, color sense, and knowledge of the rules of the road. No examination of any kind was required for motor-boat operators.

During the fiscal year 1930 officers of the Service inspected nearly 7000 vessels of all types and made 2500 reinspections. In addition they performed various other duties, including the testing of marine boiler plates, and the inspection of new life preservers and various other types of marine apparatus.

In the year ending June 30, 1930, 136 persons lost their lives on American steam vessels. On the basis of the total number of passengers carried by these craft, 317,231,352; this meant that for every life lost, 2,332,583 passengers were safely carried.

There were 143 strandings of large vessels on the coasts of the United States during the period from January, 1927, to March, 1930, according to the U. S. Lighthouse Service. Of these strandings 121, or 85 per cent, were of vessels not equipped with radio compasses, and 22, or 15 per cent, were of vessels having radio compasses. In only four cases did strandings of vessels equipped with radio compasses occur in general regions protected by radio beacons.

During the fiscal year ended June 30, 1930, the U. S. Coast Guard reported that 904 American merchant vessels sustained casualties involving a loss of \$300 or more in the case of each vessel. These 904 vessels were valued at \$202,759,317 and their cargoes at \$60,807,037, the total value of property endangered being \$263,566,354. The losses to vessels amounted to \$21,126,181 and to cargoes \$2,677,060, making the aggregate property loss \$23,803,841. The number of vessels totally lost was 253. Seventy-seven of the vessels involved in disaster foundered, 253 stranded, 241 were in collisions, and 333 sustained miscellaneous casualties, which are classified in the following table under "other causes." These foundering, strandings, collisions, and "other causes" were distributed by coasts and localities as follows: On the Atlantic and Gulf coasts, 288; on the Pacific coast, 244; on the Great Lakes, 93; on the United States rivers, 133; at sea and in foreign waters, 146. A total of 29,304 persons were on board the 904 vessels, 8749 of the number being passengers and 20,555 being members of crews. Of the 29,304 persons on board these vessels, 310 were lost, 233 being members of crews and 77 passengers.

Among the notable accidents at sea recorded during 1930 the following disasters were of chief interest:

January 12. British tug *St. Genny* foundered 80 miles from Ushant, with 23 lives lost.

January 28. Steamer *Edgar F. Coney*, 153 gross tons, with the barge *Pure Detona* in tow, left Sabine Bar bound for Pensacola, Fla. During the night the tug disappeared after hawser had been broken or cast adrift in rough weather. The entire crew of the tug, 14 persons, lost their lives. Only one body was recovered. On January 31 the barge was picked up and towed to Pensacola by the steamer *W. E. Hutton*.

February 11. North German Lloyd liner, *München*, burned at dock in New York after explosion of cargo of chemicals.

February 16. Seagoing barge *Carroll*, one of three barges in tow of the tug *Montrose*, bound from Norfolk, Va., to New York, N. Y., sank during a severe storm south by west of Five Fathom Bank Lightship. The master of the *Carroll* and crew of three were lost.

March 2. Steamer *Scantic* docked at Alabo Warehouse Dock, Mississippi River, New Orleans, La., was destroyed by a fire which started among bales of cotton on the dock. The fire spread to the vessel so quickly that it was impossible for those on board to leave by the gangplank or to lower a life-boat. Four members of the crew and three women and a child, who were visiting the ship, lost their lives. Approximate damage to steamer, \$75,000.

April 2. Ferry boat capsized near Takada, Kyushu Island, Japan, 110 lost.

April 8. H. M. S. *Sepoy* engaged in manœuvres off Hong Kong suffered an explosion of a depth charge, five men being killed and two injured.

April 10. Ellerman liner *City of Peking* struck sunken rock in fog south of Korea, 80 passengers and crew being rescued.

April 24. Freight steamer *Thames*, 560 gross tons, bound from New York, N. Y., to Bridgeport, Conn., caught fire from some unknown cause and, after being beached off Sound Beach, burned to the water's edge. Sixteen of the 26 members of the crew lost their lives.

April 31. Italian oil tanker and Swedish steamer in collision off Beachy Head, England, 18 lives being lost.

May 22. Steamer *Asia* destroyed by fire in harbor of Jeddah, Arabia; 100 lives lost.

June 4. Steamer *Goeraga* sunk off Teneriffe, Colombia; more than 60 lost.

June 9. Steamer *Litung* sunk in Yangtze River, China, after hitting rocks; 100 lost.

June 10. Steamer *Fairfax*, 5649 gross tons, collided with the motor ship *Pinthia*, 1111 gross tons, in the vicinity of No. 4 Gas Buoy, Massachusetts Bay, resulting in an explosion on the *Pinthia* and her immediate sinking with all hands (19) on board. A fire then broke out on the steamer *Fairfax*, as a result of which 14 of her passengers and 17 of her crew were lost.

August 11. Chinese launch exploded on Sikiang; 100 killed.

August 13. Two Chinese steamships in collision off Shantung peninsula, 79 lost.

August 16. British liner *Tahiti* lost propeller in Pacific and foundered; passengers and mails taken off by American liner *Ventura*.

August 18. Ferry boat capsized near Calcutta, India; 32 persons drowned.

August 20. British yacht *Islander* dashed to pieces on Cornish coast in storm, and six drowned.

December 7. The Italian salvage steamer *Artiglio* of Genoa lost by an explosion between islands of Belle Ile and Houat, near Quiberon. Disaster due to explosion of munitions in wreck of steam-ship *Florence* sunk in 1915. *Artiglio* was using explosives to remove the wreck. Captain Bertholotto and all the divers, making a total of 12, were lost.

December 19. Finnish steamers *Arcturus* and *Oberon* in collision in a dense fog. The *Oberon* sank and 24 members of the crew and 18 passengers were lost.

December 30. Steamer *Torefiell* wrecked off coast of Norway; some 24 lost.

SAFETY COUNCIL, NATIONAL; SAFETY, INDUSTRIAL. See NATIONAL SAFETY COUNCIL.

SAGHALIEN. See SAKHALIN.

ST. CHRISTOPHER or ST. KITTS. See LEEWARD ISLANDS.

ST. HELENA. An island of volcanic origin in the South Atlantic, about 1200 miles from the west coast of Africa, belonging to Great Britain. Area, 47 square miles; population, according to the census of 1921, 3747; estimated civil population, Dec. 31, 1928, 3797. Capital and seaport,

Jamestown. The chief occupation is the fibre industry, and fibre and tow are the principal exports. A detachment of the Royal Marine Artillery is stationed on the island, which is also a coaling station for the British navy. Governor in 1930, C. H. Harper.

ST. JOHN'S COLLEGE. A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the autumn term of 1930 was 242. There were 27 faculty members. The library contained more than 20,000 volumes. Acting President, Robert E. Bacon.

ST. KILDA. A small island of the Scottish Hebrides, abandoned by the 33 remaining inhabitants in August, 1930. The population decreased from 110 in 1851 to 45 in 1928. Sheep raising and fishing were the main occupations of the islanders.

ST. LAWRENCE UNIVERSITY. An institution for the higher education of men and women in Canton, N. Y., founded in 1856. The registration for the autumn term of 1930 was 2875, distributed as follows: College of letters and science, 890; theological school, 29; law school, 1956. The faculty numbered 136 members, including 54 in the college of letters and science, 5 in the theological school, 39 in the law school, and 11 special lecturers. The endowment funds amounted to \$4,059,088, and the income for the year to \$80,324. The library contained 54,000 volumes. During 1930 a dormitory for men, to house 200, was under construction. President, Richard Eddy Sykes, D.D.

ST. LOUIS, MISSOURI. For River des Peres improvement, see RECLAMATION.

ST. LOUIS MUSEUM. See ART MUSEUMS.

ST. LUCIA, lō'shī-ā. A British insular colony in the Windward group of the West Indies. Area, 233 square miles; population in 1928, 56,917. Castries, the chief port and capital, is a naval base and coaling station. The chief products are cacao, sugar, lime juice, hides, logwood, and rum. For 1928, imports totaled £242,053; exports, £197,836; revenue, £85,351; expenditure, £97,235; total shipping, 1,222,306 tons. The island is under an administrator aided by a nominated executive and a partly nominated and partly elected Legislative Council. Administrator and Colonial Secretary in 1930, Charles William Doory.

ST. PIERRE AND MIQUELON, mē-ke-lōn'. Two small groups of islands belonging to France, close to the southern coast of Newfoundland, and named from their two largest islands. Area of St. Pierre group, 10 square miles; of Miquelon group, 83 square miles; total population (1926), 4030. St. Pierre, the capital and chief port, had 3040 inhabitants. The islands are rocky and unsuited to agriculture, their main importance being as a centre for the cod-fishing industry and as a base of operations for liquor-smuggling into the United States. Following the embargo laid by Canada early in 1930 on the exportation of liquor across the American border, the rum-running trade of St. Pierre showed a marked increase. Liquor imports from Canada alone totaled 98,492 gallons in May, 1930, as compared with 16,114 gallons in the same month of 1929. In 1928, all imports totaled 168,557,794 francs; exports, principally dried fish and fish products, 145,788,882 francs. The local budget for 1929 balanced at 11,024,700 francs. The islands are under a governor aided by consultative and municipal councils. The Governor in 1930 was Adrien Juvanon.

ST. THOMAS. See SÃO THOMÉ AND PRINCEPE.

ST. VINCENT. A British insular colony in the Windward group of the West Indies. Area, 150.3 square miles; population in 1928, 51,426. Kingstown, with a population of 3836 in 1921, is the capital. In 1928 there were 1993 births, 1043 deaths, and 139 marriages. The chief products are arrowroot, sugar, cotton, rum, cacao, and spice; the Sea Island cotton is regarded as the best grown in the British Empire. For 1928, imports totaled £192,476; exports, £158,472; revenue, £84,593; expenditure, £60,441; total shipping, 713,613 tons. One-half of the Grenadine Islands are under the administration of the island of St. Vincent and the other half under Grenada (see GRENADA). An administrator and colonial secretary governs the colony, aided by a legislative council consisting of official, elected, and nominated members. Administrator in 1930, Major H. W. Peebles.

SAKHALIN, sā'kū-lyēn'. An island off the eastern coast of Siberia, separated from Japan by the narrow Strait of Soya. The portion south of the 50th parallel of N. latitude belongs to Japan; north of that line lies the Province of Sakhalin, belonging to Russia. Japanese Sakhalin or Karafuto (see KARAFUTO), has an area of about 13,934 square miles and a residential population (1929) of 240,502. The area of the Russian province is 14,088 square miles, with a population estimated at 34,000 in 1915. Valuable forests cover 75 per cent of the entire island. Discovery of additional oil reserves in the Okha region of Russian Sakhalin in 1929 increased the total estimated resources of that region to about 3,000,000 metric tons. Construction of a railroad connecting the oil fields with the port of Baikal was reported to have begun in 1930. The Japanese oil concession in Russian Sakhalin produced 150,000 metric tons of oil in 1929, compared with 133,000 tons in 1928. The Japanese coal concessionaire exported 115,498 tons in 1928-29.

SALVADOR, sālvá-dōr'. A Central American republic on the Pacific coast, bounded on the east by Honduras and on the north by Guatemala. Capital, San Salvador.

AREA AND POPULATION. The area is estimated at 13,176 square miles; the population in 1929 was estimated at 1,722,579. The mestizos, or persons of mixed race, numbered 1,307,200 and the Indians 326,800. San Salvador had a population in 1928 of 89,066. Other large towns were: Santa Ana, 75,796; San Miguel, 38,629; Zacatecoluca, 34,456; and San Vicente, 34,723. Births in 1928 numbered 65,431, of which 38,390 were illegitimate; deaths, 32,985.

EDUCATION. Primary education is free and nominally obligatory for children from 7 to 14 years of age. In 1929, there were 54,673 pupils enrolled in primary schools, 1137 in secondary schools, and 302 in the National University.

PRODUCTION. The coffee crop is the major factor in the national economy, normally furnishing over 90 per cent of the value of all exports. About 80 per cent of the total area is under cultivation. The area planted to coffee in 1929-30 was 203,614 acres, bearing 118,800,000 coffee trees, and the crop was estimated by the Government Statistical Office at 1,320,000 quintals, or 880,000 bags. The average prices received for coffee in 1929-30 were about 40 per cent less than during the previous season, resulting in a serious business depression. Other products are sugar (normal production about 25,000 tons), henequen, maize, cacao, bal-

sam, tobacco, indigo, hides and skins. Limited quantities of gold and silver are mined and new iron and lead mines in the Metapán district were being opened up in 1930. The forests contain valuable dye woods and hard woods. Sugar grinding and coffee cleaning are the chief manufacturing industries. Shoes, textiles, furniture, etc., are produced for the local market.

COMMERCE. Due to the lower price and curtailed shipments of coffee, exports in 1929 declined nearly 25 per cent at \$18,416,000 (\$24,464,000 in 1928), while imports decreased by 7 per cent to \$17,856,000 (\$19,189,000 in 1928). Of the total exports in 1929, coffee shipments were valued at about \$17,000,000. Germany was the principal customer in 1929, taking exports (mostly coffee) valued at \$5,852,000. The United States purchased exports to the value of \$3,830,000 (\$3,201,000 in 1928) and supplied imports valued at \$8,050,000 (\$7,591,000 in 1928). For the year ended June 30, 1930, Salvador's exports to the United States decreased 18.4 per cent to \$3,158,729 and imports from the United States decreased 8.9 per cent to \$6,825,419. Coffee, sugar, henequen, balsam, and indigo were the principal exports.

FINANCE. For the calendar year 1929, actual national revenues totaled 26,147,000 colones (1 colon equals \$0.50 at par), or 601,000 colones more than in 1928. Expenditures increased also to 27,219,000 colones, or 1,852,000 colones above the 1928 figure. The deficit for 1929 was 1,072,000 colones. The budget for the fiscal year ended June 30, 1930, calculated revenues and expenditures at 25,490,000 colones and 25,775,398 colones, respectively. The budget for 1930-31, as passed by the National Assembly, estimated receipts at 24,793,000 colones and expenditures at 25,189,146 colones. According to preliminary figures, the public debt on Jan. 1, 1930, stood at 43,194,000 colones (\$21,597,000), as compared with 45,806,000 colones (\$22,903,000) at the beginning of 1929.

COMMUNICATIONS. Of the 364 miles of railway in operation in 1929, the principal line was the Salvador branch of the International Railways of Central America. This line, 273 miles long, carried 911,969 passengers and 187,000 tons of freight in 1929 and earned gross receipts of \$1,572,000 in 1928. A new line completed during 1929 gave Salvador direct access to the Caribbean through Puerto Barrios, Guatemala. Highway mileage in 1930 was 1605 miles. A total of 682 vessels aggregating 1,533,000 tons called at Salvadorean ports during 1929 (694 vessels of 1,513,250 tons in 1928). An airplane service links San Salvador with Guatemala City and other Central American points.

GOVERNMENT. Executive power is vested by the constitution in a President elected for four years, who acts through a ministry of four members, and legislative power in the Congress of 42 members elected for one year by universal suffrage. The two most important political groups were the Partido Nacional Democrático and Partido Civista, President Romero Bosque and most of the members of the Government belonging to the former group. Neither party had a fixed or distinct programme. President in 1930, Dr. Pio Romero Bosque, who assumed office Mar. 1, 1927; Vice President, Gustavo Vides.

HISTORY. Salvador in 1930 made noteworthy progress in the evolution of its political institutions, under the capable and public-spirited leadership of President Pio Romero Bosque. Hav-

ing definitely broken the power of the Meléndez family, which controlled the Presidency from 1913 to 1927, Dr. Pio Romero Bosque in 1930 made elaborate preparations for the holding in January, 1931, of the first free Presidential election in Salvador's recent history. Of the nine candidates, including a woman fortune-teller and the President's son, who entered the campaign, the strongest appeared to be Señor Arturo Araujo, a wealthy plantation owner with strong labor support; General Gómez Zárate, former Minister of War; and Dr. Enrique Córdoba, representative of the conservative elements. Personalities were the all-important factor in the campaign, there being little difference in the platforms of the candidates. All favored better educational methods, the development of national industries, and improved governmental administration.

The multiplicity of candidacies aroused fears that no candidate would receive the necessary popular majority and that the duty of selecting a President would then fall upon the National Assembly, as provided by the Constitution. President Pio Romero Bosque sought to induce nine rivals to agree upon two candidates to be presented to the people, but his effort failed and three lawyers, two generals, and one farmer were still in the field at the end of the year. To prevent election disorders, the President enjoined strict neutrality upon the army, prohibited the holding of more than one political rally in a locality on the same day, and forbade women and children to participate in political demonstrations. Another achievement of the year was the adoption by the National Assembly in June of a law creating the office of Auditor-General to prevent the possible unauthorized expenditure of funds by the Executive. Dr. Hector Herrera, leader of the reform elements, was appointed Auditor-General. Creation of a national bank, to be known as the Mortgage Bank of El Salvador, was authorized by the National Assembly on Sept. 25, 1930. The capital stock of 10,000,000 colones was to be provided from proceeds of the export duty on coffee shipments.

The economic depression stimulated widespread labor unrest toward the end of the year. Serious riots, in which Communist agitators were reported to have been implicated, occurred in the towns of Santa Tecla and Sonsonate on December 21. In Santa Tecla, where the outbreak was suppressed by the police, there were two killed, 11 wounded, and 300 prisoners taken. The Government abolished its legations in Great Britain, Germany, Spain, and Mexico as an economy measure. This left the legations in Washington and Paris as the only remaining diplomatic posts.

SALVATION ARMY. An international organization with headquarters in London, whose sole purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The movement was first organized as a mission in the East End of London in 1865 by William Booth, a minister of the New Connexion Methodists. It spread rapidly throughout England and in 1880, as the Salvation Army, was extended to the United States. Incorporation took place in New York City in 1899. The government is military in character and in 1930 was under the command of Gen. Edward J. Higgins. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner and subdivided

into divisions consisting of a number of corps or posts under the direction of a captain and lieutenant. The United States has four territories, with headquarters in New York City, Chicago, San Francisco, and Atlanta. The Salvation Army is active in 82 countries and colonies, and preaches the Gospel in 72 languages.

The year 1930 marked the Salvation Army's jubilee in the United States. It was celebrated by a national congress which was held in New York City from May 16 to May 23, 4000 delegates being in attendance. The new administration building at 120 West Fourteenth Street, New York City, and the Centennial Memorial Temple were dedicated by Commander Evangeline Booth. See CELEBRATIONS.

The principal international event was a conference of commissioners held in London during November, when General Higgins met in council with 42 of the highest ranking officers. The conference met to consider the best method of putting into effect the pledges made by General Higgins on his election in June, 1929. These pledges were three in number:

1. That all future generals of the Salvation Army should be elected by a representative body, instead of being nominated by their predecessors.
2. That a retiring age should be fixed for the general.
3. That a body of trustees should be appointed to hold the properties of the Salvation Army, instead of these assets being vested, as at present, solely in the general.

The third point does not affect the United States, where all Salvation Army properties are held by a board of trustees appointed under the charter of incorporation. The conference set up the machinery to cover the election of the general, fixing 70 years as the retiring age and appointing a body of seven as trustees. Application was to be made to the British Government for an act of Parliament to legalize these reforms. During the conference there was evidenced a strong body of opinion which desired complete democratization of Salvation Army government. That body proposed to set up a cabinet to advise the general on matters of high policy and administration, with the power of veto under certain circumstances. The proposal was lost, but a compromise was effected by the offer of General Higgins to set up a board of arbitration consisting of five members. Any commissioner or chief secretary, who considered himself aggrieved by any action of the general, would have power to appeal to this board for its decision, which would be final.

In 1930 there were in the service of the Salvation Army throughout the world 25,427 officers and cadets, 9647 persons without rank wholly employed, 144,348 local officers and bandmen, 64,045 songsters, 34,778 corps cadets, and 15,163 corps and outposts in operation. Social institutions and agencies numbered 1526, and day schools 1098. Among the social institutions were: 27 naval and military homes; 148 hotels for men and 32 hotels for women, accommodating 36,143 persons; 6 inebriates' homes with 234 patients; 104 homes housing 5430 children; 23 crèches; 9 industrial schools with 584 pupils; 100 women's industrial homes, accommodating 3527 women; and 90 maternity homes with 3709 patients. The Army also maintained 308 miscellaneous social services, as well as 12 farms, 168 slum posts, 217 homes, elevators, workshops, and woodyards accommodating 7062 persons. In addition to 16 food depots, there were 120 combined shelters for men

and 17 shelters and food depots for women. Through the 137 labor bureaus, 244,949 men were supplied with work. The organization published 128 periodicals, with an average circulation of 1,964,264 copies per issue.

In the United States there were, in 1930, 1763 corps and outposts, 4832 officers and cadets, 13,198 local senior officers and bandmen, and 12,868 local junior officers and bandmen. Converts during the year numbered 104,264. Among the social institutions were 87 men's hotels, 1 women's hotel, and 10 residential hotels for young women, accommodating a total of 7590 persons. Men's industrial homes numbered 111 with accommodation for 4519 persons; children's homes, 10 with accommodation for 852 persons; women's homes and hospitals 43, with accommodation for 2763 persons; and general hospitals and dispensaries, 21 with a total of 63,623 patients. During the year 11,140 families were visited and 82,991 children sheltered, while Thanksgiving and Christmas dinners were distributed to 510,016 persons. In addition, 24,517 prisoners were assisted by the Salvation Army on discharge; 3,325,398 persons were afforded temporary relief outside social service centres and hotels; 34,594 children and 8194 mothers were given summer outings; and 189,372 men and women found employment through the Army's 93 free employment bureaus.

The national headquarters of the Salvation Army in the United States are at 122 West Fourteenth Street, New York City. Evangeline Booth, daughter of the founder, is the commander-in-chief. The territorial commissioners in 1930 were: John McMillan (eastern); William McIntyre (central); Adam Gifford (western); and Alexander M. Damon (southern).

SAMOA. A group of 14 islands in the Pacific Ocean, about 2000 miles south of Hawaii and 4000 miles southwest of San Francisco. Since Feb. 13, 1900, the islands east of 171° W. longitude have belonged to the United States; the islands west of that line belonged to Germany until the outbreak of the World War in 1914, when they were occupied by New Zealanders and later turned over to New Zealand for administration, under a mandate of the League of Nations.

WESTERN SAMOA. The official name applied to the former German Samoan Islands is the Territory of Western Samoa. This territory includes Savaii and Upolu, two of the largest islands, and Apolima and Manono. Area of Savaii, about 660 square miles; Upolu, 550 to 600 square miles. Population, Dec. 31, 1929, 43,736, including 2770 Europeans and half-castes and 39,878 natives Samoans. The principal port is Apia, on the island of Upolu. About 11,400 pupils are instructed in schools conducted by the Government and various missionary groups. The products include copra, cacao, bananas, rubber, sugar, and cardamoms. The imports for 1928 totaled £326,553; exports, £422,175. Revenue for the year ended Mar. 31, 1929, amounted to £141,904; expenditure, £130,445. The general control of the islands is under the New Zealand Ministry of External Affairs, and the local Government is under an administrator. There is a Legislative Council, the membership of which is restricted to British subjects or persons born in Samoa of European descent, and a Native Council which advises the administrator in native affairs. Administrator in 1930, Colonel S. S. Allen, appointed March, 1928.

AMERICAN SAMOA. Tutuila, Tau, and the Manua group comprise the American Samoan group of

islands. The total area is about 60 square miles; the population at the census of 1930 was 10,055, as against 8056 at the census of 1920. The principal port is Pago Pago on the island of Tutuila, the best and safest harbor in the South Seas. In 1930 there were 20 public schools with 2044 pupils and 46 teachers, 41 of whom were Samoans, and four missionary schools with 350 pupils. Production of copra, the sole export, totaled 1687 tons valued at \$147,215 in 1929. The fertile soil produces a variety of fruits. Imports in 1929-30 were valued at \$146,534 and the gross revenues for the year totaled \$133,772. The United States Navy has established a high-powered radio station on the island of Tutuila. The Government is in the hands of the Governor of the United States Naval Station at Pago Pago. The islands are divided into three general administrative districts, corresponding to the former political divisions of Samoa, each administered by a native governor who is appointed by the American governor. At the head of each village is a chief, elected annually, subject to the governor's approval. Governor in 1930, Captain G. S. Lincoln, U. S. N.

HISTORY. Native opposition to the administration of New Zealand's mandate in Western Samoa, which culminated in riots in December, 1929, gradually died down during 1930 as a result of energetic action on the part of the Government. Four Samoan chiefs were sentenced to 17 months' imprisonment at Apia in March for threatening other chiefs who were unwilling to join in resistance to the Government. On March 20, it was reported that all Samoans wanted for various offenses had surrendered in a body and that the majority of the members of the Mau, a native organization opposed to the Government, had returned to their villages from the bush, whence they fled following the outbreak of December. The policy of the Government toward those who recognized its authority was conciliatory and a number of reforms were inaugurated. Nevertheless, secret meetings of the Mau were known to continue.

American Samoa was visited in September by a Congressional committee, charged with the task of drafting an organic act and a bill of rights for the islands. Although the naval administration of the territory was admittedly much more successful than attempts at democratic forms of governments had proven in Western Samoa, it was considered desirable to end the anomaly presented by a democratic republic ruling by undemocratic methods. A section of Samoan opinion was represented as feeling that they could maintain their status quo as a people only under a civil rule in which they could participate, with their own representatives in Congress. A number of Samoan leaders opposed any change. The change to a civil form of government had been recommended by a Naval Governor. The committee consisted of Senators Bingham of Connecticut (chairman) and Robinson of Arkansas, Representatives Kiess of Pennsylvania and Williams of Texas, and three Samoan chiefs. The recommendations of the committee included the extension of a bill of rights and of American citizenship to the natives, without bringing them under the Constitution. An epidemic of dengue fever, introduced from Suva, affected 2135 persons during April, May, and June, 1930.

SAMOS. An island in the Aegean Sea, belonging to Greece. Area, about 181 square miles;

population, according to the census of 1928, 70,497. Capital, Limir Vathy, with a population of 8636. The island was acquired from Turkey as a consequence of the Balkan Wars fought in 1912 and 1913.

SANFORD, EDWARD TERRY. An American jurist, died in Washington, D. C., Mar. 8, 1930. Born in Knoxville, Tenn., July 23, 1865, he was graduated from the University of Tennessee in 1883 and received the LL.B. degree from Harvard University in 1889. On being admitted to the bar in 1888, he began his practice in Knoxville with the Hon. George Andrews and Col Jacob M. Thornburg. He was Assistant Attorney-General of the United States during 1907-08, and from 1908 to 1923 was Federal district judge of the eastern and middle districts of Tennessee. President Harding appointed him an associate justice of the United States Supreme Court in 1923. Among the more widely known opinions which he delivered are the "pocket veto," decision by which the right of the President to block legislation by refusing to return bills was sustained; the Charlotte Anita Whitney case, which upheld the Californian law providing prison penalties for preaching sabotage and terrorism; and the Benjamin Gitlow decision. The LL.D. degree was conferred on Justice Sanford by Harvard University in 1904 and also by the University of Cincinnati in 1908.

SAN FRANCISCO. See BRIDGES; MUNICIPAL OWNERSHIP.

SANFUENTES ANDONAEGUI, JUAN LUIS. A Chilean statesman, died July 16, 1930, in Santiago where he was born Dec. 27, 1858. Admitted to the bar, he practiced law for several years before embarking on his political career. He served as Minister of Finance in 1901, senator in 1902, a member of the Council of State and president of the Senate from 1906 to 1915, and president of the republic from 1915 to 1920. During his administration he stood for strict neutrality, although the German colonists in the southern territory and some of the militarists desired that Chile enter the World War on the side of Germany. He was also an ardent supporter of the League of Nations and was largely responsible for Chile's adherence to that body.

SANITARY DISTRICT OF CHICAGO. See SEWERAGE AND SEWAGE TREATMENT; ILLINOIS under *Political and Other Events*.

SANITARY ENGINEERING. See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE TREATMENT; WATERWORKS AND WATER PURIFICATION.

SAN MARINO, mā-rō'nō. A republic of Europe, located in the peninsula of Italy. Area, 38 square miles; population, in December, 1928, 13,013. Capital, San Marino (1600 inhabitants). The chief exports are wine, cattle, and the building stone quarried on Mount Titano. The revenue and expenditure for 1928-29 balanced at 4,053,072 lire and the estimates for 1929-30 at 3,592,180 lire (1 lira exchanged at about \$0.052). Politically and economically San Marino is closely allied with Italy, Legislative power is exercised by a council of 60 elected members and executive power by two regents appointed every six months by the council.

SANTO DOMINGO. See DOMINICAN REPUBLIC; SPANISH AMERICAN LITERATURE.

SÃO PAULO. See **BRAZIL** under *History*.

SÃO THOMÉ, soun tō-mā', and **PRINCEIPE**, prēn' thē-pā. Two islands in the Gulf of Guinea, about 125 miles from the coast of Africa, constituting a province of Portugal. Area 360 square miles; population in 1921, 52,150 for São Thomé and 6905 for Príncipe. Europeans numbered 1115. Cacao, cinchona, coffee, and rubber are the chief exports. In 1928-29, revenue totaled 11,984,664 escudos and expenditure, 11,962,954 escudos. Imports for 1928 totaled 40,768,815 and exports, 71,585,431 escudos (1 escudo exchanged at \$0.0447 in 1929.) Governor in 1930, Eugenio de Barros Soares Branco. See **PORTUGAL** under *History*.

SARAWAK, sä-rä-wā'k. An independent state, comprising the northwestern part of the island of Borneo; under the protection of Great Britain. Area, about 42,000 square miles (coast line 400 miles). Population estimated at 600,000, made up of Malays, Dyaks, Kayans, Chinese, etc. Kuching is the capital, with a population of about 25,000. There are large resources of coal, and an oil field has been opened up in the Baram region. The chief exports are petroleum products, plantation rubber, and sago flour. Imports in 1927 totaled 25,664,546 Straits dollars (1 dollar equald \$0.56 in 1927); exports 49,786,143 Straits dollars. In the same year revenues were 6,243,065 Straits dollars and expenditures 5,764,318 Straits dollars. The region was acquired by Sir James Brooke in 1842 from the Sultan of Brunei. Rajah in 1930, Sir Charles Vyner Brooke, grandnephew of Sir James.

SASKATCHEWAN. One of the Prairie Provinces of Canada, situated between Alberta on the west and Manitoba on the east. Area, 251,700 square miles; population, according to the census of 1926, 821,042; estimated June 1, 1930, 882,000. Capital, Regina, with a population in 1926, of 37,329. Other cities are Saskatoon, 31,234, a gain of 25 per cent over 1921; Moosejaw, 19,039; Prince Albert, 7873. Births in 1928 totaled 21,100; deaths, 6138; marriages, 6687. The total enrollment in the public schools in 1928 was 223,049. The University of Saskatchewan is at Saskatoon. Agriculture is the basic industry, yielding an estimated gross income in 1928 of \$392,602,000. The acreage planted to field crops in 1929 was 22,420,232 and the value of the yield, \$247,374,000 (\$348,586,000 in 1928). Mineral production (1929) was valued at \$1,935,676, the output of coal being 577,820 tons. The total value of the fisheries in 1928 was \$563,533. Compared with the other Provinces, forest resources are limited; the value of timber production in 1927 was \$2,387,260. There were 737 industrial establishments in 1928, employing 6173 persons, and with a gross production valued at \$59,125,280. For the fiscal year ended Apr. 30, 1930, revenues totaled \$16,561,526 and expenditures, \$17,079,704. The funded debt increased by \$11,174,305. There were 7687 miles of steam railway in 1928.

Executive power is vested in a lieutenant-governor and a legislative assembly of 63 members elected for five years. In 1930, the government coalition included 24 Conservatives, 5 Progressives, and 6 Independents, with 28 Liberals forming the Opposition. In the Dominion general election of July 28, 1930, the Province returned 12 Liberals, 7 Conservatives, and 2 Progressives to the House of Commons at Ottawa. Lieutenant-Governor in 1930, H. W. Newlands; Premier,

President of the Council, and Minister of Education, J. T. M. Anderson. See article on **CANADA**.

SAULT STE. MARIE, CANALS AT. In 1930 the 16,818 vessels passing through the United States and Canadian canals at Sault Ste. Marie, Michigan, and Ontario, had a total registered tonnage of 54,828,769, as compared with 19,794 vessels of 68,239,570 tons in 1929. These consisted in 1930 of 14,661 steamers, 1014 sailing vessels, and 1143 unregistered vessels, as compared with 18,036 steamers, 1217 sailing vessels, and 541 unregistered vessels in 1929. Through the United States canal, there were 13,863 vessel passages with a registered tonnage of 51,348,738, and through the Canadian canal, 2955 vessel passages with a registered tonnage of 3,480,031. Lockages in 1930 numbered 12,661, as compared with 14,585 in 1929. The number of passengers showed a decrease, the totals for 1929 and 1930 being 54,415 and 45,303, respectively.

The total freight passing through the canals aggregated 72,897,752 short tons or a decrease of 19,724,265 tons. Of the total freight tonnage, 57,066,516 were east-bound and 15,831,236 were west-bound. The leading items of east-bound freight carried through the United States canal were wheat, 228,740,322 bushels; grain, other than wheat, 46,425,496 bushels; and iron ore, 46,980,851 short tons, which together with the tonnage carried through the Canadian canal brought the totals up to 243,927,016 bushels, 55,433,921 bushels, and 46,990,351 tons, respectively.

Among the leading articles of west-bound traffic were 13,256,786 short tons of soft coal, of which 13,180,726 tons were carried through the United States canal and 76,060 tons through the Canadian canal. The total tonnage of hard coal was 801,925, of which 773,462 tons went through the United States canal and 28,463 tons through the Canadian canal.

SAVINGS BANKS. See **BANKS AND BANKING**.

SAXONY. The name Saxony is applied to three divisions of the former German Empire; the Republic of Saxony (formerly the Kingdom of Saxony); the former Grand Duchy of Saxony (now a part of Thuringia); and the Province of Saxony in Prussia.

REPUBLIC OF SAXONY. The third largest state of the German Republic; proclaimed a republic on Nov. 9, 1918. Area, 5786 square miles; population, according to the census of 1925, 4,994,281. The capital, Dresden, had a population in 1925 of 619,157. The largest city is Leipzig, with a population of 679,159. The other cities with over 100,000 in 1925 were Chemnitz, 335,982, and Plauen, 111,436. In 1928 the movement of population was: Births, 84,735; deaths, 54,987; marriages, 51,023. On May 1, 1927, there were 2129 public elementary schools with 16,977 teachers and 507,234 pupils. In 1929 the area under cultivation was 2,491,435 acres. Wheat, rye, barley, oats, potatoes, and hay are the chief crops. Livestock at the end of 1929 included 161,324 horses, 693,090 cattle, and 676,987 swine.

Textile manufacturing is the chief industry, followed by mining and metal working. In industry Saxony is rivaled only by the chief industrial provinces of Prussia. The coal output in 1928 was 4,042,000 metric tons and the lignite production, 11,937,000 metric tons. In 1928-29, 143 breweries produced 89,567,444 gallons of beer. For the fiscal year 1929-30, revenue totaled

406,971,769 marks and expenditure (ordinary and extraordinary) totaled 484,247,591 marks.

The German Social-Democrats held 33 of the 96 seats in the Diet elected May 12, 1929. Premier in 1930, Herr Brüner (German People's party), appointed June 25, 1929.

SCALE. See ENTOMOLOGY, ECONOMIC.

SCANDINAVIAN LITERATURE. This review includes the late books of 1929 in addition to the books of 1930, and is divided into Danish, Norwegian, and Swedish literature.

DANISH. Poetry. Hans Povlsen, the gifted prose-writer, surprised the critics with *I Himmerlands Dale* (In the Valleys of Himmerland), a volume of lyrics of extraordinary power. *Aske og Gløder* (Ashes and Burning Coals) by Olaf Gynt is expressive of deep emotion and shows great promise.

Fiction. In *Midt i en Jærntid* (Right in an Iron Age), which gives a cross-section of Danish life during the World War, Martin Andersen-Nexø shows himself more coldly intellectual than in his earlier works. Nevertheless, there are parts of the book in which pure sentiment shines through. Gunnar Gunnarsson's *Svarifugl* (Black-bird), a crime novel, is written in the usual melancholy vein of the author; yet it has in it that elevating and reconciling element also often found in his works—the idea that in the face of death differences of human fortunes disappear. Edvard Egeberg's *Mørk Tid* (Dark Times), an historical novel from the seventeenth century, has for its background the Torstensson wars in Jutland. In spite of the cruelty and misery that it portrays, the book leaves with one the feeling that things are essentially right. *Skærsilden* (Purgatory) by Johannes Buchholtz is the story of a young man who forever vacillates between two women. Marcus Lauesen's *En Mand gaar bort fra Vejen* (A Man Strays from the Road) suggests the influence of Pär Lagerkvist. The hero's straying is caused by his removal from his original environment. The characters are well defined and clearly drawn. Of collections of short stories may be mentioned Helge Rode's *Den Rejsende* (The Traveler), Aage Madelung's *Med Stav i Hånd* (Staff in Hand), and Edith Rode's *Afrodite smiler* (Aphrodite Smiles).

Literary Criticism, etc. In *Et Portræt* (A Portrait), a picture of Georg Brandes as a man, Henri Nathansen displays the same ability to analyze character that distinguished his novel, *Af Hugo Davids Liv*. Edvard Lehmann's *Grundtvig* is the first study that in a thorough and authoritative manner treats the different aspects of the great theologian's activities.

NORWEGIAN. Poetry. In *Norge i våre hjerter* (Norway in Our Hearts) Nordal Grieg aims to express the sentiments of the different classes in Norway. These poems are characterized not so much by technical perfection as by genuine feeling. Aase Kristoffersen's *Fiskerim* (Fishermen's Rimes) and Rudolf Nilsen's posthumous volume *Hverdagen* (Weekday) were well received.

Fiction. In *Våre gjerninger* (Our Actions), a psychological novel, Peter Egge shows how human lives are often changed by a single act. Olav Duun's *Medmenneste* (Fellow Men) treats the relationship between goodness and strength. Goodness without strength—this seems to be

the author's thesis—is impotent; and yet, this same goodness which is effective when constructively active in the service of humanity ceases to be good and hence loses its power as soon as it engages in destructive combat with evil. Sigurd Christiansen's *Riket* (The Kingdom) is the last part of a trilogy, the earlier parts being *Inngangen* and *Sverdene*. Its characters are strongly religious and resemble those of the earlier volumes in their conviction that man's inner life is the essential thing, while the external life is a matter of indifference.

Ronald Fangen's *Nogen unge mennesker* (Some Young People) touches the problems that for the last fifteen years have been occupying youth. Throughout we sense the author's conviction that in suffering lies not only life's riddle but also the solution of this riddle, that suffering is the bridge between man and God. *Folk ved sjøen* (People by the Sea) is somewhat different from most of Johan Bojer's works. Without any central theme, or even a definite plot, it impresses one as a collection of events or situations. In this book Bojer gives us less of himself and more of reality than usual. In *En fremmed i hans hus* (A Stranger in His House) Katharina Gjesdahl expresses the idea, not entirely new with her, that a marriage in which one side is very strong and overpowering is not an ideal one. Knut Hamsun again turned to his own youth for some of the material of *August*, a sequel of *Landstrykere*. In his usual manner he inveighs against the tendency in modern civilization known as "Americanism." Hans E. Kinck's posthumous volume, *Torvet i Cirta* (The Market Place in Cirta), contains two short stories. These express Kinck's pessimistic view of the political and literary world which he considers possessed with inordinate passion for fame.

Literary Criticism. Vetli Vislie's *Asmund Vinje*, written in Landsmål, combines the objective impartiality of a critic with the appreciation and understanding of a poet who interprets a fellow craftsman.

SWEDISH. Poetry. Albert Henning's *Den oroliga lågan* (The Restless Flame) shows a fine sensitiveness to nature. In *Jordens oro* (Earth's Restlessness) Bengt Nyström proved himself a master of the elegiac style. These poems have many characteristics that suggest Runeberg. Bertil Malmberg, whose earlier poems were written in an idealistic vein under the influence of Schiller, turned to a more realistic manner and a more pessimistic tone in *Vinden* (The Wind).

Fiction. Swedish literature sustained a great loss in the death of Birger Mörner. Rudolf Värnlund's *Det druckna kvarteret* (The Intoxicated Quarter) gives a realistic picture of a group of dissipated Stockholmers. Olle Hedberg's *Rymmare och fastlagare* (Fugitives and Captors) pictures the unsuccessful attempt of a young boy to get away from his environment. In *Resan till Rom* (The Journey to Rome), a volume of short stories, we find Hjalmar Söderberg in his usual rôle of the inimitable raconteur. In this volume, as in several others, he shows the immense influence exercised on human lives by little mistakes and misunderstandings. Other volumes of short stories deserving mention are Hjalmar Bergman's *Kärlek genom ett fönster* (Love through a Window), Erik Wilhelm

Olson's *Black botten* (Muddy Bottom), and Astrid Värings' *Vddeld* (Fire by Accident).

HISTORY AND CRITICISM. *Furstar och rebeller* (Princes and Rebels), a collection of biographical sketches in which Fredrik Böök brings his critical acumen to bear on the latest historical researches, shows several characters and events in an entirely new light. Gösta Attorps' *Pelle Molin* is not only a distinctive and valuable contribution to Molin criticism, but also a very readable work. See also **PHILOLOGY**, **MODERN**.

SCAWTITE. See **MINERALOGY**.

SCHILDKRAUT, shilt'krout, RUDOLF. A Jewish actor, died in Hollywood, Calif., July 15, 1930. He was born in Istanbul (Constantinople) in 1862, and attended the Vienna Conservatory of Music, studying under Mitterwurzer, but later chose the stage as his career. In 1893 he appeared at the Raimund Theatre in Vienna and after 1898 attracted much attention by his work in comedy at the Karl Theatre. Afterward he created a number of his more serious rôles, including several in Shakespearean dramas, in Hamburg and Berlin. In 1911 he came to the United States appearing for two years at the Irving Place Theatre in New York in German repertory and at several Yiddish theatres. He then returned to Germany, but came back to the United States again in 1920, making his English-speaking début in 1922 at the Provincetown Theatre in *The God of Vengeance*. Since 1926 he had been acting in motion pictures in Hollywood. He built up a repertoire both varied and extensive, including Shakespeare, Hauptmann, Sudermann, Shaw, Pinero, Oscar Wilde, and others. His interpretations of Skylock and Mephistopheles (in Reinhardt's production of Goethe's *Faust*) were considered masterpieces of histrionic art.

SCOTT-MONCRIEFF, CHARLES KENNETH. A British translator, died in Rome, Italy, Feb. 28, 1930. He was born in Lanark Co., Scotland, Sept. 25, 1889, and was graduated from Winchester College in 1908. He later attended Edinburgh University where he received the M.A. degree in 1914 and was Patterson bursar in Anglo-Saxon, 1913-15. During the World War he was a captain in the 3rd regiment of the King's Own Scottish Borderers. In 1920 he was appointed private secretary to Lord Northcliffe and in 1921 joined the editorial staff of the *London Times*. He resigned in 1923 to devote his entire time to translating, gaining recognition as an artist in that form of interpretation. His publications include authorized translations of the works of Marcel Proust, Stendhal, and Pirandello; also various volumes translated from Latin, Old English, and Old French, such as *Letters of Abelard and Héloïse*, *Beowulf*, and *The Song of Roland*.

SCRIBNER, CHARLES. An American publisher, died Apr. 19, 1930, in New York City where he was born Oct. 18, 1854. On graduation from Princeton in 1875 he became identified with the publishing house which his father had founded in 1846, the firm assuming the name of Charles Scribner's

Sons in 1879. After the death of his brother, J. Blair Scribner, in the latter year he assumed the presidency and founded *Scribner's Magazine* in 1887. He was also active in the organization of the American Publishers' Association, of which he was the first president.

SCULPTURE. Sculpture, always far behind other arts in America, added little to its development in a season meagre in all respects. As usual the exhibitions of sculpture alone were few. One of the better shows was the comprehensive exhibition of modern sculpture held at the Brooklyn Museum from the middle of May through the summer. It was principally but not entirely American—Hungarian, Russian, Italian, Mexican, and French sculptors being represented. There were in all 100 artists and 500 pieces of sculpture. The exhibition included memorial showings of the work of Charles Grafly and Charles Cary Rumsey.

The Sixth National Biennial Exhibition of Sculpture in the Open Air was held in Rittenhouse Square, Philadelphia. More than 150 pieces were shown and an unusual effect was gained by flood-lighting at night. The prizes were awarded as follows: The Fairmount Park Art Association Prize of \$1000 for the best outdoor decoration group to Oronzio Maldarelli for *Resignation*; the Art Alliance Prize of \$500 for a single figure suitable for the front of the Art Alliance building to Carl Milles for *Orpheus*; the Art Alliance Prize of \$500 to Arthur Lee of New York for *Rhythm*; the gold medal of the Garden Club of America to Albert Henry Atkinson of Boston for *Spirit of the Sea*.

Other exhibitions were a rather lively modern show at the Grand Central Galleries, New York, in February, and in the autumn a very interesting exhibition of 24 sculptured portraits ranging from early Egyptian and Chinese to modern French.

BIBLIOGRAPHY. Publications on sculpture during the year included the following: A. M. Rindge, *Sculpture*, "The contemporary point of view about the art of Sculpture"; A. H. Martinie, *La Sculpture* (L'Art Français depuis Vingt Ans); W. Ormsby Gore, *Florentine Sculptors of the Fifteenth Century*.

SEAGER, HENRY ROGERS. An American economist and educator, died in Kiev, Russia, Aug. 23, 1930. He was born in Lansing, Mich., July 21, 1870, and was graduated from the University of Michigan in 1890 and received the Ph.D. degree at the University of Pennsylvania in 1894. He later studied at the Johns Hopkins University and the Universities of Halle, Berlin, and Vienna. He was assistant professor of political economy at the University of Pennsylvania from 1896 to 1902, when he went to Columbia University. In 1905 he became full professor and soon was regarded as a leading authority on labor, trust, and insurance problems. He was made a member of several commissions, both State and national, to investigate labor conditions. During 1917-19 he was secretary of the Shipbuilding Labor Adjustment Board in Washington, and during 1919-20 executive secretary of the second Industrial Conference. At the time of his death he was traveling in Russia with a group of American economists engaged in investigating the five-year economic programme launched by the Soviet Government. He was president of the American Association for Labor Legislation from 1911 to 1913 and of the American Economic Association in 1922. In

addition to serving on the board of editors of the *Political Science Quarterly*, he wrote: *Introduction to Economics* (1904); *Economics, Briefer Course* (1909); *Social Insurance* (1910); *Principles of Economics* (1913); *History of the Ship-building Labor Adjustment Board, Washington, 1917-19* (1921); *Practical Problems in Economics* (1923); and *Trust and Corporation Problems* (1929).

SEGRAVE, SIR HENRY O'NEAL DE HANE. A British motorist and sportsman, died on Lake Windermere, June 13, 1930, when the motor boat, *Miss England II*, in which he was racing capsized. He was born in Baltimore, Md., Dec. 22, 1896, and was educated at Eton and Sandhurst. He served during the World War with the 2nd Warwickshire Regiment and the Royal Air Force, and in 1917 acted as private secretary to the Chief of Air Staff. At the close of the War he took up motor-racing as a hobby, winning many prizes for his international victories on both the road and track. The Sunbeam car which he drove at Daytona Beach, Fla., in 1927 made an average speed record of 203.79 miles per hour. In 1929 he raised this record on the same course, in the *Golden Arrow*, to an average speed of 231.36 miles per hour. He was rewarded with knighthood on his return to England for this feat. He met his death while practicing for the Harmsworth Trophy race to be held in Detroit in August, 1930, breaking the world's motor-boat speed record at more than 100 miles per hour. He was the author of *The Lure of Speed*.

SEISMOLOGY. Though earthquakes cannot be prevented, nor even successfully predicted, the knowledge to be obtained from a full and careful study of their phenomena and their effects will materially help the engineer to prevent serious damage by earthquakes. Because of the great difficulty of determining with certainty exactly what goes on near the epicentre in severe quakes, however, the observation and study of natural seismic phenomena is now being supplemented by elaborate experimental investigations with shaking platforms; in this way, e.g., valuable information may be obtained as to the stresses set up in engineering structures by movements resembling those that take place during quakes.

The Pasadena Seismological Laboratory and its six associated stations, established under the auspices of the Advisory Committee on Seismology formed in 1921 by the Carnegie Institution, have recorded 4800 local earthquake shocks in southern California during four years. The points of origin of nearly 4000 of these shocks were determined; the disturbances were found to originate mostly on known active geological faults, along which crustal adjustments and displacements were still taking place.

The earth movements which occur during quakes were being extensively investigated in Japan. A resurvey of the region shaken by the Japanese quake of 1923 had shown that the base line of the former triangulation was increased in length by 10 inches; many displacements of stations amounting to several feet were found, the maximum displacement being 12½ feet. Elevation and depression, amounting in some places to as much as 5 or 6 feet, took place over large areas. Imamura investigated the topographic

changes which accompanied 26 different quakes in Japan; in 12 of these, the changes were determined very accurately by one or more series of precise levels. Elevations of the land were in most cases confined to Tertiary or more recent formations, and depressions to pre-Tertiary; most of the changes were due to discontinuous tilting of mosaic blocks of the crust, but some were caused by rotational movements about vertical axes or by bodily vertical displacements.

Turner found that earthquakes with very deep foci seem to be confined to an area which covers the greater part of the Pacific Ocean.

An examination, by C. Davison, of the records of the earthquakes that had occurred during the last few centuries, showed that on the average about 14,000 or 15,000 people perish annually as a result of quakes.

BIBLIOGRAPHY. Many elaborate and important investigations of particular earthquakes, numerous contributions to the mathematical theory of the propagation of earthquake waves, studies of the interpretation of seismograms, etc., may be found in the *Bulletin of the Earthquake Research Institute of Japan*, and the *Bulletin of the Seismological Society of America*. The results of the seismological work done by the U. S. Coast and Geodetic Survey are summarized in periodical reports issued by this Survey; consult, in particular, *Special Publication 168*, "Progress of Seismological Investigations in the United States, July 1, 1927 to Jan. 1, 1930." SENEGAL, sē'negal'. A colony belonging to France on the west coast of Africa, under the Government of French West Africa (see FRENCH WEST AFRICA). Total area, 74,112 square miles; population in 1926, 1,318,287. Capital, St. Louis, with a population in 1926 of 19,746 (Europeans, 1038). Other important towns are Dakar, the seat of the Governor-General of West Africa and a fortified naval station; population, 1926, 33,697 (Europeans, 2939); and Rufisque, population, 8953 (Europeans, 799).

Cotton, peanuts, gum arabic, hides, and rubber, are produced for export. Total exports in 1928 amounted to 760,214,982 francs, of which 593,234,000 francs represented peanut shipments, and total imports to 885,017,452 francs (1 franc exchanged at \$0.0392). The local budget for 1929 was 134,442,000 francs. Dakar, Rufisque, and St. Louis are connected by a railway 165 miles in length, and there is another between Thiès and Kayes, a distance of 435 miles. Dakar is the only coaling station on the French West African coast. The administration is in the hands of a lieutenant-governor, assisted by a council of French citizens and representatives of the native chiefs. The colony sends one deputy to the French Parliament.

SERBIA. A former Balkan kingdom which was proclaimed in December, 1918, a part of the new unitary Kingdom of the Serbs, Croats, and Slovenes, later (1929) officially named Yugoslavia. In the new state Serbia was divided into two provinces, North Serbia, with an area of 19,286 square miles and a population, at the census of 1921, of 2,655,078, and South Serbia, with an area of 17,651 square miles and a population of 1,474,560. The former capital of Serbia (Belgrade) became the capital of Yugoslavia. It had a population in 1929 of 225,000. This admin-

istrative framework was radically altered in 1929 by a royal decree. See **JUGOSLAVIA**.

SEWAGE TREATMENT. See **SEWERAGE AND SEWAGE TREATMENT**.

SEWERAGE AND SEWAGE TREATMENT. The protracted litigation over the diversion of water from Lake Michigan to dilute the sewage of Chicago and convey it through the Chicago Drainage Canal and into the Mississippi River system was brought to a close by a decree of the United States Supreme Court early in the year putting into specific terms its decision of the previous year. The decree restricts diversion to 6500 cubic feet a second from July 1, 1930, to Dec. 31, 1935, then to 5000 feet until Dec. 31, 1938, and after that to 1500 feet, in addition to the water pumped from the lake for the domestic supply of the city. The Lake States, other than Illinois and Indiana, sought to have all diversion stopped on the ground of interference with navigation. The decision necessitated early completion of a programme of construction of sewage-treatment works by the Sanitary District of Chicago in progress for many years and partly executed in 1930. On July 1, the Sanitary District submitted the first of the semi-annual reports on progress, as required by the court decree. Works completed were capable of treating, to the extent required by the decree, the sewage of 1,144,000 people. An additional large new plant, known as the West Side, was put in partial use on June 3. The entire plant here was to have a daily capacity of 480,000,000 gallons, the treatment being sedimentation and sludge digestion in three groups of Imhoff tanks. For further details of the Chicago Sanitary District litigation and treatment works see earlier **YEAR BOOKS**.

Large sewerage and sewage-treatment projects were recommended for Buffalo, N. Y., and for Atlanta, Ga. The Buffalo project included intercepting sewers, two sewage-treatment plants and storm-relief sewers, at an estimated cost of \$23,000,000, and was advised in a report based on joint studies by city and consulting engineers. Of the two sewage-works one would employ sedimentation followed by the activated-sludge process, with the resulting sludge dried in glass-covered sand beds. The other works would rely on either sedimentation or fine screening, with chlorination in either case. The intercepting sewers would be able to serve a population of 1,000,000 in 1980, while the treatment works would be able to serve 720,000 people in 1945. The Atlanta project also included intercepting sewers, sewage-works and storm-relief sewers. These would serve a proposed metropolitan sewerage district of 175 square miles, at an estimated cost of nearly \$14,000,000. One of three outgrown sewage-works would be retained and two new ones would be built, all three plants to include sedimentation tanks, trickling filters and separate sludge-digestion tanks.

Preliminary work, mostly planning, continued on the 180,000,000-gallon activated-sludge plant on Ward's Island, in the East River, New York City, where sewage of a part of the city will be treated.

At San Antonio, Texas, a 30,000,000-gallon activated-sludge plant was under construction, with hope for completion by April, 1931. Sewage com-

ing to the plant would pass through a Venturi meter, revolving screens, grit chambers, pre-settling tanks, activation tanks, where compressed air will be diffused upward with a spiral-flow motion through the partly clarified sewage. The air will keep the sludge of finely divided solids of the sewage in motion, and constantly supplied with oxygen for activation. Next the sewage will go to final settling tanks. The excess sludge will be passed to heated digestion tanks, where its volume will be reduced by the production and elimination of gas. Finally the sludge will go to lagoons where it will lose moisture by evaporation from the surface and seepage into the earth. The screenings removed in the operations would be incinerated. Since 1901 the sewage of San Antonio has been conveyed to a 900-acre reservoir, from which it has been drawn for irrigating land. Growth of population has increased the volume of sewage beyond the capacity of the land. It was hoped that the utilization of the sewage on land, after treatment, might be continued. The plant outlined was designed to serve an ultimate population of 400,000.

Standard forms for reporting the operation of sewage-treatment works to facilitate comparisons of results and costs in different cities and from year to year in the same city, all to the end that efficiencies may be kept at a maximum, were proposed at the 1930 convention of the American Society of Municipal Improvements by its committee on sewerage and sanitation. Because of the many processes of treatment used singly or in combination nine forms were proposed, with a tenth and simpler form for small places. The nine heads proposed, of which some are for processes or partial processes and some for results of treatment, are: (1) Clarification; (2) biologic filters; (3) activated sludge; (4) clarified sewage; (5) contact area in settling chambers; (6) filter effluent; (7) fresh sludge; (8) gas; (9) activated-sludge plant effluent.

A new British work was Adams, *Modern Sewage Disposal and Hygienics* (London).

SHANDON, IGNATIUS JOHN O'BRIEN, FIRST BARON. An Irish peer and former Lord Chancellor of Ireland, died in London, Sept. 10, 1930. He was born in Cork, July 30, 1857, and attended the Catholic University of Ireland. He was admitted to the Irish bar in 1881 and to the Inner Bar in 1899, serving as bench of King's Inns in 1907 and as sergeant-at-law in 1910. In 1911 he was appointed Solicitor-General for Ireland by the Liberal Government during Lord Asquith's premiership, and the following year succeeded Redmond Barry as Attorney-General for Ireland. In 1913 he became Lord Chancellor of Ireland, retaining that office until 1918 in spite of several changes of government during the turbulent war years. In 1923 he was called to the bar of the Middle Temple. He was created a baronet in 1916 and a baron in 1918.

SHANTUNG, shǎn'tōng. One of the 30 provinces of China. Area, 55,970 square miles; population, estimated at 30,803,245. See **CHINA**.

SHEEP. See **LIVESTOCK**; **VETERINARY MEDICINE**.

SHIP, NAVAL. See **NAVAL PROGRESS**.

SHIPBUILDING. The total output of mercantile shipbuilding launched in 1930, according

to the annual summary of the mercantile shipbuilding of the world, compiled by *Lloyd's Register of Shipping*, was 2,889,472 tons, as against 2,793,210 tons in 1929. These figures, as usual, did not include warships, or the tonnage launched in Russia, concerning which complete information was not available, and took into account only merchant vessels of 100 tons gross and upwards, whether they were completed during the year or were under construction at its close.

The vessels launched in 1930 included 47 craft of 362,195 tons, which were to be fitted with steam turbines, including 7 vessels of 62,034 tons with final electric drive, and 16 vessels of 71,649 tons, having a combination of steam reciprocating engines and turbines, including one vessel of 5698 tons fitted with auxiliary electric drive. It was interesting to note that the tonnage of vessels launched during 1930 fitted with internal combustion engines amounted to 1,582,994 tons, as compared with 1,270,000 tons launched in 1929, the 1930 total exceeding by over 330,000 tons the world's output of steam tonnage. In 1929 the motor tonnage equaled 84.4 per cent of the steam tonnage. Of the total steam tonnage—1,252,000 tons—launched in 1930, about 552,000 tons refers to oil-burning steamers, and the fact developed that less than one-quarter of the world's output for the year depended exclusively upon coal for propulsion.

Of the 1084 vessels launched during the year, classified on a basis of size, 120 were between 4000 and 6000 tons; 155 between 6000 and 10,000 tons; 23 between 10,000 and 15,000 tons; and 7 were over 15,000 tons each. The four largest vessels launched during the year were as follows:

| | Tons | Built in |
|---|--------|---------------|
| Turbine S. S. <i>Empress of Britain</i> | 42,000 | Scotland |
| Turbine S. S. <i>L'Atlantique</i> | 40,945 | France |
| Turbo-electric <i>President Hoover</i> | 21,900 | United States |
| Motorship <i>Warwick Castle</i> | 21,000 | Ireland |

In 1930, excluding vessels of less than 1000 tons, 119 tankers of 889,865 tons were launched, of which 101 vessels of 778,854 tons were motorships. As usual, Great Britain and Ireland led in the output of shipping during the year, the following countries registering the largest tonnage of ships launched:

| | Tons |
|---------------------------|-----------|
| Great Britain and Ireland | 1,478,563 |
| United States of America | 246,687 |
| Germany | 245,557 |
| Holland | 153,072 |
| Japan | 151,272 |
| Denmark | 137,230 |
| Sweden | 131,781 |

The table on page 712 from *Lloyd's Register of Shipping* indicates the fluctuation in the yearly totals for world tonnage launched for the years 1913-1930. During the period 1926-30 the average tonnage launched annually in the world was about 20,000 tons less than the average tonnage for the five pre-war years, 1909-13. The following paragraphs give items of interest in regard to the tonnage launched in various countries during 1930.

GREAT BRITAIN AND IRELAND. The output of Great Britain and Ireland in 1930, 1,478,563 tons, though 44,060 tons less than for 1929, represented 51.2 per cent of the world's output for the year. The tonnage launched in England and Wales amounted to 727,381 tons; in Scotland 581,686

tons, and in Ireland 169,496 tons. Distributed by leading shipbuilding centres, the output was as follows: the Clyde, 508,289 tons; the Tyne, 323,750 tons; the Wear, 173,306 tons; Belfast, 168,606 tons; and the Tees, 111,416 tons. Of the total tonnage launched, 827,988 tons were for registration in Great Britain and Ireland, and 650,575 tons for owners in other countries, including 301,224 tons for Norway. The proportion for foreign owners—44 per cent—was the highest ever recorded, exceeding 40 per cent attained in 1908, and comparing with 17.1 per cent in 1929, and an average of over 22 per cent in the pre-war period—1909-1913.

During the year nine vessels of 10,000 tons and upward were launched, the largest of which was the quadruple screw turbine steamer, *Empress of Britain* (about 42,000 tons), which was the largest vessel launched in the world during 1930. The motorship, *Warwick Castle*, of about 21,000 tons, and the *Reina del Pacifico*, of 17,300 tons, were the two next largest craft. Excluding vessels of less than 1000 tons, 77 tankers of 550,475 tons, of which 68 of 510,791 tons were motorships, were launched during the year. There were 18 vessels, the total tonnage, 119,121 tons, fitted with steam turbines, two of which, 11,845 tons, had electric drive. In addition, nine vessels of 53,145 tons were launched with a combination of reciprocating engines and low pressure steam turbines, including one having auxiliary electric drive. There were launched during the year 141 motorships of 759,282 tons, exceeding by 47,000 tons the steam tonnage launched in Great Britain. Seventy-six of the motorships were between 6000 and 10,000 tons each; 7 over 10,000 tons, of which the largest, the *Warwick Castle* (about 21,000 tons) was the largest motorship launched in the world during the year.

GERMANY. During 1930, 92 vessels of 245,557 tons were launched, or a decrease of 3520 tons from 1929. There were 8 vessels of 55,883 tons fitted with steam turbines, and 6 vessels of 16,904 tons with a combination of reciprocating steam engines and low pressure turbines. There were 31 motorships of 117,205 tons, the largest of which were the *Monte Pascoal* and *Monte Rosa*, of about 14,000 tons each. Nine tankers of 86,977 tons were launched, one of which was a steamer. Six vessels launched in Germany exceeded 10,000 tons each, and 48 of 124,178 tons, or over 50 per cent of the total output, were intended for other countries, including three vessels of 35,470 tons for Danzig, and 19 of 34,598 tons for France.

HOLLAND. The total tonnage launched in Holland during 1930 was 153,072 tons, or 33,445 less than in 1929, excluding, of course, vessels for river navigation which amounted to a considerable tonnage. Of the 12 vessels of over 6000 tons each launched, all motorships, three exceeded 10,000 tons each, the largest being the *Dempo* of about 16,000 tons. There were 51 vessels of 128,195 tons to be fitted with internal combustion engines, a tonnage representing 83¾ per cent of the total output. Four tankers, of which three were motorships of 18,093 tons, and one a steamer of 5209 tons, represented the craft of over 1000 tons built for this purpose.

JAPAN. This country, with an output of 151,272 tons, showed a decrease of 13,185 tons from 1929, but the list included several notable craft, among 28 motorships of 123,894 tons. These were the *Yasukuni Maru* of 11,930 tons, the *Hiye Maru* of 11,622 tons, and the *Heian Maru* of about 11,000

tons, together with 8 others exceeding 6000 tons each. The motorship tonnage accounted for nearly 82 per cent of the total output of the year.

DENMARK. This country, with 137,230 tons launched in 1930, had not only 25,734 tons more than in the previous year, but with a single exception, 1928, when 138,712 tons were launched, a record output. The motorship tonnage amounted to 120,262 tons, including 16 vessels ranging from 4500 tons to 7300 tons and one of 9850 tons, which was the largest vessel launched during the year. Practically one-half of the tonnage launched was for Norwegian owners.

SWEDEN. The year 1930 recorded the highest output ever reached—namely, 131,781 tons, an increase of 24,535 tons over 1929. There were 21 motorships of 119,417 tons, or over 90 per cent of the total launched. Of these 11 were between 6000

and 10,000 tons. Nine tankers, all with internal combustion engines, amounted to 69,082 tons. Fifteen of the motorships of 86,813 tons were built for Norwegian owners.

FRANCE. An output for the year of 100,917 tons was comparable with 81,607 tons for 1929, and included 20,167 tons of motorships, of which the *Georges Philippiar* of 16,990 tons was the largest. There were four other craft exceeding 7500 tons, of which the turbine steamer, *L'Atlantique*, of 40,945 tons, was the largest vessel launched outside the United Kingdom during the year.

ITALY. With 87,709 tons, there was an increase of 16,212 tons over 1929, which included 15 vessels fitted with internal combustion engines amounting to 71,361 tons. The quadruple screw motor vessel, *Victoria*, of 13,500 tons, was the largest vessel launched from Italian shipyards

TABLE SHOWING THE NUMBER AND GROSS TONNAGE OF MERCHANT VESSELS OF 100 TONS GROSS AND UPWARDS LAUNCHED IN THE VARIOUS COUNTRIES OF THE WORLD DURING THE YEARS 1913-1930—LLOYD'S REGISTER OF SHIPPING

| Year | Austria-Hungary | | Belgium | | British Dominions Coasts | | Canadian Lake Ports | | Denmark | | France | |

Supplied with Turbine-Electric Drive
AMERICAN STEAMSHIPS OF 1930

during the year, and there was launched in addition, a tanker, the *J. A. Mowinkel*, of 11,330 tons.

UNITED STATES. *Lloyd's Register* reported for 1930, 246,687 tons, as against 126,063 in 1929, or

of 10,724,030 gross tons on June 30, 1929. The accompanying table is an analysis of the ownership of American seagoing tonnage in 1930 compared with the previous year.

UNITED STATES MERCHANT MARINE

| Ownership and date | Steel | | Wood | | Total | |
|---|--------|------------|--------|------------|--------|------------|
| | Number | Gross tons | Number | Gross tons | Number | Gross tons |
| Private ownership (500 gross tons and over): | | | | | | |
| July 1, 1929 | 1,433 | 7,018,726 | 520 | 643,770 | 1,953 | 7,662,496 |
| July 1, 1930 | 1,449 | 7,207,405 | 482 | 610,961 | 1,931 | 7,818,366 |
| U. S. Shipping Board (1,000 gross tons and over): | | | | | | |
| July 1, 1929 | 628 | 3,315,692 | ... | | 628 | 3,315,692 |
| July 1, 1930 | 478 | 2,663,879 | ... | | 478 | 2,663,879 |
| Total, 1929 | 2,061 | 10,334,418 | 520 | 643,770 | 2,581 | 10,978,188 |
| Total, 1930 | 1,927 | 9,871,284 | 482 | 610,961 | 2,409 | 10,482,245 |

17.5 per cent of the total output outside of Great Britain and Ireland, and the highest recorded since 1921. Of the tonnage launched, 81 vessels of 208,361 tons were built on the Atlantic Coast, 8 vessels of 32,675 tons on the Great Lakes, and 10 vessels of 5266 tons on the Pacific Coast. The largest vessel launched during 1930 was the *President Hoover*, a turbo-electric vessel of about 21,900 tons for the Dollar Line built at Newport News. There were 13 other vessels of over 8000 tons launched. Twelve turbine steamers of 110,395 tons were included in the 1930 output, and four vessels of 28,289 tons, in which electric drive was employed. Internal combustion engine tonnage accounted for 71,854 tons, while 13 oil tankers of 104,674 tons were launched, seven of which, of 55,563 tons, were motorships.

SHIPMAN, THE RT. REV. HERBERT, Protestant Episcopal Suffragan Bishop of the Diocese of New York, died in New York City, Mar. 23, 1930. He was born in Lexington, Ky., Aug. 3, 1869, and was graduated from Columbia University in 1890 and from the General Theological Seminary in 1894, in which year he was ordained a deacon in the Protestant Episcopal Church and a year later was advanced to the priesthood. The first period of his ministry was spent as assistant rector of Christ Church in New York City, of which his father was rector. In 1896 he was appointed chaplain of the U. S. Military Academy at West Point, an office which he held for nine years. After leaving West Point he became assistant rector of the Church of the Heavenly Rest in New York City and as rector from 1907 to 1921. During the World War he was chaplain of the 104th Field Artillery and served in France as senior chaplain of the 1st Army Corps, taking part in the Meuse and Argonne offensives. He was chosen Suffragan Bishop of the Diocese of New York in 1921. His ministry had been marked by a keen interest in social service work, and after his election as bishop he devoted particular attention to the religious needs of the large metropolitan Negro population, and also the outlying rural parishes. The D.D. degree was conferred on him by George Washington University in 1918 and the S.T.D. degree by Columbia University in 1922.

SHIPPING. The U. S. Commissioner of Navigation, in his annual report for the fiscal year ending June 30, 1930, stated that on that date the merchant marine of the United States, including all kinds of documented craft, comprised 25,214 vessels of 16,067,725 gross tons, of which 2105 seagoing vessels of 10,233,125 gross tons were of 1000 tons or over, as compared with 2256 vessels

The Commissioner of Navigation also stated in his report that since June 1, 1921, the coasting trade of the United States, exclusive of the trade on the Great Lakes, had increased 4,953,981 gross tons. This growth could be compared with a decrease of 2,526,063 gross tons in the total seagoing tonnage during the same nine years.

During the fiscal year 1930, 1020 vessels of 254,296 gross tons were built and documented in the United States, and on July 1, 1930, there were building or under contract to build in American shipyards 291 vessels of 486,602 gross tons. In 1929 corresponding figures were 808 vessels of 128,076 gross tons built, and 218 vessels of 169,862 gross tons under contract. In the 1930 new tonnage were included 2 steel passenger vessels of 29,892 gross tons, 7 steel cargo vessels of 48,427 gross tons, 2 steel steam ferries of 6654 gross tons, 2 steel passenger motorships of 9527 gross tons, 1 steel cargo motorship of 1605 gross tons, and 6 steel motorship tankers of 39,981 gross tons, aggregating 136,086 gross tons.

On June 30, 1930, the laid-up seagoing tonnage of the United States aggregated 541 vessels of 2,096,179 gross tons, as against 569 vessels of 2,232,449 gross tons on June 30, 1929.

INTERNATIONAL CONVENTION ON LOAD LINES. The International Convention on Load Lines met in London from May 20 to July 5, 1930, when a comprehensive convention was signed by the United States and the following other maritime countries: Germany, Australia, Belgium, Canada, Chile, Cuba, Denmark, Free City of Danzig, Spain, Irish Free State, Finland, France, Great Britain and Northern Ireland, Greece, India, Iceland, Italy, Japan, Latvia, Mexico, Norway, New Zealand, Paraguay, Netherlands, Peru, Poland, Portugal, Sweden, and the Government of the Union of Socialist Soviet Republics. The work of this convention must be considered very largely as supplemental to the Convention of 1929 on Safety of Life at Sea, held in London, at which on May 31 an international convention was signed by the United States and 17 foreign maritime nations. This convention, discussed in the *YEAR BOOK* for 1929, page 740, subsequently was ratified by a number of countries.

The U. S. Commissioner of Navigation, in his report for 1930, stated that the conventions of 1929 and 1930 were undoubtedly the most important and effective steps ever taken by maritime nations to promote safety of life at sea, and he expressed the hope that the United States Senate would consent to their ratification.

On Sept. 2, 1930, the Act to Establish Load Lines for American Vessels approved Mar. 2, 1929,

WORLD TONNAGE

NOTE.—A considerable number of vessels which are not yet completed appear in this table. Steamers of less than 100 tons gross and sailing vessels of less than 100 tons net are not included. Vessels trading on the Caspian Sea and wood or composite vessels trading on the Great Lakes of North America are not included. In the absence of satisfactory information, the records of most of the sailing vessels belonging to Greece, Turkey, and southern Russia are omitted from this table. Japanese sailing vessels are not reported in Lloyd's Register and therefore do not appear in this table. Under the heading "Country not stated" are included all vessels entered in Lloyd's Register without record of flag because definite information had not been received at the time of going to press, and under "Other countries" are grouped the figures for a number of countries because the tonnage owned by each country is comparatively small and therefore is not shown separately.

became effective, and the U. S. Bureau of Navigation, through a load-line division, conducted a survey with a view to learning the commercial practices of different types of ships engaged in various trades that experience had demonstrated might be followed with safety to life and property. As a result of this study, regulations were prepared for the establishment of load lines for American vessels of 250 gross tons and over, en-

gaged in foreign trade (the Great Lakes excepted). In these regulations the conclusions of the International Convention on Load Lines signed in London on July 5, 1930, already referred to, were freely adopted where they were applicable to the American vessels subject to the act.

The importance of the transportation of petroleum and its product is revealed by the fact that in 1930 over 10 per cent of the World tonnage was enrolled in this field. On June 30, 1930, there were 2,668,441 gross tons of tankers under the British flag compared with 2,484,126 gross tons under the United States flag. The total figures for the World tonnage were 7,753,059, from which it can readily be seen that two-thirds of all the World tonnage are owned by Great Britain and the United States together. If the tankers owned in the United States and operated under foreign flags should be added to the American flag fleet, it would be found that America possessed the greatest tonnage of this class in the World. As showing the immense impetus which this branch of shipping has received, it may be stated that on June 30, 1914, just prior to the outbreak of the World War, the United States had only 150,685 gross tons and Great Britain 837,410 tons, the total World tonnage on that date being 1,441,196 tons. While the World fleet increased over 500 per cent since 1914 and the British fleet increased over 300 per cent, the American fleet increased over 1600 per cent in this period of sixteen years. In the World tonnage figures for tankers Norway is third, possessing nearly one million tons, followed by Italy with about 300,000 tons, then the Dutch, the French, and the Germans, in that order. The total cargo capacity of the entire fleet of American tankers is 1,219,306,000 gallons or approximately a capacity of 10 gallons for every man, woman and child in the United States.

During the year there was a world-wide decline in overseas trade, which was indicated by a recession in freights, and in an increase in the idle shipping for the various countries of the world. According to *Commerce Reports* at the end of the year, there were about 8,276,000 gross tons

IDLE STEAM AND MOTOR SHIPPING OF THE PRINCIPAL MARITIME COUNTRIES

* Refers mainly to countries listed above.

of shipping laid up, or an increase of 5,058,000 tons over January 1. As the accompanying table indicates, Great Britain suffered most with approximately 1,445,000 tons idle, while the United States had an increase principally of privately owned shipping. Germany also suffered in what was beginning to be a promising carrying trade.

From all of the leading commercial countries of the world, reports came of the decline in overseas trade, which was particularly noticeable in considering the statistics of the Panama and Suez Canals (q.v.). In the case of Great Britain, the British Board of Trade, in its index figures for the year, placed the total imports in 1930 at 108.1, as compared with 110.9 in the previous year; the exports of imported merchandise at 81.1, as compared with 84.8; and the British exports at 88.7, as compared with 108.3. Net imports fell from 114.0 in 1929 to 111.4 in 1930. Further statistics, as far as available, are given in sections under *Commerce* under the various countries.

SHIPWRECKS. See **SAFETY AT SEA.**

SHOES. SHOE INDUSTRY. See **BOOTS AND SHOES.**

SHOOTING. The Argentine Challenge Cup, emblematic of the world's championship in rifle-team shooting, passed into the hands of the United States team at Antwerp, Belgium, in 1930, after having been held by Switzerland continuously since 1924. Individual winners in the international events were: Standing position, Pattersen, Denmark; kneeling position, Dr. Emmett Swanson, Minneapolis, U. S. A.; prone position, Lindgren, Finland; all-round, Oksa, Finland.

A total of 3500 marksmen competed in the United States national rifle championship matches held at Camp Perry, Ohio. The U. S. Marine Corps team, with a score of 2805 out of a possible 3000, won the team title, while individual honors were awarded Sergeant Salvatore Bartletti of the 113th N. J. Infantry, who scored 290 out of 300. Sergeant R. L. Speers, of Fort Crook, Nebr., won the President's Cup. The King's Prize for the rifle-shooting championship of the British Empire was won for the first time by a woman—Miss Marjorie Foster, who scored 280 out of a possible 300 at Bisley, England. In the national pistol-shooting events at Camp Perry, the individual championship was won by Marine Sergeant H. M. Bailey of Waterboro, S. C., with a score of 262 out of 300, and the team championship by the U. S. Marines, who scored 1304 out of a possible 1500.

The outstanding event of the trapshooting season was the winning of the Grand American Handicap at Vandalia, O., in August by Alfred Ruffus King Jr., 14 years old, of Wichita Falls, Tex. Gus Payne, of Cleveland, retained his North American amateur title. The women's North American title was won by Mrs. J. A. Murphy of Freehold, N. J., the North American professional title by Howard Benson of Pontiac, Mich., and the United States amateur championship by S. M. Crothers, of Chestnut Hill, Pa.

SIAM, si-ám. An independent monarchy in southeastern Asia, bounded on the east, north, and west by French Indo-China, Burma, and the Bay of Bengal and on the south by the Federated Malay States and the Gulf of Siam. Capital, Bangkok; reigning King in 1930, Prajadhipok, of Sukhodaya.

AREA AND POPULATION. With an area of 200,149 square miles, Siam supported a population of

11,506,207 (preliminary figure) at the census of 1929, as compared with 9,207,355 in 1920. There were some 8,000,000 of the Thai people, or original Siamese, about 500,000 Chinese, and a considerable Malay element in the south. Migration statistics for the five years ending in 1928 showed arrivals of 182,699 at Bangkok and on the southern frontier and departures of 127,832. Bangkok, the chief port and principal city, had 550,000 inhabitants in 1927. The population is mainly Buddhist in religion.

EDUCATION. About 50 per cent of the population are said to be literate. Education is supervised by a Cabinet official. In 1927-28, there were 534,474 pupils in the primary schools, 13,934 in secondary schools, and 1321 in special schools. Private and missionary schools enrolled 32,555 pupils in 1926-27. Over 90 per cent of the local schools, and 60 per cent of the Government schools are located in Buddhist temples.

PRODUCTION. Of the 7,296,000 acres (6 per cent of the total area) devoted to the principal crops in 1927-28, nearly 90 per cent was under rice cultivation. The 1928-29 rice crop totaled 3,851,350 metric tons, or 15 per cent less than in 1927-28 and 26 per cent less than the record 1926-27 harvest. The poor rice crop and the practical closing of the Chinese market for rice as a result of disorders there resulted in a serious business depression in 1929, which continued during 1930. Corn, sesame, peas, cotton, tobacco, pepper, and rubber are other crops. Livestock in 1928 included 4,256,000 cattle, 4,440,000 buffaloes, 9200 domesticated elephants, and 283,000 horses. Fishing, the extraction of teakwood, mining, and rice milling are other leading industries. A total of 142,535 teak logs passed through the Government revenue station in 1929. Exports of stick-lac for the fiscal year ended Mar. 31, 1929, totaled 7,658,000 pounds, or 77 per cent more than in 1927-28. Tin is the principal mineral produced, the output in 1929 being 8027 tons (7938 in 1928). Tungsten, lignite, iron, antimony, copper, zinc, and coal are other minerals found. Of nearly 300 rice mills in the country, about 80 are in Bangkok. Sawmills, tanneries, and small factories for the manufacture of bricks, soap, tobacco, etc., are located principally in Bangkok also.

COMMERCE. For the fiscal year ended Mar. 30, 1930, exports totaled 219,800,000 bahts (about \$96,712,000), as against 252,500,000 bahts (about \$111,100,000) in 1928-29. Imports increased to 206,700,000 bahts (about \$90,950,000) from 180,800,000 bahts (\$79,550,000) in the previous year. The baht equaled \$0.4424 at par. In 1928-29, 37 per cent of the exports went to Singapore and 24.5 per cent to Hong Kong, mainly for transshipment. Of the imports, 18 per cent were from the United Kingdom, 14.6 per cent from Hong Kong, 10.9 per cent from Singapore, and 4.9 per cent from Japan. The chief exports in 1928-29 were: Rice, \$77,696,000; tin ore, \$8,861,000; teakwood, \$4,973,000. Cotton piece goods, cigarettes, iron and steel, gunny bags, machinery, kerosene, medicines and drugs, sugar, and silk piece goods were the leading imports.

FINANCE In the budget for 1929-30, revenues were calculated at 106,440,000 bahts and expenditures at 106,267,000 bahts, as compared with estimated revenues of 100,628,000 bahts and expenditures of 99,982,000 bahts in 1928-29. Actual returns for 1927-28 showed receipts of 117,442,000 bahts and expenditures of 117,391,000 bahts. The

public debt on Mar. 31, 1930, stood at £11,385,000 (\$55,405,000) and was floated entirely in London.

COMMUNICATIONS. The Siamese railways, for the most part government-owned and operated, form one of the most efficient systems in the Far East. In 1928, there were 1739 miles of railway line on which 6,683,000 passengers and 1,379,000 tons of freight were carried, with gross receipts of 20,585,000 bahts. There were 654 miles of unsurfaced highways in 1930. The telegraph and telephone systems, also government-owned, had a combined total of 4304 miles of line and 8236 miles of wire in 1928. At Bangkok, which handles 85 per cent of the foreign trade, a total of 1075 vessels of 1,151,880 net registered tons entered and 1079 vessels of 1,158,309 tons cleared during the year 1928-29.

GOVERNMENT. Executive power is vested in the King, who is assisted by a consultative council of four elder statesmen of the royal household, and by an advisory cabinet council consisting of the ministers of state and other high officials. The cabinet council functions as the legislative arm of the government. King Prajadhipok, who was born Nov. 8, 1893, succeeded to the throne on the death of his brother, Rama VI, on Nov. 26, 1925.

SIBERIA. A vast area of northern Asia, forming part of the Union of Soviet Socialist Republics and divided administratively as follows:

SIBERIA: ADMINISTRATIVE UNITS

| | Area sq. km. | Population 1926 |
|------------------------------|-----------------|--------------------|
| Far Eastern Area | 2,846,323 | 1,805,837 |
| Yakutsk Republic | 3,769,000 | 236,728 |
| Buriat-Mongol Republic | 419,000 | 484,363 |
| Ural Area * | 1,655,700 | 6,791,875 |
| Total | 8,690,023 | 9,318,803 |

* Includes a small section of European Russia.

About 90 per cent of the population is engaged in agriculture and stock raising, with mining, lumbering, hunting, and fishing as other important occupations. Siberia is one of the world's most important sources of furs and its vast mineral and forest resources remain for the most part untouched.

The FAR EASTERN REGION accounts for 40 per cent of the mining and manufacturing output. Its largest city and port, Vladivostok, with a population of 110,000, has the largest trade of any Soviet port. While over 60 per cent of the Far Eastern Region remains unsurveyed, more than 700 deposits of coal, oil, gold, iron, copper, silver, lead, zinc, manganese, sulphur, tungsten, platinum, and other metals and precious stones have been found in the prospected sections (see SAKHALIN). There are about 200,000,000 acres of commercial timber in the region. Fishing, wood working, and flour milling are the chief industries. Railways are fairly well developed and many navigable rivers serve as means of transportation.

The adjoining YAKUTSK REPUBLIC on the west has about 625,000,000 acres of forest area. Hunting and gold mining are the two leading industries. Yakutsk, the chief city (population, 10,513), is linked with Irkutsk by air line. A severe climate and lack of railways retard its economic development. Cattle breeding is the chief occupation of the people of the BURIAT-MONGOL REPUBLIC, to the south of the Yakutsk Republic. In 1926 there were 801,400 cattle in the region. Leather

and glass industries are maintained, chiefly in Verkhneudinsk, the largest town (population, 29,271).

The SIBERIAN AREA proper is the most important section agriculturally, producing about 17 per cent of the grain as well as 15 per cent of the fur output of the whole of Soviet Russia. It extends from Mongolia to the Arctic between the Yakutsk Republic on the east and the Ural Area on the west. The capital, Novo-Sibirsk, has 120,701 inhabitants. Other large cities of the region are Omsk (161,475), Irkutsk (98,979), and Tomsk (92,485). The area under cultivation in 1929 was about 20,000,000 acres, or 13 per cent higher than in 1913; large quantities of wheat are exported annually. The Kusnetsk Basin in the Siberian Area is estimated to contain 388,000,000,000 metric tons of coal and the Cheremkhov and Minusinsk Basins hold other rich deposits. The extensive iron-ore deposits of Telbes are in the Kusnetsk Basin. Copper and other non-ferrous ores are widely distributed.

Sverdlovsk, with a population of 135,494, is the leading city of the URAL AREA. Perm, with 119,420 inhabitants, ranks next in size. Wheat, oats, rye, and barley are grown in fertile valleys of the Ural foothills. Iron, manganese, coal, graphite, and gold are the principal minerals extracted and a considerable metallurgical and chemical industry has developed. The Trans-Siberian Railway, which extends 4491 miles from Sverdlovsk to Vladivostok, is Siberia's main transportation line. See RUSSIA.

SIERRA LEONE, sē-ēr'ra lē-ō'nē. A British colony and protectorate on the west coast of Africa; bounded by French Guinea on the north and Liberia on the southeast. The approximate area of the colony is 4000 square miles and the population, according to the census of 1921, 85,163, of whom 1161 were Europeans. The chief city is Freetown, with a population in 1921 of 44,142. Freetown is the chief seaport in West Africa, being a coaling station and the headquarters of the British Imperial forces in West Africa. Vessels entered and cleared in the foreign trade in 1928 aggregated 4,774,831 tons. The total exports in 1928 amounted to £1,829,093; imports, £2,054,507; revenue, £826,318; expenditure, £815,373; public debt (Dec. 31, 1928), £1,787,673. The total railway mileage open was 339 miles.

The adjoining protectorate has an area of 27,000 square miles; population, according to the census of 1921, 1,456,148, of whom 1,450,903 were natives. The chief exports are palm kernels, kola nuts, palm oil, and ginger. It is divided into three provinces, with a European commissioner at the head of each. The governor and commander-in-chief of the colony is also governor of the protectorate. He is assisted by an executive and legislative council. Governor and Commander-in-Chief in 1930, Brig.-Gen. Sir J. A. Byrne, succeeded by A. W. Hodson, former Governor of the Falkland Islands. For settlement of boundary dispute with Liberia, see LIBERIA.

SILESIA, sl-lē'sha. The term applied to (1) a province of Czechoslovakia, including the former Austrian crownland of Silesia and a small section of Germany ceded by the Versailles Treaty; area, 1708 square miles; estimated population Jan. 1, 1929, 735,532, (2) a county of Poland, including 1241 square miles detached from German Upper Silesia following a plebiscite in 1921 and Teschen Silesia, detached from Austria, by the Versailles Treaty; total area, 1633 square

miles; population at the census of 1921, 1,124,967, and (3) the two Prussian provinces of Lower Silesia and Upper Silesia, the respective areas of which on Apr. 1, 1925, were 10,276 and 3746 square miles; respective populations on the same date, 3,132,328 and 1,379,278.

SILESIA, UPPER. For Polish-German riots in 1930, see **POLAND** and **GERMANY** under *History*.

SILK, ARTIFICIAL. See **RAYON**.

SILK. The 1930 raw-silk crop of the world was considerably below that of 1929 which as indicated in the accompanying table was the largest on record.

the leading producer, with the United States second with 50,400,000 ounces, and Canada third with 26,200,000 ounces. This production compared with 260,900,000 ounces for 1929 by the same authority, or 261,715,021 ounces according to the annual report of the Director of the Mint. This report of the world's production is summarized in the table below.

It will be recalled that the major part of the silver produced comes as a by-product of the metallurgy of copper and zinc. Production does not depend entirely on the price of the metal.

The position of silver in world markets depends

* Estimated.

^b The total production of raw silk in Asia is an unknown quantity, therefore experts' figures have been used.

^c Excludes tussah silk.

The exports from Canton and Shanghai during the season 1929-30 were 21,000,000 pounds. The Japan crop was estimated at 93,400,000.

In 1930, raw silk again figured as the largest single commodity in dollar value imported into the United States, comprising 8.6 per cent of the total value of merchandise imported as against 9.7 per cent in 1929. During the year there was 73,733,278 pounds of raw silk imported, representing a total value of \$262,912,729. This compared with 87,067,949 pounds in 1929, representing a value of \$427,126,383. There was, therefore, a decrease in 1930 of 15.3 per cent in poundage and of 38.5 per cent in value. The average value per pound was \$3.57 in 1930, against \$4.91 in 1929.

SILVAIN, EUGENE. A French actor, died in Marseilles, Aug. 21, 1930. He was born in Bourg, Jan. 17, 1851. Making his debut at the Comédie Française in 1878, he appeared for almost 50 years on that stage, and in 1925 was awarded the title of honorary dean. His classical repertoire included: *Polyeucte*, *Le Cid*, *Phèdre*, *Mithridate*, and *Le Misanthrope*. He also appeared in such contemporary French plays as *Les Burgraves*, *Le Père Lebonnard*, *Grisélidis*, *Par le Glaive*, and *La Femme de Tabarin*. His wife, LOUISE SILVAIN, also a member of the Comédie Française, died in Paris on Oct. 20, 1930.

SILVER. During 1930 the output of silver suffered a marked decline due to falling prices for the metal, which made low records for all time. Opening on January 2 at 46½ cents an ounce in New York, and 25½ d. in London, silver closed at 30¾ cents in New York on December 30, and 14½ d. in London on December 31. Many of the mines were forced by low prices to shut down their production which, for the total world, was estimated by Handy and Harman of New York City at 243,700,000 fine ounces, of which Mexico was

in large measure on political and economic conditions in China, which is the world's chief consumer, and which was suffering from civil war, crop failures, tax uncertainties, trade dues, and other manifestations of unsettled and revolutionary conditions. As a result, large quantities of silver flowed to Shanghai for safekeeping, so that the stocks on hand at that city increased from 107,900,000 ounces on Jan. 1, 1928, to 192,400,000 ounces on Jan. 1, 1930, and to 216,200,000 ounces on Nov. 15, 1930. In India an import duty was fixed on silver and also an excise tax on new silver mined in that dominion. Here, also, the Government policy figured and contributed to world conditions. In France the Government was accumulating silver to replace badly worn paper notes with silver coins, having in its vaults more than enough silver to meet the coinage needs. French Indo-China was also a factor, due to its sale of silver, practically disposing of all of its silver stock in 1929 and 1930. Mexico forbade the

importation of silver coin and suffered greatly by the low price of the metal. In the United States there was a 10 per cent price reduction made by manufacturers of silver wear, and the total production for the year was 48,637,798 ounces valued at \$18,725,552, as compared with 61,233,321 ounces valued at \$32,840,042 in 1929.

The U. S. Bureau of the Mint, with the cooperation of the Bureau of Mines, made the accompanying preliminary estimate of refinery production of silver in the United States during the calendar year 1930:

PRODUCTION OF SILVER IN THE UNITED STATES IN 1930

[Arrivals at United States Mints and Assay Offices and at private refineries]

| State | Ounces | Value * |
|--------------------------|------------|--------------|
| Alaska | 405,336 | \$ 156,054 |
| Alabama | | |
| Arizona | 5,191,474 | 1,998,718 |
| California | 1,484,458 | 571,516 |
| Colorado | 4,435,121 | 1,707,522 |
| Georgia | 23 | 9 |

| Washington | 87,461 | 14,423 |
| Wyoming | 216 | 83 |
| Philippine Islands | 117,108 | 45,087 |
| Total | 48,637,798 | \$18,725,552 |

* Value at 38.5¢ per ounce, the average New York price of bar silver.

Comparison with 1929 production indicates a decrease in 1930 of 12,690,070 ounces of silver. Comparison with the year of largest production, 1915, when silver amounted to 74,961,075 ounces, gives a reduction of 26,323,277 ounces of silver.

SILVERMAN, JOSEPH. An American rabbi, died in New York City, July 26, 1930. He was born in Cincinnati, Ohio, Aug. 25, 1860, and was graduated from the University of Cincinnati in 1883. Ordained a rabbi the following year, he successively served as minister of Temple Emanu-El in Dallas, Texas (1884-85); Congregation Benai Israel in Galveston, Texas (1885-88); and Temple Emanu-El in New York City (1888-1922). During 1900-03 he was president of the Central Conference of American Rabbis, and during 1917-19 president of the Eastern Council of Reform Rabbis. He was a member of the Mohawk Peace Conference during 1911-13, and vice president of the International Peace Forum and associate editor of the *Peace Forum Magazine* in 1913. He was also a member of the national executive committee of the Zionist Organization of America and was active in the movement sponsored by that society to establish a Jewish homeland in Palestine. The D.D. degree was conferred on him by the Hebrew Union College in 1884 and the D.H.L. degree by New York University in 1924. Besides pamphlets on various theological and Jewish subjects, he was the author of *Catechism on Judaism* (1886) and was for a number of years corresponding editor for the *Jewish Encyclopædia*.

SIMMONS COLLEGE. A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1930, was 1542, distributed among the following schools: Household economics, 270; secretarial studies, 505; library science, 244; general science, 82; social work, 189; store-service education, 62; public-health nursing, 176; landscape architecture, 7; physical education, 7. There was an enrollment of 208 in the 1930 summer session. The faculty numbered 140. The productive funds of the institution amounted to \$3,351,969 and the income for the year was \$541,010. The library contained 49,829 volumes. President, Henry Lefavour, Ph.D., LL.D.

SINGLETON, ESTHER. An American author, died in Stonington, Conn., July 2, 1930. She was born in Baltimore, Md., but had resided in New York City since 1887. For several years she was employed on the editorial staffs of various works of reference, and at the time of her death was editor of *The Antiquarian*, with which she had been connected since 1923. She was the author of more than 50 volumes covering a wide variety of subjects. Among these are: *Turrets, Towers, and Temples* (1898); *The Furniture of Our Forefathers* (2 vols., 1900); *Romantic Castles and Palaces* (1901); *Famous Paintings* (1902); *Social New York under the Georges* (1902); *Great Events of the World's History* (5 vols., 1903); *The Story of the Universe* (4 vols., 1905); *The Wild Flower Fairy Book* (1905); *Historic Buildings of America* (1906); *Landmarks of American History* (1907); *A Guide to the Modern Operas* (1909); *Dutch New York* (1909); *Modern Pictures* (1911); *How to Visit the English Cathedrals* (1912); *A Daughter of the Revolution* (a novel, 1915); *The Orchestra and Its Instruments* (1917); *The Shakespeare Garden* (1922); *The Collecting of Antiques* (1926); *Dolls* (1928); and *Old World Masters in New World Galleries* (1929).

SKATING. The world's championship figure-skating competition, held in New York City in 1930, was marked by the sensational performance of Sonja Heinie, 19-year-old Norwegian girl, who won the singles championship for the fourth consecutive year. The men's figure-skating title was annexed by Karl Shafer, of Austria, and the championship for paired skating, by M. and Mme. Pierre Brunet, of France. In the American championship figure-skating contests held in Providence, R. I., in March, Miss Maribel Vinson, of Boston, repeated her victory of 1929 and 1928 in the women's field. The men's title was retained by Roger K. Turner, also of Boston, and the pairs championship was awarded to Miss Beatrix Loughran and Sherwin C. Badger, of New York City.

The men's North American outdoor speed-skating title was won by Jack Shea, of Dartmouth College, the 1929 champion, who defeated Irving Jaffee, of New York, and Ross Robinson, of Toronto. Mrs. Leila Brooks Potter, of Toronto, captured the women's title in the same event, and broke two world's records. The women's American outdoor title again went to Miss Loretta Neitzel, of Detroit, the competition being held at

Skytop, Pa. Among the eight new records accepted by the Amateur Skating Union of the United States were Shea's mark of 23½ seconds for one-sixth of a mile and Robinson's time of 8 min. 19¾ sec. for three miles.

SKILLERN, ROSS HALL. An American surgeon, died Sept. 20, 1930, in Philadelphia, Pa., where he was born Nov. 13, 1875. He was graduated from the University of Pennsylvania with the A.B. degree in 1894 and with the M.D. degree in 1897. In 1900 he became laryngologist at the Rush Hospital in Philadelphia, which position he retained until 1913. He was professor of laryngology at the Medico-Chirurgical College from 1912 to 1918 and at the post-graduate school of medicine of the University of Pennsylvania from 1917 until his death. During the World War as major in the Medical Department, U. S. A., he was in charge of the division of head surgery at the base hospital, Camp Sheridan, Ala. (1917-18), and later lieutenant colonel in command of base hospital 89 at Meaves sur Loire, France, (1918-19). He was president of the Philadelphia Laryngological Society during 1912-14, chairman of the section on laryngology and otology of the American Medical Association during 1920-21, president of the American Academy of Ophthalmology and Oto-Laryngology during 1926-27, and president of the American Laryngological, Rhinological, and Otological Society during 1929-30. He was also a member of the American Board of Examiners in Oto-Laryngology and a fellow of the American College of Surgeons. The Sc.D. degree was conferred on him by Ursinus College in 1925. He was the author of *Accessory Sinuses of the Nose* (4 edits., 1916-23).

SLATTERY, THE RT. REV. CHARLES LEWIS. Protestant Episcopal Bishop of the Diocese of Massachusetts, died in Boston, Mass., Mar. 12, 1930. He was born in Pittsburgh, Pa., Dec. 9, 1867, and was graduated from Harvard University in 1891 and from the Episcopal Theological School in Cambridge in 1894. After ordination as deacon in 1894 and as priest in 1895, he was appointed a master at Groton School, serving at the same time as rector of St. Andrew's Church, Ayer, Mass. In 1896 he became dean of the Cathedral of Our Merciful Saviour in Faribault, Minn., where he remained until 1907, when he became rector of Christ Church in Springfield, Mass. Three years later he was chosen rector of Grace Church in New York City. He was lecturer at the Berkeley Divinity School during 1909-10; Paddock lecturer at the General Theological Seminary during 1911-12; West lecturer at Stanford University in 1915; and member of the board of preachers at Harvard University during 1920-27. In 1922 he was elected Bishop Coadjutor of the Diocese of Massachusetts and succeeded to the bishopric in 1926 on the resignation of the Rt. Rev. William Lawrence. He served as general chairman of the Church Congress in the United States and was chairman of the Commission for Revision and Enrichment of the Book of Common Prayer. The D.D. degree was conferred on him by the University of the South in 1917, Trinity College (Conn.) in 1922, and Harvard University in 1923. In addition to being an executive of unusual ability he was a prolific and scholarly writer. His more important works include: *The Master of the World—A Study of Christ* (1906); *Life beyond Life—A Study of Immortality* (1907); *The Historic Ministry and the Present Christ* (1908); *Present-Day Preaching* (1909); *The Authority of Reli-*

gious Experience (1912); *The Light Within* (1915); *Why Men Pray* (1916); *The Gift of Immortality* (1916); *A Churchman's Reading* (1917); *With God in the War* (1918); *A Study of the Lord's Prayer* (1920); *The Ministry* (1921); *The Holy Communion* (1922); *In Times of Sorrow—A Book of Consolation* (1927); *Words from His Throne—A Story of the Cross* (1927); and *Following Christ* (1928).

SLIVINSKI, slé-vin'skê, JOSEPH. A Polish pianist, died Mar. 5, 1930, in Warsaw, where he was born Dec. 15, 1865. He studied at the Warsaw Conservatory under Strobl, in Vienna with Leschetizky, and in St. Petersburg (Leningrad) with Rubinstein. He made his début in 1890, but his reputation was not established until his London appearance two years later. In 1894 he appeared in New York City. He became well known for his technique, for his mastery of intricate phrasing, and especially for his poetic interpretation.

SMITH, FREDERICK EDWIN. See BIRKENHEAD, FREDERICK EDWIN SMITH, FIRST EARL OF.

SMITH, JUSTIN HARVEY. An American historian, died in Brooklyn, N. Y., Mar. 21, 1930. He was born in Boscawen, N. H., Jan. 13, 1857, and was graduated from Dartmouth College in 1877. From 1879 to 1881, he was a student at the Union Theological Seminary and in the latter year also received the degree M.A. from Dartmouth. The next nine years he spent in the publishing business in New York City, being placed in 1890 in charge of the editorial department of Ginn & Co. In 1899 he went to Dartmouth as professor of modern history, occupying this chair until 1908, when he retired to devote his time to writing and travel. From 1896 to 1906 he was a member of the visiting committee on Romance philology of Harvard University. In 1920 he received the Pulitzer Prize for the best book on American history published during the previous year, his prize-winning work being a two-volume history, *The War with Mexico*. Three years later, he won the first Loubat Prize for the best book in English published during the previous five years on the history, geography, archaeology, ethnology, philology, or numismatics of North America. Among his other books are: *The Troubadours at Home* (2 vols., 1899); *Arnold's March from Cambridge to Quebec* (1903); *A Tale of Two Worlds and Five Centuries* (1903); *Our Struggle for the Fourteenth Colony—Canada and the American Revolution* (2 vols., 1907); and *The Annexation of Texas* (1911). He edited *The Historic Book* (1903) and *Letters of Santa Anna* (1919).

SMITH COLLEGE. A nonsectarian college for women in Northampton, Mass., founded in 1871. The enrollment for the autumn of 1930 was 2091, including 96 graduate students, 6 non-collegiate students, and 46 juniors studying in France. The registration in the 1930 summer session was 176, schools in music, Italian, and social studies being conducted. There were 238 faculty members. The productive funds amounted to \$6,227,769, and the income from funds was \$306,084. The library contained a collection of 177,450 volumes. The president during 1930 was William Allan Neilson, Ph.D., LL.D., L.H.D., Litt.D.

SMITH-DORRIEN, GEN. SIR HORACE LOCKWOOD. A British military leader, died in London Aug. 12, 1930. He was born May 26, 1858, and attended Harrow. Entering the 95th Derby Regiment in 1876, he served with distinction, between 1879 and 1880, in the Zulu War, the Egyptian War, the Nile expedition, the Sudan campaign, and with the Sudan Frontier Field Force. Thereafter, until 1898, when he accompanied another Nile expedition, he served in various parts of India, taking part in the Chitral Relief Force in 1895 and in the Tiran campaign in 1897. In 1900, as major general, he commanded a brigade and a division in the Boer War. He was adjutant general in India during 1901-03 and commander of the 4th (Quetta) Division there during 1903-07. In 1907 he became commander-in-chief at Aldershot and in 1912, having attained the rank of general, was given the Southern command. On the outbreak of the World War in 1914 he assumed command of the 2d Army corps, and later of the 2d Army, in the British Expeditionary Force sent to France. He led his troops with great skill and energy, both in meeting the onset of the Germans, who outnumbered the British four to one, and in conducting the retreat from Mons. On the second day of the retreat (August 26) he gave battle at Le Cateau, an action which was severely criticized at the time but which was subsequently recognized as a strategic feat in having saved the other divisions of the British Army from disaster. In December, 1915, he was made commander-in-chief of the expedition against German East Africa, but shortly after beginning his campaign he was obliged to resign on account of illness and was succeeded by Gen. Jan Christian Smuts. He later served as governor and commander-in-chief of Gibraltar from 1918 until his retirement in 1923. He was created a knight of the Distinguished Service Order in 1886, a knight commander of the Bath in 1904, a knight of the Grand Cross of the Bath in 1913, and a knight of the Grand Cross of St. Michael and St. George in 1915. He also was made aide-de-camp general to the King in 1910 and was elected a grand officer of the French Legion of Honor. His memoirs were published in 1925 under the title, *Memories of Forty-eight Years' Service*.

SMITHSONIAN INSTITUTION. An organization founded in 1846 according to the terms of the will of James Smithson of England, who, in 1826, bequeathed his property to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." In receiving the property and accepting the trust, Congress determined that the Federal government was without authority to administer the trust directly and, therefore, constituted an "establishment" whose statutory members are the President, the Vice President, the Chief Justice, and the heads of the executive departments. The affairs of the institution are administered by a board of regents, whose membership consists of the Vice President, the Chief Justice, three members of the Senate, and three members of the House of Representatives, together with six other persons, other than members of Congress, two to be residents of the city of Washington and the other four of different States. The chancellor of the institution in 1930 was Chief Justice Charles Evans Hughes.

The enterprises supported wholly by Congressional appropriations but administered by the

Smithsonian Institution include the National Museum, the National Gallery of Art, the Bureau of American Ethnology, the International Exchange Service, the National Zoological Park, the Astrophysical Observatory, and the U. S. Regional Bureau of the International Catalogue of Scientific Literature. It also administers the Freer Gallery of Art.

Among the events of unusual importance to the institution in 1930 was the authorization by Congress of an appropriation for the construction of wings on the natural history building at a cost not to exceed \$6,500,000; the construction and equipment of laboratories for physical, chemical, and biological investigations in the new division of radiation and organisms, for the study of the relation of radiation to plant and animal life; and the fifth and sixth awards of the Langley Gold Medal for Aerodromics to Charles Matthew Manly and to Admiral Richard Evelyn Byrd, U. S. N. There was also under construction in the National Zoological Park a new reptile house, authorized by Congress and embodying the most modern ideas as to the exhibition of reptiles.

The institution and the government bureaus under its direction published during 1930, 95 volumes and pamphlets, of which 168,663 copies were distributed to libraries, educational institutions, and individuals. The unrestricted income of the institution, averaging about \$75,000, was derived from interest on its endowment funds, which in 1930 amounted to a little more than \$1,100,000. Secretary, Dr. C. G. Abbot; assistant secretary, Dr. Alexander Wetmore.

SNUFF. See TOBACCO.

SOCCER. Uruguay won the world's soccer title for the third consecutive year in 1930, defeating Argentina 4 to 2 in the final at Montevideo, Uruguay, on July 30. Thirteen teams from Europe and North, Central, and South America competed in the tournament. The United States entry was eliminated by Argentina in the semi-finals. In the United States, both the national and Eastern championships were captured by Fall River, which defeated Cleveland at the Polo Grounds, New York, by 7 to 2, and in Cleveland, by 2 to 1. Fall River, however, was twice defeated by the Glasgow (Scotland) Rangers, who on an invasion of the United States met the best teams in the country without suffering a single setback. The Kilmarnock eleven of Scotland, Hungary's national team, and a Mexico City club also toured the United States. A number of American teams visited foreign countries, Hakoah touring South America and Fall River central Europe. The American intercollegiate championship remained undecided, with Harvard, Yale, and Pennsylvania as the leading contenders. The English soccer championship was won by the Arsenal eleven, which defeated Huddersfield Town, 2 to 0, before 100,000 spectators in Wembley Stadium. The Glasgow Rangers defeated the Patrick Thistle eleven, 2 to 1, for the Scottish Cup. Linfield won the Irish Cup and Cardiff captured the Welsh Cup.

SOCIAL INSURANCE. See MATERNITY PROTECTION; OLD AGE PENSIONS; UNEMPLOYMENT; WELFARE WORK; WORKMEN'S COMPENSATION.

SOCIALISM. The Socialist party, in many congressional districts in the United States, particularly in the eastern industrial areas, conducted a spirited campaign, and the attention given to socialistic doctrines by the public press indicated that there was a renewed interest in the party's work on the part of the American people. The Socialist congressional candidates were pledged to the support of a programme that frankly applied itself to the many pressing problems confronting the American electorate. This programme included the following fourteen major planks: 1. Unemployment relief. This programme is outlined in the article on UNEMPLOYMENT. 2. Social insurance. The Socialist party favored the establishment of a social-insurance code to cope with the problems of sickness, maternity, accident, invalidity, old age and death, to be administered on a nation-wide basis. 3. Labor legislation. The Socialist party's labor programme included the passage of legislation to prohibit the misuse of the injunction; laws declaring yellow-dog contracts illegal; the refusal on the part of the government to award contracts for public works to companies which did not recognize trade unions; the 5-day week; the abolition of convict contract labor; the extension of workmen's compensation legislation to cover occupational diseases; the abolition of interstate detective agencies engaged in industrial work. 4. Taxation. The Socialist party advocated the increase of taxation on high-income levels and of corporation taxes and of inheritance taxes. It also proposed the appropriation by taxation of the annual rental value of all land held for speculation. 5. Nationalization. The Socialist party favored the immediate nationalization of banks, insurance companies, railroads, coal mines, water-power sites, and interstate power systems. 6. Farm relief. The Socialist party favored the acquisition by cooperative societies and by Federal, State, and municipal governments of grain elevators, flour mills, creameries, implement factories, stock yards, storage warehouses and other distributing agencies. It also proposed a governmental insurance programme against losses due to hail, drought, cyclone, and flood. 7. Civil liberties. The Socialist party favored the repeal of the espionage law and of criminal syndicalist laws and the releasing of all political prisoners. 8. Negroes. The Socialist party advocated the passage of legislation making the participation in lynching a felony, calling for the government to deny financial support to Jim Crow schools and for the rigid enforcement of the thirteenth, fourteenth, and fifteenth amendments. 9. Prohibition. The Socialist party favored the resubmission of the whole question of prohibition amendment to the citizens of the United States on the basis of a national referendum. 10. Tariff. The Socialist party favored the immediate repeal of the Hawley-Smoot tariff and the enactment of a bill for the progressive reduction of protective duties. 11. Militarism. The Socialist party advocated the rapid reduction of the naval and military establishments and the ultimate abolition of naval and military armaments. 12. International relations. The Socialist party advocated the abandonment of military intervention in Central America; that all private loans and investments of American citizens in foreign countries should be made on the risk of bond holders and investors; the cancellation of all war debts due to the United States; the revision of the

Treaty of Versailles; adherence of the United States to the International Labor Office and the World Court; the recognition of the Russian government; the writing of international treaties for the arbitration of all international disputes. 13. Colonial affairs. The Socialist party pledged itself to support the extension of the bill of rights to all the territories and dependencies; Philippine independence; autonomy for Porto Rico; a civil government for the Virgin Islands. 14. Political democracy. On this point the Socialist party platform read:

The immediate calling of a national constitution convention for the purpose of coordinating the functions of government, eliminating needless offices and office holders, and making government responsive to popular majorities. A modernized constitution should provide among other things for the election of the president and vice president by the direct popular vote of the people, for the reduction of the representation in Congress of those States where large sections of the citizens are disenfranchised by force or fraud, proportional representation, and for the extension of the powers of Congress to enact labor and social legislation.

American Socialists were availing themselves of the discontent in American labor ranks, due to the continued depression and heavy unemployment, to make vigorous campaigns for congressional seats in the fall elections. New York City particularly was the seat of great activity, and under the stimulus of Norman Thomas, who had made an excellent run for the New York mayoralty in the election of 1929, an intelligent canvass was conducted. Mr. Thomas ran in the sixth congressional district of Brooklyn with a programme that advocated unemployment insurance; increase of income and inheritance taxes; public ownership and operation of public utilities; and a referendum of prohibition. Heywood Broun, a well-known newspaper columnist, made an equally spirited campaign in the seventeenth congressional district of Manhattan. Considerable intelligent New York opinion, including a number of New York newspapers, supported the candidacy of these two men.

ELECTION RESULTS. The returns of the New York elections indicated that there had been polled for the Socialist candidate for governor, Louis Waldman, at least 175,000 votes, which was a gain of 75,000 votes over the number cast in 1928. Socialist candidates for Congress received 127,481 votes in 1930 as against 66,844 votes cast in 1928 for the same offices. None of the four Socialist Congressional candidates who were thought to have a chance of winning was successful, though the votes polled for them made very respectable figures. Norman Thomas, Jacob Panken, B. Charney Vladeck, and Heywood Broun each at least doubled the total of votes cast for the Socialist nominees in the same districts in the previous election. In the municipal elections of Milwaukee, Wis., and Reading, Pa., the Socialists received large votes, too.

GREAT BRITAIN. At the British Labor party's annual conference, held in Wales October 6-10, considerable pessimism was expressed by the party leaders concerning the near future career of Labor in Great Britain. Miss Susan Lawrence, Parliamentary Secretary of the Ministry on Health, delivered the keynote address and pointed out that many of the Labor government's difficulties, because it was a minority government, grew out of the fact that it was forced to deal with doubtful and uncertain allies. One of the most significant promises made to the conference was

the statement by Arthur Henderson, the Foreign Secretary, that the MacDonald government would make an effort to repeal the trades dispute act of 1927 which makes general or sympathetic strikes criminal. In his address before the second session of the conference, Mr. MacDonald made a spirited defense of his government and committed the Labor party to continued opposition to the high-tariff programme of the Conservative party.

The MacDonald government again triumphed over the left wing, led by James Maxton, when a resolution of a lack of confidence of the government's unemployment programme was voted down, the vote being 1,803,000 against and 334,000 for the left wing resolution. The government group triumphed on a second test vote when a resolution calling on the Labor party to consider the secret memorandum on unemployment drafted by Sir Oswald Mosley was rejected. It will be recalled that Sir Oswald Mosley resigned from the MacDonald cabinet earlier in the year as a result of his disagreement with the government's unemployment policies. The vote on this particular resolution was 1,251,000 for the government and 1,046,000 against it. Mr. MacDonald, in outlining the theory of his government, pointed out in reply to the criticisms of the left wingers that: "The problem we have to face as a government in the Commons is how to transform capitalism into socialism and how to remold the forces of society itself so that the social body shall be transformed from a materialistic selfish individualistic conception of capitalism into the coöperative social and human influence of socialism."

The radicals continued their attack at the third meeting when they presented a resolution instructing the MacDonald government to disarm the country regardless of what other nations might do. This resolution, like the others, was defeated. However, the left wingers did triumph when their resolution calling for a 60-year minimum instead of a 65-year minimum for eligibility for old-age pensions was passed. One of the sensations of the conference was the defeat of J. H. Thomas, Minister of Dominions, for reelection to the national executive committee of the Labor party. This was interpreted as an official censure on Mr. Thomas's failure as Lord Privy Seal to present an adequate programme for coping with the unemployment problem. The conference elected Sir Oswald Mosley to membership on the executive committee, thus heightening the rebuke administered to Mr. Thomas. See *GREAT BRITAIN under History*.

SOCIAL LEGISLATION. See *OLD AGE PENSIONS*.

SOCIAL PROGRESS. **INTERNATIONAL ASSOCIATION FOR.** An international association, of which the Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. Meetings of technical sections of the association were held at Liège, Belgium, July 4-6, to make preliminary studies of the international aspects of migration and the social and economic signifi-

cance of high wages, for the forthcoming general assembly in 1931. The association publishes a periodical, entitled *L'Avenir du Travail*, edited by the general secretary, A. Boissard, at the international headquarters maintained at Basel, Switzerland.

SOILS. Land reclamation, soil classification, valuation and adaptation, soil erosion and moisture conservation, soil fertility, fertilizing value of minor soil constituents, soil technology, soil reaction, the relation of soil colloids to soil dynamics, and soil microbiology were among the topics receiving special consideration by soil investigators.

The trend toward more discriminating use of soils in the United States continued, and the bringing of new land under cultivation, especially that of a marginal or submarginal character, was still being discouraged. Additional areas formerly adapted to commercial crop production, chiefly in the cotton and wheat belts, sank below the economic margin through soil depletion or erosion, flood injury, or recognition of the limits of their economical adaptability. Gradual farm abandonment continued in extensive areas that have become submarginal, especially where farm taxes continued to rise. Interest continued to grow in the possibility of aiding the stabilization of agriculture by public purchases of submarginal lands and their conversion to timber growing. In connection with the retrenchment programme for agriculture there was also a growing tendency toward the readjustment of land utilization practices, based upon land classification and values and the principles of efficient crop adaptation, to eliminate the so-called high-cost acres and to concentrate agricultural effort on the more productive land. *The Report of the Secretary of Agriculture* for 1930 contained the following statement:

Readjustments in acreage are necessary as a corrective of low prices. . . . Wise acreage adjustments can help to decrease the unit cost, as well as the volume of production, and thus to widen the favorable margin, when any exists, between costs and prices, or to decrease that margin when it is unfavorable. . . . In the case of a widely distributed crop like wheat, acreage readjustment would affect lands varying much in productivity. On some farms, where wheat is a rotation crop, it might be retained at a cost of production that would be prohibitive in a cash-wheat area. Everywhere, however, the general principle of the readjustment process would be the same. In each region or locality it would transfer the highest-cost acres to other uses and thus tend to reduce average costs of production. . . .

The United States has more than half a billion acres that could be devoted to timber growing without detriment to farm development. Much of this land may become a neglected waste of small value unless our public reforestation programme is greatly enlarged. Some abandoned farm land is growing up to brush and timber of low utility. . . . Public reforestation . . . is necessary to promote timber production, to protect stream sources, to check erosion, to provide recreational facilities, and to utilize land resources that would otherwise produce little or nothing.

Farm land values, although not regionally uniform in the extent or direction of their movement, continued to decline in the United States as a

whole, the average decline in value per acre being approximately the same as during the previous year.

The soil survey continued to furnish a valuable basis for the classification, selection, and economic adaptation of soil types. This practice continued to be world wide and the United States retained the lead in such work. During the year the Department of Agriculture conducted soil survey work in 83 separate areas distributed over 31 States and one insular territorial possession. Detailed surveys aggregating 24,561 square miles and reconnaissance to the extent of 9077 square miles were covered during the year, bringing the total acreage for the detailed survey to over 511,000,000 and the reconnaissance survey to over 389,500,000, according to the *Report of the Chief of the Bureau of Chemistry and Soils* for 1930.

At the present time and in the immediate future this information has peculiar value because of the readjustment which is taking place in agriculture, calling for better land classification and adaptation. Considerable progress was made by the several State organizations coöperating with the Department of Agriculture in the proper correlation and classification of soils, and many of these are establishing projects looking to proper classification with special emphasis on soil profiles. Continued progress was also made in the classification of muck and peat soils. Actual examination was made of the distinctive characteristics of important peat soils in Florida, North Carolina, Maine, California, and Washington. Major importance is now attached to nine peat areas including those in New England, the Atlantic Coastal region, Florida and the Gulf States, the Great Lakes region, the Mississippi River Valley, the Columbia River and northern Pacific Coast region, the California and southern Pacific Coast region, the mountain Alaskan and Alpine-boreal regions, and the tropical peat regions. New interest in soil survey and mapping developed in connection with soil-erosion and moisture-conservation investigations, and soil-profile studies and soil-reaction determinations to show the correlation between reaction and soil type were continued.

Soil impairment by erosion and run-off continued to be recognized as one of the most important problems confronting American agriculture. The Department of Agriculture continued the installation of erosion experimental stations in the defined major soil regions where erosion and water losses are serious agricultural problems. Efforts were continued to secure accurate quantitative measurements of the effects of soil washing and the run-off of rainfall for definite, extensive, and important soil types existing under varying conditions of slope, crop use, and crop treatment. Measurements also continued of the rate of erosion, amount of water storage, and comparative crop values under opposite conditions of eroded and uneroded soil, with various tillage practices and on different soil types. The reconnaissance erosion survey of the United States was continued, as well as detailed erosion surveys of all experimental stations. Laboratory studies of the measurable physical and chemical properties of soils of relatively high and low erosivity were continued. Certain important soil types of the United States have been found to possess characteristics similar to certain tropical soils of lateritic character which resist washing to a marked extent and absorb most of the regional

rainfall. The plastic clays exhibit properties opposite to those of the lateritic group. It has been shown that the properties of major importance in soil erosion are the dispersability of the colloid material and the moisture equivalent of the soil.

The demand continued for more accurate and specific information regarding the fertilizer requirements of crops on soils of known character, and soil fertility studies continued to concentrate in that direction with considerable expansion in connection with the development of more reliable experimental technique. The further development of the newer concentrated fertilizers continued to require some modification of this work with reference not only to character and amount of application, but also to method of placement. Additional evidence was obtained of the crop-producing and economic value of these materials, but the necessity was emphasized for exercising the utmost precaution in placing and distributing concentrated fertilizers on soil types of a sandy nature. The evidence continued to accumulate that small applications of manganese salts are beneficial to certain crops such as tomatoes in some soils of the Atlantic and Gulf Coastal Plains. On other soil types salts of some of the less abundant constituents of soils, boron especially, gave crop responses indicative of unusual functions in connection with crop growth and development depending somewhat on the manner and amount of the application. It appears that where the concentration of boron in the soil solution is not above one or two parts per million, it is not injurious to most crop plants and may be beneficial. Experiments with other rare elements, such as copper, iron, and zinc, which appear to be essential to such crops as strawberries in certain soils were continued.

The relation of soil reaction to crop production continued to receive much attention, with particular reference to its influence on the prevalence and severity of certain crop diseases and on crop yields. The investigations of cotton-root rot were continued and yielded some prospects of indirect control of the disease by the use of suitable chemical fertilizers, especially those containing the higher proportions of phosphorus and some nitrogen, according to the Bureau of Chemistry and Soils. Deep subsoiling appeared also to lessen or retard root rot. Work also was continued on the adjustment of soil reaction to retard diseases of tobacco. In this connection seasonal fluctuations of the soil reaction sufficient to affect tobacco yields were demonstrated by the Connecticut Tobacco Experiment Station.

Additional important information was developed during the year, especially at the State agricultural experiment stations, relating to the functions and behavior of soil colloids with particular reference to base exchange phenomena and the availability of soil nutrients to plants. According to the Bureau of Chemistry and Soils, acid anions are actually absorbed by soil colloids, this being in general more marked in lateritic soils than in the less completely decomposed materials of other soil types. The possibility of the fractionation of soil colloids in such a way as to reveal differences in origin and composition was also developed. Different colloids were also found to vary quite widely in their retarding effect upon phosphorous assimilation by plants, this being more or less closely associated with their silicasesquioxide ratio. Information continued to accumulate regarding the causes of unproductive-

ness of certain soil types of known infertility, this apparently being due in many cases to lack of essential nutritive elements, or the presence of toxic substances.

Soil microbiology continued to be an important subject for research. Information relating to nitrogen fixation and transformation in soils continued to accumulate, especially at the State agricultural experiment stations. The Bureau of Chemistry and Soils demonstrated the possibility of regenerating the productivity of conspicuous types of depleted acid soil by fertilizer treatment and proper stimulation of the soil organisms. The so-called slime molds, not hitherto recognized in general agricultural work were also found to be present and active in the decomposition of plant residues in soil. Studies of soil fungi were continued.

BIBLIOGRAPHY. Advances in the knowledge of the sciences of soil technology, microbiology, and fertility appear currently in *Soil Science*, published in Baltimore, Md., and in *Journal of the American Society of Agronomy*, published at Geneva, N. Y. Recent books on these subjects are: B. F. Lutman, *Microbiology* (New York, 1929); T. L. Lyon and E. O. Fippin, *The Nature and Properties of Soils*, 2d ed. (New York, 1929); H. Kappen, *Die Bodenazidität, nach agrikulturchemischen gesichtspunkten dargestellt* (Berlin, 1929); S. Thomas, *Bacteriology, A Text Book on Fundamentals* (New York, 1930); E. A. Mitscherlich, *Die Bestimmung des Düngerbedürfnisses des Bodens* (Berlin, 1930); A. Stebutt, *Lehrbuch der Allgemeinen Bodenkunde* (Berlin, 1930); C. E. Thorne, *The Maintenance of Soil Fertility* (New York, 1930); E. L. Worthen, *Farm Soils, Their Management and Fertilization* (New York, 1930); Paul Emerson, *Principles of Soil Technology* (New York, 1930); L. A. SOMALILAND, sō-mā'lē-lānd, PROTECTORATE. A British territory on the African coast of the Gulf of Aden, bounded by Italian Somaliland, Abyssinia, and the French Somali Coast. Area about 68,000 square miles; population estimated at 344,700, mostly Mohammedan and entirely nomadic except for permanent settlements on the coast. The capital and chief port is Berbera, with about 30,000 inhabitants. Stock raising is the main occupation in the interior. The principal imports are dates, sugar, textiles, rice, and specie; the principal exports, hides and skins, gums and resins, cattle and sheep, and glue. Imports for 1928 totaled £635,908; exports, £564,470; revenue, £157,487; expenditure, £198,628; military grant-in-aid, £24,500. Highways open in 1928 totaled 940 miles. There are no railways. The government is under the British Colonial Office, which is represented by a local governor and commander-in-chief. Governor in 1930, Sir H. B. Kittermaster, appointed Jan. 26, 1926.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1930 was 273, of whom 253 were registered in the college and 22 in the theological school. There were 37 students registered in the summer quarter, 17 of whom returned for the autumn session. The faculty had 32 members, exclusive of student assistants. The income from productive funds was \$68,400, while the receipts from all sources totaled \$348,600. The library contained 43,903 volumes. President, Benjamin Ficklin Finney, LL.D.

SOUTH AFRICA, UNION OF. A self-governing dominion of the British Empire, comprising the provinces of the Cape of Good Hope, the Transvaal, Natal, and the Orange Free State; constituted a legislative union by the South African Act of September, 1909. Capital, Pretoria; seat of the legislature, Cape Town.

AREA AND POPULATION. Total area, 471,917 square miles; divided as follows: Cape of Good Hope, 276,536; Natal, 35,284; Transvaal, 110,450; Orange Free State, 49,047. Total population, according to the census of 1921, 6,927,403, distributed as follows: Cape of Good Hope, 2,781,542; Natal, 1,429,398; Transvaal, 2,087,636; Orange Free State, 628,827. The total European population of the Union of South Africa, at the census of 1926, was 1,676,660, of which 706,137 were in Cape Province, 158,916 in Natal, 608,622 in the Transvaal, and 202,985 in the Orange Free State.

The estimated total population (1929) was 7,895,000, of which 1,768,000 were Europeans and 6,127,000 non-Europeans (5,358,000 natives, 186,000 Asiatics, and 583,000 mixed and other colored persons). Of about 180,000 Indians in the country, approximately 150,000 lived in Natal. Births among the European population from 1925 to 1929 averaged 44,621 annually and deaths 16,508. In 1929, immigrants numbered 8839 (7896 Europeans) and emigrants 5047 (3597 Europeans). The estimated populations of the principal cities in 1929, with census figures for 1921 in parentheses, were: Johannesburg, 325,400 (288,131); Cape Town, 258,300 (212,997); Durban, 113,600 (151,642); Pretoria, 73,100 (74,052); Port Elizabeth, 60,000 (52,298); Benoni, 48,600 (47,041). The capitals of the respective Provinces are: Cape of Good Hope, Cape Town; Transvaal, Pretoria; Natal, Pietermaritzburg; Orange Free State, Bloemfontein (46,400 inhabitants in 1929).

EDUCATION. In 1928, there were 666,739 pupils in 8651 state and state-aided schools (other than schools of higher education), including 342,033 Europeans and 324,706 non-Europeans. Teachers in these schools numbered 24,484, and the state expenditure was £7,570,490. The enrollment in the 10 universities in the Dominion aggregated 7273; the principal institutions were the University of Cape Town, University of Stellenbosch, University of Witwatersrand, and Transvaal University College, Pretoria.

PRODUCTION. Of about 10,000,000 acres of arable land in the Union in 1929, about 60 per cent was devoted to cereals, with corn the dominant crop. Fruits, tobacco, cotton, and sugar cane are other important crops. Production of the chief crops in 1929-30, with comparative figures for 1928-29 in parentheses, was: Wheat, 10,697,000 bushels (6,930,000); barley, 1,725,000 bushels (994,000); oats, 9,773,000 bushels (7,598,000); corn, 90,583,

000 bushels (65,946,000); potatoes, 6,840,000 bushels (5,068,000); sugar, about 298,000 short tons; tobacco, 13,250,000 pounds (15,800,000); Kafir corn, 115,000 short tons (144,000); cotton, 5,100,000 pounds (3,900,000); wine, 17,351,000 gallons in 1928-29; peanuts, 23,030,000 pounds (20,930,000). Livestock in 1928 included 42,500,000 sheep, 10,478,000 cattle, 7,455,000 goats, and 833,000 swine. Wool production for the 1929-30 season, not including pulled wool, was 244,372,000 pounds (223,811,000 pounds in 1928-29); mohair, 10,000,000 pounds.

The value of mineral production in 1929 increased to \$294,907,000 from \$284,870,000 in 1928. The Union is the leading gold-producing country of the world. In 1929, the gold output reached the record total of 10,412,000 fine ounces, as compared with 10,354,264 ounces in 1928. In 1930, the gold output was 10,710,895 ounces (see GOLD). Production of other leading minerals in 1929, with comparative figures for 1928, was: Diamonds, 3,661,000 carats (4,373,000 carats in 1928); platinum, 21,608 troy ounces (17,828); coal, 13,913,000 short tons (13,404,000); asbestos, 33,035 short tons (24,054); copper, 9807 short tons (9803); tin, 2006 short tons (1992); silver (in gold bullion only), 1,032,000 fine ounces (1,031,000). The decline in the production of alluvial diamonds was due chiefly to the restriction of operations in the Namaqualand state mines. The newly-established diamond-cutting industry consisted in January, 1930, of 26 establishments, with 35 licensed cutters and 358 apprentices (see DIAMONDS). A Government steel plant, under construction in 1930, was expected to stimulate coke production. Construction of a railway for the exploitation of large manganese deposits at Post-mashburg was completed in June, 1930, and daily production of the mines was reported to be nearly 1000 tons.

The expansion of manufacturing industries continued in 1929, particularly the clothing, cigarette, and fertilizer industries. In 1927-28 factories employed 207,736 employees and 849,443 motive horse power; the value of production totaled \$520,628,000, of which \$250,727,000 was added in process of manufacture.

COMMERCE. Foreign trade showed a considerable decline in 1930. Preliminary figures placed imports at £64,089,842, as compared with £83,449,000 in 1929, a decrease of 20 per cent; exports totaled £74,540,696, exclusive of diamonds, or 8 per cent less than the 1929 figure of £80,943,000. Despite a larger volume of exports than in 1929, price declines in corn, wool, and other leading products caused the aggregate value to fall below the previous year's level. In 1928, imports were valued at £79,088,000 and exports at £72,611,000. Re-exports amounted to £4,305,457 in 1929 and £3,496,186 in 1928. The United Kingdom in 1929 supplied 42 per cent of all imports and purchased 68.8 per cent of all exports; the United States furnished 18.9 per cent of the imports and took 2 per cent of the exports; and Germany supplied 6.3 per cent and took 5.3 per cent. The chief exports, in order of value, were: Gold bars, \$174,630,000; wool, \$70,067,000; diamonds, \$52,320,000; hides and skins, \$14,907,000; corn \$11,249,000. The principal imports were automobiles and chassis, cotton piece goods, apparel, gasoline, wood and wood manufactures, electrical machinery, and apparatus.

FINANCE. The first deficit in the ordinary budget since 1923-24 was forecast for the fiscal

year ending Mar. 31, 1931, by the Union Minister of Finance in his annual budget address in June, 1930. To offset the anticipated shrinkage in revenues due to depressed business conditions, the income-tax rebate of 20 per cent, inaugurated in 1927, was abolished Apr. 1, 1930, and the £450,000 surplus resulting from financial operations in 1929-30 was carried over to the 1930-31 ordinary account. Even with these measures, revenues were expected to total some £500,000 less than the appropriations for the year of £30,218,000. Capital expenditures from loan funds in 1930-31 were estimated at £10,811,000.

In 1929-30, ordinary revenue, as distinguished from loan and railway accounts, totaled £30,633,000 and expenditure £30,184,000. Customs duties were £250,000 greater than anticipated and income-tax receipts were £250,000 above estimates, but receipts from the diamond export duty and from the Government's property interest in the Premier and Namaqualand diamond mines declined considerably, as a result of stagnation in the American market. Due to a decline in the movement of agricultural produce in the last quarter and to the competition of private motorbus lines, the separate railways and harbors budget for 1929-30 showed a deficit of £289,504 on total expenditures of £31,205,941. The railways and harbors budget for 1930-31 calculated expenditures at £31,940,000. The gross public debt on Mar. 31, 1929, was £244,045,000 and the net debt, £227,699,000 (\$1,108,097,000).

COMMUNICATIONS. In the fiscal year, 1928-29, there were 13,008 miles of railway line, of which all except about 400 miles were operated by the state. Passengers carried during the year numbered 81,995,000; freight, 22,038,000 short tons; gross receipts, £26,091,000. Highways in 1930 extended 85,598 miles, of which 58,899 miles were unimproved earth, 25,986 miles improved earth, and 680 miles macadam. In the same year, 593 miles were under construction, to be completed in 1931. Motorbus lines, inaugurated in 1924 by the Railway Administration as an adjunct to the railways, in 1930 covered a total of 12,000 miles. Fifty-one new routes covering a distance of 2300 miles were opened during 1929. An air-mail line connecting Cape Town, Port Elizabeth, Durban, and Johannesburg was inaugurated in 1929. Port Elizabeth, Lourenço Marques, and East London were joined in the Union's long-distance telephone system during 1930. Vessels in the foreign trade entering the ports in 1929 numbered 1468, of 5,233,000 net registered tons; vessels clearing, 1465, of 5,246,000 net registered tons.

GOVERNMENT. The executive power is vested in the governor-general, appointed by the Crown, who acts through an executive council of ministers, each in charge of a department. Legislative power rests in a parliament, consisting of a senate of 40 members, of whom eight are nominated by the governor-general-in-council and 32 by the Provinces (eight each), and a house of assembly of 148 members, distributed among the Provinces as follows: Cape of Good Hope, 58; Transvaal, 55; Natal, 17; and Orange Free State, 18; the basis of suffrage being the same as that existing in each Province at the time of the formation of the Union. The executive council in 1930 was composed as follows: Prime Minister and Minister of Native Affairs, General J. B. M. Hertzog; Interior, Health, and Education, Dr. D. F. Malan; Mines and Industries, A. P. J. Fourie; Railways and Harbors, C. W. Malan; Finance, N. C. Hav-

enga; Justice, O. Pirow; Defense and Labor, Col. F. H. P. Creswell; Agriculture, Gen. J. C. G. Kemp; Lands, P. G. W. Grobler; Posts and Telegraphs and Public Works, H. W. Sampson; Native Affairs, E. G. Jansen; Secretary to the Prime Minister and Secretary for External Affairs, Dr. H. D. J. Bodenstein.

The composition of the Assembly, following the elections of June, 1929, was: Nationalists, 78; South African party, 61; Labor (Creswell), 5; Labor (National Council), 3; Independent, 1. Governor-General, Commander-in-Chief, and High Commissioner for South Africa in 1930, the Earl of Athlone. It was announced that he would be succeeded in January, 1931, as Governor-General and Commander-in-Chief by the Earl of Clarendon, former Parliamentary Under-Secretary of State for Dominion Affairs. The high commissionership was made a separate post, to which Sir Herbert Stanley, Governor of Ceylon, was appointed, effective March, 1931.

HISTORY

The native problem and the question of South Africa's status within the Empire were the two all-important issues in the parliamentary elections of June, 1929, won by General Hertzog's Nationalist party (see 1929 YEAR BOOK). Both issues remained in the foreground of South African politics during 1930, but the approaching crisis in the racial struggle tended to subordinate the problem of Imperial relationships.

The Nationalist Government, which drew its main support from the Afrikaners, sought to insure the continuance of white domination by forcible repression of native demands for political, economic, and social equality. The South African party, largely British in composition although led by Gen. Jan Christiaan Smuts, a Boer, favored a policy of conciliation. The aftermath of the Nationalist victory in 1929 was marked by increasing native unrest, the refusal of many natives to pay the poll tax, and a number of outbreaks. Native resentment was fanned by the passage early in 1930 of a bill giving the Minister of Justice absolute powers in dealing with the native agitation. The Minister had demanded exceptional powers on the ground that Communists were stirring up the Negroes against the Government. This the leaders of the African National Congress, which sponsored the native movement, denied. Strong opposition to the "riotous assemblies" bill by the Opposition parties rendered the position of the Government delicate and on March 21 Premier Hertzog, in an effort to conciliate the Opposition, appointed a commission to inquire into the economic and social conditions of the natives. On May 5, rioting broke out in the native compound at Worcester, 60 miles from Cape Town, in which five natives were killed and three policemen and 17 natives injured. At the end of the year, considerable sections of the native population were reported in a dangerous state of agitation.

The declaration of the complete autonomy of the British Dominions by the Imperial Conference of 1926 had to a considerable extent checked the movement for a South African republic. Extreme Nationalists increasingly complained that Premier Hertzog and other party leaders had accepted the status of South Africa within the Empire. The republican issue was resuscitated by a section of the Nationalists headed by Dr. Colin F. Steyn, former Mayor of Bloemfontein, at a meeting in that city July 2, 1930, attended by

delegates from three of the four Provinces. A resolution was adopted to arrange for a national conference "with the object of establishing a league within the Nationalist party in order to reestablish the original ideals of the party."

The national sensitiveness with regard to the Dominion's coequal status within the Empire was emphasized by the action of the South African Assembly in approving on May 22, 1930, the recommendations of the Imperial Conference of 1926. The Assembly resolved that the approval of the recommendations "must not be taken as derogating from the right of any member of the British Commonwealth of Nations to withdraw therefrom." Premier Hertzog pressed for formal recognition of the right of secession at the Imperial Conference of 1930, although declaring he had no intention of advocating South Africa's withdrawal from the Empire. Formal recognition was not forthcoming, it being the consensus of the conference that the right of withdrawal was implicit in the statute extending autonomy to the Dominions adopted in 1926. This tacit understanding and the assurance given by J. H. Thomas, the British Secretary of State for Dominions, that any Dominion might secede at any time "if it were foolish enough to do so" appeared to satisfy Premier Hertzog and his associates of the Nationalist party (see GREAT BRITAIN under History).

General Hertzog created consternation among the Afrikaner republicans by delivering a series of anti-republican speeches upon his return from the Imperial Conference. He declared that the constitutional issue had been satisfactorily settled and that unity of the white population would henceforth be his primary objective. He issued a warning on December 3, however, that the refusal of Great Britain to grant tariff preferences to the Dominions at the Imperial Conference, if persisted in, would force South Africa to revise her economic policy with regard to Imperial preferences.

Two Provincial elections during the year resulted in gains for General Smuts's South African party. The Nationalists won by a narrow margin in the Transvaal on March 28, capturing 28 seats, as against 25 won by the Opposition party. In Natal, on June 13, the South African party captured all 25 seats in the Provincial Council, in which it had previously held all except five.

The South African Assembly on March 4 passed an alien quota bill, restricting to 50 the number of immigrants to be admitted annually from any country except 12 of the Northern European countries, the British Commonwealths, and the United States. The measure operated to check immigration from southern and eastern Europe and the Near East, and particularly that of Jews from Palestine (see JEWS). A bill, introduced by Premier Hertzog, to extend the suffrage to women of European descent, was passed by the South African Assembly April 11 by a majority of 39. Party lines disintegrated completely in the vote on the measure. In September, Premier Hertzog headed the South African delegation to the League of Nations Assembly at Geneva. Ralph J. Totten, the first Minister of the United States to the Union of South Africa, presented his credentials to the Governor General on September 8. South Africa sent a Minister to the United States in 1929. Consult John Kirk, *Economic Aspects of Native Segregation in South Africa* (London, 1929).

SOUTH AMERICA. See under the various South American countries. See also **EXPLORATIONS.**

SOUTH AMERICAN LITERATURES. See **SPANISH AMERICAN LITERATURES.**

SOUTH AUSTRALIA. A state of the Australian Commonwealth, occupying the south central part of the continent. Area, 380,070 square miles; population, 495,160 at the census of 1921, as compared with an estimate of 580,249 on March 31, 1930. Adelaide, the capital and largest city, had 324,898 inhabitants (with suburbs) on Jan. 1, 1930. The total estimated population increase fell to 923 in 1929 from 3577 in 1928, due to depressed economic conditions. Births in 1929 totaled 10,665; deaths, 5039; marriages, 3719; the excess of emigration over immigration, 4703 (2684 in 1928).

Education is free, secular, and compulsory. In 1928 there were 1093 State schools, with 98,862 pupils, and 184 private schools, with 15,857 pupils. There is a State university at Adelaide. The value of all production in 1927-28 was about £39,098,244, distributed as follows: Manufactures, £13,135,489 (£12,568,377 in 1928-29); crops, £12,865,099; pastoral, £7,236,615; dairying, £1,984,513; minerals, £1,188,522 (£1,302,805 in 1928-29); fisheries and game, forestry, poultry, etc., £2,088,000. Wheat is the principal crop, the yield from 3,645,764 acres in 1929-30 being estimated at 23,345,093 bushels (26,826,094 bushels in 1928-29). Barley, oats, hay, and grapes, are other crops, the wine output in 1928-29 totaling 14,828,968 gallons (10,000,000 in 1929-30). Live-stock in the State in 1929 included 7,079,947 sheep (6,200,000 estimated for 1930), 263,016 cattle, 205,865 horses, and 62,723 swine. Wool production for 1928-29 was estimated at 74,616,004 pounds (78,369,918 pounds in 1927-28); butter, 11,315,714 pounds; cheese, 2,975,095 pounds; bacon and ham, 5,110,352 pounds. The principal minerals are iron, copper, gypsum, phosphate rock, and salt.

Preliminary figures for 1929-30 placed the value of direct overseas imports at £9,367,348 (£11,305,866 in 1928-29) and of direct overseas exports at £14,998,975 (£14,811,542 in 1928-29). Wool, wheat, flour, copper, meats, butter, honey, wine, fruits, and hides and skins are the chief exports. There were 2542 miles of State-owned railways in operation in 1928-29. The total mileage, including State, Federal, and private railways lines, was 3738 miles. Highways extended about 40,000 miles. For the fiscal year 1929-30, State financial operations resulted in a deficit of £1,625,472. Ordinary revenues in 1928-29 totaled £10,840,914 and expenditures were £11,771,772. The gross State debt on June 30, 1930, stood at £93,986,118, or a per capita debt of £162 (about \$812).

The administration is under a governor appointed by the Crown, and an executive council; legislative power is vested in a council and an assembly, the latter consisting of 46 members elected for three years. Governor in 1930, Brig.-Gen. Sir Alexander G. A. Hore-Ruthven, appointed May, 1928; Premier, Treasurer, and Minister of Railways, R. L. Butler (Liberal). See **AUSTRALIA.** The Liberal-Country party coalition Government, which in the 1929 State Legislature held 28 seats against Labor's 16, was overthrown by the Labor party at the general election held early in 1930. Labor held 26 seats, the Liberals 17, and the Country party 2, following the election of 1930.

SOUTH CAROLINA. POPULATION. According to the Fifteenth Census, the population of the State on April 1, 1930, was 1,738,765. The population on Jan. 1, 1920, was 1,683,724. The capital is Columbia.

AGRICULTURE. The following table gives acreage, production, and value of the principal crops, in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|-----------|-------------------------|------------|
| Cotton | 1930 | 2,193,000 | 1,040,000 ^a | \$..... |
| | 1929 | 2,183,000 | 845,000 ^a | 89,280,000 |
| Corn | 1930 | 1,635,000 | 26,978,000 | 24,280,000 |
| | 1929 | 1,422,000 | 23,321,000 | 23,088,000 |
| Tobacco | 1930 | 129,000 | 94,170,000 ^b | 11,300,000 |
| | 1929 | 133,000 | 82,460,000 ^b | 13,194,000 |
| Oats | 1930 | 408,000 | 9,996,000 | 7,397,000 |
| | 1929 | 408,000 | 11,016,000 | 8,813,000 |
| Sweet potatoes | 1930 | 52,000 | 5,200,000 | 4,160,000 |
| | 1929 | 50,000 | 5,750,000 | 4,888,000 |
| Hay | 1930 | 383,000 | 805,000 ^c | 5,724,000 |
| | 1929 | 368,000 | 316,000 ^c | 6,056,000 |
| Potatoes | 1930 | 23,000 | 2,073,000 | 3,865,000 |
| | 1929 | 22,000 | 2,608,000 | 3,651,000 |
| Wheat | 1930 | 42,000 | 538,000 | 705,000 |
| | 1929 | 64,000 | 768,000 | 1,152,000 |

^a Bales. ^b Pounds. ^c Tons.

Farms in the State numbered 157,894 in 1930, as against 172,767 in 1925 and a total of 192,693 in 1920.

MINERAL PRODUCTION. The narrowly limited mineral industry of the State ran increasingly to the production of stone, which contributed in 1928 substantially more than half of the year's entire mineral product as reckoned by value. The yield of stone rose to 1,278,190 short tons for 1928, from 1,197,870 for 1927; in value, to \$2,203,863 for 1928, from \$1,992,558 for 1927. The value of clay products, the next mineral industry in order of importance, declined to \$1,462,055 for 1928, from \$1,802,772 for 1927. The yearly yield of raw clay, 109,186 short tons, in value \$1,000,183 for 1928, went only in part into the State's own clay products. The entire mineral product of the State attained the value of \$4,045,849, with allowance for duplications, for 1928; for 1927, of \$4,251,137.

FINANCE. State expenditures in the year ended Dec. 31, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$14,113,851; (of which \$4,119,874 was for local education); for interest on debt, \$1,456,734; for improvements, \$11,606,735; total, \$27,176,320 (of which \$13,558,431 was for highways, \$2,374,129 being for maintenance and \$11,184,302 for construction). Revenues were \$21,653,726. Of these, property and special taxes formed 25.2 per cent; departmental earnings and compensation to the State for officers' services, 6.7; sale of licenses, 59.4 per cent (including gasoline taxation of \$5,227,064). The funded debt of Dec. 31, 1929, \$41,150,242 outstanding, included \$35,516,160 for highways; net of sinking fund assets, the debt was \$40,853,503. On a property valuation of \$426,359,133, were levied State taxes of \$2,830,345.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 3778.95. No additional construction of line or trackage in 1930 was reported.

EDUCATION. Steps were taken to revise the system of school reports made by the county superintendents to the State Department of Education. It was intended that the annual State report should in consequence carry the figures of an

annual school census, enrollment, average attendance, and classified totals of public-school expenditures.

CHARITIES AND CORRECTIONS. The State had a State Board of Public Welfare, which, however, did not maintain executive offices in 1930. A child-placing bureau aided needy children in divers ways. Under the charge of the State Board of Health were two institutions for tubercular patients, the South Carolina Sanatorium (white) and the Palmetto Sanatorium (colored). Other State institutions were the Industrial School for Boys, Industrial School for Girls, State Reformatory for Negro Boys, State Training School (for the feeble-minded), State Hospital, Confederate Infirmary, and State Penitentiary.

LEGISLATION. The State Legislature held its regular annual session, adjourning on April 4. Three bills were passed to effect a constitutional change, subject to approval by popular vote in November, to do away with annual legislative sessions and substitute biennial sessions in their stead. It was required by law that drivers of motor vehicles on the roads of the State must provide themselves with drivers' licenses, procurable for 50 cents, and that the proceeds of these licenses should be employed to employ officers to patrol the highways. The pooling of State funds was facilitated by enactment. A law was passed to prevent municipalities and counties from purchasing their supplies of gasoline outside the State and escaping the payment of the State's tax on gasoline sales. The weights, sizes, and loads permissible for vehicles using the highways were limited. A small revolving fund of \$50,000 for the purchase of seeds and fertilizers was created. Provision was made for the manufacture of road signs and of license plates for motor vehicles at the State Penitentiary. Radio receiving sets were subjected to a tax of which the proceeds were to aid the State Tuberculosis Sanatorium. As a means to minimize litigation with regard to the State's \$65,000,000 issue of road bonds it was required that those instituting suits with regard to the sale of the State's securities furnish bond of \$25,000. Another act validated \$10,000,000 of highway bonds of which the sale had been questioned.

POLITICAL AND OTHER EVENTS. In the Democratic primary election, held on August 26, Sen. Cole L. Blease received the largest vote, but his lead was not sufficient to secure his renomination. A runoff primary was therefore held on September 9. In this second primary Blease was defeated for the Senatorial nomination by James F. Byrnes of Spartanburg, who received a vote greater by about 5000. In the first primary Olin D. Johnson, an opponent of the policy of a heavy issue of State bonds, led by about 9000 votes for Governor, but in the runoff I. C. Blackwood gained the nomination by a narrow margin. Senator Blease's loss of votes was attributed to his having alienated an element in his party by bolting the Smith Presidential ticket in 1928.

The 150th anniversary of the battle of King's Mountain was celebrated on the battlefield, near the North Carolina line, on October 7. President Hoover attended and delivered the chief address, before some 35,000 persons. Allegations of cruel treatment of prisoners employed in chain gangs by Spartanburg County led to the institution by Governor Richards in July of an inquiry.

ELECTIONS. The democratic candidates, James F. Byrnes for Senator and I. C. Blackwood for Governor, were elected on November 4 without

opposition, and the usual delegation of seven Democratic Representatives was chosen.

OFFICERS. Governor, John G. Richards; Lieutenant-Governor, Thomas B. Butler; Secretary of State, W. P. Blackwell; Treasurer, J. H. Scarborough; Budget Secretary, Walter E. Duncan; Attorney-General, John M. Daniel; Comptroller-General, A. J. Beattie.

JUDICIARY. Supreme Court: Chief Justice, R. C. Watts (later deceased, no successor being chosen in 1930); Associate Justices, Thomas P. Cothran, John G. Stabler, Eugene S. Blease, Jesse F. Carter.

SOUTH CAROLINA, UNIVERSITY OF. A non-sectarian State institution of higher education in Columbia; chartered in 1801 and opened in 1805. The enrollment for the autumn session of 1930 totaled 1673, of whom 1055 were men and 618 women. The registration for the summer session was 492. The faculty, including instructors, numbered 103. The appropriation by the General Assembly of the State of South Carolina was \$537,780 for the fiscal year. There were 110,000 volumes in the libraries. President, Davidson McDowell Douglas, A.M., D.D., LL.D.

SOUTH DAKOTA, POPULATION. According to the Fifteenth Federal Census the population of the State on Apr. 1, 1930, was 692,849. The State Census of May 1, 1925, showed a population of 681,200, of which 20,559 were Indians. Of this total, 347,579 were males and 313,122 were females. By the Fourteenth Federal census the population was 636,547 on Jan. 1, 1920. The capital is Pierre.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------|------|-----------|-------------|--------------|
| Corn | 1930 | 4,965,000 | 76,958,000 | \$36,170,000 |
| | 1929 | 4,916,000 | 112,085,000 | 69,493,000 |
| Hay | 1930 | 3,803,000 | 3,161,000* | 23,076,000 |
| | 1929 | 3,785,000 | 3,667,000* | 29,163,000 |
| Wheat | 1930 | 3,420,000 | 40,840,000 | 18,929,000 |
| | 1929 | 3,211,000 | 31,200,000 | 29,001,000 |
| Oats | 1930 | 2,236,000 | 64,844,000 | 13,617,000 |
| | 1929 | 2,259,000 | 64,382,000 | 21,890,000 |
| Barley | 1930 | 1,935,000 | 42,570,000 | 12,345,000 |
| | 1929 | 2,016,000 | 37,296,000 | 16,783,000 |
| Flaxseed | 1930 | 670,000 | 3,484,000 | 4,634,000 |
| | 1929 | 637,000 | 3,758,000 | 10,522,000 |
| Potatoes | 1930 | 65,000 | 3,445,000 | 3,273,000 |
| | 1929 | 67,000 | 4,422,000 | 5,085,000 |
| Rye | 1930 | 400,000 | 5,800,000 | 1,450,000 |
| | 1929 | 222,000 | 2,442,000 | 1,856,000 |

* Tons.

Farms in the State numbered 83,138 in 1930, as against 79,537 in 1925 and 74,637 in 1920.

MINERAL PRODUCTION. Gold, mainly the output of the Homestake Mine, continued to furnish about three fourths of the total mineral product of the State in 1928. There were produced in 1929, 312,328 fine ounces of gold or very nearly the 318,095 fine ounces of 1928; by value these yearly totals were \$6,450,400 for 1929 and \$6,575,600 for 1928. Sand and gravel were produced in 1928 to the value of \$1,301,075; stone to that of \$451,869. The total value of the mineral product of the State was \$9,443,488 for 1928; for 1927, \$8,463,952.

Metal mines in South Dakota in 1930 produced \$8,423,776 in gold and 105,000 ounces of silver, according to the U. S. Bureau of Mines, Department of Commerce. This compares with the production in 1929 of \$6,549,599 in gold and 85,182 ounces of silver. Despite the serious damage by

fire to the Ellison hoist on July 10, 1930, the Homestake mine, at Lead, the largest producing gold mine in the United States, increased its production \$1,900,000 over the 1929 output.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4287.45. No additional construction of line or trackage in 1930 was reported.

EDUCATION. There were enrolled in the public schools of the State, in 1930, 165,624 pupils. Of these, 134,286 were in elementary and 31,338 in high-school grades. The expenditures for public-school education totaled \$19,213,611. Salaries of teachers averaged, for the year, \$1282.

CHARITIES AND CORRECTIONS. The central authority over the charitable and correctional institutions of the State rests with the State Board of Charities and Corrections, one of the constitutional boards of the government. A separate constitutional board, the State Pardon Board, composed of the presiding judge of the State Supreme Court, the Secretary of State, and the State Attorney-General, exercises powers of pardon elsewhere vested in the executive. The parole system is conducted by a statutory Parole Department, headed by a State parole officer. Separate commissions administer the activities for child welfare and for the care of the feeble-minded. The State Penitentiary, at Sioux Falls, had in confinement, on June 30, 1930, 467 convicts, including 18 women. Other State institutions were: Home and School for the Feeble-minded, Redfield; School for the Deaf, Sioux Falls; School for the Blind, Gary; State Training School, Plankinton; Tuberculosis Sanatorium, Custer; Hospital for the Insane, Yankton; Soldiers' Home, Hot Springs.

POLITICAL AND OTHER EVENTS. Stock raisers were reported by the State Sheriff as suffering increasingly from the depredations of stock thieves using automobile trucks, which the local officers of the law were found inadequate to stop or trace. There resulted a demand for the creation of a State constabulary. This demand was supported by bankers in the State, who demanded fuller protection against bank robbers. In the Republican primaries on May 6 U. S. Senator McMaster was renominated. He had asked a vote of confidence in Progressive Republicans who had opposed the regular Republicans in the Senate, while his opponent, George J. Danforth, had presented himself as a Hoover Republican. For Governor, Gladys Pyle, Secretary of State, received the highest Republican primary vote. She failed, however, to obtain 35 per cent of the vote cast, as the State law required, and the nomination was thus thrown into the hands of the State Republican convention, which nominated W. J. Green.

ELECTIONS. Governor William J. Bulow, running on the Democratic ticket, was elected to the U. S. Senate, on November 4, receiving 105,079 votes, as unofficially reported, to 97,869 for the incumbent Republican Senator, W. H. McMaster. The Governorship went to Warren E. Green, Republican, obtaining 106,316 votes (unofficial), to 92,282 for D. A. McCullough, Democrat. The Legislature remained in Republican control in both branches, and three Republican Representatives were elected. Four proposed amendments to the State constitution were adopted by popular vote. They provided that judges might suspend sentences on first offenders; that the proceeds of fines be paid into local school

funds; that farm lands within consolidated districts might be specially classified for purpose of taxation; and that the Rural Credits Department pay the regular taxes on lands acquired by foreclosure. A proposed amendment to authorize the Legislature to alter by a two-thirds vote the salaries of State officers was rejected. Rejected also, by a referendum vote, was a measure to impose a tax at the rate of 3 per cent on the sales of motor vehicles.

OFFICERS. Governor, W. J. Bulow; Lieutenant-Governor, J. T. Grigsby; Secretary of State Gladys Pyle; Treasurer, A. J. Moodie; Auditor, William M. Dunn; Attorney-General, M. Q. Sharpe; Superintendent of Public Instruction, E. C. Giffen.

JUDICIARY. Supreme Court: Presiding Judge, N. D. Burch; Judges, Dwight Campbell, Samuel C. Polley, James Brown, Carl G. Sherwood.

SOUTH DAKOTA, UNIVERSITY OF. A State institution of higher education in Vermillion, founded in 1882. The enrollment for the autumn term of 1930 was 1292 and for the summer session, 299. The faculty and staff numbered 149. The productive funds amounted to \$355,880, and the income for the year was \$110,421. The library contained 70,000 volumes. In the fall of 1930 there was completed the first unit of a student-union building, costing \$100,000. President, Herman G. James, J.D., Ph.D.

SOUTH DAKOTA STATE COLLEGE. A State college of agriculture and mechanic arts in Brookings, founded in 1882. The enrollment for the summer session and the autumn of 1930 was 1529, distributed as follows: Agriculture, 149; engineering, 265; home economics, 130; pharmacy, 83; commercial science, 184; printing and rural journalism, 40; trades and industries, 10; general science, 221; special students in music, 31; graduate students, 20; secondary school of agriculture, 208; summer school, 235. The teaching staff of 103, including whole and part-time teachers, was equivalent to 87 full-time teachers. The productive funds of the college amounted to \$504,870. The income for 1929-30 was distributed as follows: For college maintenance and extension of physical plant, \$625,890; for the agricultural experiment station, \$138,249; and for agricultural and home-economics extension service, \$277,538. The library contained 42,700 bound volumes and 12,000 pamphlets. During 1929-30 the Coughlin Campanile, a gift of an alumnus, Charles Coughlin, was completed at a cost of \$75,000. President, Charles W. Pugsley, D.Agr.

SOUTHERN CALIFORNIA, UNIVERSITY OF. An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. The enrollment for 1929-30, including summer session and extension classes, was 17,137. In the autumn of 1930, there were 535 members on the faculty. The endowment was \$1,600,000, the income from tuition and fees, \$1,639,975, and other income, \$209,018. There were 126,637 volumes in the library. In 1930 construction of a new physical education building was completed. President, Rufus B. von Kleinsmid, Sc.D., J.D.

SOUTH POLE. See **POLAR RESEARCH.**

SOUTHWEST AFRICA. A former German protectorate, administered since Dec. 17, 1920, by the Union of South Africa under a mandate from the League of Nations; bounded by Portuguese West Africa, the Atlantic Ocean, Cape Providence of the Union, and Bechuanaland Protectorate. Area, 311,820 square miles; population,

at the census of 1926, 24,115 Europeans and about 234,790 natives; estimated in 1930, 30,404 Europeans and 261,117 natives. Capital, Windhoek.

SOVIET CENTRAL ASIA. A region in Central Asia, including the territory formerly known as Russian Turkestan, and extending from the Caspian Sea to Mongolia and from Siberia to the northern boundaries of Afghanistan, and Persia. Administratively it is divided into the following soviet socialist republics and autonomous areas affiliated with the Soviet Union:

SOVIET STATES OF CENTRAL ASIA

| | Area sq. km. ^a | Population 1926 ^a |
|-------------------------|------------------------------|---------------------------------|
| Kazak Republic | 2,924,938 | 6,530,528 |
| Turcoman Republic | 473,000 | 883,549 |
| Uzbek Republic | 340,346 | 5,270,200 |
| Tadzhik Republic | 80,000 | 745,200 |
| Kirghiz Republic | 246,000 | 997,441 |
| Kara-Kalpak Area | 113,000 | 303,460 |
| Total | 4,177,284 | 14,730,378 |

^a Figures from Soviet Union Year Book for 1929.

SOVIET RUSSIA. See RUSSIA.

SPAIN. A constitutional monarchy of southwestern Europe, occupying the greater part of the Iberian peninsula, and separated from France by the Pyrenees. Capital, Madrid; ruling sovereign in 1930, King Alfonso XIII.

AREA AND POPULATION. The area of Continental Spain is 190,050 square miles; including the Balearic and Canary Islands and Spanish possessions on the West Coast of Africa, it is 194,800 square miles. The estimated population on Jan. 1, 1930, was 22,760,854, as compared with 21,338,381 at the census of 1920. Births averaged 652,607 annually from 1925 to 1929; deaths 418,681. The birth rate per 1000 inhabitants in the same period averaged 29.3 annually and the death rate, 18.8. The principal cities, with their estimated populations on Jan. 1, 1929, are: Madrid, 816,928; Barcelona, 767,774; Valencia, 269,727; Seville (Sevilla), 216,511; Málaga, 159,479; Zaragoza, 155,529; Murcia, 154,705; Bilbao, 150,112.

EDUCATION. At the census of 1920, 39.8 per cent of the males and 53.1 per cent of the females over five years of age could neither read nor write. In 1927, there were 29,010 public and about 5500 private elementary schools, with approximately 3,000,000 pupils, and 65 secondary, or middle-class schools, with 76,293 pupils (9310 girls). In the same year, the 11 universities enrolled 39,719 students.

PRODUCTION. Agricultural, garden, and forest products dominate the economic life of the country. Together with extensive mineral and water-power resources, they form the basis for the considerable industrial development during and since the World War. While the productive area of Spain is placed at 113,987,500 acres, or 90.4 per cent of the total surface, the area under cultivation in 1925 was 47,823,000 acres, or 38.3 per cent of the total. Due to the aridity of the central and southern sections, about 41 per cent of the total area of Spain is devoted to meadow and pasture land, on which sheep raising receives particular attention. The area and production of the chief crops in 1928 and 1929 are shown in the accompanying table.

Spain has an exportable surplus of copper, iron, lead, zinc, manganese, mercury, and pyrite, and adequate amounts for its own use of tungsten, barite, fluor spar, graphite, gypsum, talc,

SPANISH CROPS: AREA AND PRODUCTION

^f Seasons ended following year.

and soapstone. Domestic consumption is small and iron-ore production is dwindling. British capital controls most of the valuable mineral deposits. Mineral production in 1929, in metric tons, was: Coal, 6,983,400; lignite, 402,000; coke and briquettes, 1,198,400; pig iron, 731,600; steel ingots and castings, 924,000; lead, 133,300; zinc, 11,800. The value of crude mineral products in 1928 was 422,976,000 pesetas (\$70,172,000) and that of metallurgical and other mineral products was 1,295,300,000 pesetas (\$214,900,000).

COMMERCE. Excluding bullion movements, imports for consumption in 1929 declined to 2,736,700,000 pesetas (average exchange value of the peseta in 1929 was \$0.1468) from 3,004,300,000 pesetas in 1928. Domestic exports similarly decreased to 2,108,100,000 pesetas from 2,118,400,000 pesetas in the previous year. The unfavorable balance of trade amounted to 628,600,000 pesetas in 1929 and 885,900,000 pesetas in 1928.

Spain's unfavorable balance of trade in 1930 was the smallest in a decade. Imports totaled 2,440,000,000 pesetas and exports 2,290,000,000, according to preliminary figures. The unfavorable trade balance was 147,000,000 pesetas.

FINANCE. Ordinary budget revenues in 1930 were estimated at 3,669,672,000 pesetas and ordinary expenditures at 3,637,684,000 pesetas. Preliminary returns for the year forecast a slight surplus in the final account. Preliminary returns for 1929 placed ordinary receipts at 3,724,000,000 pesetas and ordinary expenditures at 3,596,000,000 pesetas. Extraordinary receipts were calculated at 500,000,000 pesetas and extraordinary expenditures at 459,000,000 pesetas, leaving an estimated surplus of 169,000,000 pesetas. However, as the extraordinary receipts were largely loans, an actual deficit of some 331,300,000 pesetas was shown, as compared with an actual deficit of 194,100,000 pesetas in 1928 and 262,200,000 pesetas in 1927.

The total funded public debt on Jan. 1, 1930, stood at 19,988,000,000 pesetas (about \$3,258,000,000), as compared with 19,273,000,000 pesetas on Mar. 31, 1929. Most of the public debt is held in Spain.

COMMUNICATIONS. Important developments in the Spanish railway situation took place in 1930. The Andaluces Railway, the most important system in southern Spain, purchased the Sur de Espana lines for 20,376,700 pesetas (about \$2,852,865). This gave the Andaluces system a total of 1021 miles of broad-gauge track, with an estimated property value of 302,234,309 pesetas (about \$42,312,000). The total railway mileage

in 1928 was 10,138 miles. Most of the railways, though privately owned, received government subventions. The Minister of Finance reported in May, 1930, that railway receipts from 1926 through 1929 totaled 1,516,900,000 pesetas and expenditures 1,512,300,000 pesetas. A deficit of 299,000,000 pesetas was estimated for 1930.

GOVERNMENT. According to the constitution, executive power is vested in the King, who acts through a responsible ministry, and legislative power in the Cortes, or Parliament, consisting of a Senate and Chamber of Deputies. Parliament was dissolved by royal decree, Sept. 16, 1923, and the control of the government remained in the hands of the dictator, Primo de Rivera, until early in 1930.

HISTORY

The ferment of unrest, which reached dangerous proportions in 1929, was not allayed by the fall of the dictatorship of Primo de Rivera on Jan. 28, 1930. The nation seethed throughout the new year in a wild confusion of revolutionary conspiracies, anti-monarchist demonstrations, strikes, riots, political controversies, and autonomous movements in Catalonia and the Basque provinces. That King Alfonso held his throne at the end of 1930 was due to the loyalty of the bulk of the army and the inability of his opponents to reconcile their conflicting aims and ambitions.

FALL OF PRIMO DE RIVERA. When the dictator, who for more than six years had guided the destinies of the nation, submitted his resignation as Premier to the King on January 28, few were surprised. His prestige had steadily declined during 1929 (see 1929 YEAR BOOK). The antagonism of the King, dissatisfaction in the army, the financial straits of the government, and widespread popular unrest made his continuance in office impossible. On January 18, he announced that the purposes of the dictatorship had been achieved and that he planned to withdraw. The continued fall of the peseta forced the resignation of his Minister of Finance two days later. Then came an attempted military revolt and riots by students of the National University at Madrid. In a moment of indiscretion, the Premier on January 26 sent a note to about 17 ranking army officers asking whether he still held the support of the army. Alfonso seized the opportunity to ask for Primo de Rivera's resignation before any public answer had been received from the military chiefs. The King immediately ordered General D'Amaso Berenguer, head of his military household and former Military Governor of Morocco, to form a new Cabinet.

THE BERENGUER RÉGIME. The new Premier announced that his first task would be to re-establish constitutional government, provide for the election of the Cortes, or Parliament, and restore civil rights and the right of free speech and a free press. Whether the King desired the full restoration of constitutional rights is difficult to say, but the obstacles confronting such a programme were in themselves sufficient to explain the lack of progress made during the year. During six years of dictatorship the old political parties had disintegrated, voting lists were out of date, and the machinery for holding an election required complete rehabilitation. In addition, every move in the direction of constitutional government made possible new attacks upon the monarchy and the Cabinet and agitations which

frequently resulted in disorders. Parliamentary elections were originally promised for November, but in that month the census committee reported that the election lists could not be completed before Mar. 1, 1931.

The Cabinet formed by Premier Berenguer, who assumed also the portfolio of War, contained but one outstanding figure—the Duke of Alba as Minister of Education. The other members were: Finance and Economy, Manuel Arguelles; Public Works, Leopold Matos; Interior, General Enrique Marzo; Navy, Vice Admiral Salvador Carvia; Labor, Pedro Sangro y Ros de Ordoño; Justice, José Estrada; Commerce, Julio Wais. It was generally anticipated that the life of the Cabinet would prove short. The King, by a decree of February 15, abolished the powerless National Consultative Assembly established by Primo de Rivera. At the same time he restored the former rule providing for promotion in the army on a basis of seniority, rather than of merit or favoritism. Meanwhile, the Premier appointed civil governors in most of the 52 Spanish Provinces and established provincial delegations, which were Conservative in character.

Dissatisfaction with the slowness of the transition from dictatorship to constitutional government became increasingly vocal as the year progressed. A number of Republican and Socialist leaders and university professors, exiled from the country by Primo de Rivera, returned to conduct agitations against the King and the Berenguer régime. Among them were Miguel de Unamuno, the philosopher, and Antonio Maria Sbert, leader of the non-Catholic student group at the University of Madrid. Sanchez Guerra (see 1929 YEAR BOOK), former Premier, renewed his demands for the establishment of a republic. Student demonstrations, labor strikes, and food riots broke out in February and increased in violence as the agitation gathered momentum. There were frequent clashes with the police and numerous deaths, injuries, and arrests. In February, also, occurred a reorganization of the Cabinet. The Duke of Alba was named Minister of State, a post abolished by Primo de Rivera, and his place as Minister of Education was filled by Elias Tormo.

Alarmed by the development of the republican movement, the army, the clergy, and the aristocracy rallied to the support of the monarchy. A monarchist demonstration was held in the new Madrid bull ring in April, attended by delegates from all Spanish Provinces. Clashes between republicans and monarchists featured political meetings in the large cities.

Despite intense political activity, the government continued its gradual restoration of constitutional rights. A large degree of freedom of speech and press was allowed. Professor Unamuno was reinstated as rector of the University of Salamanca. On March 13, a royal decree re-established juridical rights and another permitted those fined unlawfully by the régime of Primo de Rivera to claim the return of their payments. In May, steps were taken toward reopening the universities closed during student riots early in the month.

The political campaign in preparation for the anticipated elections in November got under way in earnest in September, accompanied by general strikes and rioting in many cities. The government on September 18 lifted the newspaper censorship for the first time in seven years, except

in Barcelona, but with a stern warning that abuses of freedom would be severely punished. An alliance of the most important of the 22 republican parties in Spain was formed and reached an agreement to enter only one republican candidate in each district for the general elections. An alliance with the Socialists was rejected.

FALL OF THE PESETA. The political difficulties of the government were increased by the alarming decline in the exchange value of the peseta, a tendency which engrossed the attention of government officials and the business classes throughout the year. With a par value of about five to the dollar, the peseta in June exchanged at around 8.50 to the dollar. On August 19, Finance Minister Arguelles resigned because of his inability to check the peseta's decline. He was succeeded by Julio Wais, Minister of Economy, whose post was assumed by Luis Rodriguez Viguera. The new Finance Minister introduced measures designed to restrict imports, control all foreign-currency transactions, and prevent speculation in foreign exchange. The peseta continued to decline, however, reaching 10.50 to the dollar on October 16. It then rallied to 8.93 on October 30.

THE REPUBLICAN CONSPIRACY. The decline of the peseta had been accompanied by a rise in prices, which contributed to the suffering caused in some districts by the interruption of economic activities through labor strikes and political disorders. The announcement made in November that elections could not be held until the following March fanned popular discontent, and a wave of violence swept the country. Following a clash in Madrid on November 14 between workers of the building trades and the police, the General Union of Workers called a 48-hour strike, which spread to other cities. In some cities, notably Barcelona, Communist groups appeared to have forced the strike on the Socialist trades unions, which later repudiated a policy of violence. For several days rioters terrorized Madrid and in Barcelona strikers barricaded the streets. In clashes with the police, many were killed and hundreds injured.

These events proved a prelude to a more ominous republican uprising, which started on December 12 with the revolt of the garrison of the fortified town of Jaca in the Pyrenees. The revolution had been carefully planned on a large scale, with the primary object of establishing a republic. Through the over-eagerness of a young officer, Captain Galan, the insurgents at Jaca tried to effect a junction with fellow-conspirators in a neighboring town a few days before the appointed time. Prompt intervention by loyal troops, dispatched from Madrid, resulted in the defeat of part of the rebels in a mountain pass and the frustration of the plan for a combined march on Barcelona, which was to have become the national revolutionary headquarters. The premature move in the North also enabled General Berenguer to forestall risings in other parts of the country. Jaca subsequently surrendered to loyal troops and the two insurgent leaders, Captains Galan and Garcia, were summarily court-martialed and shot.

On December 15, Maj. Ramon Franco, the noted Spanish aviator, emerged from hiding and for a few hours gained control of the Cuatro Vientos military air field near Madrid. The artillery regiment of Leon ended the uprising by firing 100 rounds over the heads of the rebels

at the air field. Major Franco and 11 other aviators escaped in four airplanes to Portugal. These revolutionary efforts were accompanied by a general strike in most of the large cities. The *Guardia civil* and the *Guardia de Seguridad* remained loyal, however, and a strong display of force led to the termination of the strike. Martial law, which had been declared throughout Spain on December 15, continued in effect to the end of the year. The roundup of republican leaders and participants in the abortive revolt placed nearly 10,000 persons within Spanish prisons by December 20. Among the leaders of the conspiracy, charged with signing a revolutionary manifesto, were Alcalá Zamora, Miguel Maura, Francisco Largo Caballero, and Hernando Ríos. In Madrid alone, 950 were under arrest on December 20. A mass "confession" of complicity in the conspiracy made its appearance on the same date. By the end of the year, the situation had quieted down to such an extent that the government was discussing the possibility of an immediate lifting of martial law. Official figures released December 19 placed casualties in the revolt at 45 dead and 187 wounded. Republicans declared these figures to be too low. One result of the revolt was the announcement by General Berenguer that he intended to restore the Constitution of 1876 and would summon the Cortes for this purpose following the elections scheduled for the following March.

OTHER EVENTS. A new Spanish tariff schedule published in the Royal Gazette of July 23, 1930, raised still further the Spanish tariff wall, already the highest in Europe. The tariff action was protested by some American exporters, who considered it a reprisal for the increases in import duties in the American tariff adopted earlier in the year. This charge was denied in Spain. See obituary articles on PRIMO DE RIVERA Y ORBANEJA, GEN. MIGUEL; and WEYLER Y NICOLAU, GEN. VALEBIANO, who died during the year, and SPANISH LITERATURE.

SPANISH ACADEMY. See SPANISH LITERATURE.

SPANISH-AMERICAN LITERATURES.

It is necessary to remind our readers that the facts here presented must not be considered exhaustive, nor must the omission of some of the countries be taken as evidence that they produced nothing in 1930. Alberto Guillén (who, in his *Breve antología peruana*, made a very select little volume of the best modern Peruvian poetry) has done a remarkable bit of editing in his larger collection, *Poetas jóvenes de América*.

ARGENTINA. The following items show Argentina well represented in several fields. *Fiction.* Roberto Arlt, *Los 7 locos* (whose conception, critics declare, had no precursors, but which won, nevertheless, the third prize for prose in the 1930 Municipal Competition for Literature); Samuel Eichelbaum, *Tormenta de Dios* (collection of tales highly praised by the critics); B. González Arrioli, *La virgen de Luján* (finely documented recreation of historic scenes and personages); Carlos B. Quiroga (who has specialized in Argentina's Northwest, as witness his earlier novels, *Cerro*, *La particiolla ilusionada*, *Alma popular*, *La montaña bárbara y misteriosa*, and *Frax Mamerto Esquíú*), *La raza sufrida* (splendid and imposing), and *La imagen noroéstica* (hailed as a worthy member in the series, and granted the second prize for prose in the 1930 Municipal Competition for Literature); Rosa Río, *Piquillín*;

Sara Etcheverría, *El constructor del silencio* (awarded first prize in 1930 Municipal Competition for Literature); Julio A. Quesada, *Frivolas* (Novelerías dialogadas).

Essays. Alcira Olivé, *El divino derecho* (brilliant defense of motherhood and severe diatribe against the social ostracism of mothers without benefit of clergy); Herminia C. Brumana, *Mosaicos* (a restless, daring book); and Ernesto Nelson (one of the greatest educators in the three Americas), *La salud del niño, su protección social* (a very important and thoroughly documented work).

Poetry. Augustín de Rossi, *Flores en el deseo* (versos); Julio César Ford, *La casa donde el hombre buscó el amor* (versos); H. Lartigueau Lespada, *Nuevas orazonadas* (colección de versos); Angélica Fuselli, "A cuantos . . ." (verses showing very womanly sensibility and great delicacy of religious feeling); Emilia Helena Citter Morosini (who some years ago in great grief produced a book of verse *Acacias*), *Celajes* (although still melancholy it gives ground for hope that she will gradually conquer her grief and produce something more cheerful); Sara Montes de Oca de Cárdenas, *Ofrenda* (a miscellaneous collection of rich verse which reveal the writer as an exuberant soul crying aloud its burning Christian ideal).

Erudition. Mariano G. Bosch (author of *Teatro antiguo de Buenos Aires*, 1904, and of *Historia del teatro en Buenos Aires*, 1910), *Historia de los orígenes del Teatro Nacional Argentino y la época de Pablo Podestá* (interestingly written and well documented).

BOLIVIA. J. Uriel García, *El Nuevo Indio*.

CHILE. Ernesto Silva Román, *El dueño de los Astros* (cuentos); Aníbal Echeverría y Reyes, *Voces usadas en la industria salitrera* (valuable dictionary of technical words); Daniel de la Vega (very popular poet), *Sus mejores poemas*; Julio Vicuña Oñfuentes (genial folklorist), *Estudios de métrica española* (excellent); Ruperto Murillo, *Hacia la luz* (love story with a theme of political unrest and social reform); Julián Petrovick, *Naípe adverso* (fine bit of romanticism).

In 1930 there were several changes in the Chilean Academy. Early in the year the perpetual secretary, Ramón A. Laval, died. Samuel A. Lillo was elected perpetual secretary. The following scholars, having read their respective entrance discourses, took their chairs: Roberto Peragallo y Silva (*Grandeza futura del idioma español*); Gen. Francisco J. Díaz (*Locuciones viciosas en el lenguaje militar*); and José A. Alfonso, vice Vicente Reyes.

COLOMBIA. Outstanding items in Colombia's literary activity for the year are: Alfonso Mejía Robledo, *La risa de la fuente* (excellent novel of Colombian provincial life and first volume of a new series, *Novelistas Hispanoamericanos*, published by the Editorial Cervantes, in Barcelona); Arturo Suárez, *Rosalba: Historia de un amor grande y verdadero* (Colombian novel of the dazzlingly beautiful valley of the Cauca, after five editions in its native land, has now appeared in an Argentine edition); Luis G. Sepúlveda (hailed by critics as the Spanish-American George Bernard Shaw), *Instantáneas Neoyorkinas* (excellent skits in verse, showing a keen appreciation of the real New York).

COSTA RICA. Camilo Cruz Santos, *De mi vida inquieta—selección de crítica y discursos* (very

well received). The Costa Rican Academy lost its well-known member, Claudio González Rucavado.

CUBA. Cuba's contributions that have come to hand are more erudite than belletristic. Eduardo Zamacois (who lives generally in Spain or elsewhere in Europe), *Los vivos muertos*; A. Hernández Catá, *Mitología de Martí* (careful studies about the great Cuban patriot); Diego Vicente Tejera (hijo), *Delitos cometidos con ocasión del ejercicio de los derechos individuales garantizados por la Constitución*; Elisea Giberga, *Obras* (vol. ii contains his Parliamentary Discourses in the years previous to Cuba's independence); Coronel Luis Yero Miniet, *Carlos Manuel de Céspedes*; Roque E. Garrigo, *Historia documentada de la conspiración de los Soles y Rayos de Bolívar* (2 vols., published by the Academy of History of Cuba); Jorge Juárez Cano, *Hombres del 51*; Adrián del Valle, *Historia documentada de la Conspiración de la Gran Legión del Águila Negra* (granted the prize for the 1929 Competition of the Academy of History of Cuba).

DOMINICAN REPUBLIC. There were two volumes of essays by Federico Henríquez Carvajal, *Ética i Estética: I, Páginas breves; II, Almas i Libros*.

ECUADOR. Víctor H. Escala, author of *Kaleidoscopio* (which first appeared in Yokohama where the author was Ecuador's diplomatic representative, and later appeared in Venezuela) and of *La Sandalia del Peregrino* (admirable work that had run through two editions, 1925 and 1928), published *Mosaico* (travel notes of an experienced man-of-the-world, and series of critical articles on books). Other works are: Jesús Vaquero, Dávila, *Aspectos sociológicos de la nacionalidad ecuatoriana*; César Augusto Velarde, *Patología Indolatina*; and José de la Cuadra, *Sueño de una noche de Navidad* and *El amor que dormía*.

GUATEMALA. Of late years the Guatemalan Academy suffered many severe losses through death, four of which occurred in 1930: Manuel Valladares, Mariano Zecceña, Tácito Molina Izquierdo, and its illustrious Director, Antonio Batres Jáuregui. The following new members were elected to fill the vacancies mentioned and complete the roster: Carlos Federico Mora, Carlos Salazar, Jorge García Granados, David Vela, Lisandro Sandoval, Manuel Cobos Batres, José María Bonilla, Carlos Wyld Ospina, and José B. Ubico. Of these recent electees Lisandro Sandoval has just published a monumental part of a work that bids fair to be almost colossal: *Diccionario de raíces griegas y latinas y de otros orígenes del idioma español*, *Tomo primero, Primera parte: Raíces griegas* (pp. LXXII, 932 in 4^{to}).

MEXICO. Martín Luis Guzmán, *La sombra del caudillo*; Alfonso Comín (author of *Entre volcanes*, novel with scene laid in Mexico), *Xochitl* (volume of verse on the Mexican Revolution); Pedro I. Pérez Piña, *Atavismo* (*Novela Mexicana*); Manuel Brioso y Candiani, *Album literario de Oajaca*; Jesús Guzmán y Raz Guzmán, *Bibliografía de la reforma, la intervención, y el imperio*, *Tomo I*; Jorge Salas y Medina, *Disquisiciones gramaticales*; and *Algunos documentos sobre el Tratado de Guadalupe y la situación de Méjico durante la invasión americana*.

NICARAGUA. Hernán Robledo, *Sangre en el trópico* (*Novela de la intervención yanqui en Nicaragua*) (a keen study by a former Sub-Secretary of the Ministry of Public Instruction in the cabinet of President Juan Bautista Sacasa, both interesting and important); Julio Linares,

Poemas cortos; Rubén Darío, *Obras Completas* (ordenadas y prologadas por Alberto Ghirardo y Andrés González-Blanco), vols. xviii and xix. Azarias H. Pallais took his seat in the Nicaraguan Academy.

PERU. At a reception held in her honor in Madrid, Angélica Palma (talented daughter of the great tradiconista Ricardo Palma) spoke on *Mujeres del Perú*. She published also a new novel *Uno de tantos*.

SALVADOR. Rafael García Escobar, *Rosas de América*.

URUGUAY. Carlos Alberto Garibaldi, *Tensiones y Alegrias* (poemas); *Publicaciones del Centro Gallego IV y V, Curso de conferencias* (series of lectures by distinguished persons native and foreign, on topics of varied cultural interests); Carlos Sabat Ercasty, *Los Adioses* (*Interludios al modo antiguo*); Arturo Scarone, *Bibliografía de José Enrique Rodó*.

VENEZUELA. In connection with the Bolívar Centenary, the Venezuelan Government ordered the reprinting of two very important works: Francisco González Guinán, *Historia Contemporánea de Venezuela* (of which vol. i has appeared); and Gil Fortoul, *Historia Constitucional de Venezuela* (of which the author is preparing a second edition). Other works published during the year include: Caracciolo Parra Pérez (Venezuelan diplomat in Rome), *Miranda et la révolution française* (written in French), and *Bolívar* (synthesis of Bolívar's political ideas, written in Spanish); Guillermo Austria, *Cenizas de emoción*; Pablo Godoy Fonseca, *El derecho de castigar*; and Rafael Angarita Arvelo, *Ilustraciones del Romancero Castellano, Cancionero y Romancero Venezolano* (*Poesía popular*) (an interesting study that appeared in the September-October number of *Cultura Venezolana*). The most amazing production of the year, however, is *Doña Bárbara* by Rómulo Gallegos, who, despite the appearance, in 1920, of his first novel, *Reinaldo Solar* (reprinted this year), was practically unheard of previously, and who is now hailed by some serious critics as the first "great novelist" that Spanish America has produced.

SPANISH LITERATURE. For the fifth year in succession, the dramatic output of 1930 seemed to run ahead of that of the other branches, and for the third year in succession erudition seemed to outstrip fiction.

DRAMA. The older generation continued to flourish, to our delight and advantage, as witness the following: J. Benavente, *Los andrajos de la púrpura* (his best play in years, based on the life of Eleanor Duse); *La melodía del jazz-band*, and *Los amigos del hombre*; G. Martínez Sierra, *Triángulo* (farce with an unusual idea beautifully worked out); Azorín, *Angelita* (auto sacramental—highly praised); Pilar Millán Astray, *El millonario y la bailarina*; Alvarez Quintero Brothers, *Mariguilla Terremoto*, *La esposa y la chismosa* (wife endures husband's infidelities rather than disturb the peace of the home and shock the children), *Doña Hormiga* and *Los duendes de Sevilla*; Miguel de Unamuno, *Sombras de sueño*; Eduardo Marquina, *El monje blanco* (retablos de leyenda primitiva); Manuel y Antonio Machado, *La Lola se va a los puertos* . . . ; Luis Fernández Ardavin, *Han cerrado el portal*.

Others may also be mentioned: Armando Cotarelo y Valledor, professor at the University of Santiago de Compostela, *Lubacán* (*drama gallego*); Serrano Anguita, *Manos de plata*;

Eduardo Ugarte and José López Rubio, *La casa de los naipes*; J. M. Granada and Sobrevilla, *La hija de Juan Simón*; L. Navarro and J. M. López-Morís, *El oro del diablo* (a very fine and delicate work).

FICTION. Some of the well-known authors continued to charm the public: Pío Baroja, *Los pilotos de altura* and *La Estrella del Capitán Chimista*; Concha Espina, *Siete rayos del sol*; A. Insúa, *El Capitan "Malacentella"* and *El amante invisible*; W. Fernández Flórez, *El País de papel* and *Los que no fuimos a la guerra*; Pedro Mata, *El pájaro en la jaula*; V. Blasco Ibáñez, *El Caballero de la Virgen* (Alonso de Ojeda); José Más, *Luna y sol de marisma*; A. Pérez Lugín, *La virgen del rocío ya entró en Triana* (important posthumous work completed and published by J. A. Vázquez).

POETRY. Much of the best Spanish verse appears in the drama. Of nondramatic verse the following may be noted: Juan Bautista Andrade, *Diana de Gaita*; Juan José Domenchina, *El tacto fervoroso*; Antonio Ríos Argüeso, *Flores marchitas*; Professor José Manuel Camacho Padilla, *Guía lírica de Córdoba*; Miguel Gimeno Castellar, *Torre de Silencio* (awarded prize by the Cámara del Libro de Madrid); Juan Alcaide Sánchez, *Colmena y pozo*; and Alejandro Casona, *La flauta de Safo*.

ERUDITION. Among the most interesting works of erudition were the following: Angel Dotor, *Mirador—las letras y el arte contemporáneos, 1924-1929*; J. M. Salaverría, *Sevilla y el andalucismo*; J. Ortega y Gasset, *El espectador, VII*; Santiago Alba, *Para la historia de España*; R. Martínez de la Riva, *Blasco Ibáñez, su vida, su obra, su muerte, sus mejores páginas*; Alardo Prats y Beltrán, *Tres días con los endemoniados* (*La España desconocida y tenebrosa*); F. Romero Otazo, *Sentido democrático de la doctrina de Santo Tomás*; F. García Mercadal, *La Casa popular en España*; Xavier de Winthuyssen, *Jardines Clásicos de España—Castilla*; S. Cánovas Cervantes, *¿Cómo llegó a reinar Fernando VII?*.

ROYAL ACADEMY. Three members-elect took their chairs, all being among the six recently created regional chairs: one Basque, Julio de Urquijo e Ibarra, and two Catalans, Lorenzo Riber y Campins (for Majorca) and Antonio Rubió y Lluch (for Cataluña). To fill the vacancy caused by the death of E. Gómez Baquero ("Andrenio"), announced last year, the Academy elected Ignacio Bolívar. The Academy secured a Royal Decree of May 15, 1930 abolishing the six recently created regional chairs, the said decree to take effect only upon the death of the respective incumbent. The Academy published in facsimile form the Salamanca 1514 edition of the *Farsas y Eglogas* of Lucas Fernández.

The Fastenrath Prize for lyric poetry for the last quinquennial was awarded to Eduardo del Palacio.

NECROLOGY. The Catalan theatre lost its greatest *escenógrafo* in the person of Mauricio Vilumara at the age of eighty-three. The Spanish theatre suffered two very great losses: Irene Alba, who for more than 30 years had been creating important rôles; and Fernando Díaz de Mendoza, husband of María Guerrero, who with their company (known as Guerrero-Mendoza) had been dominant figures on the Spanish stage for more than half a century (see 1928 YEAR BOOK). The most notable literary loss was that of Gabriel Miró, one of Spain's best-known novelists.

SPERRY, ELMER AMBROSE. An American inventor and engineer, died in Brooklyn, N. Y., June 16, 1930. He was born in Cortland, N. Y., Oct. 12, 1860, and was educated at the Cortland State Normal and Training School, attending Cornell University 1879-80. He devised an electric arc light that was adopted and in 1880 he established the Sperry Electric Company in Chicago for the purpose of manufacturing these lights, and electrical machines and appliances.

About 1900 Mr. Sperry became interested in electro-chemistry and established a research laboratory in Washington, under the charge of C. P. Townsend, which continued in operation for 10 years. Among the achievements of this laboratory were the so-called Townsend process for manufacturing pure caustic soda from salt, accompanied by the production of hydrogen and chlorine compounds; the chlorine detinning process; and the electrolytic process for producing white lead from impure by-product lead. In 1915 the inventor announced his high-intensity arc searchlight, which was adopted by the principal armies and navies.

Mr. Sperry later was perhaps best known for his inventions based upon the application of the gyroscope. Chief of these was the gyro-compass, which eliminated the variations due to the earth's magnetism. This instrument not only served in navigation but afforded a permanent base line for the firing of torpedoes. This invention also was adapted to ocean navigation. From it was developed the gyro-stabilizer to keep a ship on an even keel.

Among Mr. Sperry's naval warfare inventions were a stabilized platform for the magnetic-needle submarine detector; electrically sustained gyros for torpedoes which enabled them to complete long trajectories with a high degree of accuracy; the goniometer, an instrument for determining the altitude of an airplane; and the pretelemeter, a device for anti-aircraft gunners to determine the fuse setter's range and the exact position of a target in terms of azimuth and elevation.

During his lifetime Mr. Sperry took out more than 400 patents. He was president of the Sperry Gyroscope Company of Brooklyn from 1910 to 1926 and chairman of the board from 1926 to 1929, when the organization was sold to the North American Aviation Company. He received numerous honors and medals, was one of the first members of the Naval Consulting Board, formed in 1915 as civilian advisers to the U. S. Navy, and in 1927 was chairman of the division of engineering and industrial research of the National Research Council.

STANFORD UNIVERSITY. A nonsectarian institution for the higher education of men and women in Palo Alto, Calif.; founded in 1891 in

memory of Leland Stanford, Jr. The enrollment for the autumn quarter of 1930 was 3576, and for the summer quarter, 1262. The faculty numbered 538. The productive funds of the university amounted to \$30,374,520, and the budget income for the year, including fees, was \$2,995,000. The library contained 528,934 volumes (including the Hoover War Library). Acting president, Robert Eckles Swain, Ph.D., executive head of the chemistry department, who was appointed to serve during the leave of absence of Ray Lyman Wilbur.

STATISTICAL ASSOCIATION, AMERICAN. An organization founded in Boston in 1830 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data.

The various association chapters meet from time to time in the leading cities of the United States. The ninety-second annual meeting was held in Cleveland Dec. 29-31, 1930. The officers of the association for 1931 were: President, William F. Ogburn; vice-presidents, Walter E. Stewart, William A. Mackintosh, Harry C. Carver, Sewall Wright, Fred G. Tryon, Donald R. Belcher; secretary-treasurer, Willford I. King; editor, Frank Alexander Ross. The official publications are: *The Journal of the American Statistical Association* and the *Annals of Mathematical Statistics*, each issued quarterly. Headquarters are in the Commerce Building of New York University, 236 Wooster Street, New York City.

STATISTICS. The British Government, during the year, issued an official paper giving the total expenditures for specific social services for the years 1928 and 1929. The table on page 736 indicates the expenditures for these years for England and Wales and Scotland.

STANDARD OF LIVING OF FORD MOTOR COMPANY EMPLOYEES. The Bureau of Labor Statistics, in the early part of 1930, in order to furnish basic material for minimum wage scales to Ford Motor Company employees in Europe, made a study of 100 families of employees working for the Ford Motor Company in Detroit. All these employees were supposed to be maintaining a family on the Company's minimum wage of \$7 a day. The average annual earnings of husbands in the families canvassed was \$1,694.63 and the average income from all other sources was \$17.24, making a total average income of \$1,711.87. The average expenditures of the 100 families was \$1,719.83. This leaves an average deficit of all families of \$7.96. The average number of persons per family was 4.5; the average equivalent of adult males was 3.27. The following figures indicate the distribution of expenditures by per cents: food, 32.3 per cent; clothing, 12.2 per cent; housing, 22.6 per cent; fuel and light, 6 per cent; furniture and house furnishings, 5.2 per cent; life insurance, 3.4 per cent; street car and bus fares, 2.2 per cent; expenses of sickness, 3.8 per cent; school expenses, 0.4 per cent; cleaning supplies, 1.0 per cent; barber, 0.7 per cent; miscellaneous expenses, 10.2 per cent. The housewives in the majority of these families did their own laundry work but electric washing machines were used in 49 homes. Only 5 families reported a telephone in the home. Forty-seven of these working men's families

EXPENDITURES UNDER SPECIFIED ACTS IN 1928 AND 1929

[Conversions into U. S. currency made on basis of £ = \$4.867]

| Act | England and Wales | | Scotland | |
|--|---------------------------------|---------------------------------|---------------------------------|---------------------------------|

owned cars. Seventeen families purchased automobiles, new or second hand, during 1929 and two families purchased their cars in 1928 but completed the payments in 1929. Upkeep on cars averaged \$78.02 for the 47 families. Only five families reported servant hire and in their case the annual average was only \$21.56 expended for this purpose. The following data regarding the home conveniences possessed by the 100 families covered in the survey indicate something of the standards of living being enjoyed: families having automobiles, 47; radio sets, 36; radio loud speakers, 35; foot sewing machines, 75; vacuum cleaners, 21; telephone, 5; piano, 13; phonograph, 45; electric washing machines, 49; electric irons, 98; electric fans, 4; electric toasters, 6. See UNEMPLOYMENT.

STEAMBOAT INSPECTION SERVICE, U. S. See SAFETY AT SEA.

STEAM BOILERS. See BOILERS, STEAM.

STEAM ENGINES. See POWER PLANTS AND BOILERS.

STEAM TURBINES. In the field of steam turbines, the year 1930 showed a trend toward the single-shaft tandem type for units of large capacities—100,000 kilowatts and above,—and the single-cylinder type for capacities up to 80,000 kilowatts. For extensions or rehabilitation of existing plants where it was necessary to install greatly increased capacity in the floor space formerly occupied by smaller units, the vertical (superimposed) type offered a solution. One notable instance of this was at the Rouge plant of the Ford Motor Company where a 100,000-kilowatt superimposed compound unit was being installed in the space formerly occupied by a 12,500-kilowatt turbine-generator. A similar case was to be found in Station "A" of the Pacific Gas & Electric Company at San Francisco, where two 50,000-kilowatt units were being put in. In both cases the units were to operate at 1200 pounds pressure, the essential difference being that in the San Francisco plant the high-pressure turbine and generator are mounted on top of the generator of the low-pressure turbine, whereas in the Ford installation the high-pressure turbine was over the low-pressure turbine with their generators occupying the same relative positions.

The record for size still was held by the 208,000-kilowatt cross-compound unit at the State Line Station near Chicago which was completed in 1929. In Europe the size of turbines was increasing although they have not yet attained the

capacities reached by units in the United States. The Lungstrom, radial-flow type was there gaining in popularity and one machine of 50,000 kilowatts capacity was installed near Stockholm, Sweden. The highest efficiency thus far reported had been attained by an 85,000-kilowatt Brown-Boveri turbine at the Zachorniwitz plant in Germany, which has an indicated efficiency of 87.7 per cent.

In the United States the year under review saw a trend toward higher steam temperatures and several turbines were being built to operate at 825 to 850 degrees Fahrenheit. Such temperatures had been in use for several years in a few European stations. The 10,000-kilowatt turbine built in England in 1929 for the Detroit Edison Company to operate at 1000 degrees was delivered but at the end of the year was not yet in service.

Turbine units of higher speeds, namely, 3600 r.p.m., have lately received attention and units have been built to operate at this speed up to 15,000 kilowatts capacity in the tandem-compound type. These higher speeds mean lighter motors and a shorter distance between bearings.

Refinements in design include a greater number of stages and longer blades in the high-pressure section in order to attain higher efficiency. Blade materials for the low-pressure stages of large units still presented a problem and various materials were being tried out to resist erosion and cutting from the moisture in the steam. These include chromium plating, nitrided materials and wear-resistant shields of hard metals such as tungsten and tantalum. As yet these were in the experimental stage.

STEIN, LUDWIG. A German philosopher and publicist, died in Berlin, July 14, 1930. He was born in Erdő-Bénye, Hungary, Nov. 12, 1859, and attended the Universities of Berlin and Halle. In 1889 he became professor of philosophy at the Polytechnic Institute in Zurich and in 1891 at the University of Bern. His principal works are: *Die Psychologie der Stoa* (1886); *Die Erkenntnistheorie der Stoa* (1888); *Die soziale Frage im Licht der Philosophie* (4 vols., 1897–1923); *Der Sinn des Daseins* (1904); *Der soziale Optimismus* (1905); *Philosophische Strömungen der Gegenwart* (1908); *Weltbürgertum, Nationalstaat und internationale Verständigung* (1913); *Einführung in die Soziologie* (1921); and *Evolution and Optimism* (1924). He was editor of other works.

STELLAR EVOLUTION. See **ASTRONOMY**; **PHYSICS**.

STERLING, THOMAS. An American lawyer and former United States Senator, died in Washington, D. C., Aug. 26, 1930. He was born near Amanda, Ohio, Feb. 21, 1851, and was graduated from the Illinois Wesleyan University in 1875. Admitted to the Illinois bar in 1878, he practiced in Springfield. In 1882 he removed to Redfield, S. D., and was elected a member of the Senate of the first State Legislature in 1890. From 1901 to 1911 he was dean of the law college of the University of South Dakota in Vermilion. In 1913 he was elected to the United States Senate to succeed Robert J. Gamble and was reelected in 1918 for the term ending in 1925. At the time of his death he was a member of the faculty of the National University law school in Washington and also was engaged in private practice in that city.

STEVENS INSTITUTE OF TECHNOLOGY. A college of engineering in Hoboken, N. J.; founded in 1870. The college offers an unspecialized course in the fundamentals of engineering to provide basic training for the practice of the profession in its several branches. The enrollment for the autumn of 1930 was 509, including 31 graduate students, and for the summer session of that year, 87. There were 63 members on the teaching staff. The productive funds amounted to \$3,400,000, and the income for 1929-30, including fees from students, was \$400,000. The library contained 20,000 volumes. In June, 1930, the Stevens engineering camp in Johnsonburg was opened on a tract of 350 acres. President, Harvey Nathaniel Davis, Ph.D.

STORY, WILLIAM EDWARD. An American mathematician and educator, died in Worcester, Mass., Apr. 10, 1930. He was born in Boston, Mass., Apr. 29, 1850, and was graduated from Harvard in 1871. He then studied at the universities of Berlin and Leipzig, receiving the Ph.D. degree from the latter institution in 1875. From 1876 to 1889 he was successively assistant and associate professor of mathematics at Johns Hopkins University. In the latter year he was called to the newly-founded Clark University as professor of mathematics, occupying this chair until his resignation in 1921. From 1878 to 1882 he was editor-in-charge of the *American Journal of Mathematics* and later edited the *Mathematical Review*.

STRAITS SETTLEMENTS. A British crown colony in Malaysia, comprising Singapore (with Christmas Island, Cocos Islands, and Labuan), Penang (with Province Wellesley and the Dindings), and Malacca. The Settlements were divided by area and population (1929) as follows: Singapore, 281 square miles and 555,284 inhabitants; Penang, 571 and 342,023; Malacca, 720 and 194,342. Labuan had an area of 28 square miles and a population of 5904 (not included in figures for Singapore). Total area, 1600 square miles; population, 1,097,553, more than half of whom are Chinese. The capital, Singapore (population 259,610 in 1921), ranks seventh in importance among the ports of the world, the volume of trade handled annually approximating \$1,000,000,000. Georgetown (Penang), with a population of 101,180 in

1921, and Malacca, population 21,200, are the chief towns of the two other STRAITS territories.

Governor in 1930, Sir Cecil Clementi, appointed January, 1930. See **CHRISTMAS ISLAND** and **LABUAN**.

STRATIGRAPHY. See **GEOLOGY**.

STRAUS, SIMON WILLIAM. An American banker, died in New York City, Sept. 7, 1930. He was born in Ligonier, Ind., Dec. 23, 1866. In 1884 he entered the banking business with his father as manager of the Chicago branch of the mortgage loan firm of Straus Bros. & Co. He was admitted to partnership in 1888, and on the death of his father in 1894 became senior partner. The firm was reorganized as S. W. Straus & Co. in 1898 and incorporated in Chicago in 1905. Mr. Straus acting as president until 1928 when he became chairman of the board. The New York office was opened in 1912, and branches were established in 40 other cities of the United States. Mr. Straus also founded the Franklin Trust and Savings Bank of Chicago and the Straus National Bank and Trust Companies in New York and Chicago.

STRIKES AND LOCKOUTS. It will be noted, from the following table, that the number of strikes and lockouts in the United States for the year 1930 showed a marked falling off, when compared with those of the preceding year. There is no question that the economic depression was the greatest single influence in bringing about this result. The table presents the strike history of the country for the period January, 1929-June, 1930.

| Month and year | Number of disputes | | Number of workers involved in disputes | | Number of man-days lost during month or year |
|----------------|----------------------------|---------------------------|--|---------------------------|--|
| | Beginning in month or year | In effect at end of month | Beginning in month or year | In effect at end of month | |
| 1927: Total | 734 | .. | 349,434 | | 87,799,394 |
| 1928: Total | 629 | .. | 357,145 | | 31,556,947 |
| 1929: Total | 903 | .. | 230,463 | | 9,975,218 |
| 1930 | | | | | |
| January | 42 | 21 | 8,879 | 5,316 | 182,202 |
| February | 44 | 33 | 37,301 | 6,562 | 436,788 |
| March | 49 | 34 | 15,017 | 5,847 | 289,470 |

| December | 22* | 11 | 4,132 | 6,361 | 279,119 |

* Preliminary figures subject to change.

None of the strikes that took place during the year 1930 involved large groups of workers or was characterized by serious disorders of the kind that have attended industrial disputes in previous years. Below there follows an account of some of the more important strikes and lockouts in the United States:

Garment Workers, Cleveland.—A general strike of organized garment workers in Cleveland began January 7. The union demands included a 40-hour instead of the prevailing 44-hour week, elimination of the sweatshop, guarantee of workers' wages in the shops of contractors, and preference for skilled workers in Cleveland before work was sent out of the city. The total number of workers involved in the walkout was 2500. A preliminary agreement between the striking workers and the association manufacturers was reached January 8 and went into effect January

13. Its most significant provisions were the following: a five-day and forty-two-hour week; the use by inside manufacturers of union contracting shops; the guarantee by inside manufacturers of one week's wages to workers in contracting shops and preference of work to cloak makers and dress-makers in the city of Cleveland before work is to be sent outside of the city.

Dressmakers, New York.—On February 4, in order to eliminate sweatshop conditions in the garment and dressmaking factories of New York City, the International Ladies' Garment Workers' Union called on its 30,000 members, of whom two-thirds are women, to quit work. The conditions for which the strikers were leaving their machines and tables included the following: the five-day and 40-hour week; a minimum scale of wages; the right to the job; the assumption by the jobber of conditions existing in contracting shops; elimination of sweatshop conditions. The strike affected the inside manufacturers, represented by the Affiliated Dress Manufacturers, Inc.; the contractors, represented by the Association of Dress Manufacturers, Inc.; and the jobbers, represented by the Wholesale Dress Manufacturers' Association, Inc. The four bodies involved in the dispute agreed to accept the services of Lieut. Governor Herbert H. Lehman as mediator. An agreement with the inside dress manufacturers was reached on February 10. Under it the union agreed to waive its demands for an unemployment insurance fund for one year; a permanent, impartial chairmanship was set up; a five-day and forty-hour week was agreed upon; Saturday overtime during the busy season was to be permitted at time and a half; the wage scale was to remain unchanged. The difficulties between the jobbers and contractors were settled February 12. By the agreement that was reached the contractors' association consented to give up its claim to jurisdiction over contracting shops outside of New York City while the jobbers pledged themselves to confine their work to members of the contractors' association for a trial period of three months.

Garment Workers, Massachusetts.—On March 13, 2000 workers, affiliated with the International Ladies' Garment Workers' Union in the Boston locals, struck for the creation of an unemployment fund, the setting up of an impartial chairmanship, increases in wages and the use of only decent outside contracting shops in those cases where contractors were being used. The chief demand, however, was for the five-day week and the eight-hour day. On March 24 the strike was over with the signing of agreements covering all the union demands except the wage increase and the creation of the unemployment fund.

Teamsters and Chauffeurs, New York City.—On May 1, 400 teamsters and chauffeurs, handling building materials, struck for an increase in wages of \$1 a day and an extra helper on trucks handling more than 3000 bricks. The strike terminated successfully May 9. On May 5, 700 chauffeurs employed in building operations went on strike, demanding a 55-hour week instead of a working day ranging from 11 to 16 hours and wage increases to \$35 per week. The strike ended on May 31, with the men receiving a wage increase of \$2.50 per week.

Garment Workers, Baltimore.—On July 23 the Ladies' International Garment Workers' Union called out its 2000 members in Baltimore in a strike whose principal demands were the follow-

ing: recognition of the union, elimination of sweatshops, the 40-hour week, the five-day week in two years, a minimum wage scale and the establishment of an arbitration committee. Some one-half of the manufacturers affected immediately came to terms with the union and a three-year contract was signed calling for the following: recognition of the union, a 44-hour week for the first year and a 40-hour week for the third year, and the right of discharge accorded to the employer on the basis of a defined procedure. Other manufacturers soon followed this example and by August 4 the strike was over.

Southern Textile Workers.—At Bessemer City, N. C., on August 18, 550 workers in the plants of the American Cotton Mills went on strike against a proposed general wage increase averaging 20 per cent. The strikers also demanded a reduction in the rent of the company houses. The strike terminated on August 25, with the establishment of the *status quo*. On September 29, some 4000 workers employed in the Riverside and Dan River Cotton Mills, located at Danville, Va., struck to obtain recognition of their union, which had recently become affiliated with the United Textile Workers. The strike was still in progress in December and apparently had been lost by the workers. Reference should be made to the YEAR BOOK of 1929 for a discussion of the labor troubles that were so numerous in the Southern textile areas for that year. At its 1930 convention, the executive council of the American Federation of Labor reported that it was making considerable headway in its organization campaign in these disaffected areas. Headquarters were established at Birmingham, Ala., and a total of 21 organizers was being maintained in the field. Up to September, 1930, 112 local unions had been organized in the various crafts affiliated with the A. F. of L., as well as five central labor unions.

Women's Tailors and Dressmakers, New York City.—On September 25 some 2550 workers, employed in the fashionable shops of New York City, struck for a wage increase of \$3 per week for the tailors and improved working conditions for the unorganized workers. Although the workers met with some success early in the strike the majority of the employers refused to give way with the result that the strike continued for upwards of two months.

CANADA. The accompanying table presents the record of strikes and lockouts in the Dominion for the years 1913 to 1929.

STRIKES AND LOCKOUTS IN CANADA, 1913 TO 1929

| Year | Number of disputes in exist- ence in the year | Begin- ning in the year | Disputes in existence in the year Employers involved | Workers involved | Time loss in working- days |
|------|--|-------------------------------|--|---------------------|----------------------------------|
| 1913 | 113 | 106 | 1,015 | 39,536 | 1,287,678 |
| 1914 | 44 | 40 | 205 | 8,678 | 430,054 |
| 1915 | 43 | 38 | 98 | 9,140 | 106,149 |
| 1916 | 75 | 74 | 271 | 21,157 | 208,277 |
| 1917 | 148 | 141 | 714 | 48,329 | 1,134,970 |
| 1918 | 196 | 191 | 766 | 68,489 | 763,341 |
| 1919 | 298 | 290 | 1,913 | 138,988 | 3,942,189 |
| 1920 | 285 | 272 | 1,278 | 52,150 | 866,754 |
| 1921 | 145 | 138 | 907 | 22,930 | 956,461 |
| 1922 | 85 | 70 | 569 | 41,050 | 1,975,276 |
| 1923 | 91 | 77 | 419 | 32,868 | 768,494 |

| 1928 | 101 | 97 | 726 | 18,239 | 238,182 |
| 1929 | 90 | 88 | 243 | 12,924 | 154,936 |

STUDENTS IN UNIVERSITIES AND COLLEGES. See **UNIVERSITIES AND COLLEGES.****STUDY, COURSES OF.** See **EDUCATION IN THE UNITED STATES; UNIVERSITIES AND COLLEGES.**

STUTZ, HARRY C. An American automobile manufacturer, died in Indianapolis, Ind., June 26, 1930. He was born in Ansonia, Ohio, Sept. 12, 1876. His early experience as a mechanic was obtained in a machine shop in Dayton. In 1910 he joined Henry Campbell in forming the Stutz Motor Car Parts Company, and in 1911 organized the Ideal Motor Car Company to manufacture the Stutz car, the two companies being consolidated in 1913 under the name of the Stutz Motor Car Company. He sold his interests in this company in 1919 but later again became associated with Mr. Campbell in the H. C. S. Motor Car Company.

SUBMARINE BOAT. See **NAVAL PROGRESS. SUBWAYS.** See **RAPID TRANSIT.**

SUCCESSION STATES. The designation applied to the three states forming the Little Entente. See **LITTLE ENTENTE.**

SUDAN, ANGLO-EGYPTIAN. A British-controlled territory in the upper Nile region of Africa, extending south from Egypt and Libia to British East Africa and the Belgian Congo; bounded on the east by the Red Sea, Eritrea, and Ethiopia, and on the west by French Equatorial Africa. Area, estimated at 1,008,100 square miles; population in 1928 estimated at 5,483,889. Capital, Khartoum, with 40,760 inhabitants; other cities, Omdurman, 102,648; Khartoum North, with adjacent rural district, 97,628.

In 1929 imports amounted to £E6,856,114 and exports to £E6,526,112. The budget for 1929 was estimated to balance at £E6,451,000 (the Egyptian pound exchanged at \$4.99 in 1928). Railway lines open for traffic in 1929 totaled 2097 miles. Governor-General in 1930, Sir John L. Maffey. See **EGYPT, under History.**

SUEZ CANAL. The preliminary reports for 1930 of the Compagnie Universelle du Canal Maritime de Suez showed a somewhat unusual decline in traffic, the first occurrence of this kind since the revival of traffic in 1922. In 1930 it was estimated that 5761 ships with a net tonnage of 31,608,759 passed through the canal, as compared with 6274 ships with a net tonnage of 33,466,014 in 1929. The movement of merchandise in 1930 was 28,511,000 gross tons; in 1929, 34,516,000 gross tons. Total transit and navigation receipts in 1930 amounted to 1,044,107,000 French francs (French franc equals \$0.0392). The accompanying table gives the final figures for Suez Canal traffic for 1929 and some years earlier:

SUEZ CANAL TRAFFIC

| Year | Transits Number | Net tonnage Tons | Cargo traffic Metric tons | Tolls Gold francs* |
|------|--------------------|---------------------|------------------------------|----------------------------|
| 1929 | 6274 | 33,466,000 | 34,516,000 | 1,115,920,000 ^b |
| 1928 | 6084 | 31,906,000 | 32,622,000 | 221,090,000 |
| 1927 | 5544 | 28,965,000 | 29,524,000 | 208,650,000 |
| 1922 | 4345 | 20,743,245 | 21,860,000 | 162,613,850 |
| 1919 | 3986 | 16,013,802 | 13,973,000 | 136,969,915 |
| 1912 | 5373 | 20,275,120 | 25,444,000 | 132,929,341 |
| 1909 | 4239 | 15,407,527 | 16,924,000 | 117,754,888 |

* One gold franc equals \$0.193.

^b In French francs, each equaling \$0.0392. See **EGYPT under Communications and History.**

SUFFRAGE. See **JAPAN, TURKEY, and SOUTH AFRICA under History.**

SUGAR. The world's sugar production in 1929-1930 as based on estimates published by Willett and Gray was 26,884,442 tons of 2240

pounds comprising 17,651,150 tons of cane sugar and 9,233,292 tons of beet sugar. The yields in long tons of cane sugar for the more important countries were placed as follows: Cuba, 4,671,260 tons; Java, 2,894,000 tons; British India, 2,766,000 tons; Formosa, and Japan, 926,255 tons; Hawaii, 815,000 tons; Porto Rico, 773,310 tons; Philippines, 750,000 tons; Brazil, 600,000 tons; and Australia, 530,483 tons. The estimate for the production of North and South America was 8,963,988 tons, for Asia 7,337,134 tons, for Africa 721,865 tons, and for Australia and Polynesia 618,163 tons. For 1930-31 the same authority estimated sugar production at 28,162,530 tons of which 11,597,100 were cane sugar.

Cane-sugar production in 1930 in the United States, limited to Louisiana, was estimated by the Department of Agriculture at 208,000 short tons, 8000 tons more than in 1929 and the largest since 1922. The acreage of sugar cane increased from 169,000 acres in 1929 to 184,000 acres in 1930. The introduction of disease-resistant varieties during recent years was reviving the industry in Louisiana. The value of the 1930 sugar-cane crop of 3,108,000 tons at \$3.42 per ton, the farm price December 1, was \$10,625,000 and of the 1929 crop of 3,159,000 tons at \$3.81 per ton, \$12,038,000. The production of sugar-cane sirup was estimated at 19,427,000 gallons on an area of 116,000 acres at the rate of 167.5 gallons per acre. The farm price Dec. 1, 1930, was 58.6 cents per gallon, giving a total value of \$11,390,000.

In the United States the Department of Agriculture estimated the production of sugar beets at 9,175,000 tons on an area of 799,000 acres with an average yield of 11.5 tons per acre compared with 7,318,000 tons, 688,000 acres and 10.6 tons, respectively, in 1929. It was forecast that the beet crop of 1930 would make 1,185,000 tons of refined sugar compared with 1,018,000 tons in 1929 and a five-year average of 1,011,000 tons. At the rate of \$7.15 per ton, the farm price December 1, the 1930 tonnage of beets was valued at \$65,561,000. As estimated, Colorado produced 3,299,000 tons of sugar beets, Nebraska 1,132,000 tons, California 771,000 tons, Wyoming 621,000 tons, and Montana 564,000 tons.

The production of maple sugar in the United States in 1930 was estimated at 2,588,000 pounds, procured from 14,421,000 trees at the rate of .18 of a pound per tree. The maple-sirup production was placed at 3,977,000 gallons from the same number of trees, the average rate per tree being .28 of a gallon. See **UNITED STATES under Congress.**

SUICIDE. See **CRIME.**

SULPHUR. During 1930 production in the United States, Sicily, and continental Italy, the world's three leading producers, increased and the total output for the world was estimated at about 2,900,000 tons, or an increase of 100,000 tons over 1929. The shipments were estimated at 2,450,000 tons, as compared with 2,800,000 tons in the previous year. In the United States production was active and totaled 2,558,981 long tons, as against 2,362,389 tons mined in 1929.

The exports of sulphur from the U. S. in 1930 totaled 598,220 tons valued at \$12,525,718, as against 855,183 tons valued at \$17,628,813 in 1929. Sicily increased its production in 1930 with an estimated output of 245,000 tons, as against 237,000 tons in 1929, while continental Italy produced about 88,000 tons in 1930, with shipments about 75,000 tons, as compared with 65,000 tons

in 1929. In Japan a decrease in production and shipments was noted over the previous year, while Chile was estimated to have produced 10,000 tons, and Spain 70,000 tons. The United States was in a position to supply as much sulphur as was required, and at the end of 1930 had 2,487,000 tons available stock, a net gain of 569,000 tons for the year.

SUMATRA. See DUTCH EAST INDIES.

SUN. See ASTRONOMY.

SUNDAY-SCHOOL UNION, AMERICAN. A volunteer association composed of members of different Protestant denominations, whose object is to establish and maintain Sunday schools and to publish and circulate moral and religious publications. In the year ending Feb. 28, 1930, 746 schools were organized and 554 schools reorganized, with a total of 4104 teachers and 38,676 pupils. There were 202 young people's societies established; 120 preaching stations opened; 17 churches of various denominations organized; and 6 churches built. The income for the year ending Feb. 28, 1930, was \$588,877; expenditures amounted to \$580,163. The most important of the publications is the *Sunday School World*. The officers in 1930 were: President, E. Clarence Miller; vice presidents, James M. Snyder and Robert L. Latimer; treasurer and recording secretary, John H. Talley; secretary of missions, Elliott D. Parkhill; editor of publications, Arthur M. Baker. National headquarters are at 1816 Chestnut Street, Philadelphia.

SUPERPHOSPHATE. See FERTILIZERS.

SURETY INSURANCE. See INSURANCE.

SURGEONS, AMERICAN COLLEGE OF. A college or guild (not a teaching institution), organized in 1913 by some 500 surgeons of North America representing every branch of surgery. The membership in 1930 was about 10,000 and included prominent surgeons of the United States, Canada, and the Latin-American countries.

The 1930 congress was held in Philadelphia October 13-17. The official journal of the college is *Surgery, Gynecology and Obstetrics*. The officers for 1930-31 were: President, Dr. C. Jeff Miller, New Orleans; president-elect, Dr. Allen B. Kanavel, Chicago; vice presidents, Dr. Eldridge L. Eliason, Philadelphia, and Dr. Ross Millar, Ottawa; treasurer, Dr. Frederic A. Besley, Waukegan, Ill. Dr. Franklin H. Martin was director general and Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell, associate directors. Headquarters are at 40 East Erie Street, Chicago.

SURGERY, PROGRESS OF. Leading developments in surgery during the year 1930 are summarized in the following paragraphs dealing with topics selected as of unusual and general significance.

ANÆSTHESIA. Perhaps the most important advance in anæsthesia in the United States during the year was the increased use of Avertin, a tribrom alcohol extensively employed in Germany and on the Continent since 1928. This drug, first prepared by Willstätter and Duisberg in 1927, soon gained wide acceptance, and has been used now in approximately 400,000 cases. In the December issue of the *Archives of Surgery*, Waters and Muehlberger of the University of Wisconsin reviewed the extensive literature which had accumulated on the use of this anæsthetic and reported the results of their own clinical and pharmacological studies. They found that Avertin produced a rapid, deep anæsthesia in animals, that the margin of safety was as great as with

ether and other similar drugs, that recovery was usually quite uneventful, and that there was no evidence of damage to the liver or kidneys by ordinary doses.

Clinically, the drug is given by instillation in the rectum. As a rule a 3 per cent solution containing 0.1 gram of Avertin per kilogram of body weight is used. The patient immediately becomes drowsy, but feels no alarm or fear, and is asleep in seven minutes. In twenty minutes the anæsthesia has reached its maximum depth and is maintained at this level for several hours. In the United States full anæsthetic doses are not given, and Avertin is supplemented with small amounts of nitrous-oxide or ether given by inhalation. By this technique a safe, so-called "basal" anæsthesia is obtained which can be varied in depth as required by the addition of inhalation anæsthetics. As a matter of fact, for ordinary operations only very slight additional anæsthesia is required. After a period of from two to five or six hours the patient slowly awakes. There is no excitement and practically never any nausea or vomiting. The patient has no memory of what has occurred and feels as if he were awakening from a sleep. Usually he soon falls asleep again and may not awake for several hours more.

OSTEOMYELITIS. Dr. W. S. Baer of the Johns Hopkins Medical School introduced a new method of treatment for osteomyelitis which promised to be of great value. This serious disease, an inflammation of the bone and marrow, is quite common in childhood and too frequently results in a chronic, recurring infection. It was frequently observed during the World War that soldiers, who had been wounded and had lain on the field for some hours before being brought to relief stations, had their wounds infested with maggots. Surprisingly enough, the wounds that did contain maggots were often quite clean and free from pus. Dr. Baer conceived the idea of applying this observation to the treatment of the infected, purulent bone cavities found in osteomyelitis. In his studies he found that the maggots acted as scavengers, that they would feed on necrotic tissue but refuse to ingest living tissue.

Maggots which have been raised from sterilized eggs (to prevent contamination with the germs of tetanus) are placed in the infected bone cavity following operation, and are prevented from escaping by covering the cavity with a small, tightly fitting box. After a few days they die and are removed by irrigation. More maggots are placed in the cavity until all the dead tissue and products of infection have been removed. They seem to produce no harmful effect on the patient and are apparently very effective in cleaning up the infected tissue.

EARLY DIAGNOSIS OF PREGNANCY BY HORMONE TESTS. Need has long been felt for an accurate diagnostic test for early pregnancy, and indeed many tests have been proposed, none of which have proved to be of much value. Recent work on the female sex hormone and on a hormone secreted by the anterior part of the pituitary gland has furnished three methods for diagnosis which seem to be fairly accurate. Mazer and Hoffman reported the interesting results of their use of these tests (*Jr. Am. Med. Assn.*, Jan. 3, 1931).

Investigators found that there is present in the blood and in the urine of pregnant women a substance called "female sex hormone" which produces the phenomena of "heat" or oestrus when injected into animals. Further, in 1927, Zondek

and Ascheim in Europe and Smith and Engle in the United States found that an extract of the anterior lobe of the pituitary gland (a small gland of internal secretion located at the base of the brain) caused maturation of the ovaries when injected into immature white mice. It was already known that in pregnancy there is a marked enlargement of the anterior lobe of the pituitary, and further study showed that the urine of pregnant women contained fairly large quantities of this anterior pituitary hormone.

The first test resulting from these studies, the so-called female sex hormone test, is carried out as follows: small quantities of the patient's urine are injected into female mice which have been previously castrated. If appreciable quantities of the hormone are present, the mouse shows oestrus, and this can be accurately determined by microscopic examinations of vaginal smears. This test was positive in 75 per cent of the women who later proved to be pregnant and was falsely positive in only 4 per cent.

The second test (Ascheim-Zondek) depends upon the presence of a demonstrable quantity of anterior pituitary hormone in the urine of pregnant women. Repeated small injections of urine are made into immature white mice and after four days the animals are killed. The test is positive if the ovaries of the mice are found on examination to show the changes of maturation and ovulation. In Mazer's series 73 per cent of the pregnant women gave a positive test, but the test was also positive in 16 of 64 women who were not pregnant. This was probably due to the fact that detectable quantities of anterior pituitary hormone are sometimes found in the urine of women who have marked ovarian insufficiency.

The third test (Siddall) depends upon the development of the lower genital tract of immature mice following the injection of blood serum of the pregnant woman, brought about probably by the action of both the female sex hormone and the anterior pituitary hormone. The test is considered positive when the weight of the uterus and ovaries of the mouse is greater than $\frac{1}{400}$ of the animal's weight. In the series reported, the test was positive in 76 per cent of the women later known to be pregnant, but was erroneous in 17 per cent.

DIAGNOSIS OF DISEASES OF THE URINARY TRACT. In few fields of medicine is diagnosis more exact than in urology. This is largely due to the fact that not only may the lower part of the urinary tract be seen by cystoscopy, but the ureter and pelvis of the kidney may be easily injected with an opaque material and their outline accurately shown in the X-ray. Urologists have long wished for a means of visualizing the urinary tract by means of a substance injected intravenously in order that its function might be better studied and in order that the patient might be saved the burden of cystoscopy. Researches of Swick and Binz apparently offer a method for accomplishing this. In 1923 Rowntree and his co-workers at the Mayo Clinic were able to obtain fairly satisfactory Röntgenograms of the kidneys by injecting 10 per cent sodium iodide intravenously. This was given up because of the toxicity of the drug and because visualization was not uniformly satisfactory. Swick of New York, working in Germany in the clinics of Lichtwitz in Altona and von Lichtenberg in Berlin, developed a method of intravenous urography which promised to be of great value. He used a series

of iodine containing pyridine compounds, synthesized by Binz, and finally found that one of them (subsequently named Uroselectan) was secreted differentially by the kidneys, was opaque to the X-ray, gave a fairly uniformly accurate delineation of the urinary tract, and most important of all was practically non-toxic in the doses used. This work was reported in Berlin in 1929 and again in the *Jr. Am. Med. Assn.*, Nov. 8, 1930.

GALL BLADDER DISEASE. Moore of the Barnes Hospital in St. Louis reported his experience with cholecystography (demonstration of the gall bladder outline by X-ray) in the seven years since it was first devised by the Washington University Medical School group headed by Dr. Evarts Graham (December, 1923). This method is based on the fact that certain dyes, which are opaque to the X-ray, are excreted by the liver following intravenous or oral administration, are then concentrated in the gall bladder, and thus serve to visualize it. The dye most commonly used is phenol-tetraiodo-phthalein. If the function of the gall bladder is normal, the dye is concentrated and the shadow of the gall bladder is uniformly dense. If the gall bladder is diseased, this concentration fails to take place and the shadow is either absent or of diminished density. Gall stones frequently show as small, round, less opaque areas in the uniform gall bladder shadow.

Cholecystography has been widely used since its discovery in 1923, and has proved to be an exceedingly valuable agent in the diagnosis of gall bladder disease. It may be properly said that it has revolutionized diagnosis in this particular field.

Moore reported the results of 1956 examinations. In the cases in which the diagnosis could be verified at operation or necropsy, the test proved to be correct in 98.77 per cent. Most of these examinations were made after the intravenous administration of the drug, a method not used in some clinics because of fear of the dye's exerting a toxic effect. Moore stated that there were no deaths and no serious reactions in his series. Twenty per cent of the patients had very mild reactions and 14 per cent had more persistent discomfort and occasional nausea and vomiting, but no alarm was felt concerning them. (*Jr. Am. Med. Assn.*, Dec, 27, 1930.)

CANCER. In the *Annals of Surgery* for January, 1931, there appeared a comprehensive review of present knowledge concerning cancer, to which contributions were made by the leading scientists and surgeons of American and of Europe. The volume was in honor of Dr. James Ewing of the Cornell Medical School in New York, probably the chief student of malignant disease in America. The subject of cancer is considered under four headings: Cancer in its general relations, cancer research, regional cancer, and radium and Röntgen ray therapy of cancer. Among the American contributors were W. J. Mayo, Finney, Crile, Lewis, Bloodgood, Graham and Coley, and among the Europeans Gordon-Watson, Sampson-Handley, and Sir G. Lenthal Cheate of England, Wintz and Erlanger of Germany, and Bastianelli of Italy.

Practically, the chief problem that presents itself is still that of early diagnosis. The cause of cancer is as yet unknown and no specific treatment has been developed for it; but in spite of this fact, early cancer, as a rule, may be cured by surgery, or by both radiotherapy and surgery.

A recent report from the University of Pennsylvania Medical School is of interest. Investigators there found that extracts of the cortex of the supra-renal gland were of no value in the prevention or treatment of spontaneous cancers in mice—a form of cancer which is in many respects identical with that found in man. Their work was prompted by the fact that Coffee and Humber of San Francisco had treated a great number of sufferers from cancer with such an extract and believed it of some value. This controlled laboratory experiment failed to furnish an experimental basis for such treatment, and verified the opinion of leading students of cancer that it was probably of little efficacy (Itami and McDonald, *Science*, October, 1930).

RELIEF OF PAIN IN ARTERIAL DISEASES OF THE EXTREMITIES. Certain obliterative vascular diseases of the lower extremities, notably thromboangiitis obliterans (Buerger's Disease) and arteriosclerotic gangrene, are accompanied by intractable pain as well as by ulceration and necrosis of tissue. This factor of pain is so important that legs are often sacrificed by the surgeon in order to obtain for the patient relief from suffering, even though amputation is not rendered necessary by actual gangrene. Smithwick and White of the Massachusetts General Hospital made a valuable contribution to the treatment of painful circulatory diseases of this type (*Surgery, Gynecology and Obstetrics*, September, 1930). They described a method of blocking the sensory nerves to the lower leg and foot by alcohol injection. See **MEDICINE, PROGRESS IN.**

SURINAM. See DUTCH GUIANA.

SVALBARD (SPITZBERGEN). An Arctic archipelago under Norwegian sovereignty, situated 360 miles north of Norway between 10 and 35 degrees east longitude and 74 and 81 degrees north latitude. Area, about 25,000 square miles; population, 749 in winter of 1927-28; administrative headquarters, Green Harbor. The chief islands are West Spitzbergen, Northeast Land, and Barents Island. Coal deposits on West Spitzbergen, estimated at 8,000,000,000 tons, are mined from six camps open the year round. The largest camp is Longyearbyen, with 490 inhabitants in the winter of 1927-28. Coal exports in the summer of 1929 totaled 236,000 tons.

SVERDRUP, OTTO. A Norwegian Arctic explorer, died in Copenhagen, Denmark, Nov. 26, 1930. He was born in Bindal, Helgeland, Oct. 31, 1854, and followed the sea at the age of 17. In 1888 he joined the expedition which Fridtjof Nansen (q.v.) conducted across the ice-capped interior of Greenland. In 1893 he started with Nansen for the North Pole as commander of the *Fram*, which had been built under his supervision. When Nansen, in 1895, left the *Fram* in an attempt to reach the North Pole by dog sledge, Sverdrup remained with the ship, attaining during the long Polar drift a point only a few miles south of Nansen's farthest, that of 85° 57' N. In August of the following year he brought the ship safe through the ice to Troms, Norway. During 1898-1902 Sverdrup led another expedition in the *Fram* in an attempt to circumnavigate Greenland. Unable to pass north of Cape Sabine, Smith Sound, he transferred his field of operations the second summer to Jones Sound, where his explorations were notable in extent. They included Heiberg and Ringnes lands, the most westerly coasts of Grinnell Land, and regions near Greely Fiord. See **SVERDRUP ISLANDS.**

SVERDRUP ISLANDS, svér'dróöp. A group of islands in the Canadian Arctic, west of Ellesmere Land, the Canadian title to which was formally recognized by the Government of Norway in 1930. The Sverdrup group was discovered and explored in 1898-1902 by Captain Otto Sverdrup (q.v.), leader of a Norwegian Polar expedition. The Canadian Government, in return for the withdrawal of Norway's claims, paid Captain Sverdrup \$67,000 and promised to accord favorable treatment to Norwegian hunters and fishermen in the territory.

SWARTHMORE COLLEGE. A nonsectarian institution for the higher education of men and women in Swarthmore, Pa.; founded in 1864 by the Society of Friends. The 1930 enrollment was 590 full-time students. The teaching staff numbered 65. During 1930 a two-year endowment campaign was completed, by which \$4,000,000 was added to the educational endowment fund, bringing the total endowment to \$7,500,000. The library contained 68,000 volumes. President, Frank Aydelotte, LL.D.

SWEDEN. A constitutional monarchy occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm; reigning sovereign in 1930, King Gustaf V.

AREA AND POPULATION. With a gross area of 173,174 square miles (land area, 158,510 square miles), Sweden had a population at the census of 1930 of 6,120,080, as compared with 5,904,489 in 1920. For the five years 1925 to 1929, births averaged 99,274 annually and deaths 73,445, the annual excess of births being 25,829. During the same period, immigrants averaged 5613 annually and emigrants 12,461. Stockholm, the largest city, had a population of 509,097 at the end of 1930, as against 419,449 in 1920. The estimated population of the other leading cities in 1929 was: Göteborg, 241,561; Malmö, 119,778; Norrköping, 61,270; and Hälsingborg, 55,299.

EDUCATION. Of a total of 877,881 children between the school ages of 7 to 14 years in 1928, 743,048 were attending school. In addition, there were 28,120 students in Government high schools (lyceums), many in private and technical schools, and 7712 in the four universities.

PRODUCTION. Approximately one-half of the population is engaged in agriculture and the remainder in commerce and industry. Arable land in 1928 totaled 9,185,000 acres, or 9.1 per cent of the land area; permanent meadows, 2,280,000 acres; forests and pasture, 60,749,000 acres. The total value of field crops produced in 1929 was \$284,963,000 (\$305,166,000 in 1928) distributed in part as follows: Sown hay, \$84,427,000; oats, \$41,299,000; potatoes \$29,613,000; wheat, \$24,242,000; rye, 17,339,000. Production, by quantity, of the leading crops in 1929 was: Wheat, 19,031,000 bushels; rye, 16,232,000 bushels; barley, 11,485,000 bushels; oats, 88,239,000 bushels; mixed grain, 516,000 metric tons; potatoes, 70,843,000 bushels; sugar beets, 767,000 metric tons; beet sugar, 121,000 metric tons; hay, 4,822,000 metric tons; forage roots, 3,012,000 metric tons. Live-stock in 1928 included 2,898,000 cattle, 1,369,000 swine, 806,000 sheep, and 628,000 horses.

Industrial activity slumped somewhat in 1930 in sympathy with the world economic depression, but in general Sweden was much less affected than the other countries of Europe. Mineral and metallurgical production in metric tons in 1929 was: Iron ore, 11,467,600; coal, 395,000; pig iron, 489,700; steel ingots and castings, 729,900; zinc ore,

72,300; manganese ore, 14,600. Ships, machinery, wood pulp and paper, lumber, and matches, are the principal manufactured products. New ships launched in 1930 aggregated 132,000 gross tons, as against 107,000 gross tons in 1929. The total production of manufactures and semi-manufactures in 1929 was valued at 5,677,000,000 kronor, or 9 per cent more than in 1928 (1 krona equals \$0.2680 at par).

COMMERCE. In spite of the decline in general price levels, exports increased 15.1 per cent in value in 1929, as compared with 1928, while imports rose 3.7 per cent. The respective totals were: Exports, \$485,954,000 in 1929 and \$422,010,000 in 1928; imports, \$474,784,000 in 1929 and \$457,732,000 in 1928. Germany was the leading source of supply in 1929, furnishing 30.8 per cent of all imports, and the United Kingdom was the chief market, taking 25.2 per cent of all exports. In 1930, both imports and exports decreased noticeably. Preliminary figures showed imports of 1,647,890,000 kronor (\$422,458,000) and exports of 1,545,220,000 kronor (\$414,891,000) in 1930.

FINANCE. Actual returns for the fiscal year ended June 30, 1929, showed ordinary receipts of 732,416,000 kronor (\$196,287,000) and ordinary expenditures of 701,243,000 kronor (\$187,933,000). The net surplus of 16,700,000 kronor was automatically transferred to the treasury reserve fund. The state-operated railways yielded a profit of 29,189,000 kronor and the administration of posts, telegraphs, and telephones a profit of 24,200,000 kronor. In the budget for 1929-30, ordinary receipts were estimated at 740,228,000 kronor and ordinary expenditures at 689,285,000 kronor. Preliminary returns indicated an actual net surplus for the year approximately the same as in 1928-29. The 1930-31 budget, including ordinary and extraordinary items, balanced at 813,367,200 kronor. The national debt on Dec. 31, 1930, stood at 1,805,000,000 kronor, an increase of 6,000,000 kronor during the year. More than 80 per cent of the debt was held internally.

COMMUNICATIONS. At the beginning of 1930, there were 10,391 miles of railway line, of which 4028 miles were state-owned. Gross revenues of the merchant marine in 1929 were estimated at 319,604,212 kronor (290,232,047 kronor in 1928). In 1928, 29,992 vessels of 15,894,000 net registered tons entered Swedish ports and 30,049 vessels of 15,989,000 tons cleared.

GOVERNMENT. Executive power is vested in the King, who acts through a responsible ministry known as the Council of State, at the head of which is the Minister of State, or Premier. Legislative power is in the Diet (Riksdag) of two chambers.

HISTORY. A distinct swing to the Left among the Swedish people in 1930 caused increasing dissatisfaction with the Lindman Cabinet's conservative attitude toward tariff protection, religious instruction in the schools, disarmament, social reform, and labor legislation. A long series of rebuffs administered the Government in the Riksdag culminated May 31 in the defeat in both Chambers of its proposals for increased agricultural imports duties. The Cabinet accordingly resigned on June 2.

A new Ministry was formed June 7 by Carl Gustaf Ekman, Director of the Public Debt and leader of the People's party. A former stone-cutter and probably the outstanding political figure in Sweden, Ekman had been Premier once before. He failed in his effort to secure a broad

parliamentary basis for his Ministry. Of the 12 members, but five were members of the Riksdag. He controlled outright only the 28 votes of the People's party. The party, however, held the balance of power between the Right and the Left parties and was thus normally assured of a majority vote upon any measure it supported. In outlining his programme before the Riksdag June 7, Premier Ekman said that the questions of national defense, tax reforms, and social legislation would be disposed of as soon as possible. The Riksdag adjourned for the summer soon after he assumed office. On October 25, the Government inaugurated a survey of the national defense problem with the appointment of a commission headed by Per Albin Hansson, Social Democratic leader and former Minister of National Defense. The primary question dividing the Left ranks on this issue was whether the problem should be attacked in conjunction with the other Scandinavian countries and possibly the League of Nations or whether Sweden should follow Denmark's example and disarm without regard to the action of other countries.

The September elections, regarded as a preliminary skirmish in the campaign leading up to the election of a new Lower Chamber of the Riksdag in 1932, confirmed the drift toward the Left evidenced in earlier political developments of the year. Although the Liberal parties of the Left Centre, headed by Premier Ekman, sustained the heaviest losses (39 seats), the Social Democrats gained 30, as against a gain of 19 for the Agricultural Union, and three for the Conservatives. One faction of Communists lost 11 seats, the other gaining five.

Queen Victoria of Sweden (q.v.) died in Rome Apr. 4, 1930. See ICELAND and DENMARK under *History*.

SWEDENBORGIANS. See NEW JERUSALEM, CHURCH OF THE.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWETE, E. LYALL. An English actor and producer, died in London, Feb. 19, 1930. Born at Wrington, Somersetshire, July 25, 1865, he was educated at Trinity College, Stratford-on-Avon, and at the Worcester Cathedral School. His notable earlier performances included the rôles of Sir Daniel Ridgley in Pinero's *His House in Order* and the Earl of Warwick in Shaw's *Saint Joan*. He was also a producer of plays. *The Blue Bird* was staged by him at the Haymarket Theatre in 1909 and *Chu-Chin-Chow* at the Manhattan Opera House (New York) in 1917. From 1917 to 1921, he was in New York City, where he was both actor and producer. On his return to England, he produced plays at the West End theatres.

SWIMMING. Eighty American and nearly that many world's swimming marks were shattered by American swimmers during 1930 in one of the most brilliant seasons the sport has experienced. Of the 80 new National Amateur Athletic Union records established, 26 were for men and 54 for women. Leading the assault on previous records were Miss Helene Madison, 17-year-old Seattle schoolgirl; Miss Eleanor Holm, 10 years old, of the New York Women's Swimming Association; and Clarence Crabbe, of Los Angeles.

Miss Madison alone established 26 new records for women in free-style swimming. Her time, in 75-foot pools, for 100 yards was 59 seconds; for 220 yards, 2:35. In 110-yard tanks, she lowered

the 440-yard record to 5:39½; the 880-yard mark to 11:41½; and the 1-mile record to 24:34½. Fifteen new records in back stroke and medley events, were set by Miss Holm, while Crabbe lowered four free-style marks, including that for the mile, which he covered in 21:27, and for the half-mile, covered in 10:20¼. Other important records were broken by Raymond Ruddy, who set a new free-style indoor 440-yard mark of 4:55½.

Ruddy won the men's outdoor long-distance title, and Lisa Lindstrom, of the New York W. S. A., the women's title in the same event, while team titles were garnered by the New York A. C. and the New York W. S. A., respectively. The A. A. U. fancy diving championships went to Harold Smith and Georgia Coleman of the Los Angeles A. C.

SWINE. See LIVESTOCK.

SWINTON, ALAN ARCHIBALD CAMPBELL. A Scottish engineer, died in London, Feb. 20, 1930. He was born in Scotland, Oct. 18, 1863, and was educated in Scotland and at Havre, France. A shadow picture of the bones in his hand which he made in 1896 was said to be the first photograph taken by means of Röntgen rays in Great Britain. In 1898 he showed experiments with cathode rays and X-rays at the Royal Institution of Great Britain. After 1904, he gave up his work as electrical contractor and became exclusively a consulting engineer, at the same time doing research work in radio. He was also associated with the development of the Parson's turbine.

SWITZERLAND. A federated republic in the centre of Europe, bounded by Germany on the north, France on the west, Italy on the south, and Austria on the east. Capital, Berne.

AREA AND POPULATION. The area of Switzerland is 15,940 square miles; population, according to the census of 1920, 3,880,320; estimated in 1929, 4,052,200. In 1929 the estimated population of the principal cities was: Zurich, 232,520; Basel, 147,425; Geneva, 130,200; Berne, 111,370. Births in 1929 totaled 69,006; deaths, 50,438; marriages 31,238. German is the language of 70.9 per cent of the people, French of 21.2 per cent, Italian of 6.2 per cent, and Romansch of 1.1 per cent.

EDUCATION. For the school year 1928-29 there were 4376 primary schools, with 472,246 pupils and 16,263 teachers; 618 secondary schools, with 57,655 pupils and 3190 teachers; and 210 higher secondary schools, with 19,523 students and 2060 teachers. The seven universities had 6647 students for the winter semester of 1929-30.

PRODUCTION. The arable land aggregates about 1,250,000 acres and is divided among some 212,290 peasant proprietors. Of a total working population of 1,950,000, 26 per cent are engaged in agriculture and 44 per cent in industry. Forest land totaled 2,315,482 acres; grass land, 3,025,000 acres; and pasturage, about 2,000,000 acres. Dairying and cattle raising are the principal agricultural occupations.

Violent storms during July and August, 1930, damaged or destroyed a considerable part of the wheat, corn, potato, and fruit crops, with the result that prices of agricultural products mounted from 20 to 40 per cent. The value of agricultural production in 1930 was placed at 1,385,000,000 francs, as against 1,479,000,000 francs in 1929.

Mining in Switzerland is confined to the production of salt, iron ore, and manganese ore. Industries flourish, there being 8253 factories in operation in 1928. Swiss watchmakers produce about 90 per cent of the world output and export 95 per

cent of their production. Machinery, electrical apparatus, textiles, chemicals, and dairy products are other leading industrial lines. Due to complete reorganization of the industrial structure, Swiss manufacturers in 1929 reported the most satisfactory year since the depression of 1921.

COMMERCE. Total imports in 1929 amounted to 2,783,848,000 francs and exports to 2,134,436,000 francs, leaving a surplus of imports of 649,412,000 francs, as compared with an import surplus of 539,500,000 francs in 1928 (1 franc exchanged at \$0.1027 in 1929). The balance of trade is chronically unfavorable, the excess of imports being ordinarily offset by tourist expenditures, exports of electrical power, and heavy foreign investments. American tourists in Switzerland are estimated to expend between \$8,000,000 and \$10,000,000 annually. In 1930, Swiss imports totaled 2,664,000,000 francs and exports 1,768,000,000 francs, leaving an unfavorable balance of 896,000,000 francs.

Germany, France, and the United States, in the order named, were the leading customers and sources of supply in 1929.

FINANCES. In the federal budget for 1930, revenues were estimated at 383,000,000 francs and expenditures at 382,780,000 francs, the estimated surplus being 220,000 francs. Actual receipts in 1929 were 395,956,833 francs and actual expenditures, 371,966,066 francs, leaving a surplus of 23,990,767 francs. The budget estimates for 1929 were lower in all respects than the actual returns, receipts being calculated at 352,800,000 francs, expenditures at 350,925,000 francs, and the surplus at 1,875,000 francs. The national debt on Jan. 1, 1930, including that of the federal railway system, totaled 4,901,729,000 francs, as compared with 4,952,596,000 francs on the same date in 1929.

COMMUNICATIONS. State railway lines, excluding tramways and funiculars, had a length on Jan. 1, 1929, of 3367 miles, of which 1046 miles were electrified.

GOVERNMENT. Both executive and legislative power are vested in the Parliament of two chambers. The Federal Assembly delegates the chief executive authority to the Federal Council, whose seven members are elected for three years. The chief magistrates are the President of the Confederation and the Vice President of the Council, and are elected by the Federal Assembly for one year. President in 1930, Dr. Jean Marie Musy.

HISTORY. Enactment of the Hawley-Smoot tariff by the United States Congress during 1930 aroused widespread protest in Switzerland, which exported a considerable part of its manufactured products to America. Preliminary returns for 1930 showed a decline of 23 per cent in imports from the United States, as compared with 1929, and a decrease of 32 per cent in exports to the United States.

As a result of a referendum held April 7, the Government was empowered to raise taxes on strong liquors and to take over and operate all private stills, the increased income being allotted to social reform and old-age pensions. Dr. Henri Häberlin, chief of the federal Department of Justice and Police, was elected President of Switzerland for 1931 on Dec. 11, 1930.

SYMONS, (GEORGE) GARDNER. An American painter, died in Hillside, N. J., Jan. 12, 1930. He was born in Chicago, Ill., in 1861 and obtained his art education at the Art Institute of Chicago,

studying later in Paris, London, and Munich. He was best known for his winter landscapes and marines. He was represented in the permanent collections of practically all of the leading art museums in the United States. Among his outstanding paintings are: "The Opalescent River," in the Metropolitan Museum of Art, New York City; "Snow Clouds," in the Corcoran Art Gallery, Washington; "Sorrow," in the Cincinnati Art Museum; "Snow-Clad Fields in the Morning Light," in the Toledo Art Museum; "The Top of the Hill and Beyond" and "The Winter Sun," in the Art Institute of Chicago; and "Through Snow-Clad Hills and Valley," in the City Art Museum, St. Louis.

SYMPHONY ORCHESTRA. See MUSIC.

SYRACUSE UNIVERSITY. A nonsectarian institution of higher learning for men and women in Syracuse, N. Y.; founded in 1870. The 1930 autumn enrollment was 5317; the extension school enrollment was 1592; and the summer session enrollment was 1903. The faculty numbered about 525 for the year 1929-30. The productive funds of the university amounted to \$3,648,821, while the income for the year was \$1,916,249. The library contained 195,220 volumes and more than 75,000 pamphlets. Chancellor, Charles Wesley Flint, D.D., LL.D.

SYRIA. A mandated territory of France in western Asia, bounded by the Mediterranean on the west, Palestine on the south, Iraq on the east, and Turkey on the north. The total area is about 60,000 square miles, with a population in 1929 of 2,831,622, divided administratively as follows: Republic of Syria (population, 1,696,638), Republic of Lebanon (796,284), Alawiyya (286,920), and Jebel Druze (51,780). The population is mainly of Arabic origin. Arabic is the chief language and about 1,514,755 are Moslems in religion. The principal towns are Damascus, the capital of the Syrian Republic, with 193,912 inhabitants; Aleppo, 177,313; Beirut, capital of Lebanon, 134,655; and Homs, 52,792.

PRODUCTION, ETC. Agriculture and cattle breeding are the main occupations, the total area under crops approximating 7719 square miles. Wheat, barley, maize, olives, silk cocoons, cotton, and sesame are the leading crops.

Imports during 1929 were valued at 72,998,400 Syrian pounds and exports at 25,506,080 (1 Syrian pound equals about \$0.7840).

Revenues in 1929 were reported at 21,905,200 and expenditures at 18,111,000 Syrian pounds. Vessels entering the ports in 1928 numbered 3777 of 1,923,593 tons. In 1927 there were 492 miles of railway and 2240 miles of macadam highways. A weekly air service between Beirut and Bagdad was established in January, 1930.

GOVERNMENT. Executive power is vested in the French High Commissioner, although the five territories exercise a certain amount of autonomy. High Commissioner in 1930, Henri Ponsot.

HISTORY. The impasse reached in February, 1929, between the French High Commissioner and the Syrian Nationalists over the form of the proposed new Constitution was ended on May 22, 1930, when the High Commissioner promulgated a new statute providing for the establishment of a republic with a Parliament elected for four years. The President, who must always be a Moslem, was given the right to adjourn and dissolve Parliament under specified conditions.

Under the compromise finally reached the French consented to accept the Constitution in the form

desired by the Nationalists, which gave the republic powers equivalent to those of an independent state, in return for the addition of a final article reserving to France the control of foreign relations and other powers as long as she continued to exercise the mandate. The new republic included all the territory under French mandate with the exception of the Republic of Greater Lebanon, which was granted a Constitution in 1926. Continuation of the largely autonomous administrations in territories of the Alawiyya, of the Jebel Druze, and in the Turkish-speaking enclave of Alexandretta was guaranteed.

In Lebanon, economies introduced by the Cabinet headed by M. Emile Eddeh, and particularly the closing of Moslem schools, orphanages, and hospitals, resulted in the resignation of the Cabinet on March 25, 1930. A new Ministry was formed by Edib Pasha, a Maronite, the first Prime Minister of Lebanon and a former Egyptian Treasury official. Emile Eddeh's administration was characterized by increasing disregard of the Lebanese Parliament, which was reported wholly engrossed in partisan bickerings. Suppression of the parliamentary régime was threatened.

TADZHIKISTAN, or TADZHIK SOCIALIST SOVIET REPUBLIC. See SOVIET CENTRAL ASIA.

TAFT, WILLIAM HOWARD. Former President of the United States and former Chief Justice of the U. S. Supreme Court, died in Washington, D. C., Mar. 8, 1930. He was born in Cincinnati, Ohio, Sept. 15, 1857, and was graduated from Yale University in 1878 and from the Cincinnati Law School in 1880. Admitted to the Ohio bar in 1880, he was for a year law reporter for the Cincinnati *Times* and the *Commercial* before entering upon actual law practice. During 1881-83 he was assistant prosecuting attorney for Hamilton Co., Ohio, after which he practiced in Cincinnati until 1887, serving for the last two years of that time as assistant county solicitor for Hamilton Co. He was judge of the Superior Court of Ohio during 1887-90. With this background of legal and judicial experience, Mr. Taft entered upon his national service with an appointment to the office of Solicitor-General of the United States in 1890. From 1892 to 1900, he was United States circuit judge for the Sixth Circuit, a part of which time (1896-1900) he was also professor and dean in the law department of the University of Cincinnati. In 1900 he was appointed president of the United States Philippine Commission and in 1901 became the first civil Governor General of the Philippine Islands. He remained Governor General until 1904, organizing the government and doing much toward promoting a sympathetic understanding between the Filipinos and the people of the United States. In 1902 he was sent to Rome by President Roosevelt to confer with Pope Leo XIII in regard to the purchase of the agricultural lands of the religious orders in the Philippine Islands. This accomplished, he secured from Congress an appropriation of \$7,239,000 for the purchase and then sold the lands to the tenants and inhabitants on easy terms.

In 1904 he was appointed Secretary of War in President Roosevelt's cabinet. Sent by the President to Cuba to adjust an insurrection there in 1906, he acted for a short time as governor. The following years, he visited Panama, Cuba, Porto Rico, and, later, Japan, the Philippine Islands, and Russia. As Secretary of War, Mr. Taft was both a political adviser and close personal friend

of President Roosevelt, who in 1908, designated Mr. Taft as his successor in the office of president. With Mr. Roosevelt's support, he easily secured the Republican nomination and, in 1908, defeated William Jennings Bryan, the Democratic candidate. He met with opposition as president. The Payne-Aldrich Tariff Act of his administration proved unpopular and the Ballenger-Pinchot controversy in the Department of Interior and other matters developed hostile criticism. Mr. Roosevelt came to consider that President Taft was reactionary and that he was not keeping his campaign promises. The break in their friendship grew more definite as time went on until, in 1912, Mr. Roosevelt announced himself a candidate for the presidency in opposition to Mr. Taft. Although Mr. Taft secured the Republican nomination, Mr. Roosevelt, as candidate of the newly-formed Progressive party, so divided the Republican votes that the election was lost to the Democratic candidate, Woodrow Wilson. On retiring from the presidency in 1913, Mr. Taft turned again to law, holding the Kent professorship of law at Yale University from 1913 to 1921. In 1915 he became president of the League to Enforce Peace, which concerned itself with the promotion and ratification of the Treaty of Peace and the League of Nations, and, in 1918-19, he was co-chairman of the National War Labor Conference Board. Mr. Taft, in 1921, was appointed by President Harding Chief Justice of the U. S. Supreme Court. Widespread expressions of approval of the appointment indicated the esteem in which Mr. Taft was held. In 1922, while on a visit to England, he was made an honorary bencher of the Middle Temple. Early in February of 1930, Chief Justice Taft retired from the Supreme Court bench because of ill health and, at that time, the nationwide tributes to him were most affectionate in nature.

TANGANYIKA (tän'gán-yé'ká) **TERRTORY.** An African territory administered by Great Britain under a mandate of the League of Nations, formerly German East Africa. Area, about 374,000 square miles. The native population (mainly of mixed Bantu race) was estimated at 4,742,872 in 1928 (4,107,000 at census of 1921); Europeans numbered 5808 (2447 in 1921), and Asiatics, 24,000 (14,991). Capital, Dar-es-Salaam, with a population of 25,000. The capital and Tanga are the chief seaports.

The chief agricultural products are cereals, coffee, manioc, peas and beans, groundnuts, oil products, sweet potatoes and other vegetables, fruits (chiefly bananas), and coffee. Sisal and cotton are also important crops. The imports in 1928 were valued at £3,737,000; total exports, £4,050,594. In the budget for 1929-30 revenue was estimated at £1,916,052 and expenditure at £1,886,728. Governor in 1930, Sir D. C. Cameron, appointed in 1925. For the British Government's proposal for the union of Tanganyika, Kenya, and Uganda, see KENYA.

TANGIER. See MOROCCO.

TARIFFS. See UNITED STATES under *Congress and Administration*; AUSTRALIA, CANADA, FRANCE, and SPAIN under *History*; AGRICULTURE.

TASMANIA. A state of the Australian Commonwealth, consisting of the island of that name

and several small islands. Area, including the island of Macquarie (170 square miles), 26,215 square miles; population, according to the census of 1921, 213,780; estimated on Mar. 31, 1930, 215,969. Capital, Hobart, with a population including suburbs (Jan. 1, 1930), of 57,500.

Primary education is free, secular, and compulsory. In 1927 there were 500 State schools, with 1282 teachers and 31,978 enrolled pupils. Agriculture, stock raising, mining, manufacturing, and lumbering are the chief industries. In 1927-28 the net value of agricultural and pastoral products was £4,484,000, of manufactures, £3,670,888 (£3,556,194 in 1928-29), of mining products, £1,433,303 (1929). Wheat, oats, peas, hay, potatoes, fruits, and hops are the chief crops. In 1929 there were about 2,000,000 sheep, 208,812 cattle, 34,908 horses, and 48,304 swine. Wool production in 1928-29 was estimated at 14,900,000 pounds (as in the grease). Copper is the principal mineral exploited, others being gold, silver, lead, tin, and coal. The value of direct overseas imports in 1929-30 was estimated at £1,834,210; direct overseas exports, £2,970,843. For the fiscal year ended June 30, 1929, revenues totaled £2,866,434 and expenditures, £2,855,977. The State debt as of June 30, 1930, stood at £22,688,862.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses. Governor in 1930, Sir James O'Grady; Premier and Treasurer, J. C. McPhee. See AUSTRALIA.

TAXATION. Changes in the legislation of the several States in the matter of taxation during the year 1929-30 were very largely of a routine character. Federal legislation confined itself to two main features: (1) The new tariff law of 1930 which made advances upon rather more than 1100 articles; and (2) the modification of income tax rates (normal tax) which cut these rates by 1 per cent while corporation tax rates were reduced a like amount effective for the taxable returns of the year 1930. State legislatures were in session during the year to the number of nine only, as against some 43 the year before, the result being that the output of legislation on their part was rather less than usual. However, modifications were made in several significant particulars. Constitutional amendments were passed by 19 States and State tax commissions did work of more or less importance in half a dozen or more States. In Europe no very great changes took place during the year; and while the tendency was toward heavier taxation, particularly in Germany, the major alterations were along the same lines that had been indicated in the past. Tax burdens that proved so heavy in many European countries that political unrest had developed, and there was agitation of a pronounced and sometimes violent character in favor of relief.

Turning to State taxation in the United States, the principal changes may be summarized as follows:

STATE INCOME TAXES. Income tax legislation was altered in two States—South Carolina where personal exemptions were decreased for single individuals from \$1500 to \$1200 and for heads of families from \$2500 to \$2200, while rates were increased by lowering the brackets so that they ranged from 1 per cent to 5 per cent; and Virginia where exemptions were raised from \$1000 to \$1250 for single persons and from \$2000 to \$2800 for married. The income tax of Georgia

was held constitutional Apr. 17, 1930, by the Georgia Supreme Court and in Wisconsin the Tax Commission exempted insurance companies and steam-railroad and sleeping-car companies from income taxation.

INHERITANCE TAX. An estate tax was, in 1930, levied in Kansas equal to the difference between the Kansas tax upon an estate and the 80 per cent Federal credit. A new estate tax law was adopted in New York. See NEW YORK under *Legislation*.

STATE CONSTITUTIONAL AMENDMENTS. The legislature of Florida adopted by a single vote a proposed amendment permitting an inheritance tax at a rate of 80 per cent of the Federal and another eliminating ad valorem taxes on automobiles. In Georgia the income tax enacted in 1929 went into effect. Minor amendments were submitted to the people in Illinois; and in New Hampshire the constitutional convention proposed an amendment permitting the "general court" to exempt from the operation of income tax so much income as they may deem just, no income tax to be assessed at a rate greater than the average rate of taxation on general property. In Ohio an amendment permitting classification of property for tax purposes was passed and became effective on Jan. 1, 1931. In Utah several amendments to the constitution were proposed,—one calling for the creation of a State Tax Commission, an alteration in the tax on mining property, and the establishment of a maximum rate on taxable property.

CORPORATION TAXES.—In Kansas, the law providing for the assessment and taxation of shares of stock held by shareholders of banks, loan companies, and trust companies was amended to include the stock of investment and finance companies, but to except the stock of public service corporations, insurance companies, express companies, and sundry other enterprises. In Mississippi, a franchise tax was proposed on the stock of all corporations; in South Carolina the rate of income tax on corporations was increased in 1930 from 4 to 4½ per cent with a minimum tax of 2 per cent. In Tennessee, corporations were given the option to pay either a tax of ½ of 1 per cent of gross receipts or pay on their authorized capital as in existing law. In Texas a new franchise tax was in 1930 enacted on every foreign and domestic corporation doing business in the State.

VEHICLE AND GASOLINE TAXES. During the year 1930 motor vehicles taxation was changed in 10 States. In Georgia the method of issuing license plates by mail was adopted; in Kentucky the fee for motor cycles, formerly \$10, was reduced to \$5; fees for passenger pleasure cars and others were generally given a 25 per cent reduction. In Massachusetts the excise tax was amended so as to provide for taxation by months for periods of ownership less than a year. In Minnesota a law making motor vehicles owned by a public service corporation paying a gross earnings tax subject also to motor vehicles registration tax was held unconstitutional. Temporary registration of non-residents was required by Mississippi. New Jersey imposed a license tax of \$50 to \$100 on motor vehicle "junk yards." New York has exempted motor vehicles, used by societies for the prevention of cruelty to animals, from registration. South Carolina imposed a license fee on automobiles belonging to a nonresident corporation. Texas exempted farm trailers from registration fees. Virginia imposed a special tax on carriers operat-

ing regularly over designated routes. Fifteen States changed their laws or administrative rulings relating to taxation of gasoline. Most of these changes relate to the rate per gallon to be imposed. In Kentucky, however, a gasoline tax was imposed on refiners as well as dealers.

SALES TAXES. Kentucky introduced a sales tax on all stores except those engaged in selling garden or farm products, at one-twentieth of 1 per cent on gross sales up to \$400,000 gross receipts with higher rates on larger incomes. Mississippi imposed a sales tax on gross sales or gross income at rates varying from 1 per cent to ¼ of 1 per cent according to the nature of the business, and South Carolina reduced the lower limit of taxes on candy, to candy at 50 cents a pound instead of 80 cents as formerly.

LOCAL TAX ADMINISTRATION. Changes in local tax administration; made in two States—Illinois, which validated various resolutions and bond issues of Cook County passed as emergency issues; and Massachusetts which authorized the Commissioner of Corporations and Taxation to find some way by the payment of local taxes in two or more installments so as to get more money at the beginning of the year.

SPECIAL COMMISSIONS. In Georgia a group of private citizens were financing a survey of the State tax system; in Illinois the Revenue Investigation Commission made a preliminary report recommending a permanent non-partisan tax bureau; in Iowa an unofficial commission of business organizations was established to co-operate with the official special tax committee; the Louisiana Tax Commission was authorized to study the tax systems of other States; Massachusetts appointed a new tax commission for study of local problems; in New Hampshire the Recess Tax Commission of 1927 reported sundry bills which were defeated; in New York a temporary tax survey commission was created to produce a "workable and practicable and equitable" system of taxation; in Ohio the governor appointed a representative committee to be known as the Governor's Taxation Committee; in Oklahoma an unofficial tax commission of eight members was appointed; in Tennessee an unofficial committee of 15 business men was making a non-political study of the local system, and in Wyoming a citizens' committee of 21 members was appointed, while in Washington an advisory committee was to make a tax survey.

CHAIN STORE TAXES. Taxes on chain stores were held constitutional in Georgia, unconstitutional in Indiana, constitutional in North Carolina, unconstitutional in South Carolina—in each case by the local supreme court, and in New Hampshire a recess committee was appointed to study the taxation of chain stores.

BANK TAXES. In Massachusetts the bank tax was held unconstitutional in 1929, and what had been collected was ordered refunded. Special taxes on banks in Michigan were held unconstitutional and the same has been done in the State of Washington. In Kansas bankers were asked to refrain from litigation until Congress had acted on the bank tax question.

FEDERAL TAX RECEIPTS. During the year 1930 Federal receipts were (ordinary) \$4,177,900,000 as against \$4,033,200,000 in 1929, while expenditures for 1930 were \$3,994,200,000 as against expenditures in 1929 of \$3,848,500,000. Income tax receipts included in the foregoing were \$2,411,000,000 as against \$2,331,000,000 in 1929, while

miscellaneous internal revenue was \$628,300,000 as against \$607,000,000. Proceeds from government owned securities were as follows: Foreign obligations, \$239,500,000 against \$199,100,000; other than foreign obligations were \$20,300,000 against \$22,500,000. Corporation taxes which had been so large in former years were impaired by the reduction of income following upon the panic conditions, while stock market profits were greatly reduced by the losses incurred by those who had sold after the slump in values which ensued upon the panic of 1929, but these losses did not show in the fiscal year returns (to June 30, 1930). The following table shows the distribution of revenue from income tax as between corporations and individuals in 1930 and earlier years:

| | Corporation Per cent | Individual Per cent |
|------------|-------------------------|------------------------|
| 1922 | 47 | 53 |
| 1927 | 58 | 42 |
| 1928 | 59 | 41 |
| 1929 | 52 | 48 |
| 1930 | 51 | 49 |

The factors which previously had tended to keep corporation returns relatively high had lost their effect in 1930, but there was still a substantial tax revenue due to the Government upon profits made by corporations whose fiscal years had started prior to the panic.

For further information, see PUBLIC FINANCE and consult *Bulletins National Tax Association*, especially appendix to vol. xv, "Review of State Tax Legislation, 1930"; also *Report of the Secretary of the Treasury, 1930*.

TAXONOMY. See BOTANY; ZOÖLOGY.

TAYLOR, MAJ.-GEN. HARRY, U. S. A., RET. An American soldier and engineer, died in Washington, D. C., Jan. 28, 1930. He was born in Tilton, N. H., June 26, 1862, and was graduated from the U. S. Military Academy in 1884 and from the Engineer School of Application in 1887. Promoted through the grades, he became major general in 1924 and retired two years later. In 1911 he became assistant to the Chief of Engineers in Washington. During 1916-17, he was in charge of river and harbor works in New York harbor and on the Hudson River and Lake Champlain. He was commissioned brigadier general in the National Army on the entrance of the United States into the World War and served in France as chief of engineers. In September, 1918, he was appointed assistant chief of engineers in the U. S. Army, becoming chief in 1924.

TEACHERS' COLLEGES. See EDUCATION IN THE UNITED STATES; UNIVERSITIES AND COLLEGES.

TEL EL-AMARA. See ARCHÆOLOGY.

TELEPHONY. Parts of two more continents were brought within earshot of telephone users in the United States during 1930. In April telephone service was established connecting North America with Argentina and with the cities of Montevideo, Uruguay, and Santiago, Chile, in South America. In October service was opened to the eastern part of Australia via the transatlantic radio telephone to Great Britain and thence by another radio link to Australia. Additional points in Europe were also brought within range of America by telephone through extensions of the transatlantic service to cover the whole of Sweden (instead of

merely Stockholm, Göteborg and Malmö as theretofore), and to reach Memel and Kovno in Lithuania and Vatican City. The network of the Ericsson Telephone Company in Mexico, covering about 40 cities and towns, was also connected with the telephone system in the United States, making a substantial addition to the number of telephones in Mexico that could be reached from the United States and Canada. It became possible to talk from any telephone connected with the Bell System in the United States with practically any one of about 32,200,000 telephones in North and South America and Cuba, Europe, Australia and one point in Africa: Ceuta, Spanish Morocco. This represented 91 per cent of the total telephones throughout the world, which numbered approximately 35,000,000 on Dec. 31, 1930.

Ship-to-shore telephone service which was opened late in 1929 to the S.S. *Leviathan*, was extended to several other liners during 1930.

In common with other businesses, the telephone industry in the United States was appreciably affected by the general business depression during the year, but it continued to grow, though at a slower rate than in previous years. On Dec. 31, 1930, there were about 20,200,000 telephones in service in the United States, connected by more than 82,000,000 miles of wire. The total investment in telephone plant and equipment in the United States at that date was in excess of \$4,600,000,000. Employees of the operating telephone companies in the United States numbered about 400,000.

The average number of telephone conversations daily during 1930 was about 83,500,000, including approximately 79,900,000 local conversations and 3,600,000 toll conversations. Dial telephone service was further extended during the year and by the end of 1930 more than a quarter of all the telephones in the United States were served from dial system central offices.

About 35,000 miles of telephone circuits were being used in 1930 to link up chains of radio stations for simultaneous broadcasting. About 200 radio stations were included in one or other of the various chains.

During 1930 the Bell System bought the Teletype Corporation, manufacturers of telephone typewriters, and that business was operated as a subsidiary of the Western Electric Co., Inc. The New Jersey State Police established a state-wide telephone typewriter service during 1930.

In April, 1930, two-way television by which persons at a distance see each other while they converse, was demonstrated by Bell System engineers over a circuit between the Bell Telephone Laboratories and the headquarters of the American Telephone and Telegraph Company in New York, about two miles apart. See TELEVISION.

TELESCOPES. See ASTRONOMY.

TELEVISION. During the year the leading broadcasting and research corporations were actively engaged in the development of television, but it had not been reduced to a commercial basis. On May 22 at Schenectady television was used for the first time in a theatre as part of a regular performance, the images being transmitted by radio from a studio of the General Electric Company located about one mile from the theatre. Upon a screen, 6 x 7½ feet, active images of the performers were reproduced, which were readily visible to those seated on the back rows and in the balcony. The light impulses were transmitted on a wave length of 140 meters, and voice and

sound effects were also secured. The experiment was of interest in that the projection had been increased from about 14 inches square to an area 6 feet square, or about one-fourth that of the standard motion-picture screen.

An interesting development also carried on by the General Electric Company was the transmission of a television picture some 20,000 miles through space from the short-wave station W2XAF at Schenectady to station VK2ME at Sydney, Australia, where the signals were re-broadcast back and received again in Schenectady in about one-eighth of a second.

Television from color movie film, with all the colors reproduced, a method of securing television reproduction of fine detail without the use of extraordinarily wide frequency bands, either by radio or wire, and improved reproduction of color values in two-way television, were described at the meeting of the Optical Society of America, held at the University of Virginia, October 30, by Dr. Herbert E. Ives, under whose supervision the researches were carried out at the Bell Telephone Laboratories. The transmission of color movie film was done with the Kodacolor process, used in amateur 16-mm. motion-picture cameras. Here a series of minute ridges running the length of the film yields a positive film in which the image is made up of a series of fine horizontal lines. The position of these lines with respect to the ridges determines the color which they show on the screen. This is because the ridges act as cylindrical lenses and direct the light for the screen picture through one or more of three vertical color filters placed before the lens.

For the television arrangement, a scanning disk, with a series of fine holes, rotates in front of the film as it moves in front of a light. Then a lens projects the image on to three photoelectric cells side by side. No color filters are used, but the cells are arranged so that one picks up the red image, one the green, and one the blue. In the television receiver, which is the same as that used in previous experiments in transmitting color images from real subjects, the current from each of these cells is fed into a glow lamp which reproduces the original color. The light from these three lamps is combined, and so the eye sees the reproduced image in full color. See TELEPHONY.

TEMPLE UNIVERSITY. An institution for the higher education of men and women in Philadelphia, Pa.; founded in 1884. The 1930 autumn enrollment was 10,100. There were 694 members on the faculty. The income for the year totaled \$1,682,336. The library contained 47,874 volumes. In 1930 a medical school building was completed at a cost of more than \$1,000,000, and construction was begun on Mitten Memorial Hall, a recreation building, to cost more than \$500,000. President, Charles E. Beury, LL.D.

TENEDOS. See GREECE under *History*.

TENNESSEE. **POPULATION.** According to the Fifteenth Census, the population of the State on April 1, 1930, was 2,616,556. The population on Jan. 1, 1920, was 2,337,885. The capital is Nashville.

AGRICULTURE. The accompanying table gives the acreage, production, and value of the principal crops in 1929 and 1930.

Farms in the State numbered 245,968 in 1930; in 1925, 252,669; and in 1920, 252,774.

MINERAL PRODUCTION. The mining of coal, chief of the State's extensive list of mineral products, declined to a total of 5,405,464 net tons, for 1929,

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|-----------|--------------------------|--------------|
| Corn | 1930 | 2,915,000 | 41,102,000 | \$38,225,000 |
| | 1929 | 2,944,000 | 73,600,000 | 67,712,000 |
| Cotton | 1930 | 1,227,000 | 400,000 ^a | ,000 |
| | 1929 | 1,120,000 | 515,000 ^a | 42,488,000 |
| Hay | 1930 | 1,380,000 | 1,153,000 ^b | 22,985,000 |
| | 1929 | 1,520,000 | 1,986,000 ^b | 34,464,000 |
| Tobacco | 1930 | 151,800 | 120,903,000 ^c | 19,465,000 |
| | 1929 | 132,300 | 107,784,000 ^c | 20,048,000 |
| Potatoes | 1930 | 41,000 | 2,867,000 | 3,609,000 |
| | 1929 | 39,000 | 3,576,000 | 4,828,000 |
| Sweet potatoes | 1930 | 44,000 | 3,740,000 | 3,366,000 |
| | 1929 | 44,000 | 4,400,000 | 4,180,000 |
| Wheat | 1930 | 308,000 | 3,542,000 | 3,542,000 |
| | 1929 | 405,000 | 3,645,000 | 4,811,000 |
| Oats | 1930 | 217,000 | 4,340,000 | 2,300,000 |
| | 1929 | 197,000 | 3,546,000 | 2,199,000 |

^a Bales. ^b Tons. ^c Pounds.

from 5,601,959 for 1928; by value, to \$9,122,000 for 1929, from \$9,694,000 for 1928. The production of stone, largely of the superior grades, retained second place, by rank of importance, among the State's mineral products in 1928. After allowance for duplications, the total value of the yearly mineral product of the State was \$38,789,242 for 1928; for 1927, \$37,874,981.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$21,318,394 (of which \$4,531,764 was for local education); for interest on debt, \$1,899,062 (of which \$683,466 was paid by the State on county road bonds); for permanent improvements, \$23,291,805; total, \$46,510,498 (of which \$28,269,696 was for highways, \$7,448,674 being for maintenance and \$20,821,022 for construction). Revenues were \$34,404,985. The funded debt on June 30, 1929, was \$31,609,026, against which were no reported sinking-fund assets. On property bearing an assessed valuation of \$1,836,874,048 were levied in the year State taxes of \$3,673,748.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 3961.84.

EDUCATION. The school population of the State, as reckoned to include all persons from 0 to 18 years of age in May, 1929, numbered 661,071. There were enrolled in the public schools of the State, in 1929, 637,571 pupils. Of these, 569,301 were in common schools or elementary grades, and 68,270 were in high schools. The expenditures of the year for public-school education totaled \$21,832,006. The year's salaries of teachers averaged \$831.

CHARITIES AND CORRECTIONS. In accordance with a law of 1923, all charitable and penal institutions of the State were, in 1930, under the authority of the State Department of Institutions, which had as its head a commissioner (R. H. Lyle). There was also maintained for their needs a State purchasing agency.

POLITICAL AND OTHER EVENTS. In the Democratic primary, held on Aug. 7, 1930, Representative Cordell Hull was chosen the party's candidate for the U. S. Senate and Governor Henry H. Horton was renominated. Under the administration of Governor Horton progress was made with the development of communications designed to bring into contact the mutually isolated and widely differing eastern, central, and western portions of the State. Work was prosecuted on the system of bridges essential to this end; their intended cost was \$9,848,303.

Tennessee, like Virginia and West Virginia,

presented to the Federal Government objections to the practice of the Federal Power Commission, to require applicants for development of power on non-navigable streams to limit their projects to such a manner as not to impair the requisite flow of navigable waters below. The U. S. Attorney-General ruled that the Commission was not required by statute to impose the conditions to which objection had been made. Three natural-gas companies filed copies of their charters with the Secretary of State of Tennessee in the course of the year, with a view to piping natural gas, derived from the Texas fields, into the State.

At Nashville occurred in November a banking crisis of some magnitude. Caldwell and Company, a large investment house, was thrown on November 13 into the hands of a Federal receiver. This house had exerted a controlling interest in the Bank of Tennessee, a State institution with liabilities of \$13,969,000. The difficulties of Caldwell's, which became apparent early in the month, led to the suspension of the Bank of Tennessee on November 7 and its passing into the hands of the State Banking Department. At Knoxville the Holston-Union National Bank, in alliance with the Caldwell interests, closed on November 11. The State of Tennessee had on deposit in the Bank of Tennessee some \$3,000,000 of its highway funds and \$336,000 of its general Treasury funds; in the Holston-Union National Bank \$2,105,600 of its moneys. Some of the counties and the State of Louisiana were also depositors in one or another of the failed institutions. In order promptly to meet any strain on their resources the American National and the Fourth and First National banks and the Nashville Trust Company and the American Trust Company, all of Nashville, combined on November 13 under the name of the American National Bank, thus concentrating resources that approximated \$86,000,000.

ELECTIONS. Governor Henry Horton, Democrat, was reelected on November 4, obtaining 141,412 votes, by unofficial report, to 79,784 for C. Arthur Bruce, his Republican opponent. For the ensuing full term as U. S. Senator, Representative Cordell Hull, Democrat, was elected, defeating Paul E. Divine, Republican; the vote as unofficially totaled was 137,785 to 53,907. The appointed interim Senator, W. E. Brock, Democrat, was elected for the remainder of the term expiring March 4, 1931. Elections to the Federal House of Representatives gave eight seats to Democrats, one to a regular Republican, and one to an Independent Republican, O. B. Lovette. The State Legislature remained in control of the Democratic party.

OFFICERS. Governor, Henry H. Horton; Treasurer, John F. Nolen; Comptroller, Edgar J. Graham; Secretary of State, Ernest N. Haston; Auditor, P. H. Williams; Attorney-General, L. D. Smith; Commissioner of Education, P. L. Harned.

JUDICIARY. Supreme Court: Chief Justice, Grafton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, W. H. Swiggert, William L. Cook.

TENNESSEE, UNIVERSITY OF. A State institution of higher education, nonsectarian and coeducational in Knoxville, with colleges of medicine and dentistry and schools of pharmacy and nursing in Memphis, and a junior college in Martin; founded in 1794. The total enrollment was 5577 in 1930. The faculty numbered 451. The endowment funds of the university amounted to \$426,755; the income for the year 1929-30 was

\$2,981,632. There were 112,381 bound volumes in the libraries. President, Harcourt A. Morgan, LL.D.

TENNIS. Spectacular developments in the realm of lawn tennis marked the year 1930. Led by William T. Tilden, 2d, and Mrs. Helen Wills Moody the United States swept through the Wimbledon, England, tournament in June and July to an overwhelming victory, only to lose to France by 4 to 1 in the Davis Cup matches, and to England by 4 to 3 in the Wightman Cup competition. The year saw the rise of the veteran Tilden to new heights of tennis fame by conquering all opposition at Wimbledon and then his defeat by John Doeg, of Santa Monica, Calif., for the United States championship at Forest Hills, Long Island, on September 12, followed by his formal retirement from amateur competition at the close of the year. Mrs. Helen Wills Moody won her fourth successive championship at Wimbledon and her third French championship. She declined to defend her United States championship, which she had held for six years, and the title was taken to England by Miss Betty Nuthall, 19 years old, the first foreign player not resident on American soil to accomplish the feat. She easily defeated Mrs. Lawrence A. Harper of Oakland, Calif., in the finals, at 6-1, 6-4. Paired with Miss Sarah Palfrey, Miss Nuthall also won the American doubles championship. The men's doubles title was won by Doeg and Lott for the second year in succession.

Clifford B. Sutter, sophomore at the University of Tulane, won the intercollegiate tennis championship at Haverford, Pa., on June 28. Miss Sarah Palfrey, of Brookline, Mass., won the girls' national championship for the third consecutive year at Philadelphia on September 6, meeting Helen Marlowe, of Los Angeles in the finals. The national mixed doubles title was captured by Miss Edith Cross, of San Francisco, and Wilmer Allison.

The United States professional title was regained by Vincent Richards from Karel Kozeluh, Czechoslovakian star, who had taken the title from the American player in 1929. Later Richards announced his retirement from competitive play.

TEXAS. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 5,824,715. The population on Jan. 1, 1920, was 4,663,228. The capital is Austin.

AGRICULTURE. The accompanying table gives the

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|------------|------------------------|----------------|
| Cotton ... | 1930 | 16,975,000 | 4,100,000 ^a | \$ 316,000,000 |
| | 1929 | 17,872,000 | 3,950,000 ^a | 66,728,000 |
| Corn | 1930 | 4,941,000 | 91,408,000 | 73,208,000 |
| | 1929 | 4,533,000 | 86,127,000 | |
| Grain sorghum | 1930 | 2,928,000 | 46,816,000 | 30,430,000 |
| | 1929 | 2,760,000 | 46,920,000 | 32,844,000 |
| Wheat ... | 1930 | 2,570,000 | 28,270,000 | 19,789,000 |
| | 1929 | 2,520,000 | 87,800,000 | 39,690,000 |
| Oats | 1930 | 1,696,000 | 46,640,000 | 19,589,000 |
| | 1929 | 1,542,000 | 43,176,000 | 22,020,000 |
| Hay | 1930 | 948,000 | 925,000 ^b | 11,270,000 |

| Sweet potatoes | 1930 | 109,000 | 7,630,000 | 7,248,000 |
| | 1929 | 104,000 | 7,884,000 | 7,753,000 |
| Rice | 1930 | 186,000 | 8,463,000 | 6,517,000 |
| | 1929 | 144,000 | 7,416,000 | 7,194,000 |
| Potatoes .. | 1930 | 41,000 | 3,674,000 | 5,695,000 |
| | 1929 | 31,000 | 2,459,000 | 3,688,000 |
| Barley .. | 1930 | 198,000 | 5,570,000 | 1,964,000 |
| | 1929 | 203,000 | 5,075,000 | 3,146,000 |

^a Bales. ^b Tons.

acreage, production, and value of the principal crops harvested during the years 1929 and 1930:

Farms in the State numbered 496,007 (1930); 465,646 (1925); 436,033 (1920). The area of the State's lands under irrigation increased considerably, to 797,695 acres for 1929, from 586,120 acres for 1919.

MINERAL PRODUCTION. Texas produced in 1929 more petroleum than any other State, in regard to quantity, and ranked second to Oklahoma alone in the production of petroleum according to value. The petroleum product of the State was 298,441,000 barrels for 1929, as against 257,320,000 for 1928; the value, \$324,900,000 (estimated) for 1929 and \$236,300,000 for 1928. The natural-gas industry increased greatly both in 1928 and thereafter, partly by reason of the construction of systems of pipe lines to convey the output of Texas wells to distant markets. There were produced 301,990,000 M cubic feet of natural gas in 1928, as against 254,063,000 M in 1927; by value, \$51,316,000 in 1928 and \$37,424,800 in 1927. Gasoline was extracted from natural gas to the quantity of 422,300,000 gallons in 1929 and of 324,516,000 in 1928; these quantities attained the values of \$25,930,000 for 1929 and of \$22,492,000 for 1928, additional to the value of the natural gas itself. The Texas output comprised the bulk of the domestic production of sulphur, which in 1929 was 2,362,389 tons valued at \$43,000,000.

The entire mineral product of the State, after allowance for duplications, had a value of \$378,616,955 for 1928; for 1927, of \$374,503,420.

FINANCE. State expenditures in the year ended Aug. 31, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$70,101,079 (of which \$13,803,923 was for local education); for interest on debt, \$135,091; for permanent improvements, \$14,076,254; total, \$84,312,424 (of which \$28,318,305 was for highways, \$16,882,208 being for maintenance and \$11,430,097 for construction). Revenues were \$93,140,031. The State's funded debt outstanding on Aug. 31, 1928, was \$4,266,722. Net of sinking-fund assets, it was likewise \$4,266,722. On property bearing an assessed valuation of \$3,988,421,517 were levied in the year State taxes of \$25,525,898.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 16,890.64. There were built, in 1930, 245.13 miles of first, and 33.55 of second track.

EDUCATION. Terms of county superintendents were lengthened to four years and of the school trustees, save in the larger districts, to three years. The number of persons of school age in the State (from 6 to 17 years) was reported for 1930 as 1,563,595. There were enrolled in the public schools in the school year 1929-1930, 1,308,028 pupils. Of these, 1,071,890 were in elementary and 236,138 in high schools. The expenditures for public-school education in the year 1929-30 totaled \$23,000,000. The year's salaries of teachers averaged \$1051.

LEGISLATION. The forty-second regular session of the State Legislature convened on January 22. Adjourning on February 18, it was immediately reconvened in a called session that ended on March 21, in order that necessary work might be concluded. A tonnage tax on the production of sulphur in the State was imposed at the rate of 55 cents, Texas having almost a monopoly of the domestic production of sulphur at the time. As

the revenue of the State from its franchise taxes had been endangered by adverse court decisions, a new franchise-tax act was passed. It imposed charges at the rate of 65 cents to the \$1000 of capital up to \$1,000,000, 45 cents thereafter up to \$10,000,000 and 35 cents above that point on utilities. The basis set for reckoning capital was that of outstanding capital stock, surplus, and undivided profits, the courts having condemned a tax on stock merely authorized. The Pipe Line Act was passed, giving authority to the State Railroad Commission to limit pipe-line deliveries of petroleum and the production of the oil fields in accordance with estimates of the requirements of the refineries. In consequence of the dispute between the two States over the activities of Texas land agents in Wisconsin the Legislature passed a resolution urging Texas to boycott all Wisconsin products. The sum of \$150,000 was appropriated for the Alamo land purchase. S. H. Terrell, State Comptroller, brought before the House on impeachment charges, alleging irregularities in office, resigned on February 25.

POLITICAL AND OTHER EVENTS. In the Democratic primary vote to nominate a candidate for Governor, Mrs. Miriam A. ("Ma") Ferguson received on July 27 the highest vote. This did not assure the victory of the partisans of the Fergusons, for her vote fell short of the majority of all votes cast, requisite to a nomination. A runoff primary was therefore held. It yielded a solid majority for Ross S. Sterling, chairman of the State Highway Commission. Mrs. Ferguson's campaign for the candidacy had been in the stead of her husband, ex-Governor James E. Ferguson, who had been removed by impeachment in 1917. An act had been passed in 1924 by a Legislature dominated by his friends, to restore his right to hold office. This act was assailed in the courts by his opponents, and the State Supreme Court on May 23 held the act invalid.

The city of Dallas voted in October by a majority of about two to one to give up the existing government by commission and to adopt in its place a municipal government by council and city manager.

The construction of a long-distance pipe line to convey natural gas from the Amarillo field in Texas to Chicago was carried on during the year. The line when completed was to be owned and operated by the Natural Gas Company of America, controlled by the Insull interests, the Cities Service Company, the Standard Oil Company of New Jersey, and other corporations with business in the field.

ELECTIONS. Democratic candidates were elected on November 4 to all offices but one without serious opposition, in a light vote. Ross E. Sterling, Democrat, won the governorship by 162,418 votes, as unofficially reported, to 37,771 for William E. Talbot, Republican. Senator Morris Sheppard, Democrat, reputed author of the Eighteenth Amendment, was reelected, defeating John Haesly, Republican. The usual strong Democratic control of the Legislature was maintained. Seventeen Democrats were elected United States Representatives. The eighteenth seat was won by Harry Wurtzbach, Republican, in the Fourteenth District.

OFFICERS. Governor, Dan Moody; Lieutenant-governor, Barry Miller; Secretary of State, Jane Y. McCallum; Treasurer, W. Gregory Hatcher; Comptroller, S. H. Terrell; Attorney-General, Claud Pollard (succeeded by Robert Lee Bobbitt).

JUDICIARY. Supreme Court: Chief Justice, C. M. Cuerton; Associate Justices, T. B. Greenwood, William Pierson.

TEXAS, UNIVERSITY OF. A State institution of higher education in Austin, with a medical branch in Galveston and a college of mines and metallurgy in El Paso. The main university was opened in 1883. For the autumn term of 1930 the enrollment at the main university totaled 5505. In addition there were 447 enrolled in the medical branch, 339 in the college of medicine and 108 in the college of nursing, and 485 in the college of mines. There were 453 members on the faculty.

The endowment resources of the institution amounted to \$12,000,000, and the income from legislative appropriation, fees, and income from trust and special funds was placed at \$3,698,330. The libraries contained 596,506 volumes. The Gregory Gymnasium was completed during the year at a cost of \$518,000, and the mechanical engineering laboratory at a cost of \$230,000. There were also under construction a new chemistry building and a women's gymnasium. President, Harry Yandell Benedict, Ph.D., LL.D.

TEXAS FEVER. See VETERINARY MEDICINE.

TEXAS TECHNOLOGICAL COLLEGE. A State coeducational institution in Lubbock, Texas; opened in 1925. The enrollment for the summer session of 1930 was 1298 students and for the autumn of 1930, 2226 students. The faculty numbered 133 members. The appropriations for the year 1930-31 amounted to \$507,350. There were 47,632 volumes in the library. President, Paul Whitfield Horn, M.A., LL.D.

TEXTILE INDUSTRY. The textile industry in the United States in 1930 felt the industrial depression for which it had been adequately warned, if not prepared. In 1930, according to the estimates of the *Textile World* (New York), the rate of textile mill operation was approximately 22 per cent below 1929, and 16 per cent below 1928. This was due, in large measure, to the effort to keep production in line with buying, which naturally fell off under conditions. An attempt was made to develop foreign outlets for textiles by coöperative selling through the formation of the Textile Export Association of the United States to handle cotton goods, and of the American Textile Trade Company to export mercerized yarns. The new tariff increased duties on numerous items, but it was not believed that the effect of this legislation had any direct effect on the industry up to the end of the year.

New mill construction, as reported to the *Textile World*, was about 30 per cent less than in the calendar year 1929. New mill construction in various States was recorded as follows: Pennsylvania, 64; New Jersey, 57; North Carolina, 47; and Massachusetts, 33. As regards industries, North Carolina led in cotton, Massachusetts in wool, North Carolina and Pennsylvania tied in knit goods, New Jersey in silk, and also in finishing. The six States leading in new cotton-mill developments, in order of importance, were as follows: North Carolina, Georgia, South Carolina, Rhode Island, Alabama, and Massachusetts.

The number of cotton spindles in place, on Dec. 31, 1930 as reported by the U. S. government, 33,567,102, showed a reduction from 34,630,866 on January 31 or about 2 per cent, with the greatest part of this reduction in New England, and a small increase in the number of spindles in places in the cotton-growing States. These were distributed as follows: Cotton-growing States,

19,106,384; New England States, 13,054,306; all other States, 1,406,412. The active spindles in December were: Cotton-growing States, 16,869,856; New England States, 7,784,158; all other States, 871,806.

The decline in the cotton textile industry during the year, shown in figures from the Cotton Textile Merchants' Association of New York, based on the spindle hour figures of the U. S. Bureau of Census, may be quoted. In 1930 the industry produced approximately 6,303,657,000 yards of cloth, with a spindle hour activity of 76,702,655,000, or a production per spindle per hour of .0822, as compared with 8,207,887,000 yards with 99,899,724,000 spindle hours, or a production per spindle per hour of .0822 in 1929. The month of December, 1930, recorded a low activity represented by 5,916,378,249 spindle hours, as against 6,768,132,246 in December, 1929, and 9,226,738,123 in January, 1929.

In the wool industry the activity in 1930 was considerably below that of 1929. The U. S. Census Bureau on the basis of returns from approximately 1000 mills reported an average of 43.8 per cent of the wide looms in space active in 1930 as against 57.4 per cent in 1929; 47.2 per cent of narrow looms against 61 per cent; 48.4 per cent of carpet and rug looms against 65.8 per cent; 58.2 per cent of cards, against 73.1 per cent; 60.8 per cent of combs, against 69.3 per cent; 57.4 per cent of woolen spinning spindles, against 70.7 per cent, and 54 per cent of worsted spindles against 65.2 per cent. See RAYON; SILK; COTTON.

THEATRE. Future historians of the theatre, digesting and epitomizing the activities of the year 1930, will doubtless stress the fact that it was the first, if not the worst, of those years covering the big slump. Economically the theatre was as completely depressed as all other business. Being numbered with the luxuries it probably suffered more than other industries. Outside the four main theatrical centres of New York, Chicago, Boston, and Philadelphia, there was so little legitimate business done by the legitimate theatres that little else was talked about. And in those four centres no better than half the normal business was realized.

Nor could anything of less importance than a strikingly original or intensely human drama recreate an interest in the theatre. The leading producers of New York, tardily awakening to the fear that perhaps a lack of public confidence caused by long-standing abuses of the ticket privileges enjoyed by speculators was in part responsible for the public's attitude, proceeded to take steps. Organizing the League of New York Theatres, with Arthur Hopkins as president, they declared open war on speculators in general and the so-called "outlaws" or "gyp" agents in particular. A certain allotment of seats was agreed upon, these to be handled exclusively by accredited agents who should also be members of the league and subject to its rulings and control. The "buy" which permitted brokers to contract for the best seats in blocks was discontinued.

The agents in turn agreed to abide by a fixed premium of 75 cents per ticket. Harlow D. Savage, an executive of ability and no previous theatrical experience, was engaged at \$25,000 a year to manage the League. The League functioned more or less effectively, despite a vast amount of boring from within and constant fire from the sniping "outlaws" from without, over a period of months. When collapse threatened, the Postal

Telegraph Company stepped in and agreed to make each of its 160 branch offices in effect a theatre-ticket agency, and charge but 50 cents a ticket premium for its service. The new scheme pleased most of the honest managers, but was not to the liking of either the so-called accredited agents or the pestiferous free lancers. The expected crash was destined to come shortly after the calendar year came to a close, and though the League continued to function weakly, the distribution and sale of seats by outside agencies went back practically to where it was before the war was started.

The legitimate theatre had been persistently menaced all through the previous year by the novelty and increasing popularity of the on-rushing talkies. Suddenly there appeared to be a kind of merger of the menaced interests. The producers of talking pictures discovered that they had to have plays and they had to have players. They had to have plays with sufficient story value to stand retelling by the spoken word rather than by fantastic captions, and they had to have players capable of speaking those words with good address and at least passable diction.

The advantages thus gained were rather more in the actors' and playwrights' favor than in that of the producers. The latter had their profits from the sale of the picture rights, but after that they ceased to participate. Many players were given long and profitable engagements, and practically all playwrights of any standing were engaged, at salaries that frequently caused them to blush profusely, either to brighten up their own dialogue in one of their old plays being rewritten for the screen or to write new dialogue for silent pictures being revived.

The effect on the theatre, so far as the play-going public was concerned, was quickly to curtail the number of productions and to change the complexion of many casts. There resulted for a short time early in the new year a season of fewer and better plays. And that condition continued practically to the end of the playgoing year.

Early in 1930 the Irish Players had reorganized for a campaign they hoped would result in the establishment of their theatre permanently in New York. But their first revival of Synge's *Playboy of the Western World* blasted these hopes. Robert Emmet Sherwood, who had done well with *The Road to Rome* and *The Queen's Husband* in previous years, came forward with a war play entitled *Waterloo Bridge* in which a sentimental chorus girl who had taken to street-walking in London refused to disillusion a young American soldier on leave when she learned that he still believed in good women. This also failed.

There was promise in the production of *Children of Darkness*, a comedy brilliantly written in the old English manner by Edwin Justus Mayer, whose *Firebrand* had been successful. This was the story of a Jonathan Wild adventure in Newgate prison in 1725 and concerned principally the romance of the thoroughly unmoral jailer's daughter and the Count La Ruse, a titled thief. The chief parts were played by Basil Sydney and Mary Ellis, and there was much praise for them. The play's run was finished in ten weeks.

An adventure of minor importance to the season was that of Leo Bulgakov, a Russian who had left the Stanislavsky Moscow Art theatre to establish himself in America. While playing an important rôle in *Street Scene* Mr.

Bulgakov organized a company for the revival of Gorky's *Night Lodging*, rewritten by W. L. Laurence in the American vernacular and retitled *At the Bottom*. It proved an interesting adventure and attracted considerable attention for two months. A revival of Chekov's *The Seagull* followed.

Edgar Selwyn, having invested something over \$100,000 in a musical comedy by George S. Kaufman and George Gershwin called *Strike Up the Band*, and which had failed on tour, successfully reclaimed that property by having the book rewritten by Morrie Ryskind and by adding the comedy team of Clark and McCullough to the cast. Being smartly satirical and good-naturedly "agin' the gov'ment" the revised version pleased the Broadway crowd and ran on and on through the season.

Maurice Moscovitch, a Jewish actor of standing in London, and eager to conquer America, was given a chance by Charles Dillingham with a dramatization of Lion Feuchtwanger's novel, *Power*. The play was called *Josef-Suss* and Mr. Moscovitch gave a melodramatically effective performance. The public, however, was more than satisfied with 40 performances.

Having written an outstanding hit in *Strictly Dishonorable* in 1929, Preston Sturges's first appearance in 1930 was with a drama called *Recapture*, in which the Henry C. Martins, divorced five years, meet in France, each following a new affair. There they try to recapture the careless rapture of their first love by again running away with each other. The plan proves a failure and so did *Recapture*.

Donald Ogden Stewart, humorist, who had turned actor in Phillip Barry's *Holiday* the season before, now turned playwright. Fashioning a comedy he called *Rebound*, principally for the use of Hope Williams, who was also the featured player around whose personality *Holiday* had been written, he wrote another part in it for his own use and played it creditably. The play ran 114 performances to finish the season.

Katharine Cornell, still the big city's most persuasive emotional actress, acquired a vehicle in Margaret Ayer Barnes and Edward Sheldon's *Dishonored Lady*. It was a fairly commonplace drama, but Miss Cornell's performance of its distressed heroine, a lady whose periodical love affairs embroil her in the murder of one lover before she can take on another and better man, pleased her critics and her public.

Fred Stone had been in the hospital the better part of two years following an airplane crash. In February, following a short preliminary tour, he came back to Broadway with a musical comedy fashioned for him by William Anthony McGuire. *Ripples* it was called, and concerned the adventure of a two-fisted drinker, a descendant of the original Rip Van Winkle who also goes to sleep in the Catskills and awakes to find himself surrounded by dwarfs. He discovers, however, that these are midget bootleggers, hired because their size serves to fool the revenue officers. Mr. Stone indicated his recovery by repeating most of his old dances. His daughter Dorothy was again his leading woman, and his second daughter, Paula, made her début successfully with the troupe. *Ripples*, however, did not please New York and after 55 performances Mr. Stone took it touring. The road response was more generous.

February was about the most exciting month of the year in the American theatre. It had not

reached its shortened middle when a comedy called *Topaze*, from the French of Marcel Pagnol, was produced by the Shuberts and immediately adopted as a worth-while adventure. The title was the proper name of an honest teacher in a boys' school who was discharged because he refused to alter the report card of a stupid pupil merely because his mother was rich. Going to work for the city's biggest grafter *Topaze* threatens to expose also the dishonesty he finds rampant in city affairs, but is effectively silenced when his employer helps him to his degree as a Doctor of Philosophy. This honor so heartens *Topaze* that he immediately goes in for grafting on his own account, and before the play ends has taken over not only his employer's business but his mistress as well.

The day after *Topaze* was produced Herman Shumlin, newly come to Broadway prominence, offered a drama entitled *The Last Mile* that came as near standing the play reporters on their excited heads as anything had ever done in the history of the New York theatre. Based on an episode published in *The American Mercury* as the verbatim report of death-house conversations and reactions the night of an execution, as they were written down by one of the condemned, it took such grip of its audience in the first act as to send even the old-timers staggering uncertainly up the aisle. It was all very shivery and exciting and the play, splendidly acted, ran the season out. Which was a record for so serious a drama. American playgoers as a class much prefer that their playgoing experiences should be cheerful.

A week later a young man from China, Mei Lan-Fang by name, began a two-week engagement under the auspices of the China Institute. He had come, it was said, to bring to America the best that China had to offer in the way of native stage art and it was hoped that his performances and his art would prove to America that the Chinese theatre and Chinese dramatic art were not devoted exclusively to those interminable historical dramas that run for years and are, to Occidental minds, hopelessly involved. Mr. Mei played a series of one-act dramas, many dating back to the Han, the Ming, and the Tang dynasties, in which he appeared invariably in those female rôles in which he specialized and in the performance of which he was amazingly adept. So successful was the experiment that the engagement was extended from two weeks to five and could have been continued indefinitely had it not been that both the actor and his sponsors wished to give some time to the education of other American theatrical centres.

After Ed Wynn had produced a *Simple Simon* dream play of his own and Guy Bolton's concoction, and after George Abbott and S. K. Laurens had failed with a better than average domestic comedy called *Those We Love*, the Theatre Guild, for whom the season's adventures had not been particularly happy, played a trump card in George Bernard Shaw's newest play, *The Apple Cart*. Heavily British in its political background, and a bit labored as a satire that peered 50 years into the future and saw America voluntarily again a part of the British Empire, Mr. Shaw's play was greatly enjoyed by the more serious of the Guild subscribers but frankly left alone by the outside public. Eighty-eight performances and it was gone.

Two days later Laurence Rivers, Inc., produced Marc Connelly's stage arrangement of Roark

Bradford's *Ol' Man Adam an' His Chillun*. This proved a second red-letter first night. The audience was moved both to tears and to cheers by the persuasively simple and sincere retelling of the Old Testament story as it is heard and visualized by a Sunday-school class of Negro children in the deep South. The play's reviewers were ecstatic and mostly unrestrained in enthusiasm and *The Green Pastures* ran through both the season and the summer and into the next season. In May it was awarded the Pulitzer Prize as the outstanding drama of the year. Interestingly Laurence Rivers, Inc., is the *nom du theatre* adopted by a modest Wall Street financier named Rowland Stebbins, whose love of the theatre had led him into numerous similar ventures.

From February till early spring the season ran along to its close without stirring much additional excitement. A company of Japanese players, hoping, no doubt, to duplicate the success of their Chinese friends, failed to do so. George White, copying his friendly enemy, Florenz Ziegfeld, to the extent of engaging Josef Urban to provide the scenic background for a musical comedy called *Flying High*, won success with that venture. Mrs. Fiske, after having carefully avoided New York with the revival of *The Rivals* in which she had successfully played Mrs. Malaprop on tour, determined to give the urban provincials a chance at it. The engagement continued a month, with James T. Powers playing Acres and Fiske O'Hara Sir Lucius O'Trigger. Alla Nazimova joined the Theatre Guild to play in a Turgenev drama adapted as *A Month in the Country*. The subscribers of the Guild approved, and the Turgenev drama ran the season out.

In late March Fritz Leiber, leading the Chicago Civic Shakespeare Society on its first eastern tour, played three surprisingly good weeks of Shakespearean repertory at the Shubert. In mid-April the Theatre Guild staged its last play of the season, Philip Barry's *Hotel Universe*. This proved a psychological drama, touched with fantasy, which was played without intermission for two interesting hours. The subscribers were a little divided as to their opinion of it, but a majority admitted a profound admiration for the author and supported his play for 72 performances.

Jed Harris, returning to the theatre after having declared his determination to stay away from it forever, staged successfully a Rose Caylor adaptation of Chekov's *Uncle Vanya*. Lillian Gish came back from the cinema to play Helena, and both Mr. Harris's production and Miss Gish were generously praised. Eve Le Gallienne added a second Shakespearean play to her Civic theatre repertory (having already played *Twelfth Night*), choosing this time to play Juliet. Her own success was noted, her production accepted for its novelty and simplicity and her company's support faintly praised.

Walter Hartwig added interest to the annual Little Theatre Tournament, which he had conducted for seven years, by giving a second week to a contest of full-length plays. Prizes were won in the Little Theatre tourney by the Players' Stock company of the Y. M. H. A. of New York, the Morse Players of St. Louis, Mo., the Studio Players of Buffalo, N. Y., and the Paravent Players of Providence, R. I. The Belasco trophy went to the Studio Players of Buffalo for a performance of Anatole France's *The Man Who Married a Dumb Wife*. In the long-play contest, which

CHARLES WESLEY HILL AS GABRIEL
(Died Dec. 10, 1930)

TWO NOTABLE PLAYS OF 1930

had five entries, the prize went to Marjorie Bartholomew for a three-act comedy called *The New Freedom*.

For their annual spring revival of one of the older dramas The Players Club selected the comparatively modern *Milestones*, written by Arnold Bennett and Edward Knoblock in 1911. To this they added Austin Strong's and Lloyd Osborne's *The Little Father of the Wilderness*, originally played by Francis Wilson in 1912. Mr. Wilson, retired these many years, came forward again to repeat his performance of Père Marlotte and had the support of practically all the active members of the club. *Milestones* was given by a cast including Tom Powers, Beulah Bondi, Selena Royle, and Dorothy Stickney. A prologue written by Franklin P. Adams was read by Edwin Milton Royle.

As a final flare in a dying season the Philadelphia Theatre Association, organized and largely financed by the late Horace Howard Furness, Jr., revived the *Lysistrata* of Aristophanes' which had caused no end of comment. In New York this 2100-year-old farce was accepted as hawdy but honest. Its success was immediate and throughout the summer it helped divert the stay-at-homes without appreciable effect on the atmospheric temperature.

Early in August David Belasco, hoping for another hit such as he had scored the year before with *It's a Wise Child*, produced a comedy of similar character called *Dancing Partner* with Lynn Overman featured. It did no better than fair, though it ran for 119 performances. The regular season was a fortnight late in starting and produced nothing of promise until Arthur Hopkins offered a drama called *Torch Song*, written by Kenyon Nicholson, with Mayo Methot playing a cabaret girl who joins the Salvation Army to cure a love hurt and then falls a second time. *Torch Song* held on for 11 weeks.

The first day of September the Shuberts again struck pay dirt with an amusing domestic wrangle in Greenwich Village written by Frances Goodrich and Albert Hackett and called *Up Pops the Devil*. Two weeks later John Golden brought out *That's Gratitude*, a comedy by and with Frank Craven that was freely spoken of as his best since *The First Year*.

There were plenty of failures the first month of the new season, but a few outstanding hits as well. One of these was George Kaufman's and Moss Hart's savage but highly amusing satire of life among the picture makers of Hollywood called *Once in a Lifetime*. Another, a boldly spoken but most diverting study of three "Follies" girls, was oddly entitled *The Greeks Had a Word for It*. Charles Hopkins, sticking profitably to the sweet and clean type of play, produced a Benn Levy fantasy entitled *Mrs. Moonlight* in which a wife who wants to grow old gracefully cannot do so because she had prayed on a mystic charm when she was 18 that she would always be young and pretty. Joe Cook stimulated the allegiance of his royal following with *Fine and Dandy*.

Two of the outstanding early season successes were musical, one *Girl Crazy*, with a George Gershwin score, and the other a revue with Fred Allen, Libby Holman, and Clifton Webb featured called *Three's a Crowd*. Dramas did not do so well. Jane Cowl managed an interestingly staged revival of *Twelfth Night*, and Lenore Ulric saved one of the more anemic imitations of *Rain* called *Pagan Lady*. The Theatre Guild presented an

elaborately staged Soviet melodrama, *Roar China*, to its subscribers but could not interest outsiders and the Shuberts imported an Edgar Wallace thriller *On the Spot*, which, with Crane Wilbur and Anna May Wong, managed to hold on.

The Theatre Guild's first hit of the season was achieved, fairly enough, with Maxwell Anderson's *Elizabeth the Queen*, Lynn Fontanne playing the name part in a triumphant makeup and Alfred Lunt aiding and abetting the drama as Lord Essex.

In mid-November the drama picked up with the overnight success of *Grand Hotel* by Vicki Baum, adapted by W. A. Drake. This Reinhardtian drama, written for a revolving stage, was expertly cast and staged by the same Herman Shumlin who had attracted attention the year before with his production of *The Last Mile*. The play, presenting kaleidoscopic cross sections of life, maintained its success through the winter.

Mr. Belasco, disappointed that *Dancing Partner* had not done better, closed the play in November and replaced it with one called *To-night or Never*, the story of a prima donna who goes adventuring for the good of her art. Interest was added to his production by the fact that Helen Gahagan, who had quit the drama two years before to study singing abroad, agreed to play the lead, in which undertaking she was eminently successful.

Jane Cowl, holding to the repertory idea, added a Benn Levy comedy called *Art and Mrs. Bottle* to her *Twelfth Night* season, and later put aside the Shakespeare revival until she went touring. Mary Boland, long without a part suited to her amusingly artificial style, found one in Paul Osborn's *The Vinegar Tree*. Ethel Barrymore, a little defiant, brought in the dramatization of Julia Peterkin's prize-winning novel, *Scarlet Sister Mary*, which Daniel Reed had made for her. Miss Barrymore had done well with the play on the road, although her public was frank to say that it did not care greatly for its favorite in blackface. New York would not have it at all and the actress, insisting that she owed something more to her art and to the theatre than merely so-called "Barrymore parts," packed up her scenery, her daughter Ethel Barrymore Colt, who made her debut in this company, and her burnt cork and went touring a second time.

Eva Le Gallienne offered a new play by Susan Glaspell called *Alison's House* which confessedly dramatizes the life of Emily Dickinson, American poetess whose fame was achieved some years after she had died. This pleased the Civic Repertory audiences greatly.

One of the moving-picture cathedrals, the Colony, came over to the drama when B. S. Moss remodeled the stage and Ray Goetz tried the experiment of offering a huge revue, *The New Yorkers*, at something approximating popular prices.

Arthur Hammerstein, having failed to make *Luana* meet expenses, failed again with *Ballyhoo*, starring W. C. Fields, for the same reason. Fritz Leiber brought his Chicago Shakespeareans back for another three weeks, and the year rode to an exciting finish with two melodramas, *Midnight*, offered by the Theatre Guild, and *Five Star Final*, produced by A. H. Woods. Both these plays were by newspaper writers, and both had journalistic backgrounds.

Five Star Final was a savage attack on the sensation-breeding methods of the worst of the

tabloids written by Louis Weitzenkorn, who had at one time been managing editor of the New York *Evening Graphic*. *Midnight* sought to prove that by wallowing in crime orgies, as exploited by the press, we were merely widening a vicious circle and weakening the decency standards of a susceptible citizenry. *Five Star Final* exposed the malicious harm a cheap newspaper can do by stirring up old scandals and invading the private lives of past offenders. Because the New York *Evening Gazette* decided to revive the story of how Nancy Vorhees had killed her playboy deceiver twenty years before it not only blasted the life of Nancy's illegitimate daughter, raised in ignorance of her mother's crime, but forced both Nancy and her second husband to commit suicide rather than face the scandal.

The British theatre also suffered a fairly dull year. The new year found three of the still most successful plays, St. John Ervine's *The First Mrs. Fraser*, Noel Coward's *Bitter Sweet*, and R. C. Sherriff's year-old sensation, *Journey's End*, held over from the previous season. These continued to do well for many months. *Bitter Sweet*, in fact, was still running at the end of the year.

The only American dramas to create any particular stir in London were Elmer Rice's *Street Scene* and Rachel Crother's *Let Us Be Gay*, both of which achieved fairish runs. Noel Coward again confounded his critics by doing a lot of things considered at least outré in a comedy called *Private Lives*, in which he and Gertrude Lawrence appeared, and was rewarded with a considerable success. The prolific and amazingly speedy concocter of thrillers, Edgar Wallace, saw his rather exciting picture of Chicago gangster life, *On the Spot*, expanded into a season's run, and it did nearly as well in New York. He tried another, *Smoky Cell*, which copied in some ways *The Last Mile*, but this one was not such a successful production.

A. A. Milne had fair success with his *Michael and Mary*, Sir James Barrie did nothing, and Bernard Shaw rested on such laurels as the Malvern festival brought him. R. C. Sherriff, with just short of 600 performances recorded for *Journey's End*, saw his second play, a light comedy called *Badger's Green*, withdrawn after 35 showings.

BIBLIOGRAPHY. The year's theatre books of first importance included the periodic issue of John Parker's *Who's Who in the Theatre*; a *Book on Dramatic Costume*, by E. Dabney and C. M. Wise; *The Russian Theatre*, by Gregor Fulop-Muller; Harley Granville-Barker's *A National Theatre*; *The Drama in English*, by Walter Prichard Eaton; Gordon Craig's *Henry Irving*; Max Beerbohm's theatre writings and dramatic criticisms in two volumes and called *Around Theatres*; John Mason Brown's *Upstage*; and a popular estimate of late screen developments by Arthur Edwin Krows entitled *The Talkies*. The annual issue of *The Best Plays* (Burns Mantle) included the record of the New York season and excerpts from 10 of the season's outstanding successes.

THEOSOPHICAL MOVEMENT. THE. The year 1930 witnessed the further spread of interest in the ancient Wisdom-Religion, traceable through

the centuries in the truths uttered by the great seers, sages, and poets of every race, and restated by Mme. Helena P. Blavatsky towards the close of the nineteenth century under the name, Theosophy. Theosophy, which is not a particular set of dogmas and beliefs but religion itself, binding all beings in the universe into one grand whole, teaches an unknowable, absolute, divine Principle as the source of the manifested universe.

The Aryan Path, an outstanding nonpolitical and nonsectarian monthly magazine, international in scope and appeal, was launched in January, 1930, with offices in Bombay, London, and New York. Numerous new editions of standard Theosophical books also appeared in 1930, including *The Key to Theosophy*, *The Voice of the Silence*, *Echoes from the Orient*, and *The Ocean of Theosophy*, the first two by Madame Blavatsky and the others by William Q. Judge. A series of pamphlets issued in Bombay by Theosophy Company (India), Ltd., has made available important Theosophical articles long out of print. In Holland a monthly magazine, *De Theosoof*, has been launched.

THEOSOPHICAL SOCIETY, AMERICAN. The American division of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World headquarters were later established at Adyar, India, near Madras. In 1930 branches existed in 44 nations, on five continents. The American Theosophical Society, which was known formerly as the American Section of the Theosophical Society, had, in 1930, 220 local lodges. The president of the society was L. W. Rogers. Headquarters are in Wheaton, Ill.

THOMPSON, ROBERT MEANS. An American lawyer and financier, died in Fort Ticonderoga, N. Y., Sept. 5, 1930. He was born in Corsica, Pa., Mar. 2, 1849, and was graduated from the U. S. Naval Academy in 1868. After serving as ensign and master, he resigned from the Navy in 1871, and the following year entered the Harvard law school from which he was graduated in 1874. Admitted to the bar, he practiced in Boston for several years. He later became identified with several mining and smelting corporations, including the Oxford Copper Company and the International Nickel Company of which he was chairman. He was also first president of the American Olympic Association and chairman of the American committee for the Olympic games held in Stockholm in 1912 and in Paris in 1924.

THOMPSON, WILLIAM BOYCE. An American financier, died in Yonkers, N. Y., June 27, 1930. He was born in Virginia City, Mont., May 13, 1869, and attended the School of Mines at Columbia University. Successful in various mining enterprises in the West he became director and officer in many important business organizations and financial institutions. He headed the American Red Cross Mission to Russia in 1917, and during 1921-22 served as a member of the advisory committee to the American delegation at the Washington Disarmament Conference. In 1924 he founded and endowed the Thompson Institute for Plant Research in Yonkers.

THOMSON, CHRISTOPHER BIRDWOOD THOMSON, FIRST BARON. A British soldier and statesman, died near Beauvais, France, Oct. 5, 1930, in the *R-101* disaster. Born Apr. 13, 1875, he was educated at Cheltenham College and the Royal Military Academy, Woolwich. Commissioned in the Royal Engineers in 1894, he served in the

Mashonaland campaign (1896) and in the Boer War (1899-1902). On the outbreak of the World War he was sent to general headquarters of the British Expeditionary Forces in France, and the following year was appointed military attaché and then chief of the British military commission in Rumania. In 1917 he was transferred to Palestine, and served on the Supreme War Council at Versailles during 1918-19, retiring with the honorary rank of brigadier-general. In 1924 he was appointed Secretary of State for Air in the Labor government, and was also created first Baron Thomson of Cardington. When the Labor government again took office after the election of 1929 he resumed his cabinet post.

THULSTRUP, TURE DE. A Swedish-American painter, died in New York City, June 9, 1930. He was born in Sweden in 1848 and attended the National Military Academy in Stockholm. While his father was Swedish Minister to France, he studied drawing in Paris. Moving to the United States he was an illustrator for several years for the *New York Daily Graphic* and *Leslie's Weekly*. In 1880 he became associated with *Harper's Weekly*, his sketches of important events of the day appearing for more than 20 years in that paper. As a painter, he depicted the life of the South during the Colonial and Civil War periods, typical subjects being: "When Quality Goes to Town"; "A Meet in Old Virginia"; and "Gossip after Church."

TIBET, ti-bét' or tib'et. A central Asian territory extending eastward from the Pamirs to the border of China; nominally under the suzerainty of China. Area, estimated at 463,200 square miles; population, approximately 2,000,000. Capital, Lhasa, with a population of 15,000 to 20,000. See CHINA, and NEPAL.

TICK ERADICATION. See VETERINARY MEDICINE.

TIMBER. See FORESTRY.

TIME SCALE. See GEOLOGY.

TIN. During the year there was a decline in production, in consumption, and in the price of tin. In December, 1930, the cash price for Standard was £104½, the lowest price recorded in London since 1902. The United States decreased its imports from 195,165,173 pounds of bar blocks, pigs, etc., valued at \$91,838,781 to 180,844,329 pounds valued at \$60,233,644. As usual, British Malaya was the leading source, imports from that territory being valued in 1930 at \$41,326,304, as against \$61,322,731 in 1929; the United Kingdom \$8,765,727, as against \$17,231,433; the Netherlands \$5,844,535, as against \$8,216,715; and Hong Kong at \$3,913,161 as against \$3,185,950 in 1929.

TIBOL, te-röl'. A former crownland of Austria in the Alps, divided between Italy and the new Republic of Austria by the Treaty of St. Germain. See AUSTRIA and ITALY under *History*.

TIRPITZ, ALFRED P. FRIEDRICH VON. Former grand admiral of the German Navy, died in Ebenhausen, Mar. 6, 1930. Born in Küstrin, Mar. 19, 1849, he became a cadet in the Prussian Navy in 1865. In 1874-76 he attended the Marineakademie. He was promoted through the grades to the rank of rear admiral in 1895, vice admiral in 1899, admiral in 1903, and was made Grand Admiral of the Imperial Navy in 1911. Admiral von Tirpitz commanded the cruiser division on the East Asia Station in 1896-97, after which he became Secretary of State for the Imperial Navy and plenipotentiary to the Bundesrat. After 1898

he was also Prussian Minister of State. He retired in 1916 and took part in the founding of the Vaterlandspartei. In 1921 he entered the Reichstag as German National Deputy.

TOBACCO. The 1930 tobacco crop of the United States was estimated at 1,510,308,000 pounds, 1 per cent less than in 1929, in spite of an increase of 3½ per cent in the acreage harvested, which totaled 2,110,300 acres. The average yield per acre, 716 pounds, was 31 pounds less than in the previous year. By types the estimated production was for flue-cured, 790,950,000 pounds; fire-cured, 158,559,000; air-cured, light, largely Burley, 323,756,000; air-cured, dark, 59,185,000; cigar types, 176,814,000, comprising filler 72,365,000, binder 92,919,000, and wrapper 11,530,000; and miscellaneous, 1,044,000 pounds. The average farm price per pound, December 1, was 14.4 cents, compared with 18.5 in 1929; the estimated total farm value was \$216,895,000 versus \$282,764,000 in the previous year. North Carolina continued to lead the producing States with 535,195,000 pounds and was followed by Kentucky with 331,699,000; Tennessee, 120,903,000; Georgia, 104,994,000; South Carolina, 94,170,000; Virginia, 88,200,000; Wisconsin, 52,000,000; Ohio, 46,376,000; Pennsylvania, 38,118,000; Connecticut, 32,105,000; Maryland, 18,190,000; and Massachusetts, 11,397,000 pounds.

Tobacco production throughout the world, as reported in December, 1930, by the International Institute of Agriculture, with available statistics, amounted to 2,101,697,000 pounds, as compared with 2,118,381,000 in the previous year. This did not take into account the crop of India, officially reported at 1,353,156,000 pounds from 1,314,840 acres in 1929, and 1,358,786,000 pounds from 1,289,766 acres in 1928. Following the United States with its 1,510,308,000 pounds, came Greece with 155,253,000; Japan, 145,175,000; Italy, 108,774,000; Bulgaria, 52,826,000; Canada, 36,713,000; Algeria, 36,509,000; and Czechoslovakia, 19,842,000 pounds. Of the Canadian crop, Ontario produced 28,078,000 pounds; and Quebec, 8,490,000; and Burley and flue-cured made up about two-thirds of the total. The 1929-30 tobacco production of Porto Rico was estimated at 26,786,353 pounds, and the 1929 crop of Cuba, at 65,000,000 pounds.

Receipts from internal revenue taxes on tobacco in the United States for the fiscal year 1930, as reported by the Commissioner of Internal Revenue, continued their upward trend to a new high level, \$450,339,060.50, an increase of \$15,894,517.29 or 3.66 per cent over the previous year. Collections from taxes on small cigarettes established another record, amounting to \$359,816,274.69, which was 79.9 per cent of the total tobacco taxes collected and \$17,864,723.47 over 1929. Taxes collected on smoking and chewing tobacco declined to \$60,098,186.23 in 1930 from \$61,159,178.09 in 1929; and on large cigars to \$21,141,015.19 in 1930, a decrease of \$1,407,552.40; whereas the taxes from snuff were \$7,542,105.43, an increase of \$415,196.44 over 1929.

The continued popularity of the cigarette was indicated by the Commissioner of Internal Revenue who reported that in the calendar year 1929, there were manufactured more than 122,392,380,000 of cigarettes weighing 3 pounds or less per 1000, nearly 13,687,000,000 more than in 1928. Leaf tobacco amounting to 579,704,000 pounds was exported during the 12 months ending December, 1930. Consult *Tobacco Markets and*

Conditions Abroad (weekly), a publication issued by the U. S. Department of Commerce.

TOBAGO. A West Indian island, included administratively in Trinidad. See **TRINIDAD**.

TOGOLAND, or Togo, tō'gō. A former German protectorate in West Africa; divided between Great Britain and France Sept. 30, 1920, as mandated territory of the League of Nations; situated between Dahomey and the Gold Coast. Total area, 34,933 square miles; total population, about 931,000 (380 Europeans).

TOLEDO, UNIVERSITY OF THE CITY OF. An institution of higher education in Toledo, Ohio; founded in 1872. The enrollment for the autumn of 1930 totaled 2339. The faculty had 64 full-time members. The income for the year amounted to \$315,150. The library contained 24,000 volumes, President, Henry John Doermann, Ed.D.

TOLEDO MUSEUM. See **ART MUSEUMS**.

TOLL BRIDGES. See **BRIDGES**.

TOMBS, ANCIENT. See **ARCHAEOLOGY**.

TONGKING (TONKIN), tōn'kēn. A French protectorate, constituting the northern chief division of the colony of French Indo-China. Area, 40,530 square miles; population in 1926, 7,401,912, of whom 9143 were Europeans, exclusive of military forces. The chief city is Hanoi, which is the capital of French Indo-China, with a population of 103,235 in 1926. See **FRENCH INDO-CHINA**.

TORONTO, UNIVERSITY OF. An institution of higher education in Toronto, Ont., Canada; founded in 1827 and supported by the provincial government. The 1930 autumn enrollment was 7189. The faculty numbered 825 members. The total expenditure for the year 1929-30 for salaries and maintenance was \$3,120,513. Total benefactions received during the year amounted to \$214,908. The library contained 252,486 volumes and 90,276 pamphlets. President, Sir Robert A. Falconer, K.C.M.G., D.Litt., LL.D., D.D., D.C.L.

TRADE UNIONS. Informed observers in recent years have commented on the fact that trade unionism in the United States had been practically at a standstill since the conclusion of the World War. There was no question that the continued organization of workers in unions had been confronted by a group of serious obstacles and that an extraordinary renewing of activity or reorganization on simple industrial lines was required in order to extend the benefits of collective bargaining to the great number of workers still unorganized in the United States. This pessimistic note was struck constantly during the year 1930 at labor conferences. Thus, at the autumn conference of Women Trade Unionists, held at the Mount Ivy Holiday School in October, M. H. Hedges, Director of Research of the International Brotherhood of Metal Workers, and Dr. Leo Wolman, the economist of the Amalgamated Clothing Workers' Union, both declared that organized labor was facing a crucial test for survival. Dr. Wolman saw the virtual bankruptcy of the American Federation of Labor with a steady loss of membership as a result of the inroads being made by the newer industrialism or mechanization.

Mr. Hedges listed the following elements in the American industrial situation that were seriously

threatening the continued existence of organized labor: The introduction of automatic machinery by conscious deliberation rather than by accident; instability in the lives of the wage earners, small business men and "white collar" workers generally; bank failures; the disappearance of businesses and home trades; the swift and constant shrinkage of jobs and professional work. Said Mr. Hedges in referring to the processes of mechanization that were robbing the workers of their old-time skill:

The process of production has become a job demanding a great deal more specialized knowledge and intelligence. It takes more brains to run industry and this specialized knowledge does not reside as it once did in the peculiar possession of the workers. It is committed to blue prints, read, interpreted and applied by engineers and specialists. There was a time after workers lost control of tools that they possessed the skill to command them. Now they have surrendered not only the tools but the specialized knowledge to specialists.

COMPANY UNIONS. The Supreme Court of the United States, in a decision rendered in June, 1930, based upon the interpretation of the Railway Labor Act of 1926, declared that railway labor was entitled to choose its own representatives in dealing with the employers. In other words, company unions, as far as railway workers were concerned, were not to have a monopoly of the field of trade-union organization. On the basis of this opinion, the Supreme Court issued a permanent injunction against interference or coercion by the railroad employers. The case arose on the Texas and New Orleans Railroad where the company, after negotiating with the Brotherhood of Railway Clerks, decided that it would no longer do business with this international union but would set up its own company union to act as the representative of the railways clerks in their service. The Brotherhood secured a District Court injunction against interference with its organizational activities. The District Court ordered the railway company to disestablish its union and reinstate the Brotherhood. The Supreme Court upheld this decree by a unanimous decision, written by Chief Justice Hughes, in which it said:

The legality of collective action on the part of employees in order to safeguard their proper interests is not to be disputed. Such collective action would be a mockery if representation were made futile by interference with freedom of choice. Thus, the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, instead of being an invasion of the constitutional rights of either was based on the recognition of the rights of both.

Commentators were generally agreed that this decision of the highest tribunal of the land marked the death knell of the company union so far as the railways were concerned.

TRADE-UNION MEMBERSHIP. The International Federation of Trade Unions made the following estimates of trade-union membership for the more important countries of Europe as of December 31, 1928: Austria, 990,137; Belgium, 724,408; Czechoslovakia, 1,738,265; France, 1,200,600; Germany, 8,604,887; Great Britain, 4,073,144; Holland, 561,037; Italy, 3,000,000; Norway, 107,982; Poland, 512,317; Russia, 11,060,000; Spain, 291,000; Sweden, 564,009; Switzerland, 285,612. In the whole of Europe, according to this estimate, there were at the end of 1928, 35,392,086 trade unionists as compared with 33,936,784 at the end of the year 1927. The same source also placed trade-union membership as being the following in other important countries of the world: Argen-

tina, 112,000; Brazil, 116,500; Canada, 300,602; Mexico, 1,850,000; United States, 4,443,523; Australia, 911,541; New Zealand, 106,916; India, 273,621; Japan, 308,900.

The following are the estimated grand totals for the continents of the world for the year ending Dec. 31, 1928. The figures for 1927 follow in the parentheses: Europe, 35,392,086 (33,936,784); America, 6,947,291 (7,416,491); Australia 1,018,457 (991,652); Asia, 3,742,194 (3,697,800); Africa, 90,497 (144,333); grand total, 47,190,525 (46,187,060).

CANADA. At the close of the calendar year 1929 there were 319,476 trade unionists in the Dominion of Canada, grouped together in 2778 local branches of various trade unions. This represented an increase over 1928 of 18,874 trade unionists and 125 trade-union locals. The largest single group of trade unionists was to be found in the 85 international craft unions in the Dominion. In these craft unions there were 203,504 members grouped in 1953 locals. See **UNEMPLOYMENT**.

BRITISH TRADES-UNION CONGRESS. At Nottingham, from September 1 to 5, there was held the sixty-second annual meeting of the British Trades-Union Congress. A total of 606 delegates was in attendance, representing 3,744,320 members. The assembly devoted its attention largely to the questions of the organization of the British Empire as an economic bloc and the granting of family allowances. The delegates went on record as opposing the recommendation of the family allowance system at this time. Resolutions were adopted favoring the repeal of the trade disputes act of 1927, for a close guard being maintained over the processes of rationalization, for the reduction of hours in order to limit labor displacements, State pensions for persons over 60 years, holidays with pay for all workers, and for the consideration of the problems of the coal industry on a national basis. See **GREAT BRITAIN** under *History*.

TRANSFORMERS. See **DYNAMO ELECTRIC MACHINERY**.

TRANS-JORDAN. An Arab territory in Asia Minor; under British protection as a part of the Palestine Mandate, although governed by a local Arab administration under Amir Abdullah Ibn Hussein, elder brother of King Feisal of Iraq. It is bounded on the north by Syria, on the west by Palestine, on the south by the Gulf of Akaba and the Hejaz, and on the southeast and east by Iraq. The area is uncertain; the partly nomadic population is estimated at 260,000, of whom 220,000 are Arab Moslems, 30,000 Arab Christians, and 10,000 Caucasian elements. Capital, Amman, with 12,000 inhabitants.

TRENGGANU. See **NON-FEDERATED MALAY STATES**.

TRIBAL STUDIES. See **ANTHROPOLOGY**.

TRINIDAD. A West Indian island north of the mouth of the Orinoco River, constituting, with Tobago, a British colony. Area of Trinidad, 1862 square miles; of Tobago, 114; total population, according to the census of 1921, 305,913; estimated at end of 1928, 397,093. Capital, Port of Spain, with 66,836 inhabitants.

TRINITY COLLEGE. An institution for the higher education of men in Hartford, Conn.; founded by members of the Protestant Episcopal Church in 1823 as Washington College and changed to Trinity College in 1845. For the autumn term of 1930 the enrollment was 350. There were 42 members on the faculty. The endowment fund of the college was \$3,112,373, and the income totaled \$269,604. There were approximately 100,000 volumes and 40,000 pamphlets in the library. During 1930 a new chapel and a dormitory were under construction. President, Remsen B. Ogilby, Litt.D., LL.D.

TRINITY COLLEGE, DURHAM, N. C. See **DUKE UNIVERSITY**.

TRIPOLITANIA. An Italian territory on the north coast of Africa; until 1919 a part of Italian Libia. In that year, for administrative purposes, Libia was divided into Tripolitania and Cyrenaica. Area, estimated at 347,400 square miles; population, according to the census of 1921, about 550,000 natives, and 20,716 Europeans, of whom 18,093 were Italians. Tripoli, population about 60,000, is the capital and chief city. See **CYRENAICA**.

TROELSTRA, trool'strâ, PIETER JELLES. A Dutch Socialist leader and editor, died in Amsterdam May 12, 1930. He was born in Leeuwarden Apr. 20, 1860, and was graduated from the University of Groningen in 1888, becoming an attorney in his native city. He entered the lower chamber of the Netherlands Parliament in 1897, and until 1925 was the leader of the Social Democratic Workers in that body, causing the influence of the party to increase steadily. When the Social Democratic Workers' party established its daily paper, *Het Volk*, in 1900, Troelstra was made its chief editor. He also was active in the international socialist movement. His writings include: *De Sociaaldemokratische arbeiderspartij in Nederland* (1896); *Social christendom* (1902); *Theorie en beweging* (1902); *Inzake partijleiding* (1906); and *Lebenserinnerungen* (3 vols., 1927-29).

TUBERCULOSIS OF LIVESTOCK. See **VETERINARY MEDICINE**.

TUCKER, THE RT. REV. BEVERLEY DANDRIDGE. Protestant Episcopal Bishop of the Diocese of Southern Virginia, died in Norfolk, Va., Jan. 17, 1930. He was born in Richmond, Va., Nov. 19, 1846, and was educated in England, Switzerland, and at the University of Toronto, Canada. On graduation from the Virginia Theological Seminary in 1873, he was ordained deacon, and two years later was advanced to the priesthood. In 1906 he was consecrated Bishop Coadjutor of the

Diocese of Southern Virginia, succeeding to the bishopric upon the death of the Rt. Rev. Alfred M. Randolph in 1918.

TUFTS COLLEGE. A nonsectarian institution for the higher education of men and women in Medford, Mass.; founded in 1852. The registration for the autumn term of 1930 was 1910. There were 390 faculty members. The productive funds of the college amounted to \$8,212,004, and the income for the year was \$876,778. The library contained 95,000 volumes. President, John Albert Cousens, LL.D.

TULANE UNIVERSITY OF LOUISIANA, THE. An institution of higher education in New Orleans; founded in 1834. Although the professional schools are coeducational, there is a separate undergraduate department for women. Enrollment for the autumn of 1930 was 3225. H. Sophie Newcomb College for Women had 642 students. The faculty numbered 415. The productive funds of the university for the fiscal year ending Aug. 31, 1930, amounted to \$10,017,708.51; the income for the year to \$1,269,544.88; and gifts and bequests to \$1,005,287.17. The library contained 144,175 volumes. In the fall of 1930 a new medical clinic building, erected at a cost of \$1,250,000, was formally opened. President, Albert Blodsoe Dinwiddie, Ph.D., LL.D.

TUNGSTEN. The U. S. Tariff Act of 1930 increased the tariff on ore from \$7.14 to \$7.93 per short ton unit of tungsten trioxide, or 45 cents to 50 cents per pound of tungsten. In anticipation of this move, domestic consumers were heavy buyers in 1929, and the deliveries were carried through into 1930. The domestic production of tungsten ores in 1929 was 830 short tons of concentrated ore carrying 60 per cent of tungsten trioxide, with a total value of \$654,000, or an average per unit of \$13.13. The imports of tungsten and alloys, based on their tungsten content, in 1930 were 3,613,832 pounds valued at \$1,658,890, as against 6,809,965 pounds valued at \$2,510,270 in 1929.

TUNIS (TUNISIA). A French protectorate in North Africa, situated on the Mediterranean coast east of Algeria, west of Tripolitania, and north of the Sahara and Libian deserts. With an area of about 48,300 square miles, Tunis at the census of 1926 had a population of 173,281 Europeans (89,216 Italians, 71,020 French, and 8396 Maltese) and 1,986,427 natives (1,932,184 Arabs and Bedouins, 54,243 Jews). The capital city, Tunis, had 185,996 inhabitants in 1926 (106,860 Moslems, 44,076 Italians, 27,922 French, and 24,131 Jews).

PRODUCTION. Agriculture is the chief industry. Sixty-one mines in operation in 1928 exported ore (including phosphate) valued at \$41,644,000. The output of phosphate of lime was 2,789,000 metric tons.

COMMERCE. The trade of Tunis normally shows a surplus of imports over exports. Imports in 1928 were valued at 1,680,175,000 French francs (1,771,029,439 francs in 1927) and exports at 1,233,352,000 francs (1,026,673,482 francs in 1927).

FINANCE. In the ordinary budget for 1929, revenues were estimated at 450,093,400 francs and expenditures at 449,091,037 francs, as compared with respective budget figures of 439,542,956 francs and 439,430,489 francs in 1928. The public debt in 1928 was 542,051,000 francs.

GOVERNMENT. The government is under the direct supervision of a French Minister Resident-

General, acting on behalf of the French Foreign Office. Resident-General, M. Manoeiron, appointed Jan. 2, 1929. The International Eucharist Congress, held on the site of ancient Carthage, May 7 to 10, 1930, attracted thousands of Roman Catholics from various parts of the world to Tunis. For the Franco-Italian dispute over Italian citizens in Tunis and the Tunis-Tripolitania boundary, see FRANCE under *History*.

TUNNELS. Among the interesting events in this field during 1930 were the opening of the Detroit River Tunnel on November 1, the proposals for a tunnel at Seattle, the progress of plans for new subaqueous work at New York, and the proposal to build a new tunnel under the Thames at London.

SEATTLE. Proposals were made to build a subaqueous tunnel between Seward Park and Mercer Island at Seattle, Wash., under unusual conditions. It was planned to use the method followed in constructing the Oakland Estuary Tube in California—namely, building the tube in sections in dry dock and sinking these in place on a prepared foundation to form the tunnel. Due to the fact that the depth of water at Seattle is about 120 feet, construction by this method would be extremely difficult. It was proposed, therefore, to adopt the novel plan of filling the deeper section of the channel to reduce the depth and founding the tubes on piles driven into this submerged embankment.

NEW YORK CITY. Studies of the proposed Weehawken-38th Street vehicular tunnel, to connect with the 38th Street cross-town tunnel authorized by the City of New York, were brought to the point where the securing of test borings and other data, in preparation for the final contract, were in order.

THE CHANNEL TUNNEL. See GREAT BRITAIN under *History*.

LAND TUNNELS. While no record-breaking tunnels were under way in 1930, some very interesting developments occurred in tunnel practice, some of which are summarized below.

Brooklyn Subway. In building new subway tunnels under Prospect Park, Brooklyn, concrete block lining was used for the first time on large-scale work in the United States. While no air pressure was required in these tunnels they were shield-driven, and the usual cast-iron lining was replaced by a special concrete block lining 18 inches thick. The lining blocks fitted together with special interlocking lugs, or projections, and the joints were grouted. A considerable saving in cost was thus secured.

Hetch Hetchy, California. The work on the Coast Range tunnel of this water-supply system of San Francisco was delayed due to an explosion of natural gas in July. Twelve lives were lost in the explosion and work was immediately shut down until safety installations could be made.

Japanese Tunnels. On Dec. 29, 1929, the Shimizu Tunnel on the Joetsu line of the Japanese Government Railways, 6 miles long, was holed through. This is the longest bore of its kind in this part of the world. Unfortunately progress on the Tanna Tunnel of the Japanese Railways had not been so satisfactory. This work was begun in 1918, but had been held up due to the extremely difficult nature of the ground encountered. Volcanic rock with cracks and faults, bad clay, swelling ground, and unusual amounts of water were encountered in the course of construction.

TURBINES. See STEAM TURBINES.

TURBINES, WATER. See WATER POWER.

TURCOMAN REPUBLIC. See SOVIET CENTRAL ASIA.

TURKESTAN. See SOVIET CENTRAL ASIA.

TURKESTAN-SIBERIAN RAILWAY. See RUSSIA, under *Transport*.

TURKEY. A republic occupying a large part of Asia Minor and contiguous territory in the Balkan peninsula, which supplanted the Ottoman Empire on Oct. 29, 1923. The land frontiers touch Bulgaria and Greece on the north and west, the Soviet Union and Persia on the east, and Iraq and Syria on the south. The republic comprises also Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara.

AREA AND POPULATION. With an area of 294,416 square miles, including 285,102 square miles in Asia and 9254 square miles in Europe, Turkey at the census of October, 1927, supported a population of 13,680,275 (12,615,969 in Asia and 1,044,306 in Europe). The estimated population Dec. 31, 1928, was 13,850,000. The population of the principal cities, with suburbs, in 1927 was: Istanbul (Constantinople), 690,857; Izmir (Smyrna), 184,254; Balikesir (Karasi), 135,473; Bursa (Brusa), 127,251; Ordu, 113,899; Adana, 109,215; Ankara (Angora), 107,581. Moslems constitute the great majority of the population.

EDUCATION. According to Turkish statistics, the percentage of illiteracy decreased from 85 per cent in 1928 to 42 per cent in 1930.

PRODUCTION. Turkey is essentially an agricultural country, in which modern methods of farming are being introduced gradually. A succession of poor crops and the decline of agricultural prices resulted in a severe economic and financial crisis in 1920 and 1930. At the census of 1927, 67.7 per cent of the population were engaged directly in agriculture, the cultivated area was slightly under 10,000,000 acres, and 89.5 per cent of the arable land was devoted to cereals. In 1929, the production of tobacco was 90,389,000 pounds (94,762,000 in 1928); raisins, 79,917,000 pounds (78,263,000); figs, 48,226,000 pounds (70,547,000); wool, 5,000,000 pounds (8,000,000); and mohair, 6,944,000 pounds (9,921,000). Wheat production (1928) was about 611,000 metric tons; barley, 900,000 tons; corn, 417,090 tons; cotton, 140,000 bales (of 500 pounds); valonea, 45,000 tons; potatoes, 59,480 tons. Other products are dried fruits, nuts, olives, gums, and opium.

COMMERCE. While imports in 1929 increased 8 per cent over 1928 to \$123,131,000, exports declined 15 per cent to a total of \$74,736,000. The excess of imports over exports was \$48,395,000. The value of imports in 1928 was \$113,666,000; of exports, \$88,244,000.

FINANCE. The Turkish pound, which has a par value of \$4.40, declined steadily after the World War to a low exchange point of \$0.47 in December, 1929. Partly due to the declining exchange value of the pound, Turkish budgets during the same period showed a steady increase, despite unfavorable economic conditions. In the budget for the fiscal year ending May 31, 1931, revenues were estimated at £T222,732,000 (about \$104,680,000) and expenditures at £T222,647,000 (about \$104,640,000). Comparative estimates for 1929-30 were: Revenues, £T220,546,000; expenditures, £T220,408,000. The Ottoman Debt Commission was formally notified July 11, 1930, that the condition of the treasury was such that Turkey could pay only one-third of the amounts due.

The Ottoman debt in 1929 totaled £T107,528,000 (about \$473,123,000), including interest in arrears of £T21,550,000 (about \$94,820,000). In addition, there was an internal debt of about £T15,000,000 (approximately \$60,000,000).

COMMUNICATIONS. Of 3291 miles of railway line in operation at the end of 1929, 1806 miles were operated by the Government and 1485 miles by concessionary companies. An additional 800 miles were under construction. The final link, 32 miles long, of the Ankara-Sivas Railway was opened to traffic on Aug. 30, 1930.

GOVERNMENT. Under the Constitution of April 20, 1924, "the Grand National Assembly exercises the executive power through the President of the Republic elected by itself and through the Council of ministers chosen by him." The Assembly, elected for four years by the indirect suffrage of all citizens over 18, has power to dismiss the Government at any time. The National Assembly elected September, 1927, consisted of 315 deputies. Ghazi Mustapha Kemal Pasha, first President of the Turkish Republic, was reelected Nov. 1, 1927, for a four-year term. The Ministry appointed by him was headed by Ismet Pasha.

HISTORY

INTERNAL DEVELOPMENTS. President Mustapha Kemal's seven years of vigorous effort to convert Turkey into a modern state on western lines appeared in 1930 to be approaching disaster on the rock of financial insolvency (see above under *Finance*). His extensive programme of internal development had resulted in a continued increase in the cost of government, while a consistently unfavorable balance of trade, a succession of poor crops, and declining agricultural prices had made it increasingly difficult to meet government expenses. The normal course of floating a foreign loan to tide over the crisis was rejected, because it involved the pledging of Turkish customs receipts, or other assets. The financial crisis was aggravated by a costly campaign necessary to crush a serious Kurdish revolt and by a ferment of internal unrest, chiefly political and religious in character.

The Kurdish rebellion, which broke out in May and required the balance of the summer to suppress, was reported to have cost Turkey the bulk of a \$10,000,000 loan received from the Swedish match corporation in exchange for a match monopoly. Approximately half of the Turkish army of 120,000 men were engaged in the campaign. The insurgent Kurds of Eastern Turkey received assistance from their kinsmen in Persia and Iraq, and Turkish troops pursued them into Persian territory. War between Turkey and Persia appeared likely for a time, after Persia had demanded compensation for the invasion of her territory and Turkey threatened to revise forcibly her eastern border in the vicinity of Mount Ararat unless Persia agreed to such a revision as would facilitate the subjugation of the revolting Turkish Kurds. On December 2, the Turkish Ambassador to Persia announced that Persia had agreed in principle to the exchange of Persian territory near Mount Ararat for Turkish territory further south.

Two days before Christmas occurred a second outbreak, this time among the Turks of the village of Menemen near Izmir (Smyrna). The outbreak was led by six fanatical dervishes of the outlawed Nakhshibend secret religious society, who appeared at the village wearing the forbidden

fez of the Caliphate. A widespread conspiracy for the restoration of the Caliphate was reported to have been uncovered. Martial law was declared in the disaffected district and numerous arrests followed there and in other parts of the country. At the end of the year a military court was conducting the trials of over 100 prisoners. Thirty-four alleged Communists were arrested at Istanbul in August and 17 were tried on conspiracy charges in December.

Undismayed by its difficulties, the Ankara Government vigorously pushed its nationalistic programme of social, political, and economic reorganization. In March, Parliament voted to permit women to vote for and to be elected as members of municipal councils throughout Turkey. Further legislation was introduced to allow women to participate in national elections. Turkey became the second European country to have women judges when two women were appointed associate judges of the equity courts in Ankara and Istanbul in April. A law strictly prohibiting the use of Arabic characters in writing or printing Turkish became effective June 1, the Latin alphabet having been substituted on Nov. 1, 1928.

THE TWO-PARTY MOVEMENT. The absolute control exercised by the People's party, since 1926 the only political organization permitted in Turkey, was ended temporarily on Aug. 13, 1930. A new party was launched under the leadership of Fethi Bey, Turkish Ambassador to Paris and a former Premier, with the expressed approval of President Kemal. Fethi Bey advocated the abolition of government monopolies, development of Turkey's economic resources with the assistance of foreign loans, freedom of speech and the press, a broader suffrage, full political rights for minorities, and membership in the League of Nations. After winning a by-election in Smyrna, Fethi Bey took his seat in the National Assembly September 24, rallied 15 deputies to his standard, and forced the reorganization of Ismet Pasha's Cabinet (September 27). The new Cabinet, containing four new members and six holdovers, was approved by a vote of 249 to 12.

Fethi Bey's Liberal Republican party showed its strength in the municipal elections ending October 18. While the People's party was everywhere successful, the new party polled about 25 per cent of all votes. For the first time under the Kemalist régime, candidates of the Greek, Jewish, and Armenian minorities were allowed on the electoral lists and women participated as voters and candidates. Extensive rioting accompanied the voting. The Liberal Republicans later voted to dissolve their party. Fethi Bey explained that he had expected the assistance of the President, but on the contrary he saw that the continuance of his party would inevitably lead to conflict with the President. A reorganization of the People's party into three groups of the Left, Middle, and Right was announced at the end of the month. Saraçoğlu Sükrü Bey, Minister of Finance, resigned from the Cabinet December 26 and was succeeded by Abdul Halik Bey, the Minister of National Defense.

FOREIGN RELATIONS. In addition to the difficulties with Persia, Turkish foreign relations during 1930 were marked by the successful conclusion of the long-drawn-out negotiations with Greece and with the signing in October of a treaty of arbitration and friendship between the former rivals during a visit by Premier Venizelos to Ankara (see GREECE under *History*). In September,

Tevfik Rüstü Bey, the Turkish Foreign Minister, visited Moscow and in November and December, Tevfik Rüstü Bey made trips to Rome and Sofia, which aroused much interest in Paris and the countries of the Little Entente. See GREECE, ITALY, PERSIA, IRAQ under *History*; also KURDISTAN. Consult Halidé Edib, *Turkey Faces West* (Yale University Press, 1930).

TURKMENISTAN, or TURCOMAN SOVIET SOCIALIST REPUBLIC. See SOVIET CENTRAL ASIA.

TURNER, CUTHBERT HAMILTON. A British theologian, died in Oxford, England, Oct. 10, 1930. Born in London July 7, 1860, he was educated at Winchester College and at New College, Oxford, and in 1889 was appointed fellow of Magdalen College. From 1888 to 1901 he was an assistant lecturer to Dr. W. Bright, Regius professor of ecclesiastical history; from 1906 to 1910, first Speaker's lecturer in Biblical studies in the University of Oxford; and from 1914 to 1920, university lecturer in early Christian history and literature. In 1920 he was appointed Dean Ireland's professor of exegesis of Holy Scripture. He was first editor of the *Journal of Theological Studies* from 1889 to 1902. His publications include numerous works on religion.

TURNER, HERBERT HALL. A British astronomer, died in Stockholm, Sweden, Aug. 20, 1930, while attending the International Geodetic Congress. He was born in Leeds in 1861 and attended Clifton College and Trinity College, Cambridge. In 1893 he was appointed fellow of New College, Oxford, and Savilian professor of astronomy in the university. His most important contribution lay in the field of determining photographically the positions of the stars. He published more than 200 papers, essays, and books, chief of which are: *Modern Astronomy* (1901); *Astronomical Discovery* (1904); *Halley's Comet* (1908); *The Great Star Map* (1912); and *A Voyage in Space* (1916).

TURTLE ISLANDS. See UNITED STATES under *Administration*.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. A nonsectarian normal and industrial school for the higher education of Negro men and women in Tuskegee, Ala.; founded in 1881 by Booker T. Washington. The institute gave regular and systematic instruction during the year to a total of 3414 persons.

UBANGI-SHARI. See FRENCH EQUATORIAL AFRICA.

UGANDA, oo-găn'dă, **PROTECTORATE.** A protectorate of Great Britain in East Africa; lying north of Tanganyika and Lake Victoria and south of the Anglo-Egyptian Sudan. Area, 94,204 square miles (1507 square miles of water); population, estimated December, 1928, at 3,255,367, including 3,241,543 natives, 11,846 Asiatics, and 1987 Europeans. Capital, Entebbe; commercial centre, Kampala. See KENYA.

U'KRAINE. A region in southwestern Russia known officially as the Ukrainian Socialist Soviet Republic, and forming (since July 6, 1923) a constituent part of the Union of Socialist Soviet Republics; including the autonomous Moldavian Socialist Soviet Republic (formed in September, 1924). See RUSSIA and POLAND under *History*.

UNEMPLOYMENT. Before the end of the year 1930 it was apparent that unemployment had taken on all the proportions of a world crisis. Next to Prohibition, the discussion of the problem was most before the attention of the American public. The greater part of the sessions of the American Federation of Labor (q.v.) was devoted to the subject; it was an important issue in the election campaigns; unemployment insurance was widely discussed; and Federal, State and municipal agencies were mobilized to cope with the situation. Particularly serious, was the growing realization that charity was inadequate to deal with the great army of the unemployed. It became necessary for public bodies to pass emergency legislation appropriating funds for public works and the cities particularly sought to give temporary work by engaging unemployed workers in parks, on docks, and on the like activities.

While there was unemployment in industrial nations before the depression of the fall of 1929, this catastrophe succeeded in heightening distress. Australia, Austria, Germany, Great Britain, Italy, Japan, Poland, and the United States showed particularly increased totals.

World-wide unemployment was attributed to a wide variety of motives. It was generally accepted that unemployment was a phase of the business cycle. Socialists and radicals generally were insisting that unemployment was a concomitant of the prevailing system of monopoly ownership with resulting low real wages and therefore underconsumption on the part of the great masses of the population. Other factors cited were: The too-rapid advance of mechanization with resulting technological unemployment; the collapse of the building and automobile booms; the crisis in raw materials caused by overexpansion with resulting drops in prices; high tariff walls being raised the world over; an increase in the labor supply; revolution in China and disturbances in India, cutting into the purchasing power of the people of these lands; drift from the farms to the cities.

The remedies proposed were equally diverse. Workers' representatives urged a shorter work day, higher wages, and unemployment insurance. Economists advocated the greater control of the business cycle, the stabilization of industry, regularization of employment, the opening of new markets, rationalization in older industries, more

credits abroad, freer trade, planned public works, and greater monopoly control of basic industries.

In November, the International Labor Office (q.v.) estimated the total of world unemployment to be from 12,000,000 to 15,000,000 persons. Only France among the great nations of the world was spared and in Russia unemployment was decreasing as the year closed. For the end of December the French government reported a total of 11,952 unemployed receiving government aid. There follows the estimates of the International Labor Office for the end of October. Germany's figure was put at 3,184,000 by Reich officials.

See **MEXICO** under *History*.

CENSUS OF UNEMPLOYMENT. In April, when the decennial Federal census was taken in the United States, an effort was also made to ascertain the number of persons "out of a job, able to work and looking for a job." This was the first federal census of unemployment ever taken in the United States. Preliminary figures released by the Federal Bureau of the Census in August reported the total of such unemployed persons as 2,508,151. At the end of the year full figures had not yet been made public, the Bureau of the Census contenting itself merely with the enumeration of the unemployed in some of the larger cities of the country.

It is important to note that the unemployment schedules included the following seven categories, and that the reported figure of 2,508,151 covered only Class A:

- Class A—Persons out of a job, able to work and looking for a job.
- Class B—Persons having a job but on lay off without pay, excluding those sick or voluntarily idle.
- Class C—Persons out of a job and unable to work.
- Class D—Persons having jobs but idle on account of sickness and disability.
- Class E—Persons out of a job and not looking for work.
- Class F—Persons having jobs but voluntarily idle without pay.
- Class G—Persons having jobs and drawing pay though not at work (on vacation, etc.).

The accompanying table issued by the Census Bureau indicated the persons' in the Class A category above. It will be noted that the percentage of unemployed is on the basis of total population and not on the number of persons in the country who make up the working population.

EUROPE. Reports received through the year indicated that unemployment was continuing to roll up great totals during 1930. The *Monthly Labor Review* (U. S.) reported that from data it had examined it was apparent that the situation in 1930 was considerably more serious than it had been in the previous year. Thus, unemployment was three and one-half times greater in Finland and Rumania in the spring and summer of 1930, as compared with the same periods in 1929; had almost trebled in Belgium in 1930, as compared with 1929; was probably two and one-half times greater in France in 1930, as against the previous year; and was twice as great in Germany, the Netherlands, and Poland. The increase in Italy had been 65 per cent over 1929, in Great Britain and Sweden also 65 per cent, in Czechoslovakia 60 per cent, in Hungary 50 per cent, in Austria 40 per cent. There were also increases in the Irish Free State and in Sweden. Interestingly enough, three countries, despite world-wide unemployment showed decreases, these being Denmark, 9 per cent; Norway, 4 per cent; and Jugoslavia, 18 per cent. The following indicates the number of persons unemployed in the

UNEMPLOYMENT

| | Unemployed | Population |
|----------------------|------------|-------------|
| Austria | 156,000 | 6,526,661 |
| Belgium | 64,000 | 7,923,077 |
| Canada | 20,000 | 9,396,800 |
| Czechoslovakia | 37,000 | 14,523,186 |
| Denmark | 25,000 | 3,434,555 |
| Danzig | 15,000 | 386,000 |
| Finland | 4,000 | 8,582,406 |
| France | 1,000 | 40,745,874 |
| Great Britain | 2,100,000 | 44,173,704 |
| Hungary | 20,000 | 8,368,273 |
| Italy | 400,000 | 30,796,000 |
| Jugoslavia | 7,000 | 12,017,323 |
| Netherlands | 25,000 | 7,625,933 |
| Norway | 20,000 | 2,649,775 |
| Poland | 240,000 | 30,212,962 |
| Palestine | 5,000 | 852,268 |
| Rumania | 23,000 | 17,393,149 |
| Russia | 1,150,000 | 150,000,000 |
| Saar | 7,000 | 770,000 |
| Sweden | 26,000 | 6,087,923 |
| United States | 4,000,000 | 122,000,000 |

NUMBER OF PERSONS OUT OF A JOB, ABLE TO WORK, AND LOOKING FOR A JOB, BY STATES
[U. S. Bureau of the Census, 1930]

[The figures in the column headed "Persons out of a job, etc.," represent persons usually working at a gainful occupation who were returned on the unemployment schedule as out of a job, able to work, and looking for a job. Returns were also made for other classes of persons not at work on the day preceding the enumeration, such as those having a job but sick or temporarily laid off; data for these other classes will be given out later. All figures are preliminary and subject to correction.]

| State | Population 1930 (preliminary) | Persons out of a job, able to work, and look- ing for a job | Per cent of popu- lation |
|----------------------------|-------------------------------------|---|-----------------------------------|
| New England: | | | |
| Maine | 800,056 | 13,244 | 1.7 |

more important European countries in the last quarter of 1930: Germany (persons registered, December 31), 4,357,000; Great Britain and Northern Ireland (persons registered, November 31), 2,274,338; Italy (persons registered, November 31), 534,356; Czechoslovakia (persons in receipt of trade-union insurance funds, October 31), 61,213; Denmark (trade-unionists), 44,200; Netherlands (persons aided by unemployment-insurance societies, November 31), 46,807; Poland (persons in extractive and manufacturing industries, September 30), 146,642; Rumania

(persons registered, October 31), 36,147; Sweden (trade-unionists, October 31), 43,927.

ENGLAND. An official report of the English Ministry of Labor for the year 1929 showed that there were 11,700,000 persons between the ages of 16 and 64 affected by the unemployment insurance code. This was an increase of insured persons of 8.1 per cent over the year 1928. The report indicated that the year 1929 had seen some improvement in the unemployment situation largely due to increased activity in the coal-mining industry. By the end of December, 1929, the percentage of unemployed coal miners varied from 10.4 per cent in Northumberland to 22 per cent in Wales, with 14.6 per cent representing the total in the whole industry. In textiles the situation continued to be unsatisfactory and in December 1929, 44 per cent of all the workers in this industry were unemployed.

The unemployment insurance system in England provided for government registry offices and the maintenance of employment exchanges. The figures collected by the Labor Ministry showed that in 1929, 1,779,434 vacancies were reported to the exchanges and that 1,554,443 positions were filled. The number of positions filled in 1929 was the highest of any year since 1917. In 1929, 227,215 more positions were filled than in the previous year. See GREAT BRITAIN under *Mining and Manufacturing*.

GERMANY. It was reported that on Feb. 1, 1930 there were 2,378,193 persons unemployed and in receipt of unemployment benefits in this country and that on Mar. 31, 1930 the number was 2,053,387. This shows a considerable increase over the number of persons receiving unemployment benefits at the end of March, 1929, when the total was 1,899,121. By the end of October the total unemployed has grown to 3,184,000. All agencies, public and private, during the year expressed concern over the seriousness of the situation, and the fear that the unemployment insurance fund could not stand up under the severe strain it was being subjected to was general. Serious attention was being given to a series of countervailing proposals in an effort to cope with the situation. Among them are to be noted the following: (1) The introduction of a one year compulsory labor service similar to compulsory military service. (2) The prohibition of over time and home work and the prohibition against husband and wife both being employed. (3) Shortening of the working day. (4) Allocation of funds to the systematic creation of work. (4) Increase of exports (6) Expansion of the vocational school system. (7) Extension of trade-union cooperative enterprises in order to relieve the unemployment situation. See GERMANY under *Industry*.

JAPAN. In April, 1930, of 7,081,898 persons investigated, 372,127 were found to be unemployed. This was an increase of 20,538 as compared with the unemployed in the month of March. The percentage of unemployed for April was 5.25. It is to be noted, however, that certain localities were suffering more severely than others. For instance, in Tokyo 29.3 per cent of the day laborers were idle in April, 1930, while 7.9 per cent of the other laborers and 10.3 per cent of the salaried workers were unemployed. See JAPAN.

PORTO RICO. In Porto Rico, in 1929 there were 170,519 persons unemployed, according to estimates submitted by Porto Rican officials early in the year. The seriousness of the Porto Rican situation may be gauged from the fact that au-

thorities in the Island listed a total of 460,940 persons as available for employment. In other words, at least 30 per cent of the available workers of the Island were out of work in the year 1929. See PORTO RICO.

EMPLOYMENT TRENDS. Index figures collected by the Federal Bureau of Labor Statistics indicated the continuous decrease of employment among a large group of industrial plants examined, for the months of 1930 as compared with previous years. Thus, in manufacturing, the Bureau of Labor Statistics covered 13,613 establishments that were on July 30 employing 3,108,843 workers. With the monthly average for 1925 as 100, the index figures of employment for the first seven months of 1930 were as follows: January, 90.2; February, 90.3; March, 89.8; April, 89.1; May 87.7; June, 85.5; July, 81.6. The payroll decreases were even greater. With the monthly average for 1926 as 100, the payroll totals for the same group of manufacturing industries for the first seven months of 1930 were as follows: January, 87.6; February 90.7; March, 90.8; April, 89.8; May, 87.6; June, 84.1; July, 75.9.

FEDERAL ACTION. On October 17, President Hoover announced the creation of a Federal programme to cope with the unemployment emergency. Naming Secretaries Lamont, Davis, Wilbur, Hurley, Hyde, and Mellon and Governor Meyer, of the Federal Reserve Board, the President created the President's Emergency Committee for Unemployment to formulate a programme. Mr. Hoover's statement indicated that there were three directions into which Federal activities might be directed: First, there was co-operation with the governments and employment organizations of the States; second, there was development of methods with national industries; and third, there was indirect federal employment in public works. Col. Arthur Woods, of New York, who in 1921 had been appointed director of a similar committee by President Harding, was chosen by the Hoover committee to manage its programme. In a statement issued by Colonel Woods it was established that the Federal committee would work only indirectly and would devote most of its activities to stimulating the creation of unemployment programmes among the States and local communities and in industry. Colonel Woods declared that the chief purpose of this committee was to find jobs for idle men, and that the secondary one was to advise communities in supplying relief to the needy.

There was general criticism against the Census Bureau's estimate of 2,508,000 unemployed. The American Federation of Labor, for example, placed the number at 3,700,000, and the People's Lobby, headed by Prof. John Dewey, put the figure at 4,000,000 to 4,500,000. In line with the presidential suggestions a number of States and municipalities announced the speeding of public-works projects in order to cope with the problem. Too, private charitable groups indicated that they would seek to raise extraordinary budgets in order to furnish at least part-time work for the large number of unemployed in their communities. Thus, in New York a group of bankers reported that they were prepared to raise \$150,000 weekly for six months in order to pay the wages of 10,000 heads of families weekly so that these might be employed in non-production activities in public parks and the like.

THE WAGNER BILLS. Senator Wagner of New York was the champion of a group of bills de-

signed to widen the sphere of activity of the Federal Government. See UNITED STATES under *Congress*.

UNEMPLOYMENT INSURANCE IN THE UNITED STATES. Out of the 4,331,251 trade unionists in the United States not more than 109,000 were enjoying the benefits of insurance protection against unemployment. There were three types of plans in operation, viz., trade-union out-of-work benefits; plans jointly agreed upon by employers and employees; and plans instituted by the employees themselves at their own expense. In the first group and confined only to the printers, bakers, lace operatives, wood carvers and lithographers, were some 35,000 trade unionists. The second group of joint-agreement insurance funds covered approximately some 65,000 employees mostly in needle trades, 55,000 of whom were members of the Amalgamated Clothing Workers Union. In 1930 the General Electric Company announced a programme for the adoption of unemployment insurance covering its 100,000 employees. The General Electric Company's plan called for the payment of 1 per cent of wages into a trust fund to which the Company will make similar payment. Benefits to employees were to run as high as 50 per cent of the average full time earnings with the maximum set at \$20 a week. In the event that an emergency should exhaust the fund, every employee of the corporation was to be called upon to contribute 1 per cent of earnings to build it up again. As part of the plan, there was to be incorporated a stabilization programme for the purpose of reducing unemployment to a minimum throughout the year. The lack of success of funds operated by employers alone was demonstrated during the year when two companies, the Consolidated Water Power and Paper Company and the Leeds and Northrup Company of Philadelphia, abandoned their plans because of the business depression. The Dennison Manufacturing Company, of Massachusetts, continued to be the only outstanding company still employing this device at the end of the year 1930.

In view of the great public attention which was being devoted to unemployment insurance, a committee made up jointly from representatives of the National Association of Manufacturers and the National Industrial Council applied itself to a study of such proposals and various systems being employed. A report filed by this committee expressed itself as disapproving of public unemployment insurance on the grounds that there did not exist adequate data on unemployment, that various State legislatures had already rejected such measures, and that the costs of handling such projects were prohibitive, as evidenced by the experiences of such European countries as Great Britain and Germany.

As an alternative the committee proposed a series of schemes that it indorsed as worthy of extensive trial before public unemployment policies were launched upon. It proposed the following eight plans: (1) Unemployment insurance in industry. There were at the present time at least eight large concerns in which such programmes had been set up, among which were to be found the Dennison Manufacturing Company and the Procter Gamble Company. Included in this group were the employers' union unemployment funds for the men's clothing industry. (2) A dismissal wage. (3) Stabilization of industry and employment. (4) Planned public works for

the stabilization of employment (5) Stabilization of the dollar. (6) Unemployment insurance through insurance companies. (7) Reduction of taxation in industry. (8) Seasonal wage adjustments.

UNEMPLOYMENT INSURANCE FUND IN THE HOSIERY INDUSTRY. On Aug. 1, 1920, there went into effect an agreement providing for the creation of an unemployment fund in the Full Fashioned Hosiery Industry. By the terms of the agreement members of the Manufacturers' Association were to contribute to the unemployment fund a sum equal to 1 per cent of the weekly wages paid to the workers in the factories. Beginning one year later the employees are to contribute an amount equal to one-half of the sum contributed by the manufacturers. These contributions are to be deducted from wages. It will be recalled that this unemployment fund is comparable to the system set up in the men's clothing industry of which men has been made in 1928 YEAR BOOK. Thus, a system of unemployment insurance had been in existence in the Chicago markets since 1923 and in the Rochester and New York City markets since 1928. The Amalgamated Clothing Workers' Union reported that more than 50,000 employees were being covered under the workings of these funds. In the Chicago market a new agreement was written in 1928 which fixed the employers' contribution at 3 per cent of the weekly payroll and maintained the employees' contributions at 1½ per cent. From May 1, 1923, until Dec. 15, 1928, there was disbursed in the Chicago Market in unemployment benefits a total of \$4,025,000. In May, 1929, covering the previous 6 months, a total of \$370,000 was paid out in benefits and in November of the same year a total of \$466,850 was paid out. In New York the whole cost was being borne by the employers who contributed 1½ per cent of the total weekly payrolls covering both their own shops and those of contractors working for them. Between Apr. 11, 1929, and Mar. 6, 1930, a total of \$305,000 was paid out by the unemployment fund. In the Rochester market the employers' contribution was fixed at 1½ per cent of the weekly payrolls and the employees' contribution was set at the same figure except that their payments were not to begin until the elapse of one year after the establishment of the fund. It was estimated that on May 1, 1932, the Rochester fund would be ready to disburse \$100,000 in such payments.

CINCINNATI'S PROGRAMME. In an effort to cope with the unemployment situation the city government of Cincinnati in 1929 created a permanent committee on stabilizing unemployment for the purpose of studying stabilization and to set up machinery to cope with the problem. In line with this programme, in October, 1929, one of the sub-committee sought to have local industry distribute the work available among as many employees as possible through the employment of a system of reduction of hours and of staggering employment. It was reported that many Cincinnati establishments had accepted this principle and were assisting in preventing unemployment from spreading by furnishing continuous work for their entire forces. On the recommendation of another sub-committee a programme of increased public works was pushed. A third sub-committee, concerned with temporary employment, applied itself to the task of developing temporary jobs and an effort was made to obtain positions for heads of families who because of unemployment had

been applying for relief. This relief programme was financed by the Cincinnati Department of Public Welfare assisted by the local Community Chest and was able to obtain temporary positions for the 500 heads of families.

The Federal Bureau of Labor Statistics reported that the programme was meeting with considerable success and that Cincinnati's City Manager's Committee on Stabilizing Employment had had a very definite part in reducing the seriousness of the unemployment emergency. How serious the situation was, was demonstrated by a local census of unemployment taken in May, 1930. The census, a result of a house-to-house canvass, which covered 108,396 persons available for work, showed a total of unemployment of 12,792 persons and a total of 15,288 persons employed part time. That is to say, 8.2 per cent of the employable population had no jobs and 9.8 per cent was employed part time. A similar census conducted in May, 1920, showed that less than 5 per cent of the employable population was out of work and that the part-time working population was one-half the size of this same group in 1930.

AMERICAN FEDERATION OF LABOR. Foreshadowing the action which the American Federation of Labor's annual convention took at Boston in October with regard to unemployment programmes, was a statement made by President William Green in September with regard to the present agitation for unemployment insurance. Attacking compulsory unemployment insurance as a form of dole and declaring that he regarded the proposal as paternalistic, Mr. Green indicated that organized labor's programmes was as follows: Establishment of voluntary joint unemployment insurance funds in seasonal industries; division of work instead of wholesale discharge; a shorter work day and work week; and a guaranteed yearly wage. It is important to appreciate that Mr. Green's stand did not go uncontested. So, the New York State Federation of Labor, meeting early in September, adopted a resolution favoring a system of unemployment insurance. Governor Franklin Roosevelt, of New York, gave his support to the same programme when he advocated a system of contributory unemployment insurance made up on the basis of contributions of employers, employees and the State. Consult the article LABOR, AMERICAN FEDERATION OF, for a list of the resolutions adopted at the annual convention in connection with the problem of unemployment.

SOCIALIST PROGRAMME. The Socialist party of America, through its congressional candidates, during the year advocated the following Federal programme for the purpose of coping with the unemployment situation: Immediate assembling by the Federal government of adequate unemployment statistics; an extensive public-works programme; Federal unemployment insurance, the cost to be defrayed by the Government and the employers; a 5-day week and a 6-hour day for workers in industry; increased taxation of inheritances and of incomes in the higher brackets to supply the funds needed to carry the programme into effect; a nation-wide system of employment exchanges under the auspices of the Federal government in cooperation with the States and cities.

GOVERNOR ROOSEVELT'S PROGRAMME. In an address before the convention of the New York State Federation of Labor at Buffalo, held in September, Governor Roosevelt aligned himself with the

social-insurance advocates when he proposed a system of State insurance to cope with the problem of unemployment. Said the Governor:

I hope that the next administration and the next legislature will take up a practical definite study of unemployment insurance, avoiding of course any form of dolo, and basing their investigation on sound insurance lines under which the State, the employer, and the employee would all be joint premium payers.

UNION COLLEGE. A nonsectarian college for men in Schenectady, N. Y.; founded in 1765. The 1930 enrollment of regular students, totaled 821. The faculty numbered 85. The amount of endowment and income for the year was more than \$3,000,000. During the year a new electrical laboratory was erected at a cost of more than \$150,000. The library contained 75,000 volumes. President, Frank Parker Day, LL.D.

UNION OF SOUTH AFRICA. See SOUTH AFRICA.

UNIONS. See TRADE UNIONS.

UNITARIAN CHURCH. Unitarianism, as a type of belief, is ancient. The Unitarian Church in the United States developed as a modification of Congregationalism in New England, which led to the formation of the American Unitarian Association in 1825. This association is the executive organization of the Unitarian churches today. Each church is an independent congregation, and the denomination requires no adherence to a formal creed in its worshipers and no profession of a particular doctrine on the part of its ministers.

The one hundred and fifth annual meeting of the American Unitarian Association was held at Tremont Temple, Boston, May 20, 1930. On Jan. 1, 1930, the denomination had 419 churches, 376 of which were active. The Unitarian constituency was reported to number 127,320. There were 3170 Sunday-school officers and teachers and 20,823 pupils. Receipts for current church activities, as presented in the treasurer's statement for 1930, amounted to \$437,000.

The denominational publications are the *Christian Register* (weekly); the *Beacon* (weekly); and the *Unitarian News Letter*. The officers of the association in 1930 were: President, the Rev. Louis C. Cornish, D.D.; secretary, the Rev. Walter R. Hunt, D.D.; treasurer, Henry H. Fuller. Headquarters are at 25 Beacon Street, Boston.

UNITAS FRATRUM. See MORAVIANS.

UNITED BRETHREN IN CHRIST. A denomination which resulted from the religious awakening of Philip William Otterbein, Martin Boehm, and their co-workers. The church had its beginning at a "great meeting" held about 1766 in the Isaac Long barn near Lancaster, Pa. The first conference was held in Baltimore, Md., in 1789, and the church was formally organized in Frederick County, Md., in 1800. Its theology is Arminian, while its beliefs are those of the earlier, evangelical denominations; baptism is administered by any mode desired by the applicant. The church is divided into 34 annual conferences, including those in China, Japan, the Philippines, Porto Rico, and West Africa. In 1930 there were 1678 charges, 2983 organized churches, 1840 active ministers, 406,442 church members, 2835 Sunday schools with an enrollment of 420,639, including teachers and officers. The amount raised by the church for all purposes in 1930 was \$6,151,130. Conference missionary appropriations amounted to \$103,489, and general home-missionary appropriations to \$210,643. The valua-

tion of church buildings and other property was estimated at approximately \$31,477,772.

Headquarters of the church are located in Dayton, Ohio.

UNITED CHURCH OF CANADA. See CANADA, UNITED CHURCH OF.

UNITED METHODIST CHURCH. See METHODISTS.

UNITED PRESBYTERIAN CHURCH. See PRESBYTERIAN CHURCH, UNITED.

UNITED STATES. AREA AND POPULATION. The area of the United States, exclusive of Alaska, is 3,026,789 square miles. The area of the non-contiguous lands, which include Alaska, Guam, and certain Pacific Islands, Hawaii, the Panama Canal Zone, The Philippine Islands, Porto Rico, American Samoa, and the Virgin Islands, is 711,582 square miles. Thus, the total area of the United States and its possessions is 3,738,371 square miles. The population of the Continental United States (understood to exclude Alaska) was 122,775,046 on Apr. 1, 1930, by the Fifteenth Federal Census. According to the previous census it was 105,710,620 on Jan. 1, 1920. The gain of population in the intervening period of 10 years and 3 months was 17,064,426, and held the ratio of 16.1 per cent to the population of 1920. The populations of the several States and insular possessions in 1930 may be found in the articles on each.

More than one-fourth of the gain over the period 1920-1930 occurred in two States, California, the highest gross gainer, of which the population increased by 2,250,390, and New York, second in this respect, which scored a gain of 2,202,839. Illinois gained 1,145,374; Michigan, 1,173,913; Texas, 1,101,487. California's gain was also the highest proportionately for any State; it came to 65.7 per cent; Florida, second in this respect, gained 51.6 per cent through the accession of 499,741 to its population. Save for a slight decrease in the case of Montana, every State increased in population.

AGRICULTURE. Farm Census of 1930. As enumerated by the Federal Census of 1930 the farms in the United States numbered 6,297,877 on April 1 of that year. This indicated a decline of 73,763 from the 6,371,640 farms of 1925 and likewise a decrease of 150,466 from the 6,448,343 farms of 1920. For the period 1925-30 the proportionate decrease was 1.2 per cent; for the period 1920-30 it was 2.3 per cent. In the category of farms were included tracts even of less than 3 acres, in cases in which the land had yielded agricultural products in the year previous to the value of at least \$250.

In most cases the trend of the number of farms, by individual States, conformed roughly with that by the sections to which the several States belonged. The New England, Middle-Atlantic and East-North-Central States showed losses without exception both for the five-year and for the ten-year period. Missouri alone in the West-North-Central group exhibited loss for both periods. North and South Dakota, Nebraska, and Kansas, somewhat unexpectedly in view of the decline in profits from wheat culture, all gained in both periods. The South-Atlantic States all lost save Florida, and with the partial exceptions of Georgia, which gained for the five-year period but still remained below 1920, and of North Carolina where the reverse result occurred. Among the Mountain States, Montana regained in 1925-30 only a part of the heavy loss in number of farms

sustained in the period 1920-25. California alone of the Pacific States achieved even a trifling gain in 1925-30; but all the Pacific States remained in 1930 well above the total for 1920.

See also AGRICULTURE; AGRICULTURE, U. S. DEPARTMENT OF; sections on *Agriculture* under the various States; and articles on separate crops, as CORN, WHEAT, ETC.

INDUSTRY AND COMMERCE. The year was adverse to domestic industry and commerce in almost every branch. It was marked by the prostration of many classes of manufacture, mining and construction; by the decline in transportation, and the severe reduction of both commodity prices and capital values; and by the steady rise of unemployment, the increasing distress both of the personally destitute and of the commercially involved, and the appearance, toward the end of the year, of disorder in the affairs of financial institutions.

This deluge of economic troubles was variously traced to a diversity of possible causes. Among the adverse influences were the following: similar depressions in a large number of other countries engaged in international trade; the entry of Russia into that trade for the first time subsequent to 1914 as a great exporter of goods; the fact that the world generally, and the United States in particular, had caught up with the arrears in its economic needs occasioned by the World War, the further fact that the terms of the international arrangements subsequent to the War had rendered it necessary for Germany to produce goods on an increased scale in the effort to meet her obligations to other European nations and thus enable them to meet theirs to America; the particular inability of American agriculture to dispose of its surplus products at the prices prevailing in the export markets; the tendency of improved mechanical methods of production in many lines to render many employees superfluous and so to narrow the consumers' demand at its base; the fact that consumption had gone on for some years on an inflated basis, from which recession was unduly easy and could run to a great extent without carrying consumption to the bounds of general and absolute need. See BUSINESS REVIEW; FINANCIAL REVIEW.

In terms of employment the depression was reflected by the lowest rate of activity subsequent to the slump of 1920-1922. As reported by the United States Labor Bureau, the year's highest monthly rate of manufacturing employment, that for February, given as 90.3 per cent of the average for 1926, was lower than the lowest rate for any previous month subsequent to 1922 while the rate of such employment for November, 1930, 76.5 per cent, marked the further decline to that time. The percentage of monthly payroll totals for manufacturing industries fell from 90.8 for March, the year's high, even more steeply to 68.3 for November. See UNEMPLOYMENT; STRIKES AND LOCKOUTS.

MANUFACTURES. A census of manufactures was taken in 1930 by the Bureau of the Census. It covered the results of the calendar year 1929. Preliminary figures on this census indicated that the aggregate value of the yearly manufactured product of the United States had increased considerably for 1929 as against 1927. This total was, for 1929, \$68,453,486,518; for 1927, \$62,718,347,289; for 1919, \$62,041,795,316. For 1929, the percentage of excess over 1927 was 9.1. Less than one-tenth of the gross increase of some \$5,700,000,000

in value of products went to the manufacturing wage earners. The total of the year's wages paid in the manufactories was, for 1929, \$11,271,016,618; for 1927, \$10,848,802,532; for 1919, \$10,401,786,869. The yearly total of wages was thus but 3.9 per cent higher for 1929 than for 1927.

The number of the wage earners increased for the period from 1927 to 1929. Their number was, for 1929, 8,550,284; for 1927, 8,349,755; and for 1919, 9,000,059. Proportionately, the increase in the number of wage earners for 1929 over 1927 was 2.4 per cent. Consequently the average yearly remuneration of the manufacturing wage earner increased only very slightly; by 1.4 per cent.

Cost of manufacturers' materials, containers, fuel, and purchased electric current rose to \$37,357,631,108 for 1929, from \$35,133,136,889 for 1927; they were about the same as the total for 1919, which was \$37,232,702,390. The totals for 1927 and 1919, moreover, both included certain mill and shop supplies excluded from the total for 1929. Therefore the relative increase, for 1929 over 1927, of the cost of manufacturers' materials and kindred supplies, roughly 6 per cent, was actually somewhat larger than appeared.

Much the greater part of the expansion in the total value of the yearly manufactured product found its way into the category of "value added by manufacture." Here again the discrepancy as to the cost of mill supplies and the like rendered exact comparison impracticable. The total of value added by manufacture was, for 1929, \$31,095,855,410; for 1927, \$27,585,210,400; for 1919, \$24,809,092,926. The apparent, though not the exact, actual increase of the total for 1929, over 1927, was about \$3,510,600,000. The value added by manufacture included not only the manufacturing profits but such capital charges as interest on investment, rent, depreciation, insurance, and property taxes, and such general business charges as income taxes and advertising.

With regard to the number of the manufacturing establishments in the country there occurred a substantial rise. The total of such establishments was, for 1929, 199,268; for 1927, 191,866; for 1919, it had been 214,383. All the leading manufacturing industries are discussed under separate articles, such as AUTOMOBILES; BOOTS AND SHOES; IRON AND STEEL; PAPER; RUBBER; SILK; TEXTILE MANUFACTURING; ELECTRICAL INDUSTRIES; etc. For engineering works, see BRIDGES; CANALS; PORTS AND HARBORS; SHIP-BUILDING; etc. See also CHEMISTRY, INDUSTRIAL.

FOREIGN TRADE. Exports and imports alike, for the calendar year 1930, fell below the totals for the year previous by an amount, as measured in value, beyond that in any previous year save 1921. While the exports of 1929 had attained the highest total by value and the imports almost the highest subsequent to 1920, the totals for 1930 were below any subsequent to 1922, as to exports, and below any year subsequent to 1921, as to imports. The value of the exports of 1930 totaled \$3,841,207,000; that of the imports, \$3,061,369,000; both totals being preliminary as to December.

The corresponding totals for 1929 had been: Exports, \$5,240,995,000; imports, \$4,399,361,000. Thus the deficiency of the foreign trade of 1930, as compared with that of 1929, was equivalent to 27 per cent of the total of 1929, as to exports; and to 30.4 per cent of the total of 1929, as to imports. The absolute favorable balance of trade merchandise, for 1930, fell moderately below that

for 1929; it was, for 1930, \$779,838,000; for 1929, \$841,635,000. Both relatively to the both-ways total of foreign trade—\$6,902,576,000 for 1930 and \$9,640,456,000 for 1929—the favorable balance was augmented, as its proportion to the trade total was higher for 1930. A factor in this relatively greater decline of the import total was the imposition of new and higher tariff duties at the middle of the calendar year.

To a great and presumably predominant extent the fall in both exports and imports represented a decline in the prices of goods. As to the gross decline in quantity of goods, an estimate of the director of the Bureau of Foreign and Domestic Commerce placed the quantity of the exports of 1930 at about 80 per cent of that of 1929, and the quantity of the imports about 85 per cent of that of 1929. As quantities in divers classes of goods were not strictly comparable, and as the variation, as to each class, in the respective years was not fully set forth, the value of the estimate was limited. Some of the decline in the quantity of exports was attributable to the policy of the Farm Board in 1930, in maintaining wheat and certain other farm products above the export price. In the case of cotton, while exports continued extensive, the consuming markets abroad showed a tendency to increase greatly their takings of cotton from other sources than the United States and thus to reduce their requirements of the domestic product. The sorts of goods of which the exportation for 1930 fell most conspicuously below that of 1929 were automotive goods, cotton, machinery, petroleum products, wheat and flour, manufactured tobacco, fruits and nuts, photographic supplies, and rubber goods.

By months, the course of foreign trade exhibited a fairly steady diminution throughout 1930. Both exports and imports for January made higher totals than for any other month of the year. December provided the lowest total by value for any month but one (July), in the case of exports and the lowest but one (November) in the case of imports. The accompanying table presents the foreign trade of 1930 and 1929 by months.

| <i>Exports</i> | 1930 | 1929 |
|-----------------|-----------------|-----------------|
| January | \$ 410,849,000 | \$ 488,023,000 |
| February | 548,852,000 | 441,751,000 |
| March | 569,549,000 | 489,851,000 |
| April | 331,732,000 | 425,264,000 |
| May | 320,034,000 | 385,013,000 |
| June | 294,659,000 | 393,186,000 |
| July | 266,650,000 | 402,861,000 |
| August | 297,765,000 | 380,564,000 |
| September | 312,207,000 | 437,163,000 |
| October | 326,900,000 | 528,514,000 |
| November | 289,008,000 | 442,254,000 |
| December | 273,000,000 | 426,551,000 |
| Total | \$3,841,207,000 | \$5,240,995,000 |

Imports of merchandise by months follow:

| <i>Imports</i> | 1930 | 1929 |
|-----------------|-----------------|-----------------|
| January | \$ 310,968,000 | \$ 388,897,000 |
| February | 281,707,000 | 369,442,000 |
| March | 300,480,000 | 383,818,000 |
| April | 307,824,000 | 410,666,000 |
| May | 284,683,000 | 400,149,000 |
| June | 250,343,000 | 353,403,000 |
| July | 220,558,000 | 352,980,000 |
| August | 218,417,000 | 369,358,000 |
| September | 226,352,000 | 351,304,000 |
| October | 247,339,000 | 391,063,000 |
| November | 203,718,000 | 338,472,000 |
| December | 209,000,000 | 309,809,000 |
| Total | \$3,061,869,000 | \$4,399,861,000 |

The net importation of gold in 1930 was \$280,-087,000, as against \$175,006,000 in the year 1929.

MINERAL PRODUCTION. The article **MINERAL PRODUCTION AND RESOURCES** gives the latest available official figures for mineral production in the United States. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

RAILWAYS. See separate articles on **RAILWAYS** and **RAILWAY ACCIDENTS**.

SHIPPING. For statistics and other information in respect to the shipping of the United States during the year, see articles **SHIPPING** and **SHIP-BUILDING**.

FINANCE. For a discussion of Federal finances during 1930, see the article **PUBLIC FINANCE**.

EDUCATION. See the articles **EDUCATION IN THE UNITED STATES AND UNIVERSITIES AND COLLEGES**. Separate articles on the most important universities and colleges also are given under their respective titles. Sections on education are included in the articles and the several States.

PENSIONS. According to the annual report of the Bureau of Pensions the total of disbursements for pensions in the fiscal year ended June 30, 1930, was \$219,203,541, as against \$229,889,986 for the fiscal year 1929. The number of recipients on the pension rolls declined to 464,257 at the end of the fiscal year 1930, from 477,915 at the year's beginning. Some groups of pensioners diminished while others increased. The number of veterans of the Civil War dropped to 48,991, from 59,945; that of Civil War veterans' widows, to 167,674, from 181,235. The total of veteran pensioners of the Spanish War increased to 186,365, from 178,804; of such veterans' pensioned widows, to 30,919, from 28,643. There were also on the roll, at the end of the fiscal year 1930, 5454 former soldiers of divers Indian wars, 4191 of such soldiers' widows, 15,661 other former soldiers and 3830 widows pensioned on account of disabilities received in soldiers' connection with military service, 630 Mexican War widows, and 10 widows of men who served in the War of 1812.

The gross loss to the pension rolls by death amounted to 35,792 pensioners, of which number 11,082 were Civil War veterans, 18,353 Civil War widows, 4242 Spanish War veterans, and 554 Spanish War widows. Those remaining on the rolls were classified as 256,515 veterans, 199,704 widows, 2262 minor children, 877 helpless children, 4426 dependent parents, and 473 Army nurses.

Separate from the military pensions, the Civil Service retirement and disability fund, also administered by the Pension Bureau, paid out during the fiscal year \$13,107,732 for annuities to retired or incapacitated civil servants. The fund held at the end of the year a credit balance of \$156,795,476.

The filing of claims for pensions on account of military service continued active during the year. There were at the outset 41,282 active claims holding over from the previous fiscal year. There were subsequently received in the course of the year 190,742 other claims, and disposition was made of 121,791 claims. There remained 110,233 pending claims at its close. The number of pension certificates issued in the year was 71,096 exclusive of reissues on account of loss of certificate.

PATENTS. Effective June 1, 1930, Congress increased the filing fee on patent applications from

\$20 to \$25 and on trade-mark applications from \$10 to \$15. The final fee on patent applications was raised from \$20 to \$25. Applications for patents for inventions, designs, and for reissues of patents reached a record total of 96,227 for the fiscal year ended June 30, 1930, as compared with 92,029 in the previous fiscal year. Applications for registration of trade-marks, labels, and prints numbered 21,342 (22,567 in 1928-29). The Patent Office granted 46,599 letters patent for inventions during the fiscal year 1929-30 and received 91,430 applications; in 1928-29 there were 43,617 letters patent for inventions granted and 87,039 applications received.

Post Office. Another heavy postal deficit incurred in the fiscal year ended June 30, 1930, gave Postmaster General Walter F. Brown occasion in his annual report to dwell on the asserted need to render the strictly postal portion of the operations of his department self-sustaining as a whole; to that end he recommended the increase on the minimum postage for first-class letters to 2½ cents, from 2 cents. He maintained that, while the second-class rate had risen by 82 per cent since 1916, the third-class by 21 per cent, and the parcel-post by 10 per cent, the first-class rate had stood at 2 cents since 1885, except for a brief period in the course of the World War.

Finances. The deficit to which Postmaster-General Brown alluded was higher for the fiscal year 1930 than for 1929, whether figured on the basis of the audited postal receipts and expenditures or net of the rebates or credits granted against expenditures for non-postal purposes by an act of June 9, 1930. The rebates provided by the act put to the credit of the Postal Department \$39,669,718; yet even so there remained a deficit of \$58,779,064 for the fiscal year exceeding that of 1929, as correspondingly figured, by \$1,913,346. The straight deficit on the basis of the audited receipts and expenditures attained \$98,215,987 for the fiscal year 1930, as against \$85,461,176 for the year preceding. The revenues of 1930, from all sources, were \$705,484,098, as against \$696,947,578. The gain thus registered in the yearly revenues was more than offset by a rise in expenditures, to \$803,700,086 for 1930 (fiscal year), from \$782,408,754 for the previous year.

Postage. Revenue derived from the sale of postage stamps and other stamped paper decreased slightly to \$575,286,569 for the fiscal year 1930, a total less by \$153,053 than that for the year preceding.

Rural Free Delivery. There were established during the year 112 new rural free delivery routes and 75 existing routes were extended. The total number of rural free delivery routes operating at the close of the fiscal year was 43,278; their aggregate length was 1,334,842 miles, as against 1,316,420 a year earlier. The number of miles covered in the course of the year by carriers serving these routes was 404,738,397.

Air Mail. Greater activity of the air-mail service was marked by the carrying in the fiscal year 1930 of an increased aggregate poundage and by the performance of a greater number of miles of flight carrying air mail. A Federal appropriation of \$15,000,000 to help maintain and develop the air mails was expended, all save some \$309,000. The number of miles actually flown in the air-mail service in the course of the year was 14,939,-

468, out of a total of 16,228,543 that had been scheduled. There were transported by air 7,719,698 pounds of mail.

Postal Savings. The total sum held in trust for postal-saving depositors increased to \$179,905,224 at the end of the fiscal year 1930, a sum \$21,849,685 in excess of that at the end of the fiscal year 1929. There were in operation, at the end of the fiscal year 1930, 6795 places where postal savings deposits might be made.

VETERANS' ADMINISTRATION. According to the annual report of the Veterans' Bureau the number of the patients under treatment in its hospitalization system rose to 30,541 on June 30, the end of the fiscal year 1930, from 27,784 on June 30, 1929. The increase for the year was nearly 1000 greater than that for the year previous. The hospital patients at the end of the fiscal year 1930 included 6341 suffering from pulmonary tuberculosis, 15,020 neuro-psychiatric cases, and 9180 under treatment for other medical or surgical conditions.

The Government converted life insurance policies in force numbered 648,044. They carried an aggregate of \$3,041,601,101 of insurance, as of June 30, 1930. In the course of the fiscal year there were reinstated 4766 policies, carrying \$22,944,310. There were approved, in the year, 16,404 applications for policies to the aggregate of \$70,584,363.

Payments in compensation, to disabled veterans and to widows, children and dependent parents of veterans, totaled \$188,000,000, approximately. Of that total about \$155,000,000 was disbursed in compensation for disability. Veterans receiving compensation at the close of the year numbered 279,539, all classed as disabled as a result of injury or disease incurred in service in the war with Germany or presumed so to have been incurred. The number of these recipients increased by 17,401 in the fiscal year. Tuberculosis was the major disability in 20 per cent of the cases, and neuro-psychiatric disease in 21 per cent.

Death compensation was paid in the fiscal year 1930 to 90,954 deceased veterans' widows, children, or dependent parents; the amount of such payments was \$32,965,000.

The net disbursements of the Veterans' Bureau for all purposes in the course of the fiscal year 1930 amounted to \$452,150,622. They exceeded the total for the fiscal year previous by \$19,407,653. The amendment of the World War Adjusted Compensation Act, by Act of June 5, 1930, extended to Jan. 2, 1935, the limit of time for making applications for the benefits of the act; it also allowed families of veterans to file claim for benefits in cases in which such veterans had been absent, without explanation, for seven years. Legislation of 1930 did not take effect in time to influence the expenditures of the Bureau for the fiscal year ended June 30, 1930.

By authority of an Act of Congress the President on July 8 ordered the Veterans' Bureau, the Pension Bureau, and the Soldiers' Home united as a single administrative organization, by name the Veterans' Administration. Gen. Frank T. Hines, head of the Veterans' Bureau, was elevated to the direction of the new unit, with the title of Administrator of Veterans' Affairs.

ARMY AND NAVY. The Army and Navy are treated separately in the articles **MILITARY PROGRESS** and **NAVAL PROGRESS**. See **AERONAUTICS**

ADMINISTRATION

THE PRESIDENT. President Hoover had before him in 1930 a number of serious problems. The chief were those that arose from the prolonged business depression that extended over the country for the entire year and from such contributing troubles as the long-standing difficulties of the farmers and the occurrence of a destructive drought in midsummer. In the opening months of the year he maintained the hopeful attitude that he had taken near the outset of the business depression.

With regard to Federal expenditure the President's policy was shaped on the one hand by faith in the doctrine that large public expenditure would help keep up the incomes of the people in the ordinary ranks of life and would thus stimulate a renewal of business demand; on the other hand, by the prospect that excessive Federal expenditure would leave the Treasury insufficiently supplied and thus compel the imposition of heavier taxation by the December session of Congress. He accordingly approved bills carrying hundreds of millions in excess of the usual authorizations for public construction. But he found it necessary to protest to Congress on the perils of excessive appropriations. He expressed on April 4 his expectation that the fiscal year would close with a moderate surplus, as proved at the end of June to be the case. But on April 22 he addressed to a leading Senator and a leading Representative a letter proposing a close restriction of further appropriations, which he thought likely to cause a deficit, otherwise, in the fiscal year to follow. As a feature of his efforts to overcome industrial depression, President Hoover requested the Department of State to apply more strictly the clause of the Immigration Law for the exclusion of those likely to become public charges.

When reports from Federal sources indicated early in August that the farms in many parts of the country were afflicted by an unusually severe drought the occasion offered for the President's employment of his familiar policy of resort to conferences and coöperative action with elements outside the Federal governmental organization. He conferred on August 14 with the governors or executive representatives of about one-third of the States and with the Federal farm officials and announced a resulting plan of which the main features were State and Federal assistance in the granting of loans to farmers, Red Cross aid, the acceleration of public works where the drought had caused lack of employment, and the reduction of rates for the transportation of feed and livestock, particularly between areas having a surplus or a deficiency of either. Relief in some 250 counties judged to be most acutely affected was to be organized by the counties themselves or the States in which they lay. The main purposes of the plan, according to the President, were to help sufferers through the winter, protect health, and prevent avoidable sacrifice of livestock. Fairly general rains, supervening, greatly simplified the drought problem.

President Hoover maintained in 1930 the plan that he had followed in 1929 of letting Congress work out the tariff rates without interference from him. In the campaign for the elections of members of the Congress Mr. Hoover took no active part.

FOREIGN AFFAIRS. *The London Conference.* The chief event of the year in the field of foreign affairs was the participation of the United States

in the London Conference on Naval Armaments. The President selected seven delegates to represent the United States Government at this conference. These were: Henry L. Stimson, Secretary of State, and chairman of the delegation; Charles Francis Adams, Secretary of the Navy; David A. Reed, Senator from Pennsylvania; Joseph T. Robinson, Senator from Arkansas; Dwight W. Morrow, Ambassador to Mexico; Charles G. Dawes, Ambassador to Great Britain; and Hugh S. Gibson, Ambassador to Belgium. The delegation was thus composed in fairly even proportions of members of the Cabinet, of members of the Senate that must ratify any agreement executed, and of diplomats. The conference itself convened on January 23.

A treaty was speedily drawn up with important articles particularly affecting the navies of the three remaining powers, the United States, Great Britain, and Japan, and was signed on April 22, by all five powers. The United States undertook to reduce its armament of battleships by disposing of four capital ships, the *Florida*, *Utah*, *Arkansas*, and *Wyoming*; the United Kingdom, of five; Japan, of one. These three powers undertook not to lay down any other capital ships until after the end of 1936, but France and Italy were to be allowed to build replacement tonnage. See *NAVAL PROGRESS* and *GREAT BRITAIN under History*.

Relations with Germany. A settlement of the obligations of the German to the United States government was made through an agreement executed by Secretary of the Treasury Mellon and signed on June 23 (later ratified; see *Congress*). See *GERMANY under History*.

The Department of State facilitated early in the year the flotation of the German government's loan in pursuance with the programme arranged at the time of the adoption of the Young plan, by giving its informal consent to the subscription of approximately \$100,000,000 of the issue in the United States.

Tax Issue with France. The Treasury Department sent to France two representatives to seek an arrangement for the termination of the so-called double taxation of American-owned companies operating in that country. Conferences took place during the summer, but the American representatives were unable to obtain from the French government any acceptable undertakings and withdrew in September.

Turtle Islands. By a convention executed on January 2 by Secretary of State Stimson and the British Ambassador the sovereignty of the United States was recognized as extending over the Turtle Islands, a group of eight small isles with a population of 200 persons, off the eastern coast of British North Borneo. It was arranged that the administration of the islands should remain for the time being with the British North Borneo Company.

Canada and the St. Lawrence Waterway. Soon after the Canadian elections, which brought into power a Conservative government, the Department of State transmitted to the Dominion government through the Minister to Canada, Hauford J. MacNider, early in September, a note proposing a renewal of negotiations for an agreement to develop an international waterway through the Great Lakes and the St. Lawrence River, for the passage of ocean vessels of considerable tonnage. The negotiations had been in abeyance since 1928, at which time an under-

standing with the former Liberal Dominion government had been found unattainable. See CANADA under *History*.

Consult C. P. Howland, *Survey of American Foreign Relations*, 1930 (Yale University Press, 1930).

DOMESTIC AFFAIRS. Unemployment Measures. The policy of the Administration to remedy unemployment by the organized acceleration of public works and private construction throughout the country had been adopted at the appearance of economic depression late in 1929. In the hands of the Department of the Interior was placed much of the work of organizing this movement. A division of construction was created in the Department. This division announced in January that there were in prospect plans of construction that would involve the expenditure during the year of about \$7,000,000,000, exclusive of the building of residences, private places of commerce, and factories. The prospective expenditure of the railroads was \$1,050,000,000; of electric, gas and street-railway companies, \$1,400,000,000; of telephone and telegraph companies, \$800,000,000; of the State governments, \$3,053,743; of the Federal Government, \$275,000,000.

The Federal works pushed forward during the year included some of the numerous public buildings in Washington and other cities, for which Congress made large provision; the operations along the course of the Mississippi River and its chief tributaries, both for the improvement of waterways and for the system of flood prevention that had been authorized under the administration of President Coolidge; and the damming of the Colorado River in accordance with the so-called Boulder Dam project. The work on this project was started on July 7, by an order of Secretary of the Interior Wilbur, with the aid of an initial appropriation of \$10,660,000. With regard to the project of works of flood prevention along the Mississippi River the Army Engineers, directing the work, were delayed in Louisiana and elsewhere by local opposition to the plans of the engineers, which were alleged not to assure proper compensation to owners whose lands would be subjected to flooding, on account of their lying between the intended levees and the river.

Tariff Commission. The Tariff Act of 1930 terminated the existing commission and created a new one, to consist of six members, not more than three of them of any one political party, each to serve a term of six years, except for original nominees whose terms should end at the rate of one a year for the first five years, thus providing for the nomination of one member in every successive year. The task of manning this commission fell to President Hoover, in whom was vested the power of appointment, subject to the advice and consent of the Senate. As the complaint had been made of the previous tariff commission that it had been packed with a high-tariff majority through the introduction of protectionist Democrats, and as the possibility of rectifying any tariff rates that might be found excessive rested in the new commission, much importance was attached to the nominations. Henry P. Fletcher of Pennsylvania, a Republican and former Ambassador, was nominated for chairman; Thomas Walker Page of Virginia, a Democrat, who had served on the Tariff Commission under Taft, Wilson, and Harding, was next nominated. Two members of the outgoing commission, Edgar H. Brosard of Utah, Republican, and Alfred P. Dennis

of Maryland, regarded as a protectionist Democrat, were then named, and with them Dr. John Lee Coulter, Republican, of North Dakota, who had been the Commission's chief economist. Thus was apparently assured the continuation of the majority that had ruled in the old commission.

Administrative Measures of Drought Relief. After the President (see **PRESIDENT**, above) had taken the initiative in organizing measure of relief for drought-stricken parts of the country, Secretary of Agriculture Hyde undertook to stimulate State highway construction in the sections afflicted. He authorized on August 16 the immediate apportionment among the States and Hawaii of \$121,875,000 which had been allowed by Congress as the Federal contribution to such work for the next subsequent fiscal year. The date for such apportionment was thus advanced by more than four months. Although the funds thus allotted would not become available for payment until July 1, 1931, it was the theory that the States to benefit by them could go ahead immediately with construction work, getting temporary accommodation if necessary, against contributions that were assured to them.

The Interstate Commerce Commission ordered in August a set of reduced freight rates, chiefly on grains, feed, and cattle, for application during the emergency, to help areas where drought prevailed.

Federal Farm Board. Apart from the agricultural difficulties brought on by the drought was the depression in the prices of a great number of farm products which ran on with increasing intensity until late in 1930. The course of the agricultural markets is related under *Agriculture*. The administrative measures to cope with this price collapse were carried on by the Federal Farm Board. They were in the main unproductive of the desired recovery in prices, the best to be said of them being that matters might conceivably have gone worse had none of the measures been taken. See *AGRICULTURE* under *Federal Farm Board*.

Fiscal Policy. The fiscal year 1931, beginning with July 1, 1930, brought for the first time in many years difficulties in maintaining at an adequate level the funds of the Treasury. The reduction in the rates of the Federal income tax, which had been enacted at the close of 1929 in the effort to stimulate an early recovery from the consequences of that year's collapse in the stock markets, did not make any serious diminution in the income tax payments of the early part of 1930. Later, the current receipts of the Treasury, largely made up of the proceeds of the customs, ran heavily behind those of corresponding periods of 1929, particularly after the going into effect of the new Tariff Act. Before the middle of September the current receipts of the Treasury were running behind 1929 at the rate of some \$400,000,000 a year. The apprehension was added that at the advent of the calendar year 1931 the total of incomes paying income tax would be much reduced by reason of adverse business in 1930.

Department of Justice. Among the important actions brought by the Attorney-General in the course of the year was that against the merger of the Standard Oil Company of New York with the Vacuum Oil Company. He sought to have the Federal courts declare this move to reunite former members of the old Standard Oil combination illegal under the decree by which they

had been separated. Another suit relating to the law against corporate combinations was brought by the Department of Justice against a proposed merging of the chief interests of the radio industry with the Radio Corporation of America. It was planned that this corporation should acquire the radio manufacturing business of the General Electric, and Westinghouse companies and should in turn come under the control of these companies by their holding of a majority of its voting stock. An agreement as to use of patent rights, including other companies, was involved. The suit brought by the Government was not only against the proposed corporate combination but also against this pooling of patents.

The transfer of the Prohibition Bureau to the Department of Justice, as provided by enactment (see *Congress*) was effected with the close of the fiscal year on June 30. It was designed to promote more efficient enforcement of the Prohibition law. The Bureau was placed under a new director, Col. A. W. W. Woodcock, who made extensive changes in personnel and adopted a policy of concentrating efforts on the greater violators. See PROHIBITION.

Administrative Reapportionment. The President issued on November 18 the schedule of the representation of the several States in the House of Representatives under the tentative reapportionment, through administrative action, for which the act of 1929 had provided. State representation was worked out according to two alternate systems, that of major fractions, which had been employed in the previous reapportionment, and that of equal proportions; both yielded the same results.

CONGRESS

SEVENTY-FIRST CONGRESS, FIRST REGULAR SESSION. The opening of the year 1930 found Congress with the chief task of the session, which had convened on the preceding December 2, still before it. This task was the enactment of a revised system of tariffs. There were also on the legislative programme large appropriations for public works of divers sorts, an alteration in the status of the administrative force for the enforcement of the Federal Prohibition laws, a reorganization of the Federal Power Commission and a number of lesser measures. Both Houses reassembled after the year-end recess on January 6. In advance of that date it was agreed at a conference of the Republican members of the Senate to give the right of way to the Tariff Bill, in preference particularly to Prohibition matters, which some of the Progressive Senators had been disposed to put in the lead.

The Tariff Act. The Senate, which had had the tariff under consideration, with intervals of other business, ever since receiving the redrafted bill from its Finance Committee on Sept. 12, 1929, in the course of the special session, resumed its consideration of the bill, point by point. The members in sympathy with the interests of the beet and cane sugar States sought to introduce a bounty for domestic beet and cane growers in connection with the duty on imported sugar. An amendment was offered to this effect by Howell of Nebraska. It called for payments to be made to these growers and to refiners at the rate, jointly, of 0.44 cents on every pound of sugar produced from domestic material; the growers were to receive 90 per cent of such payment, the refiners, 10 per cent. The amendment did not in-

clude Philippine or Porto Rican sugar in its provisions. It was defeated on January 17 by a vote of 54 to 22, despite the anticipation that this action would generate support for a move to release the Philippine Islands from American sovereignty.

On January 25 the Senate accepted an amendment to put an end to the practice of allowing special courtesies at the customs to members of Congress and other Federal officials returning from abroad.

The duty on sugar, which had formed one of the most persistent subjects of Senate controversy, was finally settled on March 5 by a vote of 47 to 39. This vote was in reconsideration of action taken January 16, on which date, by 48 to 38, it had been voted to leave the sugar duties of the Fordney-McCumber act unchanged. The action of March 5 raised the duty on Cuban sugar to 2 cents a pound, from 1.76 cents, and that on other foreign sugar to 2.50 cents a pound, from 2.20. The opposition to these increases, chiefly Democratic, had been whittled down in the interval between the two votes by what the opponents of the increases charged to be trading bargains.

The activity of Grundy of Pennsylvania, a newcomer in the Senate, who had taken his seat by appointment late in the previous year, to the vacated seat of Vare, was one of the determining influences to the success of the partisans of a higher tariff level. Grundy, although a newcomer to the Senate, employed himself effectively in speeding action and in maintaining in favor of the higher duties, on successive votes, a fairly stable majority. A duty of 6 cents a hundred-weight on cement was approved by 45 to 37 on March 7.

The supporters of a duty on hides and the advocates of protection for shoe producers being at cross purposes, an amendment of Oddie of Nevada, to place duties on both, was defeated on March 17. An amendment of Smoot of Nevada, as to censorship of books imported into the country, replaced the Cutting amendment that had been adopted in 1929. Smoot's amendment vested the judgment as to the obscenity or treasonable statements of imported books in the district courts. It was adopted March 18. A schedule of tariffs on lumber, favorable to the views of the Grundy group, was adopted March 20.

The bill in its completed form came to a vote in the Senate on March 24. At the last hour Thomas, Democrat, of Oklahoma, offered a motion to recommit, with instructions to the committee to restrict increases of duty to the farm schedule; this motion was sweepingly defeated by 70 votes to 9. The bill itself was then passed by 53 votes to 31. Of the majority voices 46 were Republican and 7 Democratic; of the minority, 5 insurgent Republicans and 26 Democrats. Eight insurgent Republicans who had opposed the bill at many points in its progress supported it on the final vote on the theory that its passage would do less harm than the failure to pass any bill.

Altered by no less than 1253 amendments, the measure was returned to the House. The "steering" committee of that body shaped a plan for sending the bill to a conference committee of the two chambers after reopening a limited discussion within its own body of three schedules alone, sugar, cement, and lumber. Representatives favorable to the domestic sugar interests opposed reopening the sugar schedule. Consequently, after

several days of discussion in committee, the bill was sent, without further House discussion, to conference, under a special rule making provision to that effect. The vote of the House on this proceeding was 241 to 153. Nineteen Republicans of the Farm Bloc voted with the minority.

The Conference Committee of the two houses labored with the bill until early in June. The House, which had voted a higher duty into its original bill, accepted the 2-cent rate for Cuban sugar on May 2; differences in the chemical schedule had previously been composed. But the Senate twice returned the reports of its delegation in the conference as not acceptable. After accepting the conference report on the majority of disputed matters, the House by vote of May 3 refused to concur with the Senate amendments providing for export debentures, a form of indirect payment out of the Customs to domestic growers of agricultural products, and for administrative provisions relating to the flexible-tariff plan.

The Senate asked for further conference on these points. Despite the opposition of a strong minority the Senate released its committee members on May 19 from the obligation to insist on its version of the bill with regard to the two points. In conformity with a ruling of Vice-President Curtis the Senate rejected on May 27 a compromise by which the Tariff Commission was to have the power to put altered rates into effect, pursuant to its decisions, should the President fail to take any action of his own on these within 60 days. On June 5 a corrected report was received from the Conference Committee. There followed a debate in which the objections of the Senate minority to the bill as a whole were put on the record by Harrison of Mississippi. The Senate finally passed the bill as reported by the conference, on June 13. The vote was exceedingly close, being 44 to 42; up to within a short time of its being taken, uncertainty prevailed as to whether a majority could be mustered to its support. Five Democrats voted for the bill; these were Broussard, Fletcher, Kendrick, Ransdell, and Trammel. Eleven Republicans, Blaine, Brookhart, Borah, Frazier, Howell, LaFollette, McMaster, Norbeck, Norris, Pine, and Schall, voted against it; and there were five pairs. The House voted enactment on June 14 by 222 in favor to 153 opposed.

The President gave notice on June 15 that he intended to sign the measure. He thus checked rumors that he would veto it as not in consonance with his recommendations of 1929. Two days later, on June 17, the act was signed, and it became effective on June 18.

The act as passed raised the duties generally on agricultural products, including cattle, meats, dairy products, breadstuffs, fruits, nuts, legumes, and other vegetables; it placed a duty of 7 cents a pound on cotton of $1\frac{1}{8}$ inch staple or over. For sugar the general duty was raised to 2.5 cents, from 2.2; for Cuban sugar, to 2.0 cents, from 1.76 cents, raw. Duties on wool were increased in most cases, in some cases doubled. Outside of the products of husbandry, the increases, though common, were scattered rather than general.

In the wood schedule logs of the chief softwoods were placed on the free list. Among building materials, cement, previously free, was subjected to duty of 6 cents a hundredweight; bricks, likewise removed from the free list, were put under duty of \$1.25 a thousand. Duty was raised on most

sorts of glass, building and other, and on most sorts of earthenware and porcelain. Manufactures of wool, generally, and those of cotton, in a considerable degree, were put under increased rates. For watches and clocks the classifications were rewritten and new rates, unwelcome to the importers, were imposed. Hides were removed from the free list and made dutiable at 10 per cent. Conforming changes were made with regard to leather. Boots and shoes, formerly free, became dutiable at 20 per cent.

Grants to Veterans. The approach of a Congressional election gave occasion in the spring of 1930 to an unusually strong demand for further extension of Federal aid to large classes of veterans. The proposed aid took the form of two chief measures. One of these, designed specifically to benefit veterans of the Spanish-American War, and commonly styled the Spanish War Veterans' Pension Bill, carried \$11,712,000 to provide pensions at rates up to \$60 a month for veterans of that war on the basis of simple disability, whether the disability were incurred in the service or not, and without exception for cases where it had resulted from vicious habits. Both houses passed this sweeping grant by large votes. President Hoover thereupon vetoed it, exercising the veto for the second time in the course of his administration. He appended to the veto a message explaining his views as opposed to the omission of the customary exception of cases of vicious habits; to the allowing of disability as a sole qualification, though the applicant were not in need; and to a lowering, in the bill, of the period of war service necessary for qualification. Both Houses, June 2, overrode the veto by overwhelming votes of both parties. The vote in the Senate was 61 to 18; in the House of Representatives, 298 to 14.

The second of the measures to aid veterans was a much more ambitious project. It was presented in the House by Johnson of South Dakota, chairman of the committee on World War veteran legislation. Later amended in accordance with the proposals chiefly of Rankin of Mississippi, it became known as the Rankin bill. It extended the term of years after the war within which certain disabilities, on their appearance, might be presumed to have arisen from service; it also greatly extended the list of disabilities, the cases of which might benefit, for pension purposes, by such presumption. This measure, passed by both Houses, was vetoed by the President on June 26; his veto message estimated that the measure would have given war-disability benefits to 75,000 or 100,000 men not actually disabled as a result of the war. Director Hines of the Veterans' Bureau estimated that the bill would have cost the Government \$102,000,000 at the outset and \$225,000,000 a year at its ultimate maximum.

The House, by a vote of 188 to 182, taken on June 26, failed to override the veto. It then immediately passed a substitute bill of Representative Johnson, providing a disability pension to the maximum of \$40 a month for veterans of the war, without regard to the origin of the disability. The substitute obtained 365 votes, to 4 opposed. The Senate quickly passed the measure on July 1, but amended it by raising the maximum monthly rate to \$60 a month. The House refused on the next day to consider the Senate amendments on the floor and sent the bill to conference. There it was reduced in the main to the terms of the House bill. The measure was then promptly

passed by both Houses and President Hoover affixed his signature to the bill on July 4.

Prohibition and Law Enforcement. A report rendered by the Wickersham Commission on Law Observance furnished the basis for legislation designed to improve the administration of the Prohibition laws. The Commission, after seven months of study, presented to the President early in January a preliminary report offering suggestions for legislation. The foremost of these was that the organization for the enforcement of Prohibition be transferred from the Treasury Department to the Department of Justice.

The President transmitted the Commission's recommendations to Congress. A measure to transfer the enforcement organization as proposed was offered in the House and was passed without roll call on February 8, opposed only by a handful of New York City Democrats. Subsequently passed by the Senate, it was signed May 27, to become effective July 1. By its terms the enforcement unit of the Treasury Department was transformed into the Bureau of Prohibition under the Department of Justice and the post of Director of this Bureau was created, to be filled by Presidential appointment. The intention was to correlate more closely the administrative and prosecutory activities.

Other acts created a Bureau of Narcotics in the Treasury Department and authorized a Bureau of Prisons in the Department of Justice. As a remedy to the overcrowding of the Federal Prisons provision was made for the construction of two more Federal penitentiaries. Funds were voted, in spite of opposition in the Senate, to the amount of \$250,000 to defray further work on the part of the Wickersham Commission.

Public Works. In conformity with the policy of the President to help mend the economic situation by heavier expenditure on public works, a large programme of Federal construction was adopted.

The Elliott-Keyes Act (signed March 31) was the foremost feature of the programme of construction. It authorized the appropriation of \$230,000,000 to defray the cost of erecting a list of public buildings covering all sections of the country. Half of the total was to be expended within the District of Columbia. The expenditure was to stretch over a term of years. This act, combined with earlier measures, raised the total of authorizations in force, for Federal building construction, to about \$500,000,000, which it was expected would be used at the rate of \$50,000,000 a year.

The Dowell-Phipps Act (signed April 4) provided for further yearly Federal contribution in aid of highway construction carried on by the States. It authorized the expenditure of \$300,000,000 in all, this amount to take the form of yearly highway contributions of \$125,000,000 for each of the fiscal years, 1932 and 1933, and of \$50,000,000 for 1931 to bring that year to the same figure. There was thus effected an increase of \$50,000,000 a year in the rate of yearly contributions. Otherwise the terms of Federal assistance to States in highway building were left by the bill substantially as they had been.

Waterway Legislation. The course of legislation for the improvement of water communications differed from that of other legislation for public works in that it was beset with controversy. A River and Harbor Bill of a very general character was drawn. In its final form it provided for

expenditure of \$144,881,902. This total was distributed among more than 170 projects. The chief group of these was that designed to furnish the interior with a 9-foot waterway from the Great Lakes through the Illinois River and from the points on the upper navigable waters of the Mississippi River and its tributaries to the Gulf of Mexico. The bill met with opposition in the Senate because of the apprehension of some of the Lake States that the waterway southward from Lake Michigan would involve an excessive diversion of lake water for the carrying of water traffic, thus upsetting the limitations that had recently been put on the diversion of water by that route, through a decision of the Supreme Court. The Senate adopted finally on June 19 an amendment offered by Blaine of Wisconsin limiting the rate at which water might be diverted.

There was also incorporated into the bill, despite the opposition of Senators from States inimical to the project of a ship canal by the Erie Canal route, a provision that the United States might take over from the State of New York its State canal system, without payment to the State therefor. But this proceeding was limited by specifications calculated to prevent the Government from developing the canals in New York into anything more than a light-draft waterway unsuitable for ocean-going vessels.

Aid for the Unemployed. Wagner of New York introduced in the Senate a series of bills to provide a system of Federal assistance for the unemployed, to operate particularly in times of depression. One of these, to require monthly statistics on unemployment, was duly passed by both Houses and was signed July 7, but awaited the forthcoming of funds to render it effective. A second, to require the planning of public works in advance, with a view to carrying them out at such times chiefly as would enable them to furnish employment when it was most needed, was passed by both Houses. The lower House, however, voted it just before the close of the session and made amendments as to which the conference committee had not reached an agreement before adjournment. This bill therefore failed of enactment. A third Wagner measure, for the institution of a National unemployment system, passed the Senate but did not emerge from the House. See UNEMPLOYMENT.

Federal Power Commission Reorganized. In agreement with the wishes of the President a new Federal Power Commission, different in its character, was created by the Parker act, to take the place of the existing one. The existing commission consisted of three ex-officio members: the Secretaries of War, the Interior and Agriculture. The measure provided a commission to be composed of five appointed members to serve only in that capacity and to receive salaries of \$10,000 each.

Colorado River Development. Although the project of a dam in the Colorado River had been authorized in a previous session, further legislative action was required to furnish the initial appropriation for carrying on the work. President Hoover requested on May 2 that Congress appropriate \$10,600,000 for this purpose. Of this amount, \$5,000,000 was sought for the beginning of the actual work toward the damming of the river, while the rest was required for building a railroad to the site, for the erection of a power plant and for other purposes. The appropriation was made part of the Second Deficiency Bill,

Immigration. The Harris Bill, introduced in the Senate, undertook to apply the system for the restriction of the number of immigrants into the United States from each country by yearly quotas to the Western Hemisphere. The purpose back of this move was particularly to check the heavy immigration from the contiguous republic of Mexico. After considerable debate and amendment the Senate voted to recommit this measure to committee. But on May 13 it reconsidered the motion to recommit and voted an amendment placing Mexico alone among the New-World nations under the quota. The House Committee on Immigration and Naturalization, in spite of opposition on the part of the Department of State, reported the bill favorably; but the House did not dispose of it during the session.

The O'Connell Bill, reducing passport fees, was enacted into law. See IMMIGRATION.

Deadlock on Muscle Shoals. As in previous sessions, the two Houses failed to agree on any plan for the permanent status of the Federal power development at Muscle Shoals. The Senate passed a resolution providing for the governmental operation of the plant, while the House voted a measure for the leasing of the plant to private concerns. Efforts to reconcile the two proposals in conference committee came to naught. See also ALABAMA.

Farm Relief. Congress supported the efforts of the Farm Board by appropriating for its use, in addition to earlier appropriations, \$100,000,000, included in a deficiency supply bill. See AGRICULTURE.

German Reparations Approved. The plan for the settlement of reparations due from the German government to that of the United States, agreed upon by the Administration, was submitted by the President to Congress on March 5. The House passed on May 22 the Hawley Bill, authorizing the plan of settlement as it had been negotiated. The Senate passed the Hawley measure June 2 and the President signed it June 6. See GERMANY under History.

Status of the Philippines. Preparatory work was done by the upper Chamber toward providing for the eventual independence of the Philippine Islands. The Senate Committee on Territories and Insular Affairs held hearings on the subject, running over the first five months of the year. The committee reported on June 2, by majority vote of eight to four, the Hawes-Cutting Independence Bill. This measure did not reach disposal during the session. See PHILIPPINES.

Investigations. Following the precedent of several preceding years of National elections, the Senate created in April a committee of five of its members to investigate the campaign expenditures of candidates for the Senate. Johnson of California declined the nomination of the President of the Senate to be chairman of this committee, and Nye of North Dakota was appointed to the post.

Investigation of Lobbying. Continuing its work begun in 1929 a special Senate committee investigated activities connected with alleged lobbies seeking to affect Senate action. In connection with a report that he filed on behalf of the committee, Robinson of Indiana asserted that the National Council of Importers and traders, according to testimony, had spent \$188,039 in the first eleven months of 1929 in efforts to promote lower tariffs. W. F. Doane, editor of the *Manufacturer*, testified in March that Grundy of Pennsylvania had retained him in Grundy's personal

pay for tariff work at Grundy's office in the Senate building. Investigating alleged lobbying related to Muscle Shoals, the committee obtained testimony that Claudius H. Huston, shortly before his becoming chairman of the Republican National Committee, and while connected with the Tennessee River Improvement Association, had received from the Union Carbide Company checks to the total of \$36,100 for the use of that association, and that these checks had been deposited in margin accounts with brokers, of which Huston was the beneficiary. It was testified that Huston had later paid the money to its intended destination, but there resulted a widespread demand that he should resign from the party chairmanship on account of these transactions. Huston resigned the party chairmanship on August 7, after conference with President Hoover.

The committee gave much attention to allegations of lobbying for or against Prohibition. The operations of the Association Against the Prohibition Amendment, to which John J. Raskob was alleged to have given liberally, were studied, while on the other hand the affairs of the Anti-Saloon League and of the Commission on Temperance and Social Service of the Methodist Church, South, were also investigated. Henry H. Curran of the anti-prohibition association testified that his society had received contributions of \$427,213 in 1929. Representative Tinkham of Massachusetts testified before the committee on April 15 to the effect that the Anti-Saloon League had not made full reports of its expenditures as required by the Corrupt Practices Act of 1912. He asserted also that Bishop James J. Cannon of the Methodist organization had not fully credited to one of its donors, E. C. Jamieson, contributions of \$65,300 made during the Presidential campaign of 1928. Cannon, testifying, admitted having received the full amount but denied the authority of the committee to require testimony from him on his activities in the anti-Smith campaign of 1928. See PROHIBITION.

Senate Action on Appointments. Two vacancies in the Supreme Court were produced by the resignation of Chief Justice William H. Taft on February 3, during his last illness and by the death of Justice Edward T. Sanford on March 8. President Hoover's nominations of successors for both the vacant seats met with more than usual opposition in the Senate. Charles Evans Hughes, who had resigned from the Court in 1916, was the President's nominee for the chair of Chief Justice. Borah of Idaho and Norris of Nebraska led the opposition to his confirmation. The anti-Hughes group charged the nominee with having been in too close relations with large corporations and with being likely to bring to the Court conservative rather than liberal opinions. The debate, forming the chief business of the Senate for three successive days, gathered to a head much of such antagonism to the administration of President Hoover as had grown up within his own party. It created an issue of whether the judgment of Mr. Hoover was to be rejected. The vote, taken on February 13, gave an ample though not striking majority in confirmation of the appointment. The Yeas numbered 52 and the Nays 26. Among the latter were 11 Republicans. The voting Democratic members were almost evenly divided.

For the second vacancy in the court the President nominated Judge John J. Parker of North

Carolina. The result in this case was less happy. Parker was unpopular with colored leaders on account of utterances attributed to him regarding the Negro in politics, and with union labor interests because of a decision that he had rendered on the bench in his home State. The Judiciary Committee reported unfavorably on him, April 21. Though a vote was delayed for more than two weeks the opposition could not be overcome. On May 7 the Senate rejected the nomination by 41 votes to 39. President Hoover then nominated Owen J. Roberts, a Philadelphia lawyer, who was duly confirmed.

Naval Treaty and Special Senate Session. The treaty of naval limitation signed at London on April 22 by the representatives of Great Britain, Japan, and the United States was submitted by President Hoover to the Senate for ratification on May 1 with a brief transmitting note. It went into the hands of the Committee on Foreign Relations. Before this body Rear-Admiral Bristol, U.S.N., head of the executive committee of the General Board of the Navy, testified that in his belief the treaty did not give the United States parity with Great Britain nor preserve the 5-3 ratio with regard to Japan. Rear-Admiral Hilary P. Jones, U.S.N., who had attended the naval conference at London, testified that his protests to Secretary of State Stimson at the Conference, as to the reduction proposed for the allowance of United States cruisers carrying 8-inch guns, had been overruled. In spite of efforts to obtain a vote of confirmation before the close of the session, a caucus of Republican Senators elected on May 26 to defer consideration of the treaty until after the session had ended.

The President accordingly, at the close of the regular session, summoned the Senate to convene in special session on July 7. On that day he issued a message to the Senate, urging ratification of the treaty, lest the world "be again plunged backward from its progress towards peace."

On the supposition that the Administration might in some way have engaged itself informally to other governments, to a greater degree than the treaty itself revealed, McKellar of Tennessee offered a resolution to request the President to transmit to the Senate all documents and other data bearing on the treaty. The Senate adopted the resolution, whereupon the President replied on July 11 that as the submission of such papers would betray foreign confidence needful to the "protection of future negotiations," he thought such a step incompatible with the public interest.

Norris of Nebraska offered a resolution to render ratification of the treaty conditional to there being no "secret files, documents, letters, understandings or agreements" of a nature to modify it. This resolution, backed by considerable sentiment against the withholding of the confidential papers, was carried. The Senate ratified the treaty itself on July 21 and adjourned for the summer.

SEVENTY-FIRST CONGRESS, SECOND REGULAR SESSION. The Congress convened on December 1 in its second regular session. Its composition was changed to some extent by the November elections. Notably, in the Senate were admitted the Democrats Bulkley of Ohio, McGill of Kansas, and Williamson of Kentucky and the Republicans Cary of Wyoming, and after brief intervals, Morrow of New Jersey and Davis of Pennsylvania. The

organization of both houses remained essentially the same as during the first regular session.

The situation facing Congress at its opening was an unusual one with respect to National finances and economic depression. In advance of the session the Administration had sought Democratic coöperation to the end that pressing measures might go through without fail before the expiration of the Congress on March 4. Robinson of Arkansas, as Democratic floor leader in the Senate, had favored this course, thus assuring weighty if not unanimous Democratic support for majority measures deemed essential. The difficulty in agreement on a programme of such measures lay in the accepted need of increasing Federal expenditure for the sake of promoting public works and thus dispensing work to the needy, coupled with the difficulty of raising requisite revenue to meet such expenditure and likewise cover an existing deficiency in revenue, without raising taxation in such wise as to depress business farther.

The President's Message. Delivered to Congress on December 2, the President's message was devoted in chief part to the kindred topics of the economic situation, the unemployed, the unfavorable condition of agriculture, and the position of the Federal finances. Apart from these matters the message indicated that a programme for the authorization of the construction of naval cruisers would be offered by the Navy Department; that much pending legislation, including the determination of policy with regard to the Muscle Shoals power development, should be completed; that the transmission of electric current between States should be regulated; that further measures should be taken to promote the consolidation of railroads; that an inquiry should be undertaken into the workings of the anti-trust laws; that the income tax on capital gains should be mitigated; that the admittance of immigrants should be made more selective; that methods should be provided to keep alien criminals out of the country; that leased post offices in large cities should be replaced by Government buildings; that Congress should study inequalities in the service allowances to veterans.

With regard to the economic depression the message dwelt in congratulatory vein on the organized coöperation that President Hoover had put in motion a year earlier, to enlist great public and private organizations in the maintaining of building activity as a means to reduce unemployment. Business activity and the general total of income were represented as measuring between 80 and 85 per cent of normal, 1929 being taken as the norm. The number of the unemployed was set at 2,500,000 as of April 1, on the basis of the Census figures, and was admitted to have subsequently somewhat risen.

With regard to taxation the message asserted that "to increase taxation for the purposes of construction work defeats its own purpose, as such taxes directly diminish employment in private industry." Nevertheless it was recommended that Congress seek to increase employment within the ensuing six months, eschewing new plans that would not bear their results within that time. As to agriculture it was pointed out that under the dispensation of the Farm Board the prices for wheat, Indian corn, wool, and other products were far above those in leading foreign markets. An appropriation to the Department of Agriculture to enable it to lend to drought-stricken farmers to buy seed and stock feed was recommended.

As to the general situation of the Federal finances the message candidly stated that in place of the surplus of revenue to the amount of \$48,000,000 that the Administration had anticipated when it had recommended the cutting down of the income tax in the previous December, the government now estimated for the fiscal year a deficiency of \$607,000,000 in the relation of revenues to expenditures, as reckoned on the accepted constituents of each. This great deficiency resulted from the estimated reduction of revenues by about \$430,000,000 below the earlier estimate and from the estimated expansion of expenditures, under existing provisions, by some \$225,000,000. Against the huge resulting deficiency were offset the \$123,000,000 of the Treasury surplus for the fiscal year, as estimated in December, 1929; the payments received from foreign governments to cover interest on their debts to the Treasury, in all about \$185,000,000, to be converted by administrative action to cover expenditure; and a sum of \$100,000,000 represented by the President as available from the Farm Board. By administrative "economies and deferments" he hoped to reduce expenditure by yet another \$67,000,000. He looked forward to an effective deficit of \$180,000,000 for the current fiscal year, as thus reduced by divers expedients. With regard to the ensuing fiscal year, 1932, as well as 1931, he intimated that the cuts in the income tax in operation in the calendar year 1930 would have to be abandoned.

Budget Message. The President's budget message, delivered to Congress on December 3, submitted plans for a total ordinary Federal expenditure, in the fiscal year 1932, of \$3,618,335,563 which was about \$225,000,000 in excess of the appropriations (\$3,393,344,355) to date for the fiscal year current. The chief positive items toward this increase were an additional proposed appropriation of \$100,000,000 for the Farm Board, about \$110,000,000 more for the Veterans' Bureau, an approximate \$50,000,000 additional for the Department of Agriculture, and a further \$33,000,000 approximately for the Shipping Board and the Fleet Corporation. The postal expenditure, though as usual included in the estimates, was to be covered in the main by receipts, so that the actual budgetary estimate of ordinary expenditure for the fiscal year 1932 might be set in the neighborhood of \$3,000,000,000. The total for service of the public debt, constituting extraordinary expenditure, was estimated at \$1,049,509,905. The general fund receipts for 1932 (fiscal year), exclusive of postal revenues and after segregation of special and trust fund receipts, were estimated at \$3,852,401,738, or about \$250,000,000 higher than those already provided for the fiscal year 1931.

With regard to the finances of the current fiscal year 1931 the Budget Message expressed the President's disapproval of proposals to meet the impending deficit by reducing the statutory redemption of the public debt. Temporary borrowing on the part of the Treasury was suggested as the possible alternative. The President further predicted that "it will probably be necessary for Congress to appropriate additional money for expenditure within the present fiscal year in order to increase employment and to provide for the drought situation."

Special Message of December 4. The phrase last quoted prepared the ground for a further message from the President, delivered to Congress on

December 4. Herein was requested \$151,603,780 to be appropriated, chiefly to the use of the Federal-Aid highway system (\$80,000,000) and the Army Engineers (\$25,500,000), for expenditure on public works in the course of the ensuing six months. Appended was a letter of Budget Director Roop vouchsafing that the scheme of appropriations had been prepared with a view to supplying, through public works, only direct and immediate benefits to those needing them. The apparent effect of this plan of added expenditure was that it must increase the Federal deficit for the fiscal year 1931 by a further large sum, to approximately \$331,000,000.

Bills to Relieve the Needy. The opening days of the session witnessed the introduction of a flood of bills carrying appropriations to aid the needy part of the population. A Senate measure from Glenn of Illinois provided an emergency fund of \$150,000,000 for an emergency fund to accelerate public works; one from Robinson of Arkansas, McNary and Caraway, \$60,000,000 for the succor of drought-stricken farmers; from Capper of Kansas, a resolution to distribute 40,000,000 bushels of the Farm Board's wheat to relief organizations for food; from Senator Brookhart a bill to increase appropriation for public roads to \$500,000,000 a year for two years; from Senator Keyes and Representative Elliott, a bill to expedite work on public buildings; from Representative Huddleston a measure to create a Destitution Fund of \$50,000,000 for expenditure by the President.

Further Needs of the Farm Board. President Hoover embodied in a letter of December 8 to the Speaker of the House a demand for the appropriation of a further \$150,000,000 to the use of the Farm Board. He stated that he had included this appropriation in the estimates of expenditure for the current year to which the government was already committed, and that it would consequently not swell the estimated deficit of about \$180,000,000 for the current year, on that basis, to which he had alluded in his budget message. This proposed appropriation for the Farm Board made up two-thirds of the \$225,000,000 by which the President had estimated that expenditures for the current year would outrun appropriations already made.

Progress of Appropriation Measures. There was a disposition among some members in either branch of Congress to exceed greatly the supplementary appropriations that had been recommended for the current year. This was particularly evident with regard to the sum sought for further relief to drought-stricken farmers. Where the President had sought \$25,000,000 to furnish loans to supply these people with seeds for their next season and the like, the Senate on December 9 passed a measure to grant \$60,000,000 for drought relief, and the House voted for a total of \$30,000,000 for this purpose. There followed a settlement of the difference by conference committee. Finally, on December 19, both houses adopted a resolution and appropriating \$45,000,000 for advances to the farmers, to be administered by the Secretary of Agriculture.

The Federal emergency construction bill as passed by the House appropriated, for use in the current fiscal year, \$110,000,000 for expenditure in divers specified forms of construction, but chiefly for advances to such States as would not or could not make up their own shares of the sums to be spent on road work in accordance with the

Federal-aid road programme. The House bill, at the same time, empowered the President to transfer any part of the appropriated money from one to another of the specified uses. The Senate passed a much altered bill, to appropriate \$118,000,000 for emergency construction, giving the President no power to alter the allocation of the items, and required that construction work under the appropriations be done by local labor at the highest wages prevailing in each community. The differences between the two houses were not readily composed in conference committee. Finally, however, on the night of December 20, both houses enacted a compromise measure placing the total appropriation at \$110,000,000, retaining the power granted the President to shift items, and eliminating the provision as to rates of pay. As initially allocated in the act, the appropriation provided \$80,000,000 for the Federal-aid highway system; \$22,500,000 for rivers and harbors; \$3,000,000 apiece for flood control in the Mississippi Valley, highways in the National forests, roads, trails, and bridges in the National forests, and roads in the public lands; \$1,500,000 for roads and trails in the National parks.

A bill appropriating \$150,000,000 for the further requirements of the Farm Board in the current fiscal year was likewise enacted just before the year-end recess. It brought to \$400,000,000 the total of appropriations on account of the revolving fund of \$500,000,000 that Congress had authorized in 1929 when it created the Board.

Appropriations for 1932. House and Senate both passed before the holiday an appropriation bill of \$1,083,000,000 to cover the needs of the Treasury and of the Post Office for the ensuing fiscal year, but differences on amendments remained to be adjusted by conference. The house passed an appropriation of \$213,000,000 for the Department of Agriculture and one of \$68,500,000 for the Department of the Interior.

Court of International Justice. The President, in a message of December 10, submitted to the Senate for its ratification the two protocols for the revision of the statutes of the Court, designed to meet the stipulations of one of the reservations that the Senate had made on Jan. 27, 1926, as condition to the United States' accession, and also the protocol for accession. He recommended ratification, stating that "these protocols permit our withdrawal from the court at any time without reproach or ill-will." The anti-court group gave evidence of intention strongly to oppose ratification. The Committee on Foreign Relations adopted on December 17 a motion of Reed of Pennsylvania to postpone consideration of the protocols until December of 1931. Reed explained his motion as prompted by the desire to obviate a special session in the spring, which he feared might result if the issue were immediately pressed. See *WORLD COURT*.

Nominations Ratified. The Senate confirmed, prior to recess, the President's nominations of all five members of the reconstituted Federal Power Board. The nominees were Ralph B. Williamson of the State of Washington, Claude L. Draper of Wyoming, Dr. George Otis Smith, Marcel Garsaud, and Frank R. McNinch of North Carolina. McNinch's name encountered Democratic opposition on the ground that he had worked on behalf of Hoover in the campaign of 1928 and consequently could not qualify as a Democratic member of a bipartisan board. His confirmation was regarded as an Administration victory. The President

nominated, to succeed James J. Davis as Secretary of Labor on the latter's entering the Senate, William N. Doak, a prominent official of the Railroad labor unions. As these were not affiliated with the American Federation of Labor, there arose opposition within the Federation, but this was withdrawn and Doak was duly confirmed.

Investigation of the Norris Campaign. The special Senate committee investigating campaign expenditures of 1930 went farther, in December, into the intrigue against the renomination of Norris of Nebraska. Seeking to trace to Washington the inspiration of the maneuver by which another and obscure Norris had been put up for the State Republican Senatorial primaries with the apparent purpose of invalidating the Norris vote, it elicited information to the effect that Robert H. Lucas, executive director of the Republican National Committee, had secretly expended money for the printing of circulars adverse to Senator Norris, and had in so doing used the fictitious name of John M. Feters. Mr. Lucas rejoined with a public statement on December 20, that he had sought the defeat of Norris and defending this course on the ground that Norris in supporting Smith for President in 1928 had ceased to be a Republican.

ELECTIONS

Elections to Congress were held on November 4 in all States except Maine, which held to its practice of September elections. There were elected in the Nation Representatives to the Seventy-second Congress from every State, to the number of 435, the reapportionment on the basis of the Census of 1910 still prevailing; Senators for full terms to the number of 34; Senator for a partly expired term ending in 1935 and thus holding over into the new Congress, one (from Kansas). Thirty-two States elected Governors and other chief officers; all States but four chose Legislatures.

The results in their national aspect were: the apparent election of 14 Republicans and 21 Democrats to sit in the Senate of the Seventy-second Congress in 1931; the apparent election of 216 regular Republicans, 1 Independent Republican, 1 Farmer-Laborite, and 217 Democrats to the House of Representatives for that Congress; the election of 17 and probably of 18 Democratic Governors, of 12 Republican Governors, of one Farmer-Labor Governor (Floyd B. Olson of Minnesota), and one Independent Governor (Julius L. Meier of Oregon). As to the current Congress, the Seventy-first, elections for unexpired terms brought to the Senate three more Democrats, raising the Democratic strength to 41 and lowering the Republican to 53; while in the House the Democrats filled eight and the Republicans five vacancies, thus bringing the Republican superiority below 100 votes.

By comparison with the composition of Congress before the November election the result was a severe setback for the Republican party and for the Administration. Fourteen Republican and 21 Democratic Senators were apparently elected to sit in the ensuing Senate. But in many of these cases the result was settled in advance by the invariable party predominance. A more accurate gauge of the implications of the election lay in the indication that Democratic Senators had been elected to replace Republicans actually sitting in nine elections to seats in the future Senate, among these nine being seats from such States as

Illinois, Kansas, Ohio, and South Dakota. Only one Democratic Senator was replaced by a Republican, this being Steck of Iowa, who owed his original election to a Republican division in that State, normally rockribbed in its Republican affiliation. In the House of Representatives as elected for the Seventy-second Congress approximately 40 Republican seats were lost to Democrats.

The occasion for this remarkable political overturn was somewhat widely attributed to dissatisfaction with the condition of business. Republicans averred that their party had been made the scapegoat for hard times, while Democrats asserted that the Republican policy in dealing with the depression had been faulty and inadequate. A secondary but important part in shaping the outcome was played by the Prohibition question. The alignment on this issue was not partisan, both of the major parties having numerous candidates on either side of it. An estimate of the alignment of Congress on Prohibition, published in the *New York Times* on November 5, represented the newly elected House as having 298 supporters of Prohibition, 117 opponents, and 21 doubtful, as against 344 supporters and 91 opponents in the old House. In the case of the Senate the alignment was estimated to be: new Senate, 75 for Prohibition, 17 against, and 4 doubtful; old Senate, 78 for, 18 against.

Within a few days after the election President Hoover addressed to Senator Robinson of Arkansas, Democratic leader, an appeal for Democratic cooperation to the end that necessary appropriation and revenue measures in the forthcoming session be not delayed by the introduction of new measures. The proposal was diversely taken by Democratic members of Congress. The President also informally discussed in mid-November the prospect of the accumulation of a deficit in the Federal finances by reason of diminished revenue and higher expenditure. It was intimated that the situation would be likely to lead to the imposition of a heavier rate of taxation on incomes, an issue that neither party had undertaken to canvass systematically in the political campaign. Consult Charles P. Howland, *Survey of American Foreign Relations, 1930* (Yale University Press, 1930). See NICARAGUA; POLAR RESEARCH; EXPLORATION.

JUDICIARY

SUPREME COURT. The United States Supreme Court rendered in 1930 two decisions of high importance with regard to the Federal Prohibition law. The first of these, in the case of *Ike Danovitz*, was given on May 5. Its general trend was to support the contention that the Government might seize goods that, although not in themselves alcoholic, were offered in such a way as to attract purchasers seeking them for illicit purposes in violation of the National Prohibition act. *Danovitz*, as surviving partner of a bottle company, had maintained an action against the seizure of such goods as barrels, bottles, corks, and labels, which the government Prohibition agents undertook to seize under the Prohibition act. Justice Holmes wrote an opinion sustaining the lower court's decree of seizure. He held that the containers and other objects seized had been offered for sale in such a way as purposely to attract purchasers who wanted them for unlawful manufacture. There having been no formal waiver of jury trial, the facts on this point, as originally

established, were held to stand. All the Court concurred. The decision was widely regarded at the time as laying a foundation for a wide extension of the activities of the enforcement organization.

An effort to extend these activities still further, so as to render the purchaser of prohibited beverages legally liable with the seller, was checked by a decision of the Court rendered on May 26, in the case of the United States against James E. Farrar. Justice Sutherland wrote the opinion, in which there was unanimous concurrence. Farrar had been indicted under the Federal law in Massachusetts for the unlawful and knowing purchase of intoxicating liquor. The District Court had sustained a motion to quash the indictment, and the government had carried the matter to the higher courts on appeal. It sought to base the liability of the defendant on Section 6 of the Prohibition Act, which detailed the need of having a permit or prescription for the purchase of liquor. It thus differed from the earlier case of the United States vs. Katz, in which had been charged a conspiracy to effect a sale of liquor in violation of Section 10 of the act, requiring a permanent record of sale. The opinion held that in Farrar's case, as in the Katz case, the section of the law cited against the defendant had application to other types of liquor dealings. No opinion was given as to the question whether Farrar's acts constituted a participation in conspiracy, this not having been the basis of the indictment. The quashing of the indictment against Farrar as a purchaser of liquor was therefore affirmed.

On November 24 the Supreme Court rendered its decision in two cases affecting groups of producers in the moving-picture business, the one headed by the Paramount-Famous-Lasky Corporation and the other by First National Pictures. The Government had brought action against both groups for violation of the Sherman Act, and both cases had come up on appeal, the one by the defendants and the other by the government. Justice McReynolds wrote the decision on the two cases. He held that the uniform credit and contract system upon which producers and distributors of moving pictures had settled amounted to an unlawful restraint of trade. He found that the arrangement had the obvious purpose of coercing purchasers. The decision was without dissent. It was commonly regarded as basically unsettling the marketing organization of the motion-picture industry.

On May 19 the Supreme Court declined to take jurisdiction in the matter of a complaint of the United States Navigation Company, which alleged that the Cunard line and 13 other British shipping companies were engaged in a conspiracy to monopolize shipping in the United States. The Court affirmed that it had discretion whether to entertain such a complaint or not, and it chose not to do so. On the same date the Court declared, in the appeal of the North Dakota Board of Railroad Commissioners, to set aside a Federal injunction to prevent the putting into effect of certain railroad rates that the Commission had declared and that the Interstate Commerce Commission had not yet reviewed, that the Federal tribunals were without authority to prevent State railroad rates from going into effect.

A unanimous decision of the Court, rendered on June 2, in an appeal of the Ann Arbor Railroad Company upon freight rates affecting Cali-

fornia territory, was adverse to the Interstate Commerce Commission's interpretation of the Hoch-Smith resolution, passed by Congress in 1925. The Court held that this resolution, so far as contrary to the guaranties in the Railroad act, gave the Commission no authority to lower railroad rates as a measure for the special benefit of farmers.

OTHER FEDERAL COURTS. The Court of Customs and Patent Appeals ruled on April 10, in the case of *Frischer and Company et al. vs. the Bakelite Corporation*, that the President had the power to fix duties on imports of commodities whenever he found unfair business methods to obtain in their importation. This power the Court held to be not a delegation of the legislative function, such as might render it unconstitutional, but a true administrative power.

The legal issue over the course of the Administration in refusing further permits for the working of petroleum and natural-gas deposits on the Western public lands was brought into the Supreme Court of the District of Columbia by application for a writ of mandamus to reinstate the application of certain individuals in California and New Mexico. The Court held that the act of 1920 did not give the power that the Secretary of the Interior had sought to exert, and announced on April 9 that it would issue the writ. The Government prepared an appeal.

The Court of Appeals of the District of Columbia by a decision rendered on December 1 upheld the authority of the Secretary of the Interior to reject and refuse applications to the Federal Government for permits to prospect for oil and natural gas on lands of the Federal public domain. It thus supported the legality of the policy that had earlier been declared by President Hoover to enforce complete conservation of the oil resources in the government lands during the course of his administration.

Edward L. Doheny, accused of having bribed Albert B. Fall, Secretary of the Interior in the Harding Cabinet, to influence the leasing of the Elk Hills Naval Oil Reserve to the Doheny interests in 1922, was acquitted in the Supreme Court of the District of Columbia on the charge of bribery on March 22. The appeal of Fall, who had been convicted earlier and separately for his part in the alleged offense, remained pending until the close of the year.

Validity of Eighteenth Amendment. In the Federal District Court of the district of New Jersey, Judge William Clark ruled on December 16 that the Eighteenth Amendment to the United States Constitution was invalid. The decision was appealed in due order. While it caused much and immediate anxiety to the enforcers and supporters of the Federal system of Prohibition, it did not affect the operation of that system, the decision being temporarily disregarded even in New Jersey. See **PROHIBITION**; **TRADE UNIONS**.

UNITED STATES MILITARY ACADEMY. A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1930, the total number of cadets was 1254. There were 215 members on the faculty. The academy is a component part of the Regular Army of the United States and is maintained solely by appropriations from the War Department, which in 1930 amounted to \$2,361,335 for salaries and maintenance of public works. The library contained

over 110,000 volumes. The Superintendent in 1930 was Wm. R. Smith, Major General, U. S. Army.

UNITED STATES NAVAL ACADEMY. A school for the education and training of midshipmen in Annapolis, Md.; founded in 1845. The total number of midshipmen at the beginning of the academic year 1930-31 was 2057. The faculty numbered 244. The library contained 71,000 volumes. Midshipmen, after graduation, are commissioned as ensigns in the U. S. Navy. Superintendent, Rear Admiral S. S. Robison, U. S. N.

UNITED STATES OF EUROPE. The project for a European federal union, advocated as early as the Hague Peace Congress of 1898-99, assumed tangible form in 1930 with the issuance on May 17 by Foreign Minister Aristide Briand of France of his "Memorandum on the Organization of a Régime of European Federal Union." The memorandum was addressed to 26 European governments, excluding Russia and Turkey. In their replies all agreed: (1) That the principle of European union merited further study; (2) that the European states should meet in September to consider further action; (3) that the proposed union should not conflict with or impair the value of the League of Nations; and (4) that it should not be directed against any other continent or group of nations.

In accordance with the second point, the Foreign Ministers and delegations of all the European states met behind the closed doors of the council room of the League of Nations in Geneva September 8. M. Briand submitted a report, which included a summary of the replies received by the French Foreign Office, as well as the respective texts. Largely through the influence of Foreign Secretary Arthur Henderson of Great Britain, the project for European union was placed on the agenda of the League Assembly, where an extended public discussion took place September 11. On September 17, the Assembly authorized the appointment of a committee to study, with the League Secretariat, means of "closer collaboration" among the nations of Europe. The various nations were instructed to inform the League Secretariat by December 15 of concrete proposals which they desired to place on the agenda for the first meeting of the committee, scheduled for Jan. 19, 1931.

For the text of the Briand Memorandum of May 17, in French and English, see the special bulletin of *International Conciliation* (published by the Carnegie Endowment for International Peace) for June, 1930. The texts of the replies of the 26 governments, together with the summary by the French Foreign Office, were published in *International Conciliation*, No. 265, for December, 1930. For a general discussion of the problem consult Paul Hutchinson, *The United States of Europe* (Chicago, 1929). See **LEAGUE OF NATIONS**; **INTERNATIONALISM**; **INTERPARLIAMENTARY UNION**; and **FRANCE** under *History*.

UNITED TEXTILE WORKERS. See **LABOR**, **AMERICAN FEDERATION OF**; **STRIKES** AND **LOCKOUTS**.

UNIVERSAL CHRISTIAN COUNCIL ON LIFE AND WORK. See **INTERNATIONALISM**.

UNIVERSALISTS. A religious denomination, existing chiefly in the United States, Canada, Japan, and Korea, which holds as parts of its doctrine the universal fatherhood of God and the final harmony of all souls with God; established in the United States in 1770 by the Rev. John Murray in Good Luck, N. J. The ecclesiastical

organization of the church is under the jurisdiction of the general convention, which meets biennially. In polity, the parish or society is independent in the management of its temporal affairs and worship. The different parishes within a State are organized into a State convention, which meets annually, and these in turn constitute the general convention. In 1930 there were 28 State conventions and two State conferences. The number of churches was 609; ministers in fellowship, including lay licenses, 530; church members, 50,078; and Sunday schools, 405. The denominational periodical, the *Christian Leader*, is published weekly. The Rev. Frank D. Adams, D.D., of Detroit, was president of the general convention in 1930. Headquarters are at 176 Newbury Street, Boston.

UNIVERSES. See ASTRONOMY.

UNIVERSITIES AND COLLEGES. STATISTICS. The United States Office of Education reported that the enrollment in colleges, universities, and professional schools for 1927-28 was 868,793. To this should be added 239,570 in summer sessions, 292,074 in extension courses, 206,799 in Teachers Colleges, and 67,549 in normal schools. The grand total is 1,443,141. This was an increase of nearly 100 per cent since 1920.

During the early part of the year 1930 there was much speculation regarding the effect that the changed economic conditions would have upon enrollments. Many predicted that there would be marked decreases. The opposite was true. Dean Raymond Walters of Swarthmore College collected enrollment figures from 431 institutions having a total registration of 578,671 full time students. He reported in *School and Society* (Dec. 13, 1930) that the enrollment of full-time students in these institutions on Nov. 1, 1930, was three and a half per cent greater than at the same date in 1929. This was more than twice the increase shown between 1928 and 1929. The total registration including part-time, and summer session students showed an increase of only one per cent. Dean Walters attributed this relatively small increase to the smaller attendances in summer schools in 1930.

The ten largest Universities in the United States and their enrollment of full-time students are as follows:

| | | | |
|---------------------|--------|-------------------|--------|
| California | 17,322 | Ohio State | 10,709 |
| Columbia | 14,958 | Michigan | 9,431 |
| Illinois | 12,709 | Wisconsin | 9,401 |
| Minnesota | 12,490 | Harvard | 8,446 |
| N. Y. University .. | 12,149 | Univ. of Wash. .. | 7,368 |

The ten largest institutions ranked according to complete enrollment of resident students, including part-time and summer students, are:

| | | | |
|---------------------|--------|------------------|--------|
| Columbia | 33,144 | Hunter College | |
| N. Y. University .. | 29,214 | (N. Y. City) .. | 15,447 |
| College of City of | | Illinois | 14,169 |
| New York | 24,752 | Northwestern .. | 14,152 |
| California | 22,797 | Pennsylvania .. | 13,928 |
| Minnesota | 18,505 | Ohio State | 13,780 |

The enrollments of full-time students in the larger women's colleges rank as follows:

| | | | |
|---------------------|-------|---------------------|-------|
| Hunter | 4,614 | Florida State Col- | |
| Smith | 1,986 | lege for Women . | 1,676 |
| North Carolina Col- | | Wellesley | 1,550 |
| lege for Women .. | 1,704 | Texas State College | |
| | | for Women | 1,467 |

Among the largest technical institutions or departments and professional schools are the following:

| | | | |
|--------------------------------------|-------|--|-------|
| Engineering, Purdue University | 2,775 | Commerce and Finance, Pennsylvania | 2,267 |
| Law, Harvard University | 1,597 | Education, Columbia | 5,587 |
| Medicine, Northwestern | 740 | Theology, Yale | 258 |
| Dentistry, Northwestern | 440 | Forestry, Syracuse .. | 420 |

The largest summer schools were:

| | | | |
|------------------|--------|------------------|-------|
| Columbia | 13,887 | Chicago | 5,810 |
| California | 7,849 | Washington | 5,171 |
| Minnesota | 6,015 | | |

PROPERTY. The United States Office of Education reported that the value of property belonging to 1076 colleges, universities, and professional schools in 1928 was \$2,413,748,981. The estimated value of property belonging to all such institutions was: grounds, \$298,318,209; buildings, \$1,018,047,321; libraries, apparatus, furnishings, etc. \$245,589,390; and productive funds \$1,150,112,251. Three privately controlled universities had productive funds exceeding \$50,000,000. They were Harvard, \$86,702,843; Columbia, \$63,597,416; and Yale, \$58,024,459.

CHANGES IN ORGANIZATION. The attention of educators was focused upon the changes taking place in Chicago University (q.v.). In November the trustees and faculty sanctioned the beginning of a radical change in educational and teaching methods, as proposed by President Robert Maynard Hutchins. Among the outstanding features of the new plan was the elimination of the four-year undergraduate course, requiring 120 credits, followed by a degree. The traditional college was to be replaced by one from which the student would be graduated whenever he was able to pass a comprehensive examination. This may take four or even five years, or it may be done by a genius in one year. The present graduate school was to be abolished and in place of it and the undergraduate courses the non-professional training was to be divided into five main sections, each with its own dean. These are: the social science section, the physical science section, the biological science division, the humanities division and the college. These divisions will award all non-professional degrees, including the equivalent of the present bachelor's, master's, and doctor's degrees.

The assignment of the various departments to the divisions was as follows:

Humanities—Philosophy, art, comparative religion, Oriental languages, New Testament, comparative philosophy, Greek, Latin, Romance, Germanics, English.

Social Sciences—Psychology, education, economics, political science, history, sociology, anthropology, home economics, geography.

Physical Sciences—Mathematics, military science, astronomy, physics, chemistry, geology.

Biological Sciences—Botany, physical culture, zoölogy, anatomy, physiology, physiological chemistry, hygiene and bacteriology, pathology, the clinics group.

Those who manifest fitness during the time they are obtaining their general education may pass into an upper division, or professional school.

The University of California (q.v.) changed its entrance requirements so as to require that the student in the high school complete "subjects which are regarded as important prerequisites for

university work." In general, the university designates eleven or twelve of the points that the entering student must present. Plans for the opening of the Institute for Advanced Study were progressing. This will be exclusively a postgraduate institution.

The George Washington University (q.v.) inaugurated a change in administration at its opening in September. It places freshmen and sophomores in a junior college where their work is under the close supervision of advisers. If they cannot or do not care to go on into the senior college, they can terminate their work at the end of the sophomore year and receive a Junior College Certificate. There are four divisions of study. They are languages and literatures, mathematics and the physical sciences, the natural sciences and the social sciences.

At the University of Minnesota (q.v.) there was established what was described as an all-university curriculum. A general committee has charge of the supervision of this work. Such students as the committee selects may study the things they want in any part of the university where they are found.

CRITICISM OF COLLEGES. In November there appeared a book entitled *Universities—American, English, German*, by Dr. Abraham Flexner. For many years Dr. Flexner was a director of the General Education Board, and in 1930 was made head of the new Institute for Advanced Study recently established by Louis Bamberger and his sister, Mrs. Felix Fuld. Dr. Flexner criticized severely many of the educational practices in American universities. He objected to the numerous extensions that have been made to the offerings, and also to correspondence, home study, and extension courses which offer college credit toward a bachelor's degree. He considered such courses as competing with the high-school offerings.

Dr. Flexner praised the graduate school as contrasted with the undergraduate departments. He also commended the provisions that had been made for libraries in American universities. He charged that enrollments have been "padded." He stated that by eliminating extension, correspondence, home study, and certain other groups of students, enrollments of 25,000 to 48,000 would be reduced to less than 5000. The criticisms that Dr. Flexner has offered called forth but few statements from the institutions concerned. It was reported that Dr. Flexner characterized this quietness as representing "discretion as the better part of valor."

ATHLETICS. During the year there was much discussion regarding college and university affairs. The report on college athletics which the Carnegie Foundation for teaching published in 1929 received much attention, but the effects were not evident to any marked degree. Athletic coaches in some places continued to receive salaries that were equal to or greater than those paid to the presidents in their respective institutions. Gate receipts continued to be large and the profits from football were the chief means of support for other less spectacular sports within the colleges.

Dr. Nicholas Murray Butler, in his annual report as President of Columbia University, stated some proposals that have received wide attention. He recognized the abuses that exist, and offers suggestions that look toward their elimination. He said that possibly "an academic League of Nations" should take jurisdiction over the entire

field of academic athletic endeavor. An additional proposal advanced by Dr. Butler was as follows:

Perhaps the one satisfactory and permanent solution of these problems is that athletic sports, being a well-recognized part of undergraduate life and undergraduate training, should be suitably and adequately endowed by the alumni. Were this done, it would then be possible at one stroke to bring to an end the importance and influence of gate receipts and to put baseball and football, for example, on the same excellent plane that rowing has long occupied.

EDUCATIONAL BOARDS AND FUNDS. *The Commonwealth Fund Scholarships.* Thirty-three students from British and Colonial Universities and the British Colonial Service received scholarships from the Commonwealth Fund for study in the United States. The scholarships are awarded annually. The students are expected to enter upon their studies in September. They travel, through the United States during the next summer and complete a second year of study before they return. The students for 1930-32 elected to study in sixteen different institutions.

Charles and Julia Henry Fund Scholarships. This fund was established by a bequest of Lady Julia Lewisohn Henry who died in 1927. She stated that the fund was established "in the earnest hope and desire of cementing the bonds of friendship between the British Empire and the United States." To this end scholarships amounting to about \$2500 each were to be offered annually to four American students for study at Oxford and Cambridge, and like amounts to four British students to study at Harvard and Yale. The scholarships were for undergraduates and are open to both men and women. Normally they are for one year only, but they may be extended. The first appointments were to be made not later than Apr. 18, 1931.

The John Simon Guggenheim Memorial Foundation. This foundation with an endowment of \$3,500,000 provides scholarships that usually amount to \$2500 for one year to such American advanced students as desire to carry on researches in other countries, or such students from foreign countries as desire to do advanced study in the United States. The foundation was established in 1925. Up to 1930 it had assisted 295 persons. During 1930 it supplied fellowships to eighty-four scholars, novelists, poets, composers, sculptors, painters, and other creative workers.

The Josiah Macey Junior Foundation. This foundation was created by an initial gift of \$5,000,000 by Mrs. Walter Graeme Ladd. The purpose was to assist in medical research which would concentrate on "fundamentals of health." The donor stated her wishes, in part, as follows:

It is my desire that the foundation in the use of this gift should concentrate on a few problems rather than support many undertakings and that it should primarily devote its interests to fundamental aspects of health, of sickness and of methods for the relief of suffering; in particular to such special problems in medical science and medical arts as require for their solution studies and efforts in correlated fields as well, such as biology and the social sciences. To these ends the foundation might give preference in the use of this fund to integrating functions in medical sciences and medical education for which there seems to be particular need in our age of specialization and technical complexities.

The Milbank Memorial Fund. The report of this fund for the year 1929 showed that the total appropriations up to the end of 1929 were \$9,422,460. The money was used for health, social welfare, and education. The officers of the fund announced that thereafter greater emphasis would be placed upon health research and education.

Rhodes Scholarships. The trustees of the Rhodes Scholarships changed the method of selecting the scholars who were appointed in December, 1930. Prior to this time two scholarships were appropriated to each State every three years. This year as an experiment they created eight districts of six States each. The 32 scholars were selected by permitting each State to recommend its best two candidates. From the 12 men thus recommended by each district the four best were chosen without regard to State lines.

A Trust Created by the late Charles F. Ruggles. Mr. Ruggles who died in August, 1930, left an estate estimated at about \$50,000,000 "for such charitable, benevolent, educational, and public welfare uses as said trustees shall elect." Both the principal and the interest may be used. His will contains the following statement:

It is my desire and interest that such trust estate and the income thereof shall be devoted to charitable, benevolent, educational and public welfare uses in the State of Michigan, and that the trustees may, in their discretion, organize a Michigan corporation to hold said trust estate and disburse the proceeds and income thereof for such purposes. It is my desire and intent that the reasonable needs and requirements of the inhabitants of Manistee County and of the charitable, benevolent, educational and public welfare institutions serving the inhabitants of said county, shall at all times be given preference over the like needs and requirements of other persons and institutions in the disbursement of said trust estate and of the income thereof.

GIFTS AND BENEFACTIONS. The year was noteworthy in the number of gifts that were made to colleges and universities. Among those of \$100,000 or more the following were announced:

Alfred University received gifts and pledges totaling \$1,020,000. **Atlanta University** received a grant of \$450,000 from the General Education Board for a Library. A fund of more than \$1,000,000 provided by William Curran, who died fifty years ago, was awarded to **Beaver College**. The will stipulated that the money should be used as a "foundation for the education of females in or adjacent to Philadelphia." **Boston University** received a trust fund of \$500,000 for the establishment of a school of journalism by the will of the late Mrs. Mary E. Taylor. **Bowdoin** received a gift of \$500,000 from Cyrus H. K. Curtis. The **Clarkson Memorial College of Technology** was to receive a bequest of \$1,145,531 through the action of Mrs. Emilie V. Moore in renouncing all interest in this sum which was left her for life by the late Mrs. Annie Clarkson.

Columbia University received \$600,000 from Edward S. Harkness to increase the endowment of the department of surgery. Mr. Harkness also supplemented a previous gift for a residence hall at the Medical Centre by a further gift of \$500,000. By the will of the late Miss Euretta J. Schlegel, Columbia was to receive \$173,232. **Dartmouth College** received a gift of \$1,000,000 from George F. Baker for the maintenance and support of the Baker Memorial Library, and a bequest of \$100,000 from the estate of the late Richard Crawford Campbell. **De Pauw University** received a legacy of \$200,000 for a chair of philosophy from James Nelson, a bequest of \$150,000 from the estate of the late Marion B. Stultz, and the major part of an estate valued at \$2,000,000 by the will of the late John H. Harrison. **Drexel Institute** received a gift of \$300,000 from Cyrus H. K. Curtis toward the erection of a women's dormitory.

George Washington University was to receive more than \$500,000 "for the promotion of athlet-

ics" by the will of the late Richard E. Pairs. **Harvard** received \$100,000 by the will of the late William Amory Gardner. **Haverford College** received a gift of \$150,000 from Charles Wharten Stook. **Johns Hopkins** received two gifts amounting to \$250,000 for the Institute of Law. **Lafayette College** received gifts of \$400,000 from John Markle, \$500,000 from Fred Morgan Kirby, and \$100,000 from Thomas Fisher. **Knox College** received gifts totaling more than \$900,000. **Lehigh University** received a bequest of \$100,000 by the will of the late Langdon C. Stewardson. **Leland Stanford** received a bequest of \$150,000 for a chair in American History, by the will of the late James William Byrne.

New York University received a bequest of \$2,000,000 by the will of the late William H. Nichols; also a bequest of \$1,000,000 by the will of the late Mrs. Emma Baker Kennedy. \$250,000 from the estate of the late Conrad Hubert, and \$100,000 from John P. Munn. **Notre Dame University** received \$200,000 from Edward N. Hurley for the foundation of a College of Foreign and Domestic Commerce. **Oberlin College** received a gift of \$100,000 from John D. Rockefeller, Jr., to be used toward a building for a Graduate School of Theology, and a gift of \$150,000 from the Carnegie Corporation for a librarianship endowment. **Princeton** received a gift of \$300,000 from John D. Rockefeller, Jr., for the endowment of the industrial relations section of the department of economics and social institutions; a bequest of \$500,000 for an Alumni Trust Fund by the will of the late Thomas Davies Jones and \$400,000 from the estate of the late Frank Hartley as an endowment fund for scholarships.

The **Polytechnic Institute** of Brooklyn received a bequest of \$250,000 by the will of the late William H. Nichols. **Ripon College** received \$100,000 from Rolin B. Lane for a new library. **St. Louis University** received a gift of \$1,000,000 from Firmin Desloge for the erection of a hospital. **Syracuse University** received a gift of \$500,000 from George H. Maxwell for a School of Citizenship and Public Affairs Building. **Teachers College** of Columbia University received a gift of \$103,882 from the International Education Board; \$100,000 from the Laura Spelman fund; \$2,000,000 from the General Education Board for the endowment of the Lincoln School; and a bequest of \$500,000 contained in the will of the late V. Everit Macy.

The **University of California** received a bequest of \$150,000 by the will of the late James William Byrne; and a gift of \$100,000 from the family of the late Ross and Jacob Stern to develop a department of music. The **University of Chicago** received \$250,000 from the estate of the late Conrad Huber. The **University of Michigan** was to receive the income from a trust fund of \$12,000,000 which was willed to it by the late William Wilson Cook. The university also received a gift of \$200,000 from Charles Lathrop Pack for the establishment of a foundation to be known as the George Wallis Pack Forestry Foundation. The **University of North Carolina** received a gift of \$100,000 from Rufus L. Patterson and John M. Morehead for the erection of a memorial Carillon tower. The **University of Pennsylvania** received a bequest of \$1,094,923 by the will of the late James L. Wood, to be used as an endowment fund. The **University of Texas** received a gift of \$205,000 from E. D. Farmer to endow exchange fellowships with the University of Mexico.

The *University of Virginia* received a gift of \$350,000 from William A. Clark, Jr., for a law building, \$120,000 from the General Education Board, and \$100,000 from Mrs. Evelyn M. B. Tiffany and a bequest of \$140,000 by the will of the late John B. Cobb for building. *Vassar College* received a bequest of \$200,000 by the will of the late Eva March Tappan. *Washington University* received a gift of \$250,000 from Edward Malinekrodt for the construction of a radio building. *Wesleyan University* was to receive more than \$1,000,000 from the estate of the late Charles Land Denison.

Yale University received \$3,000,000 from the trustees of the estate of the late John Sterling for the Yale Graduate School quadrangle and a fund estimated at \$1,000,000 was added to the gift for buildings. The University was to receive \$1,741,174 as residuary legatee under the will of Otto T. Bannard, also the major part of the estate of the late Samuel Rossiter Betts, valued at \$1,000,000. The announcement of gifts included \$400,000 from the General Education Board for buildings, \$100,000 from Paul Block for a programme of studies in the field of journalism, and \$166,000 by the will of the late Henry H. Strong.

Several schools and academies received large gifts and bequests. The *Groton School* received a bequest of \$500,000 by the will of the late William Amory Gardner. *Phillips Exeter Academy* received a gift of \$1,000,000 from William Boyce Thompson. *Deerfield Academy* received a gift of \$100,000 from Thomas Cochran for buildings and endowment. The will of the late Mrs. Grace Salisbury Foote provides a fund of \$250,000 "for preparatory and college scholarships for promising grammar school graduates." The will of the late Harvey C. Woodward provides a fund estimated at \$7,500,000 for a foundation for the establishment of "a chain of boarding schools for white boys in the South." The donor placed various restrictions upon the location and character of these schools. "Teachers must come from a line drawn east to west through Cincinnati." If after seventy-five years the schools are failures, one-half of the fund is to go to the Massachusetts Institute of Technology and the remainder is to be used as a loan fund for students in schools other than those supported or partly kept up by religious denominations.

NEW PRESIDENTS. New presidents announced in 1930 are listed in the accompanying table.

SURVEYS. *Land Grant Colleges*. A comprehensive survey of land-grant colleges was started July 1, 1927, by authorization of the Congress. An appropriation of \$117,000 was voted for expenses. The U. S. Office of Education conducted the survey and reported its findings in two volumes of more than 1800 pages. The 52 institutions established under the first Morrill Act in 1862 were each studied in detail. Among the phases reported are the following: The sources of revenue, student fees, the success of graduates, the training of the teaching staff, salary, schedules, athletics, student activities, library facilities, scholarships, student loans, and fraternities.

The report shows that the original purpose was to provide a system of education in which a child might pass from the elementary school to the high school and then to the State Land-Grant college or university without the payment of tuition or equivalent charges. This did not hold true at the time of the report, for only 50 per cent of the total revenues were received from State

| <i>Name of Institution</i> | <i>Name of President</i> |
|-----------------------------------|-------------------------------|
| Central College | Dr. Robert H. Ruff |
| Connecticut Agricultural College | Dr. Charles C. McCracken |
| Eastern Nazarene College | Dr. R. Wayne Gardner |
| Eureka College | Dr. Clyde Laten Lyon |
| Fordham University | Reverend Aloysius J. Hogan |
| Goucher College | Dr. David Allan Robertson |
| Hiram College | Dr. Kenneth Irving Brown |
| Juniata College | Dr. Charles C. Ellis |
| Maryland College for Women | Dr. George A. Steele |
| Newberry College | Dr. James C. Kinard |
| North Dakota Agricultural College | Dr. John H. Shepperd |
| Oklahoma Baptist University | Dr. Edgar Goldbold |
| Piedmont College | Reverend Henry Newell |
| Rhode Island State College | Raymond G. Bressler |
| Rose Polytechnic Institute | Dr. Donald Bishop Prentice |
| Shenandoah College | Dr. Vernon L. Phillips |
| Tarko College | Reverend Robert N. Montgomery |
| Tusculum College | Reverend Charles A. Anderson |

| Washington and Lee University | Dr. Francis Pendleton Gaines |
| Western College for Women | Dr. Ralph H. Hickok |

sources. The report disclosed the fact that many students do not take up or continue the profession for which they were trained in college. It appears that 45 per cent of those who studied agriculture did not follow this work after they left college. About the same proportion of those who registered in education failed to teach. Even among those who were trained for engineering, 32 per cent went into some other work.

The total amount received by 41 of the institutions for athletics in 1928 was \$4,545,217. The report offers some adverse criticisms regarding the manner in which some of the institutions allow student bodies to handle the large financial affairs involved in athletics. The methods employed in many of these institutions in looking after the welfare of the students are also criticized.

NATIONAL ADVISING COMMITTEE ON EDUCATION. This committee was appointed by President Hoover to "investigate and present recommendations as to policies which should be pursued by the Federal government with respect to education." The committee was organized in May, 1929. It reported in July, 1930. Among the proposals that are of greatest interest to the public are the following: The "repeal of all laws that give annual Federal grants in any form to the States for special phases of education of interest to special groups of the people—." The other proposal was to "provide one unallotted annual grant to the States of \$2.50 per child under 21 years of age with the sole restriction that these Federal funds be used for the support of educational operations." The adoption of the first proposal would require the repeal of all acts that provide Federal aid for the land-grant colleges, agricultural extension, agricultural experiment stations, vocational education, and civilian industrial rehabilitation. The adoption of the second proposal would bring about a considerable increase in Federal appropriations to educational activities.

The committee believed that "the Federal Government has an obligation to aid public education in the States." It asserted that "in the field of education, at least, matching Federal money grants, whether general or special, with State funds is a policy not to be favored."

The committee did not recommend the establishment of a Department of Education with a secretary in the President's cabinet. It did urge increased Federal appropriations for educational research and informative science. It also recommended the creation of "an adequate Federal headquarters for educational research and information."

THEOLOGICAL EDUCATION. Early in 1930 the Conference of Theological Seminaries, and the Institute of Social and Religious Research began a three-year study of the condition of theological education in the United States. It was planned to make this a thoroughly comprehensive study. It is the first time that such an effort has been made. All denominations are represented, as are all the schools that are considered either radical or conservative. See **EDUCATION IN THE U. S.**; and articles on the individual universities and colleges.

UR. See **ARCHÆOLOGY.**

URAL AREA. See **SIBERIA.**

URIBURU, JOSÉ FRANCISCO. Provisional President of Argentina. See **ARGENTINA under History.**

UROSELECTAN. See **SURGERY, PROGRESS OF.**

URUGUAY, ū'ru-gwā or ō'rōo-gwī'. A republic on the southeast coast of South America, bounded by Brazil on the north and Argentina on the west. Capital, Montevideo.

AREA AND POPULATION. Uruguay's area of 72,172 square miles make it the smallest state in South America. The population on Jan. 1, 1930, was estimated at 1,850,129 (1,429,585 in 1918). For the period 1925 to 1929, births averaged 43,392 annually, deaths, 19,166; the excess of births, 24,226. Persons entering the country in 1929 numbered 201,781; persons leaving, 184,514. The estimated population of the chief cities in 1928 was: Montevideo, 430,000; Salto, 35,000; Paysandú, 35,000.

EDUCATION. In 1929, there were 1288 public schools, with 4023 teachers, an enrollment of 158,465 pupils, and an average attendance of 127,566. The University of Uruguay at Montevideo enrolled 10,072 students in 1927.

PRODUCTION. Livestock raising and agriculture are the principal industries, with about 60 per cent of the total area devoted to stock raising, 20 per cent to mixed stock and crop ranches and farms, and 5 per cent to crop farms. Livestock products constitute over 80 per cent of all exports. In 1929 there were 9,153,000 cattle and 23,000,000 sheep. Cattle slaughtered during the year ended June 30, 1930, totaled 1,363,727 and sheep 2,284,201. The wool clip for 1929-30 reached 64,000,000 kilos, or about 148,000 bales, but wool prices were 50 per cent less than in 1928-29. In March, 1930, industrial establishments numbered 7700, with 96,000 employees.

COMMERCE. Foreign trade in 1929 resulted in the first adverse trade balance since 1923. Imports were valued at \$93,509,167, or \$796,018 (1 per cent) more than in 1928, while exports declined to \$96,466,537, or \$8,784,734 (8.3 per cent) less than in 1928. The United States furnished 31.3 per cent of all imports, as compared to 15.9 per cent by the United Kingdom and

10.2 per cent by Germany. The United Kingdom took 23 per cent of all exports, Germany 14.8 per cent, and the United States 12.1 per cent. In the year ended June 30, 1930, imports from the United States declined 15 per cent to \$24,605,697 and exports to that country declined 7.3 per cent to \$15,645,889. Preliminary returns for 1930 showed total exports of 100,864,000 pesos and imports of 87,202,000 pesos.

FINANCE. Revenues and expenditures of the National Government during the fiscal year 1928-29 totaled 58,576,428 pesos and 57,565,207 pesos, respectively, a surplus of 1,011,221 pesos resulting. As compared with 1927-28, revenues increased 2,050,059 pesos and expenditures about 3,000,000 pesos. In the President's message to Congress of Mar. 15, 1930, a deficit of about 355,000 pesos was forecast in 1929-30; the budget for the year estimated revenues at 58,041,562 pesos and expenditures at 58,547,252 pesos. The 1930-31 budget provided for expenditures of 64,415,000 pesos. The public debt on Dec. 31, 1930, totaled \$239,434,826 converted to United States currency, an increase of \$22,244,487 during the year. The foreign debt Jan. 31, 1930, was 134,550,000 pesos. The Uruguayan peso (par value \$1.0342) declined steadily in terms of foreign currency in 1929 and 1930, reaching an exchange value of \$0.7499 in December, 1930.

COMMUNICATIONS. Uruguay in 1930 had 1700 miles of railway line, most of it privately owned, and 22,487 miles of highways, of which 709 miles were macadam. A total of 18,225 vessels of 16,678,000 net registered tons entered the ports in 1929. A radiotelephone circuit linking Uruguay with the United States was opened Apr. 3, 1930.

GOVERNMENT. Under the constitution of Jan. 3, 1918, legislative power is vested in the Parliament of two Houses, the Chamber of Representatives, elected by universal suffrage of males over 18 years of age, and the Senate, chosen by an electoral college which is elected by popular vote. Executive power is vested in the President elected by direct popular vote and a national administrative council of nine members. President in 1930, Dr. Juan Campisteguy, elected for the term Mar. 1, 1927-Feb. 28, 1931.

HISTORY. After one of the most bitter and acrimonious campaigns in recent Uruguayan history, Dr. Gabriel Terra, candidate of the Batllista, or radical wing of the Colorado (Liberal) party, was elected to succeed President Juan Campisteguy at the election of Nov. 30, 1930. Events of the campaign served to increase the widespread unrest due to economic depression, the continued decline in the exchange value of the peso, and the growing breach between capital and labor.

The Colorado party, which had controlled the Presidency and the National Administrative Council for over 50 years, split into four factions, each of which entered a candidate for President. Despite these divisions, the party retained its control through the Uruguayan electoral law, which gives the entire party vote to the candidate of the faction polling the largest number of ballots. The Colorados polled 147,073 votes, as against 132,553 by the Blancos (Nationalist Conservatives). A pre-election agreement among the Colorado factions provided that Dr. Pedro Manini Rios, candidate of the Riverista faction, would win the Presidency if he polled 17.5 per cent of the total Colorado vote. He failed by 115 votes to secure the necessary percentage, and Dr. Terra, who received 136,186 votes out of the total Colorado

vote, was declared elected. Dr. Luis Alberto Herrera, the Blanco candidate, received 131,777 votes. Both the Riverista faction of the Colorados and the Blancos subsequently demanded the annulment of the election on the ground of fraud. Since the Blancos retained their control of the Senate, under the Constitution the final judge of elections, they held the power to enforce their demand. A recount previous to submitting the returns to the Senate, was under way at the end of the year, with the country in a state of extreme tension.

An incident of the campaign was the "business strike" of October 6 and 7, during which business concerns and industries closed their establishments and held demonstrations against the proposed extension to private business of minimum-wage and old-age pension legislation in force for government employees. Many commercial and industrial organizations pledged themselves not to obey or pay taxes to support the proposed laws. In his message to Congress of Mar. 15, 1930, the President warned that social legislation was being enacted in advance of the state's capacity to support it. In other fields the Government nevertheless assumed new financial burdens. Laws for the relief of agriculture adopted during the year authorized the National Administrative Council to acquire the exportable surplus of wheat and corn direct from the farmers and resell it. Importations of foreign wheat were prohibited and an unsuccessful effort made to peg domestic prices.

In the field of foreign affairs, Uruguay gained much prestige during 1930 by the successful mediation of Foreign Minister Dominguez in the settlement of the dispute between Bolivia and Paraguay arising from the Fort Vanguardia incident in the Chaco region in 1928 (see BOLIVIA and PARAGUAY under *History*). A section of the press continued its demands for tariff retaliation against the United States. The centenary of Uruguay's first Constitution, proclaimed July 18, 1830, was celebrated with elaborate ceremonies in Montevideo, participated in by representatives of Argentina, Brazil, and Great Britain.

UTAH. POPULATION. According to the Fifteenth Census, the population of the State on April 1, 1930, was 507,847. The population on Jan. 1, 1920, was 449,396. The capital is Salt Lake City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|---------------|------|---------|------------|--------------|
| Hay | 1930 | 686,000 | 1,580,000* | \$11,770,000 |
| | 1929 | 657,000 | 1,626,000* | 16,734,000 |
| Wheat | 1930 | 268,000 | 8,999,000 | 4,610,000 |
| | 1929 | 268,000 | 6,403,000 | 6,527,000 |
| Sugar beets . | 1930 | 48,000 | 557,000* | 3,986,000 |
| | 1929 | 45,000 | 565,000* | 2,160,000 |
| Potatoes | 1930 | 20,000 | 3,600,000 | 3,330,000 |
| | 1929 | 18,000 | 2,310,000 | 947,000 |
| Oats | 1930 | 55,000 | 2,436,000 | 1,462,000 |
| | 1929 | 58,000 | 1,763,000 | 917,000 |
| Barley | 1930 | 41,000 | 1,560,000 | 1,217,000 |
| | 1929 | 39,000 | | |

* Tons.

Farms in the State numbered 27,048 in 1930, as against 25,992 in 1925 and 25,662 in 1920. The area of lands under irrigation totaled 1,323,703 acres for 1929, as against 1,371,651 in 1919.

MINERAL PRODUCTION. Much the greater part of the total value of the yearly mineral yield was derived in 1928, as normally, from the mining of the five metals gold, silver, copper, lead, and zinc. The total mine production of recover-

able metal of these five sorts rose to the value of \$95,985,201 for 1929, from \$79,258,904 for 1928.

The mines of Utah in 1930 produced gold, silver, copper, lead, and zinc valued at about \$46,777,600, a decrease of more than \$49,000,000 from the record output of 1929, according to estimates of the U. S. Bureau of Mines. Large decreases were recorded in the output of all metals, particularly in copper and lead. Utah remained first in the United States in the production of silver, but it ranked third in copper after Arizona and Montana, and third in lead after Missouri and Idaho. The dividends reported paid by mining companies in Utah in 1930 amounted to about \$18,630,000. The dividend total compares with \$38,167,339 paid in 1929 and \$18,307,894 in 1928.

Gold production decreased considerably from \$4,969,915 in 1929 to about \$4,121,900 in 1930. The silver output decreased from 17,592,396 ounces in 1929 to about 12,940,260 ounces in 1930, and the total value of the silver output decreased from \$9,370,747 to about \$4,892,000, largely as a result of the decline in the average price of silver from 53.3 cents an ounce in 1929 to 38.5 cents an ounce in 1930. Copper decreased from 318,282,523 pounds in 1929 to about 178,278,226 pounds in 1930, the smallest output since 1922. The value decreased from \$56,017,724 to about \$22,106,500 as a result of a decrease in the average price of copper from 17.6 cents a pound in 1929 to 12.4 cents a pound in 1930.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the United States Department of Commerce, were: for maintenance and operation of governmental departments, \$9,267,378 (of which \$3,761,360 was for local education); for interest on debt, \$445,900; for permanent improvements, \$1,806,832; total, \$11,520,110 (of which \$3,502,630 was for highways, \$1,775,061 being for maintenance and \$1,727,578 for construction). Revenues were \$12,234,686. The State's funded debt outstanding on June 30, 1929, was \$9,696,000. Net of sinking-fund assets, it was \$5,331,899. On property bearing an assessed valuation of \$700,705,295 were levied in the year State taxes of \$5,222,295.

TRANSPORTATION. Mileage of railroad line under operation on Jan. 1, 1930, was 2193.78. There were built, in 1930, 14.28 miles of second track.

EDUCATION. An important influence on public education was exerted at a special session of the Legislature, which passed in January a measure to provide a State equalization fund.

The number of individuals of school age in the State in the year 1929-1930 was stated as 146,526. There were enrolled in the public schools, in the year, 138,046 pupils. Of these, 108,335 were ranked in grades from one to eight, inclusive, and 29,711 in the higher grades. Expenditures for public-school education totaled \$12,359,392. Salaries of teachers, principals, and supervisors averaged \$1330.

LEGISLATION. The Legislature, summoned in special session by Governor Dern, convened on January 20 and adjourned on February 26. It passed 20 measures, of which six proposed amendments to the State constitution. The chief were those having to do with taxation. It was proposed to classify tangible and intangible property separately for taxation, to create an income tax and to allow exemptions and limitations in the taxation both of incomes and of intangibles. Provision was made for a State Tax Commission of four members, and for a revision of the system

of taxation of metal mines according to net proceeds. It was provided that the State Prison might be removed from Salt Lake County.

POLITICAL AND OTHER EVENTS. Although Utah had been one of the six States to sign the Colorado River compact that formed the necessary preliminary to the Federal Government's undertaking the construction of the Hoover Dam, Governor Dern in a statement on March 27 asserted that Utah had not been fairly treated in the development of the project. He declared that the State had been neglected in the intended allocation of power from the dam, and that it would be necessary for the Government to develop the Flaming Gorge and Dewey projects on the upper Colorado River in order to give equal treatment to the States of the upper basin.

ELECTIONS. No elections for Governor or United States Senator were held on November 4. Two Republican Representatives and a prevailing Republican Legislature were elected. Several proposed amendments to the State constitution were adopted by popular vote. The four chief ones provided that intangible property might be classified for taxation at differing rates on the several classes; that the authority of the State Tax Commission be extended in certain respects; that the system for the taxation of metal mining might be altered; and that the State provide greater aid to local public schools by the creation of an equalization fund of \$750,000. Other amendments, also adopted, dealt with the method for filling vacancies in the Legislature and permitted the removal of the State prison from Salt Lake County.

OFFICERS. Governor, George H. Dern; Secretary of State, Milton H. Welling; State Auditor, Ivor Ajax; State Treasurer, A. E. Christensen; Attorney-General, George P. Parker; Superintendent of Public Instruction, C. N. Jensen.

JUDICIARY. Supreme Court: Chief Justice, James W. Cherry; Associate Justices, Daniel N. Straup, Elias Hansen, William H. Folland, Ephraim Hansen.

UTAH, UNIVERSITY OF. A State institution of higher education in Salt Lake City; founded in 1850. The total enrollment for the autumn of 1930 was 3216 and for the summer session of the same year, 731. The faculty numbered 179. The endowment of the university amounted to \$802,000, and the income for 1929-30 was \$888,000. The library contained 102,821 volumes and 29,326 pamphlets. President, George Thomas, Ph.D.

VACCINES. See **VETERINARY MEDICINE.**

VALENTINE, EDWARD VIRGINIUS. An American sculptor, died Oct. 19, 1930, in Richmond, Va., where he was born Nov. 12, 1838. He studied under Couture and Jouffroy in Paris, Bonaiuti in Florence, and Kiss in Berlin. His most prominent work is the recumbent figure of Gen. Robert E. Lee in the memorial chapel of Washington and Lee University, Lexington, Va. There also were cast from his models the bronze statues of Gen. Thomas J. (Stonewall) Jackson in Lexington, Va., and of Jefferson Davis, with allegorical females symbolical of the South, in Richmond, Va. The most beautiful example of his work in marble is the classic group, "Andromache and Astyanax," in the Valentine Museum, Richmond.

VANCOUVER. See **EXPOSITIONS.**

VANDERBILT UNIVERSITY. A non-sectarian institution of higher learning for men and women in Nashville, Tennessee; founded in

1873. The enrollment for the autumn term of 1930 was 1527 students. The faculty numbered 206. Productive funds of the university amounted to \$19,574,277; the annual income was approximately \$1,300,000; and the value of the property was estimated at \$6,434,645. The library contained 145,000 volumes. Chancellor, James H. Kirkland, Ph.D., LL.D., D.C.L.

VANNUTELLI, VINCENZ, CARDINAL. A prelate of the Roman Catholic Church and Dean of the Sacred College, died in Vatican City, July 9, 1930. He was born in Genazzano, Italy, Dec. 5, 1836, and attended the Gregorian and Apollinare Universities in Rome. Following his ordination in 1860, he was appointed professor of theology in the Vatican Seminary. After serving as Papal Nuncio in Brussels, he was appointed in 1875 by Pope Pius IX Under-Secretary of State, and three years later became Auditor of the Rota. In 1880 he was consecrated Archbishop of Sardes and was appointed Apostolic Delegate in Constantinople. In 1883, he was appointed Papal Nuncio to Lisbon, where he remained nearly a decade. In 1889 Pope Leo XIII created him a Cardinal Priest. Later, in 1900, he became Cardinal Bishop of Palestrina and Ostia, and on the death of his brother, Serafino Vannutelli, in 1915 was appointed Dean of the Sacred College.

VAN TYNE, CLAUDE HALSTEAD. An American historian, died in Ann Arbor, Mich., Mar. 21, 1930. He was born in Tecumseh, Mich., Oct. 16, 1869. After his graduation from the University of Michigan in 1896 he studied for two years at the universities of Heidelberg, Leipzig, and Paris. He received the Ph.D. degree from the University of Pennsylvania in 1900, and during the next three years was senior fellow in history at that institution. In 1903 he was appointed assistant professor of American history at the University of Michigan; in 1906, professor; and in 1911, head of the department of history. During 1913-14 he was lecturer in the French provincial universities on the *Fondation Harvard pour les relations avec les Universités Françaises*, and in 1927 held the Sir George Watson chair of American history, literature, and institutions in British universities. He was an authority on American Revolutionary history and was the author of *The Loyalists in the American Revolution* (1902); *The American Revolution* (1905); *School History of the United States* (with A. C. McLaughlin, 1911); *Causes of the War of Independence* (vol. i of a projected tetralogy, History of the Founding of the American Republic, 1921); *India in Ferment* (1923); *England and America, Rivals in the American Revolution* (1927); and *The War of Independence: American Phase* (vol. ii, History of the Founding of the American Republic, 1929). The 1930 Pulitzer prize "for the best book of the year upon the history of the United States" was awarded posthumously for the latter volume.

VARDAMAN, JAMES KIMBLE. An American lawyer, journalist, and former United States Senator, died in Birmingham, Ala., June 25, 1930. Born in Jackson Co., Texas, July 26, 1861, he read law in an office in Carrollton, Miss., and was admitted to the bar in 1882, beginning his practice in Winona. He also became editor of the *Winona Advance* in 1883, of the *Greenwood Enterprise* in 1890, of the *Greenwood Commonwealth* in 1896, and of the *Jackson Issue* in 1908. During the Spanish-American War he saw service in Cuba and rose to be major in the 5th Volunteer Infantry. He began his political career in 1890 as a member

of the Mississippi House of Representatives, and serving as speaker in 1894. Defeated for Governor on the Democratic ticket in 1895 and 1899, he was elected to that office in 1903 for the term ending Jan. 1, 1908. He was twice, in 1907 and in 1910, an unsuccessful candidate for the United States Senate, but in 1911 was selected in a primary election by an overwhelming majority. He served in the Senate from 1913 to 1919.

VARGAS, GETULIO. Provisional President of Brazil. See **BRAZIL** under *History*.

VASS, MGR. JOSEPH. A Hungarian statesman, died in Budapest, Sept. 8, 1930. He was born in Sárvár, Apr. 26, 1877, and studied theology at the University of Budapest and at the Collegium Germanicum in Rome. His first charge, after taking orders in the Roman Catholic Church, was in Stuhlweissenburg. He later became rector of St. Emmerich's Student Hostel at the University of Budapest, and in 1919 was appointed professor of theology at that institution. He was one of the leaders of the Christian National party and organized the Catholic People's Association in Hungary. After the collapse of the Bolshevik régime under Bela Kun he took an active part in political reconstruction and was elected to the first National Assembly. In 1920 he became Minister for Food and later for Education and Public Worship. From 1922 until his death he was Minister for Social Welfare and Labor.

VASSAR COLLEGE. A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y.; founded in 1861. The enrollment for the autumn of 1930 was 1157. The faculty in 1929-30 had 166 members, including 12 on leave of absence. The endowment, including fellowships and scholarships, amounted to \$7,300,000; the income from funds was approximately \$400,000. Gifts received during 1929-30 were in excess of \$800,000. There were 168,000 volumes in the library. President, Henry Noble MacCracken, Ph.D., LL.D., LL.D.

VATICAN. See **ROMAN CATHOLIC CHURCH**.

VATICAN CITY. A sovereign state, officially known as the State of Vatican City, established June 10, 1929, within the city of Rome as the seat of the Papacy under the terms of the political treaty signed between the Italian Government and the Vatican on Feb. 11, 1929. Ruler in 1930, Pope Pius XI (Achilles Ratti).

Vatican City has an area of 108.7 acres. It embraces St. Peter's Church and Piazza, the Vatican, with its administrative buildings, gardens, and observatory, and adjoining territory. A census taken Dec. 17, 1929, showed 528 inhabitants, including 389 Italians and 113 Swiss. Citizens include those having permanent residence there and the cardinals residing in Rome.

Duties are imposed on goods imported and exported. With the exception of St. Peter's Piazza, the territory is policed by the Pontifical Gendarmerie Corps of 120 members. In 1928 the Vatican received an income reported at \$13,500,000 from "Peter's pence," fiscal dues, private offerings, and other sources. In the settlement of its financial claims against Italy, the Holy See received 750,000,000 lire cash and 1,000,000,000 lire in Italian Government 5 per cent bonds. The average annual expenditures of the Vatican from 1917 to 1929 amounted to about 7,000,000 lire (\$1,400,000). There is no public debt. Direct telegraphic, telephonic, and wireless communication with the outside world and a railway station

linking with the Italian State Railways were placed in operation in 1930. Separate coinage and postal systems were to be maintained.

GOVERNMENT. The Pope exercises supreme legal, executive, and judicial powers, aided by a Governor and by a judicial tribunal, from which cases may be appealed to the sacred tribunal of the Rota and to the supreme tribunal of the Segnatura. The chief officials in 1930 were Commandatore Serafini, Governor, and Cardinal Eugenio Pacelli, Cardinal Secretary of State.

HISTORY. The quarrel between the Vatican and the Government of Malta, involving the relations of Church and State in Great Britain's Mediterranean naval base, assumed greater importance in 1930, resulting in strained relations between the Vatican and the British Government. (See **MALTA** under *History*.) In connection with this dispute, the Vatican on June 21, 1930, issued its first White Paper since the establishment of Vatican City as an independent state in the previous year.

It was officially announced Feb. 10, 1930, that the Pope had accepted the resignation of Cardinal Gasparri as Secretary of State and appointed Cardinal Eugenio Pacelli as his successor. As Papal Nuncio to Bavaria and later to Prussia, Cardinal Pacelli negotiated the concordats between those states and the Vatican.

The first case of a conflict of jurisdiction between the Vatican and the Italian Government arising out of the Lateran Treaties was tried by an Italian court in July. The heirs of Cardinal Vannutelli, who died earlier in the year, had received permission from the Vatican to remove a trunk containing his personal papers before his apartment was sealed. They entrusted the trunk to a Vatican employee, who lived outside of Vatican City. Later the judge of the Vatican tribunal called at the employee's home, sealed the trunk, and ordered that it be held for disposition by the Vatican. The heirs sued in the Italian courts for possession of the trunk.

A monopoly on the purchase and sale of tobacco and salt was established by the Vatican authorities in June, primarily to prevent smuggling into Italy, which had assumed considerable proportions. See **ITALY** under *History* and **ROMAN CATHOLIC CHURCH**.

VAULX, COUNT HENRI DE LA. A French aviator, was burned to death when his airship struck a high-tension electric wire in Jersey City, N. J., Apr. 18, 1930. Born in France in 1870, he first came into public notice by explorations in South America. At the Paris Exhibition of 1900, he won the grand prize in aeronautics for his flight in a balloon from Vincennes, a suburb of Paris, to Korostichef, Russia—at that time the world's record for distance traveled by a balloon. He was one of the founders of the Aero Club of France in 1896, one of the earliest pilots of dirigible airships in France, and a pioneer in flying in heavier-than-air machines. As president of the Fédération Aéronautique Internationale, Count de la Vaulx made a definite contribution to the work of that organization in promoting aviation and in controlling and preserving flight records of the world.

VEGETABLES. See **HORTICULTURE**.

VEHICLES, MOTOR. See **AUTOMOBILES**.

VENEZUELA, vén'è-zwē'là, *Sp. pron.* vā'nā-thwā'là, or *Amer. Sp. pron.* vā'nā-swā'là. A republic on the north coast of South America, bordering the Caribbean Sea and lying between Colombia

on the west, Brazil on the South, and British Guiana on the east. The capital city is Carácas.

AREA AND POPULATION. Venezuela has an area of about 352,143 square miles and a population estimated in 1928 at 3,116,000. From 1925 to 1929, births averaged 92,643 annually, deaths, 57,429; immigrants, 20,207; emigrants, 17,766. The chief cities, with their populations in 1926, were: Carácas, 135,253; Maracaibo, 74,767; Valencia, 36,804; and Barquisimeto, 23,109.

EDUCATION. Primary education is free and compulsory. In 1928, there were 111,420 primary pupils in Government, private, State, and municipal schools, 419 in secondary schools, 1415 in special schools, and 837 in institutions of higher education, the chief of which is the Central University at Carácas.

PRODUCTION. Despite its rise to second rank in petroleum production, Venezuela is primarily an agricultural and pastoral country. Coffee and cacao are the principal crops, production in 1929 totaling about 101,000,000 pounds of coffee and about 27,500,000 pounds of cacao. Sugar, tobacco, and rice are other farm products. Livestock in 1930 was estimated at 2,689,000 cattle, 512,000 swine, 113,000 sheep, 2,155,000 goats, and 168,000 horses. Forests cover approximately one-half of the total area, yielding balatá, tonka beans, divi-divi, and hardwoods. Petroleum production in 1930 totaled 136,890,784 barrels, as against 137,472,100 barrels in 1929; the amount exported in 1930 was 134,166,263 barrels. Production of gold in 1929 was 45,937 troy ounces; soft coal, 16,859 metric tons; asphalt (1928), 48,749 metric tons.

COMMERCE. Foreign trade in 1929, totaling \$237,662,531, was 20 per cent above the 1928 figure. Exports were valued at \$150,262,097, as compared with \$117,644,000 in 1928, and imports at \$87,400,434, as compared with \$80,406,000 in 1928. Exports increased 27.7 per cent and imports 8.7 per cent. The leading exports in 1929 were: Petroleum, \$111,498,000 (\$86,733,000 in 1928); coffee, \$25,822,000 (\$16,167,000); cacao, \$4,666,000; gasoline, \$1,765,000. The United States supplied 55.1 per cent of all imports and purchased directly 28.2 per cent of the exports in 1929. In the year ended June 30, 1930, imports from the United States declined 19.3 per cent from the previous year to \$38,528,698 and exports to the United States declined 13.2 per cent to \$42,038,886.

FINANCE. The budget for the fiscal year ending June 30, 1931, anticipated revenues of 202,598,500 bolívares (par value of the bolívar is \$0.193) and expenditures of 201,800,000 bolívares, as compared with revenues of 193,190,000 bolívares and expenditures of 192,450,000 bolívares budgeted for 1929-30. During the calendar year 1929 actual receipts totaled 256,440,000 bolívares and actual expenditures 209,155,000, leaving a surplus of 47,285,000 bolívares. Funds in the national treasury at the end of 1929 totaled 118,249,000 bolívares, as compared with 70,964,000 at the end of 1928. The public debt at the end of 1929 stood at 52,791,000 bolívares (about \$10,189,000), a reduction of 14,774,000 bolívares during the year. The budget for 1930-31 contained an appropriation of 19,159,687 bolívares to pay off Venezuela's remaining foreign debt.

COMMUNICATIONS. Venezuela in 1929 had 587 miles of railways, which carried 2,077,000 passengers and 457,000 tons of freight during the year. The highway system extended 2211 miles in 1930. The La Ceiba-Betijoque highway, connecting

Maracaibo with Betijoque, Trujillo, Merida, and with the Transandine Highway, was opened Dec. 19, 1929. Contracts for the establishment of air-mail lines connecting Venezuelan cities with Curaçao, Panama, and cities of Central, North, and South America were signed by the President on June 6 and 9, 1930. Two new cables connecting Maracaibo with Curaçao and with Barranquilla, Colombia, and through both these points with New York City, were laid by the International Telephone and Telegraph Corporation in 1930. Venezuela had 11,160 miles of navigable rivers and waterways. In 1928, 2003 vessels of 3,275,000 net registered tons entered and 7541 vessels of 9,718,000 tons cleared the ports, shipments of oil accounting for the preponderance of outgoing tonnage.

GOVERNMENT. Under Constitutional amendments passed by Congress in 1929, the executive power is vested in the President, elected by Congress for seven years, in conjunction with the Commander-in-Chief of the Army and the Cabinet Ministers. The actual ruler in 1930 was Gen. Juan Vicente Gómez, who established himself as dictator in 1908. General Gómez became Commander-in-Chief in 1929, following his resignation of the Presidency. There is a Congress of two Chambers. President in 1930, Dr. Juan Bautista Pérez, elected May 31, 1929.

HISTORY. A strict censorship veiled political developments in Venezuela during 1930 from the outside world. Dispatches from the nearby island of Curaçao and from Colombia indicated a continuance of the chronic state of unrest under the iron dictatorship of Gen. Juan Vicente Gómez. The 70-year-old dictator retained his firm grip on the reins of power, however, and there was an apparent subsidence of the numerous insurgent movements reported in 1929. A revolutionary outbreak, forecast for the centenary of the death of Simon Bolívar (December 17) failed to eventuate. Two days later a band of 300 revolutionaries was reported to have attacked and looted the town of Lobatera near the Colombian border. A month earlier, Gen. Vincenzo Perez Soto, President of the State of Zulia, narrowly escaped assassination. The Government displayed extreme vigilance, patrolling the Colombian border with airplanes, and reinforcing San Carlos fort, which controls the entrance to the rich Lake Maracaibo district from the sea. That the revolutionary wave which overturned five Latin-American governments during the year did not spread to Venezuela was attributed in part to that country's relatively fortunate economic condition. The activity in the petroleum industry and the government's extensive construction of public works lessened the suffering caused by the decline in the price of coffee and other agricultural products. Gen. José Vicente Gómez, eldest son of the dictator, died in March. He had lived in Switzerland since his father forced his resignation as Second Vice-President in 1928.

Dictator Gómez matched his political censorship with an equal reticence concerning the far-reaching programme of internal development through which he planned to make Venezuela the leading tourist and trade centre of the Caribbean. It was reported that \$40,000,000 had been spent during 1928-30 in the construction of a modern port at La Guaira, excellent paved highways, a large hotel at Maracay, and other improvements.

A United States commission, headed by James R. Sheffield, unveiled in Carácas on Dec. 9, 1930,

a statue of Henry Clay, the leading North American advocate of the recognition of the Latin American countries during their wars of independence against Spain. In 1921 Venezuela presented to the City of New York an equestrian statue of Bolívar. The centenary of the death of Bolívar was celebrated on a nation wide scale in Venezuela December 17. See BOLÍVAR CENTENARY and SPANISH-AMERICAN LITERATURE under *Venezuela*.

VENIZELOS, ELEUTHERIOS. See GREECE under *History*.

VERGIL BIMILLENNIUM. One of the outstanding events in the intellectual world in 1930 was the celebration of the Bimillennium Vergilianum. The Roman poet Vergil, author of the *Georgics*, the *Elogues*, and the *Aeneid*, was born on Oct. 15, 70 B.C. The Italians, who were naturally most interested in perpetuating the fame of Vergil, announced tentative plans several years in advance for the celebration in 1930 of the two thousandth anniversary of the birth of the poet. As a matter of fact the two thousandth anniversary of the birth of Vergil would not come until Oct. 15, 1931 (there was no year known as 0 B.C.). In ways too numerous to mention honor was done everywhere in 1930 to Vergil. In the United States the celebration passed largely into the hands of the American Classical League. An elaborate programme was worked out by the authorities of the League and every effort was made to call the fact of the coming celebration to the attention of the authorities of schools and colleges, and universities. In many of the high schools of the country the celebration took the form of a pageant which aimed to represent by pictures with or without accompanying words, various scenes from the poet's works, particularly from the *Aeneid*. Plays purporting to portray the life and the thoughts of the poet were written and produced. Almost without exception these plays were in English; often the writers, because they were not really scholars, or because there was really no information to be had about details of the poet's life, drew heavily on their imaginations. Now and again honor was done in a better way to the poet through the preparation and the acting of a play written in Latin. Special lectures and addresses on Vergil were delivered. Some of these, subsequently printed, constitute lasting additions to Vergilian literature. In classical periodicals in many countries solid articles dealing with various aspects of the poet's writings were produced. Some books also that dealt with Vergil were published. See PHILOLOGY, CLASSICAL, where the name Vergil occurs with pronounced frequency; also CELEBRATIONS.

VERMONT. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 359,611. The population on Jan. 1, 1920, was 352,428. The capital is Montpelier.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------|------|---------|------------|--------------|
| Hay | 1930 | 919,000 | 1,477,000* | \$16,204,000 |
| | 1929 | 927,000 | 1,542,000* | 16,919,000 |
| Potatoes ... | 1930 | 17,000 | 3,400,000 | 3,060,000 |
| | 1929 | 17,000 | 2,550,000 | 3,825,000 |
| Corn | 1930 | 64,000 | 2,752,000 | 2,752,000 |
| | 1929 | 67,000 | 2,747,000 | 2,884,000 |
| Oats | 1930 | 68,000 | 2,652,000 | 1,406,000 |
| | 1929 | 67,000 | 2,479,000 | 1,611,000 |

* Tons.

Farms in the State numbered 24,991 in 1930, as against 27,786 in 1925 and 29,075 in 1920.

MINERAL PRODUCTION. The stone quarries of the State, including both marble and granite of high grades, were normally active in 1928, producing 448,060 short tons, as against 321,970 in 1927. The value of stone produced, a truer index because less affected by the variations in the quantities produced of the lower grades of stone, was \$9,438,796 for 1928, as against \$9,216,116 for 1927. The production of slate continued large. The producers within the State sold slate to the value of \$3,704,894 in 1929 and of \$3,981,928 in 1928. The entire mineral product of the State had for 1928 the value of \$14,648,737; for 1927, of \$14,702,891.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$9,525,611 (of which \$517,940 was for local education); for interest on debt, \$289,092; for improvements, \$6,475,294; total, \$16,289,997 (of which \$11,907,915 was for highways, \$5,550,262 being for maintenance and \$6,357,653 for construction). Revenues were \$10,506,028. Of these, property and special taxes furnished 29.9 per cent; departmental earnings and compensation to the State for officials' services, 4.7; sales of licenses, 38.4 (in which was included State revenue from the gasoline sales tax, totaling \$1,157,155). The outstanding funded debt of the State on June 30, 1929, totaled \$9,168,532; it had been sharply augmented during the year by an issue of \$2,559,000 of flood bonds. There were no sinking-fund assets as offsets to the gross debt. On taxable property assessed at \$326,437,560 were levied in the fiscal year State taxes of \$1,191,030.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 1056.88.

EDUCATION. Standardization of public schools made marked progress; an increase of 50 per cent in two years in the number of standard or superior rural and town schools was reported at the end of 1930 in the *Journal* of the National Education Association. After July 31, 1931, the minimum requirement for the certification of new teachers was to be graduation from an accredited four-year secondary school and an accredited two-year normal school, or an equivalent acceptable to the State Board of Education.

Pupils attending the public schools in the year 1929-1930 numbered 65,727. Of these, 11,600 were in high schools. Expenditures of the year for public-school education totaled \$5,620,736. The U. S. Census of 1930 reported that the number of persons 10 years of age and over returned as unable to read and write was 6299, as compared with 8488 in 1920. The percentage of illiteracy was 2.2, compared with 3.0 10 years earlier.

POLITICAL AND OTHER EVENTS. In the Republican primary election, held on September 9, the voters chose as candidate for Governor Stanley C. Wilson, then Lieutenant Governor. Wilson had opposed the proposal to meet the cost of the projected four-year programme of highway construction by bond issue. His chief opponent, W. Arthur Simpson of Lindonville, had advocated issues of bonds at the rate of \$2,500,000 a year for the four years. At the State's eastern border, in the Connecticut River between St. Johnsbury, Vt., and Littleton, N. H., a large dam

of the New England Power Association harnessing Fifteen Mile Falls for the generation of electricity was completed with its power plant and was put in operation on September 30 by President Hoover, from the White House. The plant was designed to furnish 54,000 horse power.

The State Supreme Court held in a decision of January 7 that the State's "Disclosure Law," under which many persons had been condemned to prison for failing to tell where they had bought liquor, was unconstitutional.

United States Senator Frank L. Green died on December 17. The vacancy thus caused in the State's delegation in the Senate was filled by Frank C. Partridge, Republican, whom Governor Weeks appointed on December 23.

ELECTIONS. Lieutenant Governor Stanley C. Wilson, Republican candidate for Governor, was elected on November 4, obtaining according to unofficial report 52,647 votes to 23,360 for Park H. Pollard, Democrat. A delegation of two Republicans was elected to the Federal House of Representatives. One of these was Governor John E. Weeks. The Legislature remained under Republican control.

OFFICERS. Governor, John E. Weeks; Lieutenant Governor, Stanley C. Wilson; Secretary of State, Rawson C. Myrick; Treasurer, Thomas H. Cave; Auditor, Benjamin Gates; Attorney-General, J. Ward Carver; Commissioner of Education, C. H. Dempsey.

JUDICIARY. Supreme Court: Chief Justice, George M. Powers; Associate Justices, Leighton P. Slack, Sherman R. Moulton, Julius A. Willcox, Frank D. Thompson.

VERMONT, UNIVERSITY OF. An endowed institution of higher education in Burlington, Vt., receiving some State aid; founded by Ira Allen in 1791. The 1930 autumn enrollment was 1240. The registration for the 1930 summer session was 965. The faculty numbered 200. The endowment amounted to \$2,000,000, and the income for the year was \$650,000. The library contained over 135,000 volumes. President, Guy W. Bailey, LL.D.

VESSEL, NAVAL. See NAVAL PROGRESS.

VETERANS' BUREAU. See UNITED STATES.

VETERINARY MEDICINE. The year 1930 witnessed a notable advance in the suppression of animal diseases and parasites as a result of the application of control methods and the administration of livestock laws and regulations. There was no recurrence of the dreaded foot and mouth disease which appeared in California the previous year and the country continued to be kept free from other equally dreaded diseases of livestock against which the animal quarantine is maintained. There was a continued progress in the field of education with an increased enrollment of 13 per cent in the entering classes at the 12 accredited colleges of veterinary medicine in the United States and Canada. The eleventh International Veterinary Congress held at London in August accepted the invitation to hold its next gathering in 1934 in the United States. At the annual meeting of the American Veterinary Medical Association held at Los Angeles in August Dr. Maurice C. Hall of the District of Columbia was elected president. The United States Livestock Sanitary Association at its annual meeting held in Chicago in December elected Dr. J. W. Connaway of Missouri as its president.

LIVESTOCK TUBERCULOSIS ERADICATION. The marked progress that had been made in eradicating tuberculosis from livestock was evidenced

by the decline of the disease among cattle and swine as found in the records kept by Federal meat inspection. During the fiscal year ended June 30 there were 10,000 fewer tuberculous carcasses and 40,000 fewer parts of carcasses of cattle, sheep, and swine condemned than in the preceding year although there were a million more head inspected. At the close of the fiscal year 976 counties were recognized as modified accredited areas, signifying their practical freedom from bovine tuberculosis, representing an increase of 236 counties during the year over the preceding fiscal year. Altogether 12,845,871 cattle were tested during the fiscal year or about 1,160,000 more than in any previous year. The Federal appropriation for the work was \$6,361,000 of which \$1,190,000 was allotted for operating expenses and \$5,171,000 for paying indemnity to owners for cattle condemned as a result of the test while the combined State and county appropriations amounted to more than \$13,500,000. Up to the close of the fiscal year 1929-30, 1413 counties and the District of Columbia had engaged in the area work, an increase of 18 per cent over the number of the preceding year and there were 2,919,503 herds and 27,692,306 head of cattle under supervision. On August 1 Michigan, the first of the great dairy States, was officially designated as a modified accredited area with all its cattle practically free from the disease.

INFECTIOUS ABORTION AND UNDULANT FEVER. The first place in importance among the diseases of animals continued to be held by infectious abortion which took a heavy toll both from the cattle and the swine industry. The advance in knowledge of the direct importance of the disease to man from the sanitary health standpoint, aside from its economic importance, continued to stimulate the investigational activity. No less than 23 of the State agricultural experimental stations had some phase of the problem under investigation. In research work it was demonstrated that the eye may be a frequent channel of infection with indications that the infection may gain entry to the animal through the skin even though there be no visible abrasion. The immunizing effect of different strains of the organism received particular attention. Work in Minnesota indicated that the causative organism is associated rather closely with poll-evil and fistulous withers of the horse. It was demonstrated in Wisconsin that the udder may become infected before abortion occurs, showing that milk may be a carrier of infection even though the cow producing it has not aborted. Such cows, however, usually react to the blood test and can be removed from the herd. An outbreak of disease in a flock of hens due to this organism was reported from Michigan where it was found that though the disease is not necessarily fatal it may be of considerable importance owing to the decreased egg yield of infected birds.

In an economic study made since March, 1926, of a pure-bred dairy herd of 60 to 100 animals of breeding age it was found that positive reacting animals had $2\frac{1}{2}$ times as many abortions as negative reactors and that the sterility was four times as frequent in suspicious animals and eight times as frequent in positive reacting animals. The work of eradicating abortion from herds, which was started in an experimental way in Illinois in 1922, resulted in the presentation of the first accredited abortion-free certificate in that State

on Jan. 12, 1929, for one of the largest Holstein herds in Illinois. By 1930 there were 420 herds enrolled in the eradication project in the State in 27 counties with 27 accredited abortion free herds. For accreditation the State Department of Agriculture requires two annual negative tests on all animals over six months of age or three negative tests at intervals of six months.

TEXAS FEVER AND CATTLE TICK ERADICATION. Continued progress was made in the eradication of the cattle tick, the transmitter of Texas fever of cattle. Fifteen counties in five States, namely, one in Alabama, 4 in Florida, 6 in Mississippi, and 4 in Texas, were released during the fiscal year from the Federal quarantine. The last remaining counties in Alabama were freed of the tick and that State became the tenth of the 15 originally infested States to emerge from the quarantine. On July 1 all the territory remaining under quarantine in Mississippi was released. Owing to the failure to protect a parish in Louisiana that was released in 1917 it was re-quarantined. With these releases the year saw the area quarantined on account of Texas fever reduced to less than 20 per cent of its original size and confined to parts of four States—Texas, Louisiana, Arkansas, and Florida. On December 1, 15,210 square miles of additional territory in Arkansas, Florida, and Texas were released from the quarantine. In many localities where the tick quarantine has been lifted pure-bred animals have been rapidly introduced.

DOURINE ERADICATION. The inspection and tests made of horses in the previously infected area of Montana and on the Navajo Indian Reservation in Arizona indicated that dourine had been eradicated from those areas. During the year, however, the disease was found to exist in horses in northern Nevada, in small areas in Idaho and Oregon contiguous thereto and on the San Carlos Indian Reservation in Arizona. Eradication work was commenced in Nevada in cooperation with the livestock sanitary authorities of that State.

SCABIES ERADICATION. In the control and eradication work with scabies of sheep 22,886,382 field inspections were made and 4,450,111 dippings supervised representing a considerable increase over the preceding year. The reports indicate an increase in the number of infected sheep in Arizona, Nebraska, New Mexico, and Wyoming and a decrease in all other sheep-raising States. In similar work with cattle scabies 3,371,764 inspections were made and 446,086 dippings of cattle supervised. A total of 89,279 cattle were found to be infected or 10 per cent less than in the preceding year.

HOG CHOLERA CONTROL. The year was notable for the small extent of hog cholera in the principal areas of swine production. In all sections of the country the prevalence of the disease was comparatively low. There was a great increase in the production of clear anti-hog-cholera serum, a more refined product than that previously in general use. The principal of pasteurization in the preparation of the serum was introduced into licensed establishments, such serum safeguarding livestock from possible contamination with harmful bacteria.

ANAPLASMOSIS. There was a marked decrease in the number of cases of anaplasmosis in cattle as compared with the preceding year. The sodium-cacodylate treatment was continued, only 6 of 79 cases thus treated having died. It was found that the disease can be transmitted from an infected

to a susceptible animal by pricking the ear of the former and then the ear of the latter with the same lancet. It was shown that the brown dog tick may transmit the infection.

FOWL POX. The activity in control work with fowl pox continued. An outbreak in Michigan was controlled in four to five weeks through vaccinating the flock at the first appearance of the disease. It was shown in Massachusetts to be safe to vaccinate birds cutaneously as they are transferred from the range to laying houses even though they are in early egg production at the time. The immunity in a flock treated with the standard cutaneous vaccine in the early stages of the disease was found to last for at least 371 days. The vaccination of young fowls in Oregon with a nonattenuated virus produced an immunity in four weeks or less which lasted for at least two years in some fowls. Experiments by additional workers confirmed the finding of the preceding year that the common house mosquito may transmit the fowl pox virus and indicated that after becoming infected the mosquito may continue so during the course of its life.

PULLORUM DISEASE OF THE FOWL. It was concluded in investigations conducted in California that the agglutination test repeated at intervals of one to two months offers a reasonably certain means of eradicating pullorum disease from a flock in one season. Work in Minnesota led to the conclusion that the disease is spread, but slowly, among sexually mature fowls. In a study of the effect of pullorum disease on the first year egg production of six breeds the average for 587 reactors was 160 eggs while that for 102 non-reactors was 221 eggs.

INFECTIOUS BRONCHITIS OF THE FOWL. A subacute or chronic form of infectious bronchitis with a low mortality was described as occurring in flocks in Illinois in which other fowls had suffered 3 to 6 months previously from the acute and fatal type of the disease. The ultraviable virus which causes the disease was kept in New Jersey in dried form for 47 days. Recovered birds were found to be immune to subsequent infection.

DEATH OF DUCKS AND SHOREBIRDS. The death of large numbers of wild ducks and shorebirds that had continued to occur each year in the intermountain and northwestern States was discovered during the year to be due at least in part to botulism.

PARASITES AND PARASITICIDES. There was a notable advance made in the knowledge of intermediate hosts of helminths. A sowbug was found to serve for one and a cockroach for another of two roundworm parasites of the glandular stomach of poultry. Intermediate hosts including a dung beetle, pond snail, and grasshopper were discovered for a number of tapeworms that are pathogenic for domestic birds. Earthworms obtained from a pasture from which hogs had been absent for 4 months or longer were still infested with lungworm larvae. In addition to the snail *Galba bulimoides* a second species was found to serve as intermediate host for the common sheep liver fluke in Oregon. A variety of *Galba bulimoides* serves as its intermediate host in the South and Southwestern States, outside of Florida, and of the larger liver fluke of cattle, *Fascioloides magna*. The filarial parasite *Onchocerca cervicalis* was found in Kansas present in 10 to 12 cases of fistulous withers of the horse that were examined. Carbon tetrachloride in 1 c.c. doses was

found in Oregon to destroy mature and nearly mature flukes in the livers of sheep and goats.

LIVESTOCK POISONING. It was demonstrated that the toxic constituent of rayless goldenrod is tremetol, the same substance that causes the toxicity of snakeroot for cattle resulting in the disease known as trembles (milk sickness). It was discovered that rather large doses of sodium chlorate, which is contained in mixtures used as weed killers, are poisonous to livestock. The broad-leaved milkweed was shown in Texas to be poisonous to sheep and goats. The western bleedingheart found growing on the range in Oregon was determined to be a potential danger to livestock. It was shown that thallium sulphate, which had been used since 1920 in commercial rat poisons in the United States, when mixed with oats and used in eradicating prairie dogs caused the death of sheep grazing over the treated area.

VICTORIA. A state of the Australian Commonwealth, occupying the southeastern part of the island continent. Area, 87,884 square miles; estimated population Mar. 31, 1930, 1,783,649, as compared with 1,531,280 at the census of 1921. Melbourne, the capital and chief city, had about 1,018,200 inhabitants on Jan. 1, 1930. The population of other leading towns Jan. 1, 1929, was: Geelong, 43,150; Ballarat, 42,000; Bendigo, 33,870; and Mordialloc, 10,000. The total estimated increase of population in 1929 was 16,101. Births during the year numbered 33,604; deaths, 16,717; marriages, 12,936; and the excess of emigration over immigration was 786, compared with an immigration surplus of 2784 in the previous year.

Primary education is free, secular, and compulsory. State schools in 1927 numbered 2564, with 7166 teachers and 258,205 pupils enrolled. About 98 per cent of the population over 15 years is literate. In 1928, the State university and its branches had 612 students matriculated and 2790 attending lectures. The value of all production in 1927-28 was estimated at £96,001,644, distributed as follows: Manufacturing (value added during process) £53,798,265 (£53,025,379 in 1928-29); pastoral and dairying, £26,424,600; agriculture, £8,570,865; mining, £1,955,278 (£1,116,083, value of principal minerals in 1928-29); forestry, £1,800,400; miscellaneous, £5,685,210. Production of the principal crop, wheat, was estimated at 25,412,587 bushels from 3,566,135 acres in 1929-30, as compared with 46,818,833 bushels from 3,718,904 acres in the previous year.

The estimated value of direct overseas imports in 1929-30 was £42,309,344 and of direct overseas exports, £36,253,290; for 1928-29 comparative figures were: Imports, £46,005,660; exports, £39,437,225. Wool, wheat and flour, skins, fruits, butter, milk and cream, and meats are the leading exports. For the fiscal year 1928-29, State revenues totaled £28,156,034 (£27,357,917 in 1927-28) and expenditures, £28,104,947 (£27,521,270). The gross State debt on June 30, 1930, stood at £155,719,888, as compared with £155,989,652 on the same date in 1929. The net per capita State debt was about \$422.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses—the Legislative Council of 34 members elected for six years and subject to property qualifications, and the Legislative Assembly of 65 members, elected for three years by male and female suffrage.

Governor in 1930, Lieutenant Colonel Lord Arthur H. T. Somers; Premier, E. J. A. Hogan (Labor). A proposal to deprive hotelkeepers and others of their licenses to sell alcoholic liquor between specified hours was defeated 552,286 to 419,005 in a referendum held on Mar. 29, 1930. See AUSTRALIA.

VICTORIA SOPHIA MARIA, PRINCESS OF BADEN AND QUEEN OF SWEDEN. Consort of the Swedish sovereign, died in Rome, Apr. 4, 1930. The only daughter of Grand Duke Frederick of Baden and Princess Louise of Prussia, she was born in Karlsruhe, Germany, Aug. 7, 1862, and was educated at the Princessinschule, a school founded by her mother. In 1881 she was married to the Crown Prince Gustaf of Sweden, who succeeded to the throne in 1907. On April 12, after a funeral procession of great magnificence, she was buried in the Riddarholms Church in Stockholm, the burial place of the royal family since the time of Gustavus Adolphus.

VIEWEG COLLECTION. See ART SALES.

VILNA. See LITHUANIA under *History*.

VIOLINISTS. See MUSIC.

VIRGINIA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,421,851. The population on Jan. 1, 1920, was 2,309,187. The capital is Richmond.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|-----------|--------------|--------------|
| Corn | 1930 | 1,568,000 | 18,032,000 | \$18,934,000 |
| | 1929 | 1,522,000 | 44,138,000 | 44,138,000 |
| Hay | 1930 | 978,000 | 607,000* | 13,537,000 |
| | 1929 | 1,058,000 | 1,400,000* | 21,628,000 |
| Tobacco | 1930 | 174,000 | 88,200,000* | 8,996,000 |
| | 1929 | 168,500 | 109,500,000* | 19,162,000 |
| Apples | 1930 | | 7,700,000 | 7,315,000 |
| | 1929 | | 13,000,000 | 14,300,000 |
| Potatoes | 1930 | 143,000 | 14,583,000 | 15,312,000 |
| | 1929 | 128,000 | 17,135,000 | 21,419,000 |
| Wheat | 1930 | 644,000 | 9,982,000 | 9,683,000 |
| | 1929 | 700,000 | 8,960,000 | 11,200,000 |
| Peanuts | 1930 | 148,000 | 98,420,000* | 3,051,000 |
| | 1929 | 164,000 | 149,732,000* | 5,840,000 |
| Cotton | 1930 | 88,000 | 42,000* | |
| | 1929 | 88,000 | 46,000* | 3,910,000 |
| Sweet potatoes | 1930 | 47,000 | 3,760,000 | 3,760,000 |
| | 1929 | 45,000 | 6,705,000 | 6,034,000 |
| Oats | 1930 | 200,000 | 3,800,000 | 2,280,000 |
| | 1929 | 167,000 | 3,841,000 | 2,573,000 |

* Tons. † Pounds. ° Bales.

Farms in the State numbered 171,029 in 1930, as against 193,723 in 1925 and 186,242 in 1920.

MINERAL PRODUCTION. Coal, which yearly supplies the greater part of the State's mineral yield as measured by value, was mined somewhat more actively in 1929, the production rising to 12,748,306 net tons for 1929, from 11,900,933 for 1928; in value it rose to \$20,942,000 for 1929. A considerable list of minor mineral products helped bring the total value of the yearly mineral production of the State to \$38,770,281 for 1928 and \$41,322,998 for 1927.

FINANCE. State expenditures in the year ended June 30, 1929, were: for maintenance and operation of governmental departments, \$25,120,047 (of which \$6,614,295 was for local education); for interest on debt, \$1,050,978; for permanent improvements, \$11,814,744; total, \$37,985,769 (of which \$11,843,668 was for highways, \$3,677,661 being for maintenance and \$8,166,007 for construction). Revenues were \$48,410,022. The

State's funded debt outstanding on June 30, 1929 was \$28,748,857. Net of sinking-fund assets, it was \$26,702,669. On property bearing an assessed valuation of \$761,680,445 were levied in the year State taxes of \$5,424,676.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4505.29. There were built, in 1930, 19.94 miles of first and 3.33 of second track.

EDUCATION. The application of the equalization fund in the State was reported to have tended to raise the level of the salaries of public-school teachers. A move to obtain a law providing for the retirement of teachers was in progress in 1930. With the aid of the equalization fund the legal yearly term of school was raised to 160 days, from 140.

There were enrolled in the public schools, in the year 1929-30, 562,956 pupils. The high-school enrollment was 79,081. Expenditures for public-school education for the year totaled \$25,313,507. The year's average of teachers' salaries was \$873.

CHARITIES AND CORRECTIONS. The central administrative powers with regard to institutions and activities for the care or custody of persons rested in 1930 in the State Department of Public Welfare. This department was created by the Reorganization of Government act in 1927. It had as its executive a commissioner (Frank Bane) appointed by the Governor and as its chief authority a Board of Charities and Corrections, whose members also were thus appointed. By the department the State institutions and agencies were coordinated and inspected; child-care activities were licensed and supervised; local welfare units were supervised; social statistics were published; applications for pardon, on submission by the Governor, were investigated; building plans for local institutions were approved. A crippled-children's bureau was established within the department in 1930. The State institutions under the department, with their populations of June 30, 1930, included: Eastern State Hospital, Williamsburg, 879; Western State Hospital, Staunton, 1755; Central State Hospital (colored), Petersburg, 2587; Southwestern State Hospital, Marion, 968; Colony for Epileptic and Feeble-minded, at Colony, Va., 900; Virginia Penitentiary, Richmond, 767; State Farm for Defective Misdemeanants, at State Farm, 205 convicts and 519 misdemeanants; Virginia Industrial School for Boys, Maidens, 253; Virginia Industrial School for Girls, Bon Air, 95; Virginia Manual Labor School for Colored Boys, Hanover, 214; Virginia Industrial School for Colored Girls, Peak's Turnout, 123; Virginia Commission for the Blind, Richmond, 128 pupils under instruction. Acts were passed in 1930 to provide an industrial farm for women prisoners and other farms, eventually for other types of criminals.

LEGISLATION. The Legislature convened in regular biennial session in January and adjourned on March 8. It enacted the chief measures sought by Governor John Garland Pollard, who took office a week after the session had convened. These were laws for the more effectual conservation of creatures furnishing sea food and for ampler schedules of indemnity under the workmen's compensation system. There was also created a commission to study the reform of the election law and report its findings to the session of 1932. The importance of the changes in the law as to sea food lay largely in the provisions made for the protection of the oyster, of which the fish-

eries afforded large aggregate revenue. Negro and Indian were legally defined by enactment. It was rendered punishable as larceny to draw checks against insufficient funds with intent to defraud.

POLITICAL AND OTHER EVENTS. An agreement was effected with Maryland to settle a boundary dispute that had subsisted since about 1661 with regard to the line along the Potomac River. Wilbur A. Nelson, head of the Department of Geology at the University of Virginia, as commissioner for his State, and Edward B. Mathews, State geologist of Maryland, appointed by the Governors of the respective States in 1928, arranged the settlement. It followed an award made in 1877, to the effect that the boundary ran between the low-water marks on certain of the Virginia headlands. Subject to ratification of the settlement by Congress, Virginia gained altogether about 8 acres of under-water area supporting oyster beds.

The Chairman of the State Conservation and Development Commission addressed the Federal Power Commission on May 29 in a complaint that the latter had withheld its approval from a project of the Appalachian Electric Power Company on the New River, thus clashing with the State's own asserted control over its water-power developments. The U. S. Attorney-General, considering this and like representations from Tennessee and West Virginia, issued an opinion to the effect that the Federal Power Commission was not bound by the terms of its creation to take account of non-navigable watercourses, even though developments on these might be asserted to affect the navigations of lower streams.

About 2500 were affected by a strike in the Riverside and Dan River cotton mills at Danville in September and October, over questions of the employers' relations with the textile union and of wages and working conditions.

ELECTIONS. Senator Carter Glass, Democrat, was reelected, only a feeble opposition vote going to J. Cloyd Byars, his Independent Democratic opponent. Byars ran as the champion of the anti-Smith Democratic faction of 1928. Nine Democrats and one Republican were elected to the House of Representatives, the Republicans losing two seats.

OFFICERS. Governor, John Garland Pollard; Lieutenant-Governor, James H. Price; Secretary of the Commonwealth, Peter Saunders; State Treasurer, John M. Purcell; Auditor of Public Accounts, C. Lee Moore; Attorney-General, John R. Saunders; Superintendent of Public Instruction, Harris Hart; Commissioner of Agriculture, George W. Koiner.

JUDICIARY. Supreme Court of Appeals: President, Robert R. Prentiss; Associate Justices, Louis E. Epes, Preston W. Campbell, H. W. Holt, E. W. Hudgins, H. B. Gregory, George W. Browning.

VIRGINIA, UNIVERSITY OF. A non-sectarian institution of higher education in Charlottesville, Va., founded in 1819. The enrollment for the autumn term of 1930 was 2556, distributed as follows: College, 1464; graduate, 269; education, 132; engineering, 169; law, 287; medicine, 235. For the 1930 summer session there was an enrollment of 2446. The faculty numbered 146. The productive endowment of the university amounted to \$10,000,000; the annual State appropriation was \$400,000; and the total annual income was \$1,741,352. There were 171,899 volumes in the library. During 1930 a stadium, with

a seating capacity of 23,000, was under construction, with a gift of \$300,000 from Frederic William Scott of Richmond, Va., rector of the university. William A. Clark, Jr., of Los Angeles, Calif., donated more than \$350,000 for the construction of a new law building. President, Edwin Anderson Alderman, D.C.L., LL.D. See PUBLIC AFFAIRS, INSTITUTE OF.

VIRGIN ISLANDS. A group of islands about 60 miles east of Porto Rico, formerly known as the Danish West Indies and purchased from Denmark by the United States Jan. 25, 1917; also a group of islands attached to the British colony of the Leeward Islands (see LEEWARD ISLANDS). The Virgin Islands of the United States consist mainly of the islands of St. Thomas, St. Croix, and St. John, and have a total area of 132 square miles. Capital, St. Thomas.

The population at the census of 1930 was 22,012, a decline of 4039 since the census of 1917. St. Thomas had 9834 inhabitants, a decrease of 357; St. Croix, 11,413, a decrease of 3488; and St. John, 765, a decrease of 194. About 80 per cent of the total population are Negroes, 13 per cent of mixed race, and 7 per cent whites. The decrease in population is due largely to emigration to the United States. St. Thomas, the chief port (population about 6300), has coaling and oil-fueling stations and is a United States naval base. Other towns are Christiansted (3390) and Frederiksted (2430) on the island of St. Croix. The chief industries are sugar production and cattle raising on the island of St. Croix and the distillation of bay oil on St. Thomas. Due to a severe drought, sugar production in 1930 was only 5750 tons; bay-rum production for the fiscal year 1929-30 was 108,182 gallons (91,116 gallons in 1928-29). The depression in the sugar industry resulted in the closing of the two sugar factories on St. Croix. About 1000 persons, thrown out of work, were fed by the American Red Cross. The economic depression was increased by the falling off in trade and the bunkering business. A total of 595 vessels of 2,403,420 tons entered St. Thomas harbor in 1929-30, or 60 vessels and 247,977 tons less than in 1928-29. Following surveys by representatives of the U. S. Department of Agriculture and Bureau of Efficiency during 1930, plans were outlined for the rehabilitation of agriculture, the improvement of livestock strains, reforestation, diversification of crops, and the improvement of methods of distilling bay oil. For the fiscal year 1930-31, Congress appropriated \$421,000 for governmental expenses in the Virgin Islands, of which \$141,000 were for projects recommended by the Bureau of Efficiency to improve economic conditions.

Imports in 1929-30 totaled \$2,298,678; exports \$794,386. Trade is mostly with the United States. The government in 1930 was administered by the Navy Department in Washington through a governor appointed by the President. For local governmental purposes, the islands are divided into the Municipality of St. Thomas and St. John and the Municipality of St. Croix, each with a Colonial Council composed of a majority of elected and a minority of appointed members. By an act of Congress of Feb. 25, 1927, the natives were granted full American citizenship. At the direction of President Hoover, studies were under way in 1930 with a view to transferring the administration of the islands from the Navy to the Interior Department. The Governor during 1930 was Captain Waldo Evans, U. S. N. (Ret.).

VITAL STATISTICS. The U. S. BUREAU of the Census announced that 1,386,363 deaths occurred in 1929 in the registration area in continental United States, corresponding to a rate of 11.9 per 1000 population as compared with 12.1 in 1928. This area in 1929 comprised 46 States, the District of Columbia, and nine cities in non-registration States, with an estimated population on July 1, 1929, of 116,275,139, or 95.7 per cent of the total population; in 1928 the registration area included 95.3 per cent of the total population. The death rate from all causes per 100,000 population decreased from 1207.1 in 1928 to 1192.3 in 1929. This net decrease was almost entirely balanced by increases in influenza (from 45.3 to 55.5), diseases of the heart (208.3 to 210.9), and meningococcus meningitis (2.6 to 4.5). Deaths from these three diseases alone caused 21.2 per cent of all deaths in 1928 and 22.7 per cent in 1929.

Among the epidemic and endemic diseases listed in this summary, seven showed lower rates in 1929 than in 1928, the outstanding one being for measles (5.4 to 2.5) which caused less than half as many deaths in 1929. Decreases were shown also for typhoid and paratyphoid fever, diphtheria, acute anterior poliomyelitis, dysentery, lethargic encephalitis, and malaria. Other epidemic and endemic diseases showed increased rates, among them whooping cough, scarlet fever, and erysipelas. Decreases among other important causes were for pneumonia, all forms (from 98.2 in 1928 to 91.7 in 1929), nephritis (95.3 to 91.2), congenital malformations and diseases of early infancy (65.8 to 62.4), tuberculosis, all forms (79.4 to 76.0), diarrhea and enteritis, under 2 years (20.7 to 17.9), diabetes mellitus (19.0 to 18.8), cancer (96.1 to 96.0), and pellagra (6.1 to 5.8). Deaths from alcoholism decreased from a rate of 4.1 in 1928 to 3.7 in 1929.

Deaths from accidental and unspecified external causes increased from 79.4 to 80.9. The types of accidents which showed the most noticeable increases were automobile accidents, excluding collisions with railroad trains and street cars (20.8 to 23.3) and accidental falls (14.1 to 14.6). A slight decrease was shown for deaths from drowning (7.1 to 6.2). Statistics of deaths and death rates in the United States in 1928 and 1929 are given in the accompanying table.

That 1930 was the best health year on record was indicated by the statistics for 1930 issued by the Metropolitan Life Insurance Co. for its industrial policy holders in the United States and Canada. The general death rate for the insured, ages 1 year and over, was only 8.3 per 1000; this was 1 per cent lower than in 1927, when the previous minimum rate was established. The outstanding health fact for 1930, the report stated, was the reduction of the tuberculosis death rate to a new minimum, more than 7 per cent lower than the previous minimum rate established in 1929 and 64 per cent lower than the rate for 1911. A new low death rate was established for each of four communicable diseases of children—measles, scarlet fever, whooping cough, and diphtheria, and the combined mortality rate from the four was 26 per cent lower than the rate for 1929. The diphtheria rate was reduced more than one-third as compared with 1929. For the third successive year a new minimum was established among women policy holders of the Metropolitan Life for deaths from puerperal diseases.

DEATHS AND DEATH RATES IN THE UNITED STATES
PRINCIPAL CAUSES OF DEATH IN THE REGISTRATION AREA, 1928 AND 1929
 [From *Provisional Summary, U. S. Bureau of the Census*]

| Cause of death | Deaths in the registration area in continental United States | | Rate per 100,000 estimated population | |
|---|---|-----------|--|---------|
| | Number | | 1929 1928 | |
| | 1929 | 1928 | 1929 | 1928 |
| All causes * | 1,386,863 | 1,378,675 | 1,192.8 | 1,207.1 |
| Typhoid and paratyphoid fever | 4,854 | 5,020 | 4.2 | 4.9 |
| Malaria | 4,084 | 4,167 | 3.5 | 3.6 |
| Smallpox | 151 | 131 | 0.1 | 0.1 |
| Measles | 2,923 | 6,146 | 2.5 | 5.4 |
| Scarlet fever | 2,468 | 2,229 | 2.1 | 2.0 |
| Whooping cough | 7,310 | 6,234 | 6.3 | 5.5 |
| Diphtheria | 7,685 | 8,263 | 6.6 | 7.2 |
| Influenza | 64,588 | 51,741 | 55.5 | 45.3 |
| Dysentery | 2,777 | 3,215 | 2.4 | 2.8 |
| Erysipelas | 2,887 | 2,724 | 2.5 | 2.4 |
| Acute anterior poliomyelitis | 812 | 1,381 | 0.7 | 1.2 |
| Lethargic encephalitis | 1,813 | 1,373 | 1.1 | 1.2 |
| Meningococcus meningitis | 5,208 | 2,923 | 4.5 | 2.6 |
| Tuberculosis (all forms) | 88,352 | 90,659 | 76.0 | 79.4 |
| Of the respiratory system | 78,624 | 80,285 | 67.6 | 70.3 |
| Of the meninges, central nervous system | 3,114 | 3,446 | 2.7 | 3.0 |
| Other forms | 6,614 | 6,928 | 5.7 | 6.1 |
| Syphilis ^b | 16,188 | 16,826 | 13.9 | 14.7 |
| Cancer and other malignant tumors | 111,569 | 109,770 | 96.0 | 96.1 |
| Of the buccal cavity | 3,588 | 3,555 | 3.0 | 3.1 |
| Of the stomach, liver | 37,915 | 38,128 | 32.6 | 33.4 |
| Of the peritoneum, intestines, rectum | 16,961 | 16,130 | 14.6 | 14.1 |
| Of the female genital organs | 15,944 | 15,839 | 13.7 | 13.9 |
| Of the breast | 10,204 | 10,056 | 8.8 | 8.8 |
| Of the skin | 2,934 | 3,020 | 2.5 | 2.6 |
| Of other or unspecified organs | 24,073 | 23,042 | 20.7 | 20.2 |
| Rheumatism | 4,401 | 4,324 | 3.8 | 3.8 |
| Pellagra | 6,793 | 6,969 | 5.8 | 6.1 |

| Puerperal septicemia | 5,822 | 5,692 | 5.0 | 5.0 |
| Puerperal causes other than puerperal septicemia | 9,496 | 9,999 | 8.2 | 8.8 |
| Congenital malformations and diseases of early infancy | 72,559 | 75,159 | 62.4 | 65.8 |
| Suicide | 16,260 | 15,566 | 14.0 | 13.6 |
| Homicide | 9,909 | 10,050 | 8.5 | 8.8 |
| Accidental and unspecified external causes | 94,033 | 90,712 | 80.9 | 79.4 |
| Burns (conflagration excepted) | 6,168 | 6,323 | 5.3 | 5.5 |
| Accidental drowning | 7,252 | 8,084 | 6.2 | 7.1 |
| Accidental shooting | 3,015 | 2,839 | 2.6 | 2.5 |
| Accidental falls | 16,919 | 16,116 | 14.6 | 14.1 |
| Mine accidents | 2,661 | 2,639 | 2.3 | 2.3 |
| Machinery accidents | 2,281 | 2,180 | 2.0 | 1.9 |
| Railroad accidents | 6,769 | 6,796 | 5.8 | 6.0 |
| Collision with automobile | 1,958 | 2,041 | 1.7 | 1.8 |
| Other railroad accidents | 4,811 | 4,755 | 4.1 | 4.2 |
| Street-car accidents | 1,489 | 1,581 | 1.2 | 1.4 |
| Collision with automobile | 507 | 542 | 0.4 | 0.5 |
| Other street-car accidents | 932 | 1,039 | 0.8 | 0.9 |
| Automobile accidents (excluding collision with railroad trains and street cars) | 27,066 | 23,765 | 23.3 | 20.8 |
| Injuries by vehicles other than railroad trains, street cars, and automobiles ^c | 1,910 | 1,819 | 1.6 | 1.6 |
| Excessive heat (burns excepted) | 500 | 654 | 0.4 | 0.6 |
| Other external causes | 18,053 | 17,916 | 15.5 | 15.7 |
| All other defined causes | 109,065 | 108,533 | 93.8 | 95.0 |
| Unknown or ill-defined causes | 24,258 | 23,560 | 20.9 | 20.6 |

* Exclusive of stillbirths.

^b Includes tabes dorsalis (locomotor ataxia) and general paralysis of the insane.

^c Includes airplanes, balloon, and motor-cycle accidents

Note.—Rates in this summary are based upon revised estimates of population, derived from the 1920 and 1930 Censuses, and it will be seen that the rates shown for 1928 vary only slightly from those previously published, which were based on estimates projected from the 1910 and 1920 Censuses.

VITAMINS. How many vitamins are there is a question often asked, but one that cannot be answered definitely as yet. The alphabetical list of accepted vitamins by 1930 included vitamins A, B₁ or B, B₂ or G, C, D, and E, with B₃ suggested but still in dispute. There were few developments during the year in research on vitamins C and E; a considerable amount of research on the various B vitamins, and marked advance in knowledge concerning vitamin A.

VITAMIN A. The most important vitamin discovery of the year was the definite proof advanced by Moore (*Biochem. J.*, vol. 24, p. 692) and confirmed by others that the vitamin A of plant sources is in reality the pigment carotin which is converted *in vivo* into vitamin A. The two substances can be distinguished only by colorimetric and spectrographic tests, since in the customary animal feeding tests the carotin becomes changed into vitamin A. The details of this change and the differences in properties of carotin and vitamin A were summarized by Moore as follows:

| Carotin | Vitamin A |
|---|--|
| Synthesized in plants | Stored in animals |
| Intensely yellow | Almost colorless |
| 328 μ absorption band absent | 328 μ absorption band developed |
| Greenish blue SbCl ₃ reaction at 590 μ | Vivid blue SbCl ₃ reaction at 610-630 μ |

This cleared up satisfactorily the confusion concerning the identity of vitamin A in plant and animal sources and the well-known association of vitamin A with yellow pigmentation in plant but not necessarily in animal materials. The ultimate source of vitamin A is the synthesis of carotin in the growing plant. It is conceivable that the conversion of carotin into vitamin A in the animal body may be more or less complete. Wolff, Overhoff, and van Eckelen (*Deut. Med. Wochschr.*, vol. 56, p. 1428) reported that butter and egg yolk contain both carotin and vitamin A. Morton and Heilbron (*Biochem. J.*, vol. 24, p. 870) likewise found that samples of Danish and New Zealand butter contained both carotin and vitamin A, but that the proportions of the two differed in the two samples. The marine diatom *Nitzschia closterium* grown in pure culture in sterilized media was found by Ahmad (*Biochem. J.*, vol. 24, p. 860) to be rich in carotin. He suggested that such diatoms are the ultimate source of the vitamin A of fish-liver oils, the change from carotin to almost colorless vitamin A taking place in the bodies of the fish.

With the acceptance of carotin as responsible for the entire vitamin A effect of plant materials and in some cases for part of the similar effect of foods of animal origin, it was to be expected that satisfactory chemical tests would be forthcoming for the so-called vitamin A content of such food sources. Until recently the antimony trichloride color reaction for vitamin A had been applied chiefly to colorless liver oils on account of the interference of color pigments in plant materials. A series of papers by Norris and Church (*J. Biol. Chem.*, vol. 85, p. 477; 87, p. 139; 89, pp. 421, 580) pointed out the precautions that must be taken to obtain consistent results in such tests, important among which was the use of the non-saponifiable fraction of the substance being tested. English investigators, in using the antimony trichloride color test, rely upon the principal ab-

sorption bands of the blue solution formed with antimony trichloride which are at about 590 μ for carotin and 624 μ for liver-oil vitamin A.

Just as irradiated ergosterol is used when a concentrated source of vitamin D is desired, it is quite probable that carotin will come into use as a concentrated source of vitamin A. Green and Mellanby (*Brit. J. Expt. Path.*, vol. 11, p. 81), commenting upon the favorable results which they obtained in protecting rats against infection by daily doses of carotin, stated:

If carotin has a similar function in man to that in the rat, as seems probable, it should prove valuable both as a prophylactic and therapeutic agent. As a therapeutic agent it should be of special importance for rapid and effective action, for it can be given without the large amount of lipid material often badly tolerated, which has to be given in the massive vitamin A therapy with liver-fat preparations.

The labeling of vitamin A as the "anti-infective vitamin" received considerable criticism during the year, notably by Burton and Balmain (*Lancet*, 1930, I, p. 1063) and by Cramer (*Lancet*, 1930, II, pp. 774-777), the latter stating emphatically that there was no evidence "that vitamin A can cure infections once the barrier of the mucous membranes has been passed or that it can prevent or cure those infections which enter by the blood stream or by the subcutaneous tissues." Lassen, however (*J. Hyg.*, vol. 30, p. 300) reported that young rats depleted of vitamin A were less resistant than normal rats to paratyphoid bacilli when inoculated subcutaneously as well as when inoculated by mouth. Whether or not vitamin A acts as a general anti-infective agent, there is no doubt that degenerative processes resulting in lowered resistance to infection take place in its absence in the mucous membranes of the body. Seifreid (*J. Expt. Med.*, vol. 52, pp. 519, 533) considers the diseased condition of chickens resulting from lack of vitamin A, probably the most important of the vitamin A nutritional diseases among domestic animals. His studies showed degeneration of the mucous membrane epithelium of the entire respiratory tract with resulting secondary infections. In the upper alimentary tract the lesions were largely confined to the mucous glands and their ducts. According to Tilden and Miller (*J. Nutrition*, vol. 3, p. 121) monkeys deprived of vitamin A died of ulcerative colitis (inflammation of the mucous membranes of the colon).

THE B VITAMINS. The problem of the exact number of water-soluble B vitamins remained unsolved at the close of the year nor was the question of the function of vitamin G (B₃) as an antipellagic vitamin definitely settled. Research on vitamins B₁ and B₂ was particularly active at the Lister Institute of Preventive Medicine, London (*Brit. Med. J.*, No. 3640, p. 609). A quantitative study of the heat stability of vitamin B₂ in yeast and yeast extracts, with both growth and curative tests for experimental pellagra as criteria of activity (*Biochem. J.*, vol. 24, pp. 105, 933), showed that the vitamin is destroyed by heat in the presence of alkali. This conclusion was opposed to that of other investigators, particularly Reader (*Biochem. J.*, vol. 24, pp. 77-80), who claimed that vitamin B₂ is stable in the presence of alkalis at high temperatures, but that yeast contains another factor, B₃, which is thermo- and alkali-labile. The Lister Institute investigators believe that there is an additional factor in yeast, but that it is thermostable,

Cereals as a class are deficient in vitamin B₃ and one of the puzzling contradictions in attempts to associate human pellagra with lack of vitamin B₃ in the corn meal, which forms so large a part of the diet in sections of the country where pellagra is epidemic, is that pellagra is almost unknown among populations whose staple food is wheat, rice, or millet—presumably as deficient in vitamin B₃ as is corn. In studies at the University of Cambridge, Leader (*Biochem. J.*, vol. 24, p. 1172), attempting to produce pellagra in rats by insufficient amounts of yeast extract containing both vitamins B₁ and B₃, found that rats had a seasonal immunity against pellagra comparable to that occurring in the human disease and that in the absence of cane sugar and yeast in the diet polyneuritis, but not pellagra developed, while if sugar was added to the diet, together with a small amount of yeast, pellagra but not polyneuritis developed. In commenting upon these results, Leader called attention to the fact that when corn makes up a large part of the diet it is usually accompanied by cane sugar, sirup, or molasses—the corn bread and molasses diet of the extremely poor people in the Southern States.

With the question still unsettled as to the ultimate cause of pellagra—it seemed to be accepted generally that good sources of vitamin B₃ are of value in its prevention. Hoagland and Snider (*J. Agr. Research*, vol. 40, p. 977) found that commercial beef extract was a good source of vitamin B₃. Since 1 lb. of the extract contained approximately the same amount of vitamin B₃ as 11 lbs. of fresh lean beef, they suggested that the extract might be more effective in the treatment of human pellagra than the fresh beef so often prescribed by medical men in treating the disease.

Meantime Bliss of the School of Medicine, Tulane University (*Science*, vol. 72, p. 577) suggested that pellagra was not a vitamin-deficiency, but an iron-deficiency disease, stating in bringing forward this view that the "work of Goldberger has made less of an impression upon clinicians and laboratory workers in the South who are in actual contact with the disease than might be inferred from its ready acceptance in standard texts to-day." Whatever may be the final decision concerning the cause of pellagra, it was generally accepted, as emphasized by Sherman and Smith (*The Vitamins*, 2d ed., New York) that vitamin B₃ (G) is "a substance of coordinate importance with the longer known vitamins as an essential factor in normal nutrition and deprivation or serious shortage of this substance results in widespread injury to the body. Conversely, the liberal feeding of this substance may be expected to play a significant part in inducing a better-than-average nutritive condition."

VITAMIN C. The importance of vitamin C in preventing and curing inflammation of the oral tissues and in preventing dental caries was emphasized in a report by Hanke (*J. Am. Dental Assoc.*, vol. 17, p. 957) of continued success in the dietary treatment of such conditions by large amounts of orange and lemon juice as a source of vitamin C. The dosage which in his experience had been adequate in all cases was the juice of one-half lemon and one-half pint of orange juice twice a day. In his experience the protective quantity of vitamin C was so large that tomatoes were not as satisfactory as citrus fruits, as in the quantities required they were not as well tolerated.

The general diet recommended by Hanke includes, in addition to the citrus fruit juices, meat, fresh vegetables, any desired amount of fresh fruit and from 1 to 2 pints of milk, 1 or 2 eggs, and from $\frac{1}{4}$ to $\frac{1}{2}$ head of lettuce a day. The diet is recommended not only as a curative but as a preventive measure.

Dietary management should most certainly begin with the pregnant woman, not only because of the most immediate effect on herself, but also because of the action on the fetus. Subsequent proper systematic nourishment of the child may lead to a decreased incidence of oral inflammation and possibly of dental caries.

VITAMIN D. From the standpoint of nutrition perhaps the most significant outcome of vitamin D research reported during the year was the convincing evidence along several different lines of the mutual interdependence of vitamin D and calcium. Harris (*Lancet*, 1930, I, p. 236), Bills and Wirick (*J. Biol. Chem.*, vol. 86, p. 117), and Duguid, Duggan, and Gough (*J. Path. Bact.*, vol. 33, p. 353) showed that the toxicity of laboratory rats to large doses of irradiated ergosterol varies with the calcium content of the diet, the higher the calcium the greater the toxicity. The toxicity manifests itself by hypercalcemia of the blood and deposits of calcium in various organs and tissues. Brown and Shohl (*J. Biol. Chem.*, vol. 86, p. 245) and Watchorn (*Biochem. J.*, vol. 24, p. 631) found that large doses of irradiated ergosterol led to decreased retention of calcium in spite of the calcification of certain tissues taking place at the same time. Watchorn (*Biochem. J.*, vol. 24, p. 1560) reported, however, that absence of calcium in the diet did not check the increased excretion of calcium following massive doses of irradiated ergosterol and concluded that for calcification in the body a high intake of vitamin D must be continued, with a fairly high intake of calcium, but that regardless of the calcium intake increased elimination of calcium from the bones or tissues follows excessive intake of vitamin D. "Such a loss of calcium in the absence of calcium from the diet can only mean that it is being lost from the bones or tissues."

This view was likewise held by Hess, Weinstock, and Rivkin (*Proc. Soc. Expt. Biol.*, vol. 27, p. 298) and others. Ashford (*Biochem. J.*, vol. 24, p. 661) found, however, that the bones of rabbits receiving excessive doses of irradiated ergosterol were hard and well calcified, which would hardly suggest that the calcium came from the bones. Jones, Rapoport, and Hodes (*J. Biol. Chem.*, vol. 89, p. 647) pointed out that many experimental diets considered to be calcium-free contain sufficient calcium to produce marked hypercalcemia in the presence of excessive vitamin D and demonstrated with dogs that in a diet absolutely free from calcium, it was impossible to produce pronounced hypercalcemia even with excessive doses of vitamin D. They concluded that the source of the excess of calcium in irradiated ergosterol hypercalcemia is the food and not the body tissue. Harris (*Lancet*, 1930, I, p. 236) expressed the opinion that the extent of hypercalcemia produced by excessive dosage of vitamin D depended upon the ratio of calcium to phosphorus in the diet.

The evidence just reviewed of the relation of calcium to vitamin D is based upon the abnormal condition of excessive intake. Sherman and Stiebeling (*Proc. Soc. Expt. Biol. Med.*, vol. 27, p. 663) showed in experiments upon growing rats under more normal conditions that any one

of the three factors phosphorus, calcium, or vitamin D may be the limiting factor in bone development, emphasizing that "vitamin D appears to have influence upon the rate of normal calcification even at levels well above those associated with rickets, but the supplying of vitamin D in abundance does not justify any lack of care in providing the growing organism with the liberal calcium intake which has also been shown to be essential to the optimal development of bone." See also CHEMISTRY; DAIBYING; FOOD AND NUTRITION.

VOLKELT, fôl'kêlt, JOHANNES IMMANUEL. A German philosopher, died in Leipzig May 8, 1930. He was born in Lipnik, Galicia, July 21, 1848, and was educated at the Universities of Vienna, Jena, and Leipzig. He became professor of philosophy at Jena in 1879, at Basel in 1883, and at Würzburg in 1889. In 1894 he was made professor of philosophy and pedagogy at Leipzig, which chair he held until 1921. His more important works are: *Kants Erkenntnis-theorie* (1879); *System der Aesthetik* (3 vols., 1905-14); *Zwischen Dichtung und Philosophie* (1908); *Was ist Religion?* (1913); *Gewissheit und Wahrheit* (1918); *Die Gefühlsgewissheit* (1922); *Phänomenologie und Metaphysik der Zeit* (1925); and *Das Problem der Individualität* (1928).

VOLLBEHR COLLECTION. See LIBRARY PROGRESS.

VOUGHT, CHANCE MILTON. An American aeronautical engineer, died in Southampton, N. Y., July 25, 1930. Born in New York City, Feb. 26, 1888, he attended Pratt Institute in Brooklyn, New York University, and the University of Pennsylvania. He designed and constructed such planes as the PLV biplane, Mayo biplane, Simplex 3-place flying boat, Wright model-V military biplane, and the Wright-Hispano flying boat. He was consulting engineer with the U. S. Bureau of Aircraft Production during the World War, and designed the Vought VE-7 standardized military training biplane, VE-8 single-seater pursuit plane, VE-9 advanced training airplane, VE-10 flying boat, and VE-11 special pursuit single-seater. For the U. S. Navy he designed the V-ocatapult-observation convertible airplane for scout-cruisers and battleships and the famous Corsair or OU, a convertible land and seaplane for observation and fighting. At the time of his death he was president of the Chance Vought Corporation, manufacturers of military and naval airplanes.

WAFD. EGYPTIAN NATIONALIST PARTY. See EGYPT under *Government and History*.

WAGES. See STATISTICS.

WAGNER, COSIMA. Widow of Richard Wagner, the German composer, died in Bayreuth, Germany, Apr. 1, 1930. She was born in Bellagio on Lake Como, Italy, Dec. 25, 1837, daughter of Franz Liszt, the Hungarian pianist, and the Comtesse Marie d'Agoult. In 1857 she was married to her father's pupil, Hans von Bülow, the orchestra conductor, from whom she was divorced in 1869. A year later she was married to Wagner, by whom she had already borne three children, Isolde, Eva, and Siegfried (q.v.). In 1872 she and her husband moved to Bayreuth where, through the patronage of Ludwig II of Bavaria, an opera house was erected for the production of the composer's operas. So profoundly had she penetrated into and assimilated Wagner's ideals that after his death in 1883 she

became the leading spirit of Bayreuth, developing the annual festival into a world-famous institution. See MUSIC.

WAGNER, SIEGFRIED. A German composer and orchestra conductor, son of Richard and Cosima Wagner (q.v.), died in Bayreuth, Aug. 4, 1930. He was born in Triebtschen, near Lucerne, Switzerland, June 6, 1869, and although destined by his father for an architect's career early determined to become a musician, studying under Kniese and Humperdinck. In 1893 he entered upon his career as an orchestra conductor, touring through Germany, Austria, Italy, and England, where he met with marked success as an interpreter of the works of his father. In 1896 he became co-director, with his mother, of the Wagnerian Festival Playhouse in Bayreuth, and in that year won general favor by his work as conductor of *Der Ring des Nibelungen*. The festival was discontinued on the outbreak of the World War but was resumed ten years later, following a successful tour of Europe and the United States by Herr Wagner to raise money for this purpose. In 1924 he also assumed general direction of the playhouse on account of the advanced age and precarious health of his mother. His principal works are the operas *Der Barenhäuter* (1899); *Herzog Wildfang* (1901); *Der Kobold* (1904); *Bruder Lustig* (1905); *Das Sternengeböt* (1908); *Banadietrich* (1910); *An allem ist Hütchen schuld* (1917); *Schwarzschwänenreich* (1918); *Sonnenflammen* (1918); *Der Schmied von Marienburg* (1920); and *Der Friedensengel* (1926). In 1922 he published his memoirs under the title *Erinnerungen*. See MUSIC.

WAGNER BILLS. See UNITED STATES under *Congress*.

WAGNER MUSICAL FESTIVAL. See MUSIC.

WAILING WALL. See PALESTINE under *History*.

WALES. A historical division of the United Kingdom, consisting of 12 counties, on the west coast of Great Britain, between the Irish Sea on the north and the Bristol Channel on the south. Area, 7466 square miles; population, according to the census of 1921, 2,205,680. See GREAT BRITAIN.

WAR, OUTLAWRY OF, ETC. See ARBITRATION, INTERNATIONAL; PEACE and PEACE MOVEMENTS.

WAR CLAIMS COMMISSION. See GERMANY under *History*; ARBITRATION, INTERNATIONAL.

WARD, SIR JOSEPH (GEORGE), FIRST BARONET. A New Zealand statesman and former premier, died in Wellington July 7, 1930. He was born in Melbourne, Australia, Apr. 26, 1856, and was educated privately. In 1887 he was elected to Parliament as member for Awarua in the Liberal party, and in 1891 became Postmaster General, an office which he held continuously until 1912. He served his first premiership during 1906-12. As leader of the Liberal party, he sponsored much of New Zealand's progressive legislation.

In 1915 Sir Joseph entered the National Ministry, a coalition of the Liberal and Reform parties brought about by the War, as Finance Minister and Postmaster General; and during 1917-18 represented New Zealand in the Imperial War Cabinet in London, and in 1919 at the Paris Peace Conference. On his return from Paris he resigned from the coalition cabinet and was defeated in the election which followed, the Reform party remaining in power. He was reelected to Parlia-

ment in 1925, however, as a member for Invercargill. In 1928, as leader of the United party, he again became Premier, but resigned this office in May, 1930, on account of ill health. He was created a knight commander of St. Michael and St. George in 1901 and a Baronet in 1911.

WARDITE. See MINERALOGY.

WARSHIPS. See NAVAL PROGRESS.

WASHBURN, ALBERT HENRY. An American diplomat and lawyer, died in Vienna, Austria, Apr. 2, 1930. He was born in Middleborough, Mass., in 1866 and was graduated from Cornell University in 1889. He entered the diplomatic service immediately upon graduation, acting as United States consul at Magdeburg, Germany, for three years. On his return to the United States in 1893 he became private secretary to Senator Henry Cabot Lodge and also studied law at the University of Virginia and Georgetown University, receiving the degree of LL.B. from the latter institution in 1895. He then practiced law in Middleborough. In 1919 he became professor of political science and international law at Dartmouth College, and three years later was appointed Minister to Austria. He represented the United States on the commission of jurists sitting at The Hague from December, 1922, to March, 1923, to consider amendment of the laws of war in accordance with a resolution of the Washington Disarmament Conference. The following year he was named president of the mixed commission appointed to adjust differences between Austria and Yugoslavia arising out of provisional trade agreements. Dartmouth conferred the LL.D. degree on him in 1924. He resigned as Minister to Austria early in 1930 so as to accept the post of Ambassador to Japan.

WASHBURN COLLEGE. A coeducational institution in Topeka, Kan., founded in 1865. The enrollment for the summer session of 1930 was 204 and for the autumn term, 763. There were 72 faculty members. The endowment amounted to \$1,334,603, and the income for the year was \$230,480. The library contained 37,051 volumes. President, Parley P. Womer, Sc.D.

WASHINGTON. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,563,396. The population on Jan. 1, 1920, was 1,356,621. The capital is Olympia.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930: •

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------|------|-----------|------------|--------------|
| Wheat | 1930 | 2,445,000 | 40,065,000 | \$22,627,000 |
| | 1929 | 2,430,000 | 44,910,000 | 47,902,000 |
| Apples | 1930 | | 37,850,000 | 35,958,000 |
| | 1929 | | 29,500,000 | 38,350,000 |
| Hay | 1930 | 961,000 | 1,968,000* | 26,097,000 |
| | 1929 | 973,000 | 1,914,000* | 32,030,000 |
| Potatoes ... | 1930 | 64,000 | 9,984,000 | 7,488,000 |
| | 1929 | 56,000 | 8,680,000 | 12,586,000 |
| Oats | 1930 | 210,000 | 10,080,000 | 8,629,000 |
| | 1929 | 191,000 | 8,977,000 | 5,296,000 |
| Corn | 1930 | 50,000 | 1,900,000 | 1,672,000 |
| | 1929 | 48,000 | 1,824,000 | 1,879,000 |
| Barley | 1930 | 63,000 | 2,142,000 | 1,007,000 |
| | 1929 | 63,000 | 2,142,000 | 1,671,000 |

* Tons.

Farms in the State numbered 71,335 in 1930, as against 73,267 in 1925 and 66,288 in 1920. The area of irrigated lands totaled 503,458 acres in 1929, as against 529,899 in 1919.

MINERAL PRODUCTION. Coal, which normally has contributed somewhat less than one-half of

the yearly total of the State's mineral product as measured by value, was mined at about the same rate in 1929 as in 1928, the quantity produced being 2,521,327 net tons for 1929 and 2,519,901 for 1928, and the value of coal mined being \$8,647,000 for 1929 and \$8,720,000 for 1928. The entire mineral production of the State attained the value of \$22,119,541 for 1928; for 1927, of \$21,965,917.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in the State of Washington in 1930 was about \$349,200 as compared with \$552,233 in 1929, according to estimates of the U. S. Bureau of Mines. There were increases in the quantities of recovered gold and lead, but decreases were reported in the output of silver, copper, and zinc.

FINANCE. State expenditures in the year ended Mar. 31, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$23,130,089 (of which \$8,164,293 was for local education); for interest on debt, \$757,024; for permanent improvements, \$12,901,842; total, \$36,788,955 (of which \$14,062,820 was for highways, \$3,638,005 being for maintenance and \$11,324,815 for construction). Revenues were \$35,310,791. Of these, property and special taxes formed 40.2 per cent; departmental earnings and remuneration to the State for officers' services, 6.0; sales of licenses, 37.9 (including taxes of \$4,245,237 on sales of gasoline). The State's funded debt outstanding on Mar. 31, 1929, was \$13,800,289. Net of sinking-fund assets, it was \$12,194,031. On property bearing an assessed valuation of \$1,246,168,552 were levied in the year State taxes of \$13,835,832.

TRANSPORTATION. The mileage of railroad line under operation on Jan. 1, 1930, was 5538.95.

EDUCATION. A constitutional amendment for classifying taxable property, regarded as helpful to the finances for public education, received the organized support of the teachers, and was adopted at the polls. The effort was made to modernize more thoroughly the courses of study in the public schools, and new courses were introduced in elementary, high, and junior high schools. For the year ending June 30, 1930, the school population of the State was estimated at 432,377 individuals between the ages of 4 (or 5) and 21 years. There were enrolled in the public day schools 344,731 pupils; there was also an evening-school enrollment of 13,721. Of the day-school pupils, 3420 were in kindergartens, 255,883 in elementary, and 85,428 in high-school grades. The year's expenditures for public-school education were: Current, \$27,694,802; total, \$33,245,780. Salaries of teachers averaged, for the year, \$1525.

CHARITIES AND CORRECTIONS. Control of State institutions for the care or custody of persons, under the system in operation in 1930, was based on the State's Civil Administrative act of 1921. The Department of Business Control, having as its executive head an appointive director (Olaf L. Olson), exercised a closely centralized regulation of the institutions. The director appointed the superintendents of the several institutions, to serve during his pleasure. The department fixed the salaries of superintendents' subordinates, whom the superintendents appointed. Institutional purchasing was regulated through the department's Supervisor of Purchasing. The State institutions, with populations of October, 1930, included: Western State Hospital, Fort Steilacoom, 1670; Eastern State Hospital, Medical Lake, 1393; Northern State Hospital, Sedro-

Woolley, 1413; State Custodial School, Medical Lake, 1199; State Soldiers' Home, Orting, 158.

POLITICAL AND OTHER EVENTS. Efforts to reform the State's system of taxation were checked by decisions of the State Supreme Court. The five per cent tax on financial corporations was held unconstitutional. Governor Hartley's advisory tax commission then petitioned the Court for a reconsideration of the case. The Court dismissed the petition on August 7, delivering an opinion to the effect that the State constitution did not admit of the proposed methods of relief from *ad valorem* taxation on property. The so-called statutory excise tax on the profits of certain corporations was declared to be in reality a property tax and therefore not constitutionally assessable against some corporations if not against others.

ELECTIONS. The Republican vote on November 4 elected majorities in both branches of the Legislature. Four Republicans and one Democrat were elected to the House of Representatives. A proposed State constitutional amendment for reapportionment of representation in the Legislature was adopted by popular vote.

OFFICERS. Governor, Roland H. Hartley; Lieutenant-Governor, John A. Gellatly; Secretary of State, J. Grant Hinkle; State Auditor, C. W. Clausen; State Treasurer, Charles W. Hinton; Attorney-General, John H. Dunbar; Superintendent of Public Instruction, N. D. Showalter.

JUDICIARY. Supreme Court: Chief Justice, John R. Mitchell; Associate Justices, Warren W. Tolman, John F. Main, Emmett N. Parker, Mark A. Fullerton, O. R. Holcomb, Walter B. Beals, W. J. Millard, Adam Beeler.

WASHINGTON, D.C., IMPROVEMENT. See CITY AND REGIONAL PLANNING, under *City Planning*.

WASHINGTON, STATE COLLEGE OF. A co-educational institution for higher learning in Pullman, Wash.; founded in 1890 by an act of the State Legislature. It consists of the following colleges and schools: Colleges of agriculture, home economics, mechanic arts and engineering, sciences and arts, veterinary medicine; and schools of education, mines and geology, music and fine arts, pharmacy, and graduate. The enrollment for the autumn of 1930 was 3207; 585 students attended the summer session. There were 330 faculty members. The amount of income for the year, including appropriations made by the State Legislature (millage tax) and income from land grant and Federal funds, student fees, etc., was \$1,836,675. The library consisted of 200,000 volumes. President, Ernest O. Holland, Ph.D.

WASHINGTON, UNIVERSITY OF. A State institution of higher education in Seattle, Wash.; founded in 1861. The enrollment for the autumn term of 1930 was 7368 classified as follows: Business administration, 1193; education, 240; engineering, 917; fine arts, 759; forestry, 128; journalism, 67; law, 301; liberal arts, 2302; library science, 46; mines, 55; pharmacy, 137; science, 1223. The summer-school enrollment totaled 3272 in the two terms, including 1135 men and 2137 women. The faculty numbered 466 members. The income from all sources for the scholastic year 1929-30 was \$2,915,064.57. The library contained 255,398 volumes. President, M. Lyle Spencer, Ph.D.

WASHINGTON AND JEFFERSON COLLEGE. A nonsectarian institution for the higher education of men in Washington, Pa., which had its origin in the Washington Academy, founded in

1787 and chartered at Washington College in 1802. Jefferson College at Canonsburg, Pa., was chartered in 1806, and in 1865 the two colleges were united to form Washington and Jefferson College. The enrollment for 1930-31 totaled 434 undergraduates and 9 graduate students. The 1930 summer session enrollment was 150. The faculty enrollment 36. The productive funds of the college amounted to \$1,137,813, and the income from all sources was approximately \$200,000. The library contained 42,561 volumes. President, S. S. Baker, M.S., LL.D.

WASHINGTON AND LEE UNIVERSITY.

A nonsectarian institution for the higher education of men in Lexington, La., founded in 1749. The enrollment for the autumn of 1930 was 915. There were 58 members on the faculty. The productive funds of the university amounted to \$1,459,155, and the income for the year was \$335,780. The library contained 65,000 volumes. President, Francis Pendleton Gaines, Ph.D., Litt.D., LL.D.

WASHINGTON BICENTENNIAL. See CELEBRATIONS.

WASHINGTON UNIVERSITY. A nonsectarian institution of higher learning for men and women in St. Louis, Mo.; founded in 1853. The enrollment on Nov. 1, 1930, was 7444, distributed as follows: Graduate students, 321; college of liberal arts, 1416; engineering, 386; architecture, 123; business and public administration, 221; law, 131; medicine, 321; dentistry, 199; fine arts, 364; extension division, 2770; nursing, 254. The enrollment in the summer session of 1930 was 938. The faculty for 1930-31 numbered 580, including 94 professors, 59 associate professors, and 97 assistant professors. The value of buildings, grounds, and equipment of the institution was estimated at \$13,531,061. The endowment amounted to \$17,903,718, while the income for the year was \$2,670,052. Gifts received in 1929-30 amounted to \$1,373,830. The library contained 305,446 volumes and 86,546 pamphlets. Chancellor, George R. Troop, Ph.D., LL.D.

WATER POWER. During 1930 a total of 1,076,889 horse power (about 750,000 kilowatts) capacity in water power was added to power plants in the United States, bringing the total hydro capacity at the end of the year up to 14,884,667 horse power. The greatest increase in hydro-electric production capacity occurred in the East South Central States, where the horsepower capacity of water wheels rose 17 per cent to 1,363,653 on Dec. 31, 1930, from 1,168,992 on Dec. 31, 1929. The production capacity of water wheels in the New England States increased 16 per cent during the year to a total of 1,897,591 horse power. The South Atlantic States, with a 10 per cent increase; the Mountain States, with 8 per cent; and the Pacific States, with 6 per cent, followed in order. The increase in power-production capacity for the entire country was 7 per cent. New Hampshire, New York, South Carolina, Tennessee, Alabama, and Washington each showed a gain of about 100,000 horse power for the year. New construction undertaken, or announced, would add more than 1,000,000 horse power to that of the utility plants. This does not take into account proposed developments on the St. Lawrence River nor the Boulder Canyon (Hoover Dam) project on the Colorado River.

In Canada new installations, totaling 400,000 horse power, were completed during 1930 bringing the total for the Dominion up to 8,112,000 horse

power. New construction which was active would add 1,500,000 horse power during the succeeding two or three years. These projects would entail an expenditure of \$300,000,000. Approximately 98 per cent of the power there produced is hydro.

In addition to this there were under construction in the United States nine units, each of 84,000 horse power, for the Dneiper River Project in Russia. Some of the more important developments included in the foregoing figures are as follows:

IMPORTANT HYDRO-ELECTRIC PROJECTS PUT INTO OPERATION OR UNDER CONSTRUCTION IN 1930

| UNITED STATES PUT IN SERVICE | | | | |
|---------------------------------------|---------------------------|-------|-----------------------|-----------|
| Company | Project | Units | Size each unit (h.p.) | Head, ft. |
| New Eng. Pr. Assoc. | 15 Mi. Falls | 4 | 53,100 | 175 |
| Lexington Water Pr. Co. | Saluda | 4 | 55,650 | 180 |
| Arkansas Pr. & Lt. Co. | Carpenter | 2 | 39,500 | 89 |

| RUSSIA | | | | |
| | Dneiper River Development | 9 | 84,000 | 116½ |

The two 90,700 horse-power units being constructed for the Diablo plant of the City of Seattle are the largest in capacity thus far to be installed in the United States. These exceed the rated capacity of the Dneiper River units being built for Russia which were designed to develop 84,000 horse power at their maximum efficiency when operating under the normal head of 116.5 feet, although it was expected that each unit would develop over 100,000 horse power at full gate opening when operating under a head of 123

feet. The 40,000 horse-power Francis type turbine, installed as the second such unit at the Oak Grove plant in Oregon, represented the highest head unit of this type in this country although this had been exceeded by two installations in Europe. For higher heads the Pelton type of wheel was used.

The largest projects in the United States to use propeller type wheels were the Safe Harbor Development on the Susquehanna River in Pennsylvania, which was to have initially six 42,500 horse-power units operating under a 55-foot head and the Rock Island Development in the State of Washington, which was to install four 21,000 horse-power units to operate under a 32-foot head.

The Colorado River Project (Boulder Canyon) upon which preliminary work was started by the U. S. Government during 1930 involved a 727-foot dam (the Hoover Dam) and a power installation of 1,000,000 horse power. See DAMS.

The State of Arizona was endeavoring to prevent construction of this project under the five-State agreement and sought permission to bring suit in the U. S. Supreme Court. Under the terms of this agreement 36 per cent of the power would be allocated to the Metropolitan Water District, comprising 11 municipalities in California, 18 per cent to Nevada, 18 per cent to Arizona, 13 per cent to the city of Los Angeles, 9 per cent to the Southern California Edison Company, and the remaining 6 per cent would be distributed among various municipalities.

The much discussed development of International Section of the St. Lawrence River advanced a step nearer actuality with the report of Governor Roosevelt's Commission at the end of the year. This board recommended a single-dam two-step development at Massena Point, N. Y., the first step utilizing 50-foot head, to develop 600,000 horse power at a cost of \$79,935,000 or \$133 per horse power, and the second development, which would involve raising the dam 35 feet, would add 1,600,000 horse power at a cost of \$91,612,000. This would bring the average construction cost down to \$77.97 per horse power. From five to six years was estimated as the time required for this construction. The majority of the commission recommended development by the State of New York and the Dominion of Canada with disposal of the power to existing utilities.

Among utility plants in the United States water power accounted for slightly over one-quarter of the total capacity and accounted for 34.3 per cent of the total output in kilowatt hours. See POWER PLANTS.

WATER SUPPLY. See AQUEDUCTS; WATERWORKS AND PURIFICATION.

WATERWAYS. See CANALS.

WATERWORKS AND WATER PURIFICATION. California was the greatest centre of activity in waterworks construction. The water-supply system of the East Bay Municipal Utilities District, comprising Oakland and eight other cities on the east side of San Francisco Bay, was completed early in the year. The district was formed in 1923 and construction was begun two years later. Water of the Mokelumne River is impounded by the Pardee dam, a structure 357 feet high above the foundation, and is conveyed to the district by gravity through a 95-mile aqueduct. The district has bought the distribution system of the company formerly supplying the East Bay cities. San Francisco is continuing the construction of the Hetch Hetchy aqueduct, to bring water

by gravity from the Tuolumne River from the Hetch Hetchy dam and reservoir—renamed O'Shaughnessy dam after the chief engineer of the project. The dam has been completed for several years, as also the development of a large amount of hydro-electric power. On March 3, San Francisco took over the waterworks system of the Spring Valley Water Company, which had supplied the city with water for about 70 years (see MUNICIPAL OWNERSHIP).

To supplement the sources of supply acquired from the company San Francisco contracted with the East Bay Cities Utilities district for a temporary emergency supply pending the completion of the Hetch Hetchy aqueduct. The largest waterworks project in the world was the Colorado River aqueduct and associated works for the Metropolitan Water District of Southern California, comprising Los Angeles, Pasadena, San Bernardino and eight other cities. Studies were begun by Los Angeles alone, in 1925, but were taken over by a district organized later. After fifty different routes had been explored, all were submitted to a board of engineering review in November, 1929. The board chose four routes for further study by the district engineers.

On Nov. 10, 1930, the chief engineer of the district recommended the Parker route, which was referred back to the three consulting engineers, who approved it late in December. The aqueduct line chosen will be 265.5 miles long from the Colorado River to a terminal reservoir and requires a pumping lift of 1563 feet. The carrying capacity of the aqueduct will be 1500 cubic feet per second or about one billion gallons per 24 hours but the first installation of pumping equipment would lift only 800 feet per second. Construction cost, including interest charges, is estimated at \$200,000,000.

At an election on May 20, Los Angeles voters approved a \$38,800,000 water bond issue, the vote being 8 to 1 in favor of the loan. The money was to be divided about equally between increasing the Owens Valley supply and acquiring land and water rights. Included in the latter will be the purchase of the sites of five towns—Laws, Bishop, Big Pine, Independence and Long Pine—at a cost of nearly \$6,000,000, to end a long and bitter controversy over alleged damages to these towns caused by taking water for the Los Angeles aqueduct. For accounts of the Colorado River aqueduct project see *Engineering News-Record*, April 2, 1925, p. 560; May 31, 1928, p. 850; Nov. 27 and Dec. 25, 1930, pp. 854 and 1024.

Elsewhere in the United States the Wanaque aqueduct for the North Jersey Water Supply District, including Newark, Paterson and other cities, was completed and put in use; work was in progress on the second deep-pressure tunnel to convey the Catskill water supply beneath New York City; the 14-mile Coldbrook-Wachusett aqueduct of the Boston Metropolitan Water District was holed through and the placing of the concrete lining was nearly completed; the new gravity water supply system for Albany, N. Y., was carried well on towards completion; large additions to the supply of Detroit were under way, including a new lake intake, tunnels, pumping stations and additional filters; and large-scale experiments on the treatment of the water supply of Chicago were continued.

A tentative plan for four immense plants to treat the entire water supply of Chicago and a number of dependent adjacent towns was made

public early in the year. The estimated cost of purification works to serve the present population of the Chicago district is \$60,000,000. The capacities of the four plants was not stated. Each would be built in units consisting of chemical mixing basins to hold the water 55 minutes and settling basins to give four hours detention; filters of sand and activated carbon operating at a rate of 155,000,000 gallons an acre per day and clear-water reservoirs. The four plants would serve as many districts, the water being delivered by a dozen pumping stations. The treatment would remove turbidity and microorganisms and partly soften the water. The water would be chlorinated to complete the bacterial removal. At the November election the voters of Chicago endorsed the policy of filtration.

INTERSTATE WATER RIGHTS. Progress was made in two lawsuits before the U. S. Supreme Court seeking to prevent the diversion of the waters of interstate streams for the supply of a municipality in another State. In the suit brought by Connecticut to prevent the diversion of tributaries of the Connecticut River eastward to supplement the present supply of Boston and other places in the Metropolitan Water District, the court referee reported adversely to Connecticut on all the points raised by that State except for a conditional recommendation that slight damages be awarded to a private power company. The court had not acted on the report at the end of the year.

In a second case, by which New Jersey sought to prevent New York City from going to tributaries of the Delaware River for an additional water supply, a vast mass of testimony was taken during the year—with Pennsylvania guarding its own interests, which might be affected whichever way the decision went. The outcome of the Connecticut-Massachusetts suit would not affect the portion of the additional supply for Boston and vicinity to be carried through the Coldbrook-Wachusett tunnel, already mentioned, but New York City was postponing construction of its Delaware River project until the U. S. Supreme Court rendered its decision on the constitutionality of the diversion.

DROUGHT. Abnormally low rainfall in some of the New England, Middle Atlantic, Southern and North Central States called sharp attention to the need of increased capacities of sources of water supply for many cities but except for relatively small towns here and there water famines did not occur. Large rural areas were seriously affected. See METEOROLOGY.

LONDON. The largest waterworks system in the world, measured by population supplied, is that operated by the Metropolitan Water Board of London, England, which furnished water directly to an estimated population of 7,500,000 during the year ending Mar. 31, 1930, besides delivering water in bulk, outside its own district, to 50,000 more persons. From the time the board took over the works from the eight water companies, in June, 1904, to Mar. 31, 1930, the length of pipe in the system increased from 5759 to 7202 miles. The average daily per capita water consumption for the fiscal year 1929-30 was nearly 44 United States gallons or less than half of what would be considered a low figure for an American city.

WEATHER. See METEOROLOGY.

WEBB, SIR ASTON. A British architect, died Aug. 21, 1930, in London where he was born May 22, 1849. Educated privately, he gained renown as the most prominent British architect of his

time. He designed the Admiralty Arch at the east end of the Mall, London; the Birmingham Assize Courts; the Britannia Royal Naval College and Sick Quarters in Dartmouth; the French Protestant Church in Soho; and the London offices of the Grand Trunk Railway of Canada and of the Metropolitan Life Assurance Company. He also restored churches in different parts of England, including the beautiful St. Bartholomew's the Great in Smithfield, London. The most famous examples of his work, however, are the new façade of Buckingham Palace, together with the architectural setting of Brock's Victoria Memorial and the layout of the Mall as a processional road, and the buildings of the Victoria and Albert Museum, the Royal College of Science, and the Imperial College of Science and Technology, all in South Kensington.

WELFARE WORK. THE COST OF PHILANTHROPY. According to the John Price Jones Corporation, gifts to philanthropy in the United States in 1929 reached the total of \$2,450,720,000, which was an increase of \$120,120,000 over 1928. The following was the distribution of these gifts according to the purposes for which they were granted: Religion, \$996,300,000; education, \$467,500,000; gifts for personal charity, \$279,760,000; organized charitable relief, \$278,710,000; health, \$221,510,000; foreign relief, \$132,000,000; the fine arts, \$40,000,000; play and recreation, \$20,900,000; miscellaneous reform organizations, \$14,040,000.

SOCIAL STATISTICS. The registration of social statistics, beginning with July 1, 1930, became one of the concerns of the Federal Children's Bureau. Heretofore such data had been collected by the National Association of Community Chests and Councils and the local community research committee of the University of Chicago. For the time being the Children's Bureau was compiling figures in the fields of dependency, delinquency and health. The cities participating in the registration for 1930 were Akron, Berkeley, Bridgeport, Buffalo, Canton, Chicago, Cincinnati, Cleveland, Columbus, Dayton, Denver, Des Moines, Detroit, Duluth, Grand Rapids, Harrisburg, Hartford, Indianapolis, Kansas City, Lancaster, Louisville, Minneapolis, Newark, New Haven, New

Orleans, Norfolk, Omaha, Orange, Richmond, Sharon, Sioux City, Springfield (Ill.), Springfield (Mass.), Springfield (Ohio), St. Louis, St. Paul, Washington (D. C.), Wichita, and Wilkes-Barre.

The accompanying table indicates the relief expenditures for 15 cities for 1928 and 1929 in the family welfare field.

Relief was being given in these cities by both private and public agencies and, in most instances, the major portion was coming from the public treasury. Of the \$6,418,659 disbursed for relief in 1929 by the 15 cities, \$2,937,525, or 46 per cent of the total, was expended in Detroit. The following table indicates that the relief expenditures in 1930 for 19 cities was considerably greater than for the similar months in 1929.

AMOUNT OF RELIEF GIVEN MONTHLY FROM JANUARY, 1929 TO JUNE, 1930, IN 19 CITIES^a BY THE PRINCIPAL AGENCY PROVIDING FAMILY RELIEF IN EACH

| Month | Amount of relief given 1929 | 1930 |
|-----------|--------------------------------|-----------|
| January | \$173,239 | \$257,350 |
| February | 171,867 | 239,113 |
| March | 152,243 | 232,035 |
| April | 117,484 | 204,387 |
| May | 115,449 | 186,353 |
| June | 95,799 | 169,644 |
| July | 95,816 | |
| August | 96,589 | |
| September | 90,932 | |
| October | 106,873 | |
| November | 130,885 | |
| December | 189,888 | |

^a Excluding mothers' aid and veterans' relief.

^b Akron, Canton, Chicago, Cincinnati, Cleveland, Columbus, Dayton, Des Moines, Grand Rapids, Kansas City, Lancaster, Louisville, Minneapolis, Omaha, Richmond, Sharon, Sioux City, St. Louis, Wichita.

COMMUNITY CHESTS. According to the Association of Community Chests and Councils there were community chests in 360 cities in the country and these succeeded in raising \$80,000,000 during the year. Fall campaigns for the raising of the annual budgets were held in 220 cities and, among these, 64 cities exceeded the sums that had been raised in the year 1929. According to the Association, the unemployment situation created a greater interest among the giving public with the result that large subscriptions, coming from the wealthy, were increased rather than otherwise. In New York City, for the first time, the important family welfare societies were uniting in a common appeal because of the heavy drains made on their resources by unemployment. The goal of this drive was \$6,000,000 and it was proposed to employ the sum raised to obtain jobs in non-profit making activities for 10,000 heads of families, throughout the winter at least.

WELLAND CANAL. See CANALS.

WELLESLEY COLLEGE. A nonsectarian institution for the higher education of women in Wellesley, Mass.; chartered in 1870 and opened in 1875. The enrollment for the academic year 1930-31 was 1550, which included 52 candidates for the Master's degree. The teaching staff numbered 158. The trust funds as of June 30, 1930, amounted to \$9,732,245, and the income for the year 1929-30 was \$1,125,074 (exclusive of gifts). A new faculty apartment house was completed in September, 1930. An administration building and a zoological laboratory were under construction. The library contained about 135,000 volumes. President, Ellen Fitz Pendleton, Litt.D., LL.D.

WELLS COLLEGE. An institution of higher learning for women in Aurora, N. Y., founded in

RELIEF GIVEN BY ALL AGENCIES FOR FAMILY WELFARE AND RELIEF IN 15 CITIES^b DURING EACH MONTH OF 1928 AND 1929

| Month | Amount of relief given 1928 | 1929 |
|-----------|--------------------------------|-----------|
| January | \$600,279 | \$570,373 |
| February | 577,265 | 548,693 |
| March | 564,084 | 535,991 |
| April | 457,812 | 484,070 |

1868. The enrollment for the autumn of 1930 was 269. The faculty numbered 44 members. The endowment amounted to \$1,500,000, and the income for the year from invested funds, tuition, etc., was \$367,182. There were approximately 65,000 volumes in the library. President, Kerr Duncan Macmillan, S.T.D.

WESLEYAN METHODIST CHURCH. See METHODISTS.

WESLEYAN UNIVERSITY. An institution for the higher education of men in Middletown, Conn.; founded in 1831. The 1930 autumn enrollment was 608, distributed as follows: Seniors, 126; juniors, 118; sophomores, 141; freshmen, 198; graduate students, 24; specials, 1. The faculty for 1930-31 numbered 75. The productive funds of the university amounted to \$5,134,424, and the income for the year was \$569,672. The library contained more than 170,000 volumes. President, James Lukens McConaughy, Ph.D.

WESTERN AUSTRALIA. A state of the Australian Commonwealth, occupying the western third of the continent. Area, 975,920 square miles; population, estimated at 417,423 on Mar. 31, 1930, as compared with 332,732 at the census of 1921. Full-blooded aborigines were estimated at 22,898 in 1929. The capital, Perth, had 202,888 inhabitants on Jan. 1, 1930, or nearly half of the total population. The population increase in 1929 was 10,890. Births numbered 9051; deaths, 3930; marriages, 3367; and the excess of immigration over emigration was 5769. Primary education is compulsory. In 1929, there were 836 State schools, with an average attendance of 46,947.

Agriculture, stock raising, manufacturing, mining, lumbering, and fishing are the leading industries. The area under wheat in 1929-30 was estimated at 3,568,225 acres and the production at 39,081,183 bushels, as compared with 33,790,040 bushels from 3,343,530 acres in 1928-29. Oats, barley, hay, potatoes, fruits, and grapes are other products. In 1929-30, the value of direct overseas imports was estimated at £8,901,799 and that of overseas exports at £15,996,964. There were 4111 miles of State railways and 450 miles of Federal lines in 1930, the deficit of the former in 1929-30 totaling \$1,965,817. For the fiscal year 1928-29, State revenues amounted to £9,947,951 and expenditures to £10,223,919. The gross State debt on June 30, 1930, was £71,990,141, or over £171 per capita.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses, the Legislative Council of 30 members elected for six years on a property qualification basis, and the Legislative Assembly of 50 members elected for three years by universal suffrage. Governor in 1930, Col. Sir William Robert Campion; Premier and Treasurer, Philip Collier (Labor).

In the State election of April, 1930, the Labor Government was defeated and supplanted by a Nationalist-Country party coalition government. A movement for secession from the Australian Commonwealth gained considerable strength during 1930. See AUSTRALIA.

WESTERN RESERVE UNIVERSITY. A nonsectarian institution for the higher education of men and women in Cleveland, Ohio; chartered in 1826. The enrollment for the autumn of 1930 in the regular day curricula was 4311. The faculty numbered 475 professors and other members. The endowment of the university amounted to \$10,579,620; and the income for the year was \$2,075,-

282. The library contained about 350,000 volumes. President, Robert E. Vinson, D.D., LL.D., L.H.D.

WESTERN SAMOA. See SAMOA.

WEST POINT. See UNITED STATES MILITARY ACADEMY.

WEST SPITZBERGEN. See SVALBARD.

WEST VIRGINIA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,729,205. The population on Jan. 1, 1920, was 1,463,701. The capital is Charleston.

AGRICULTURE. The following table presents the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------|------|---------|------------|--------------|
| Hay | 1930 | 751,000 | 508,000* | \$11,613,000 |
| | 1929 | 817,000 | 1,163,000* | 17,529,000 |
| Corn | 1930 | 441,000 | 5,865,000 | 6,393,000 |
| | 1929 | 441,000 | 15,876,000 | 18,828,000 |
| Potatoes | 1930 | 60,000 | 4,200,000 | 5,670,000 |
| | 1929 | 57,000 | 6,555,000 | 9,177,000 |
| Apples | 1930 | | 3,944,000 | 4,338,000 |
| | 1929 | | 5,600,000 | 7,280,000 |
| Oats | 1930 | 216,000 | 4,428,000 | 2,613,000 |
| | 1929 | 216,000 | 5,616,000 | 3,594,000 |
| Wheat | 1930 | 134,000 | 2,345,000 | 2,392,000 |
| | 1929 | 134,000 | 1,782,000 | 2,370,000 |

* Tons.

Farms in the State numbered 82,641 in 1930, as against 90,380 in 1925 and 87,289 in 1920.

MINERAL PRODUCTION. The production of coal, which was somewhat curtailed in 1928, made some improvement in 1929. It rose to the total quantity of 138,518,855 net tons for 1929, from 132,952,159 for 1928; in value it rose less notably, to \$215,110,000 for 1929 from \$211,480,000 for 1928. The natural gas industry was on the increase in 1928, its total production for that year, 163,018,000 M cubic feet, being slightly above the 162,375,000 M of 1927, while the total value of the yearly product, \$72,265,000 for 1928, was conspicuously above the \$67,994,000 of 1927. Natural gas gasoline, of which the yield was 69,729,000 gallons for 1928, was increasingly produced, the quantity for 1929 being 70,700,000 gallons; the corresponding values were \$6,220,000 for 1928 and \$5,970,000 for 1929. Clay products totaled \$19,027,545 for 1928; for 1927, \$16,320,373. Though much of the coal produced left the State, there was a substantial production of coke. The quantities of coke produced in 1928 were 431,419 short tons from beehive ovens and 1,367,481 from by-product ovens; the respective totals by value, \$1,543,933 and \$3,761,460. Blast furnaces shipped, in 1929, 653,048 long tons of pig iron; in 1928, 645,038; the total value of the output, for either year, was about \$11,000,000. There were produced 312,000 short tons (estimated) of lime in 1929 and 279,947 in 1928; in value, \$1,860,000 (estimated) for 1929 and \$1,788,989 for 1928. The entire native mineral product of the State, after allowance for duplications, attained \$336,636,948 for 1928; for 1927, \$366,043,205.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$15,000,612 (of which \$1,902,290 was for local education); for interest on debt, \$2,627,927; for improvements, \$6,106,180; total, \$23,734,719 (of which \$8,561,704 was for highways, \$3,272,532 being for maintenance and \$5,289,172 for construction). Revenues were \$23,631,783. Of these, property and special taxes supplied 22.4 per cent; departmental

earnings and compensation to the State for officers' services, 8.1; sales of licenses, 59.7 (in which was included the gasoline sales tax, totaling \$4,463,860). The funded debt of the State outstanding on June 30, 1929, was \$65,194,300, of which \$59,210,000 was for highways. Net of sinking fund assets, the debt was \$63,828,400. On taxable property assessed at \$2,075,746,270 were levied in the year State taxes of \$2,698,469.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4005.77. There were built, in 1930, 19.94 miles of first and 3.33 of second track.

EDUCATION. For the promotion of the interests of public education a council of education was organized, charged with urging legislation whereby the State would assume one-third or more of the expenditures of the local schools. The school population of the State as estimated for 1930 was 527,613. There were enrolled in the public schools 395,505 pupils. Of these, 328,839 were in common schools or elementary grades and 66,666 in high or junior high schools. The year's expenditures for public-school education totaled \$27,104,798. The salaries of teachers averaged, for the year, \$958 for elementary and \$1730 for high-school teachers.

CHARITIES AND CORRECTIONS. The State Board of Control, as operating in 1930, exercised a central authority both over numerous State educational institutions, ranging from the West Virginia University to the schools for defectives, and also over the institutions having care or custody of individuals. The latter, with the numbers of their inmates on Nov. 30, 1930, included: Weston State Hospital (insane), Weston, 1453; Spencer State Hospital (insane), Spencer, 807; Huntington State Hospital (mental), Huntington, 971; State Hospital for the Colored Insane, Lakin, 346; State Tuberculosis Sanitarium, Lakin, 407; State Colored Tuberculosis Sanitarium, Denmark, 69; surgical hospitals at Welch, McKendree and Fairmont, 105; West Virginia Industrial School for Boys, Grafton, 424; State Industrial School for Colored Boys, Lakin, 98; West Virginia Industrial Home for Girls, Industrial, 167; State Industrial Home for Colored Girls, Huntington, 31; West Virginia Children's Home, Elkins, 83; West Virginia Colored Orphans' Home, Huntington, 38; Home for Aged and Infirm Colored Men and Women, Huntington, 52; West Virginia Penitentiary, 2344. The total of the populations of all these institutions was 7518.

LEGISLATION. A special session of the State Legislature called by Governor Conley met in March. It enacted the State's first official code of laws, for which agitation had been in progress for nine years. The code was adopted very nearly in the form drawn up by the code committee which had prepared it. It was to go into effect on Jan. 1, 1931. At a second special session called immediately after the close of the first the Legislature authorized the sale, to defray the cost of highway construction, of road bonds to the total of \$15,000,000, the remainder of an issue of 1928.

POLITICAL AND OTHER EVENTS. Senator Goff announced on April 22 that owing to ill health he would not become a candidate for reelection. Growing difficulty with the operation of the system of taxation was reported in March by State Tax Commissioner T. C. Townsend. It was asserted that the rates, ostensibly based on equal taxation of all property at full assessment, had risen above \$4 to the hundred in many localities

and that extensive evasion, whether by the removal of property from the State or otherwise, was suspected.

West Virginia, through Governor Conley, lodged with the Federal Power Commission a protest against that body's assumption of jurisdiction over the assignment of rights to develop hydroelectric power projects on streams not classed as navigable. Governor Conley's protest asserted that his State had legislation appropriate to the need of regulating power development within its borders, and that the policy of the Commission had been held a cause of delay in the proper development of the State's resources. An opinion of the Federal Attorney-General, relative to the State's complaints, held that the Commission was not bound by the terms of its creation to take account of the projects to derive power from non-navigable waters, even though the interruption of the flow of such waters might conceivably affect navigation at a distance down the same river systems.

ELECTIONS. The vote of November 4 as compared with those of recent preceding years was marked by a distinct swing to the Democratic party. Former Senator Mansfield S. Neely, Democrat, was elected Senator, defeating James Elwood Jones, Republican, by a vote of 342,839 to 210,480, as unofficially reported. Neely's plurality was higher than Hoover's of 1928. The control of the lower Legislative house but not of the upper passed to the Democrats. Four Republican and two Democratic Representatives were elected. The popular vote rejected four proposed amendments to the State constitution. These would have altered the authority for budget-making; transferred the probate power to circuit clerks; created the office of Lieutenant-Governor; and authorized new circuit judges.

OFFICERS. Governor, William G. Conley; Secretary of State, George W. Sharp; Treasurer, W. S. Johnson; Auditor, Edgar C. Lawson; Attorney-General, Howard B. Lee; State Superintendent of Free Schools, W. C. Cook; Commissioner of Agriculture, John W. Smith.

JUDICIARY. Supreme Court: President, John H. Hatcher; Associate Judges, Frank Lively, Homer B. Woods, Raymond Maxwell.

WEST VIRGINIA UNIVERSITY. An institution for the higher education of men and women in Morgantown, W. Va., founded in 1867. In the autumn of 1930 the enrollment was 2600. There were 1700 registered in the summer school of the same year. The faculty numbered more than 300. The libraries contained 92,000 volumes. The first unit of the new library building, costing \$300,000, was completed in 1930. Divisions of industrial science, biological science, social science, and education were also established as the nucleus of a graduate school. President, John Roscoe Turner, Ph.D.

WEYLER Y NICOLAU, wé-lér or wä-lér, VALERIANO, MARQUIS OF TENERIFFE. A Spanish general of German descent, died in Madrid, Oct. 20, 1930. He was born in Palma, Mallorca, Sept. 17, 1839, and on entering the army served in the Santo Domingo expedition of 1863. In 1873 he returned to Spain to serve against the Carlists. He was Governor-General of the Canaries (1878-83), of the Balearics (1883-86), and in 1889 became Captain General of the Philippines. After serving as Provincial Governor of Catalonia, in 1886 he was sent to Cuba, to suppress the revolution, succeeding Martínez Campos. His ruthless

policy in insurgent areas, combined with the concentration of noncombatants in camps where hundreds died of starvation and disease, aroused strong protests in the United States, and he was recalled in 1897. In 1900 he was made Captain General of Madrid. He was Minister of War in the Sagasta cabinet, which held office from March, 1901, to December, 1902, and in the cabinet of Montero Rios during 1905-06. As Captain General of Catalonia in 1909, he handled with skill the situation developing after the Ferrer riots.

WHALING. See POLAR RESEARCH.

WHEAT. The world's wheat situation in 1930 was characterized by surplus supplies and generally low price levels. During the commercial season ended July 1, 1930, as pointed out by the U. S. Department of Agriculture, consumption had exceeded production so that the stocks of wheat on hand at that date were about 100,000,000 bushels less than the stocks on hand July 1, 1929. In view of a reduced carryover, very low prices and a prospective greater use of wheat for feeding purposes as a result of a shortage in feed grain crops in many countries, a large consumption of wheat from the 1930 crop was predicted. The consumption of wheat in the United States and Europe together during the commercial year 1930-31 was forecast as probably greater by 250,000,000 bushels than the consumption of the past season. A survey by the Department of Agriculture indicated the use of 236,000,000 bushels for feeding livestock as compared with 90,000,000 bushels used for live-stock food from the crop of 1929.

The total production of 43 countries reporting to the International Institute of Agriculture, Rome, was estimated at 3,422,360,000 bushels, or 6 per cent above the yield of 1929 and 6.3 per cent above the annual average for the five years 1924-28. The figures included estimates for the crop year 1930-31 for Australia. The yields for the leading countries outside of the United States were given as follows: India, 386,512,000 bushels; Canada, 395,854,000 bushels; Hungary, 210,815,000 bushels; Australia, 214,780,000 bushels; Spain, 145,991,000 bushels; and Germany, 131,379,000 bushels. The acreage in European countries was increased in general but the total area for the 43 countries reporting was only 1.3 per cent above the area of 221,839,000 acres in 1929. The production of Argentina for the crop year 1929-30 was reported as 137,434,000 bushels and that of Chile as 37,052,000 bushels. While no yields for the Soviet Republics either in Europe or Asia were recorded, the area in 1930 was given as 58,891,000 acres, an increase of 0.7 per cent over the area in 1929.

The production of wheat, including winter and spring wheat, in the United States in 1930 as estimated by the Department of Agriculture was 850,965,000 bushels compared with 809,176,000 bushels the preceding year. With the stocks of wheat on hand from the previous year the total supply for the commercial year 1930-31 was placed at about 1,126,000,000 bushels, or 70,000,000 bushels more than the total supply of the preceding season. The area harvested in 1930 was 59,153,000 acres, and the year before 61,464,000 acres, the respective average yields per acre being 14.4 bushels and 13.2 bushels. On the basis of the December 1 farm price of 60.8 cents per bushel the total value of the 1930 crop was \$517,407,000. The corresponding value of the 1929 crop at \$1.042 per bushel was \$843,030,000.

The harvested area of winter wheat, 38,608,000 acres, mainly owing to a greater abandonment was about 4 per cent below that of the previous year but the average yield per acre, 15.7 bushels, was 1.3 bushels above the acre yield of 1929. The total winter wheat production, 604,337,000 bushels, was about 5 per cent above the 1929 production of 576,213,000 bushels. The average farm price on December 1, 1930, was 64.3 cents per bushel as compared with \$1.065 per bushel the year before. Of the 39 States reporting winter wheat production, the leading ones and their yields were as follows: Kansas, 158,422,000 bushels; Nebraska, 70,267,000 bushels; Illinois, 37,584,000 bushels; Oklahoma, 33,696,000 bushels; Indiana, 28,998,000 bushels; and Ohio, 28,640,000 bushels.

The production of spring wheat other than durum wheat in 1930 was estimated at 100,963,000 bushels compared with 178,773,000 bushels in 1929. After allowing for abandoned acreage the area harvested was placed at 15,902,000 acres, about the same as the year before. The average yield per acre was 12 bushels in 1930 and 11.3 bushels in 1929 and the December 1 farm price 54.3 cents and \$1.016 per bushel for the two years respectively. In both years the crop suffered from drought. The yields in the leading States of 25 reporting spring wheat production were as follows: North Dakota, 64,087,000 bushels; Montana, 28,033,000 bushels; South Dakota, 22,504,000 bushels; Washington, 19,825,000 bushels; Minnesota, 15,105,000 bushels; and Idaho, 14,703,000 bushels.

The durum wheat production in 1930 as estimated was 55,665,000 bushels compared with 54,190,000 bushels in 1929. The area harvested, 4,643,000 acres, was about 16 per cent smaller than the area of the year before but the average yield per acre, 12 bushels, was about 22 per cent above the relatively low yield of 9.8 bushels of the preceding year. The average farm price on Dec. 1, 1930, was only 45.1 cents per bushel, or 43 cents below the corresponding price in 1929. On this basis the total value of the crop declined from \$47,762,000 in 1929 to \$25,113,000 in 1930.

The leading States, and their yields, of 42 reporting wheat production were as follows: Kansas, 158,862,000 bushels; North Dakota, 99,807,000 bushels; Nebraska, 73,275,000 bushels; Illinois, 41,952,000 bushels; South Dakota, 40,840,000 bushels; and Washington, 40,065,000 bushels.

During the fiscal year ended June 30, 1930, the United States exported 92,175,000 bushels of wheat and 13,009,000 barrels of flour. The imports for the year were 12,948,000 bushels of wheat and 334,000 pounds of flour. A survey made by the Department of Agriculture indicated an area of 42,042,000 acres of winter wheat sown for the 1931 crop, a reduction of 1.1 per cent from the area sown in the fall of 1930. In another study the Department determined that the cost of producing a bushel of wheat in 1929 was \$1.24 and of an acre \$21.07. It was also pointed out by the same authority that in the period 1920-1928 more than 48,000 harvester-threshers or combines were sold in the United States.

For Australian wheat pool bill, see AUSTRALIA, under *History*.

WHITE PINE BLISTER RUST. See FORESTRY.

WILEY, HARVEY WASHINGTON. An American chemist, died in Washington, D. C., June 30, 1930. He was born in Kent, Ind., Oct. 18, 1844, and was graduated from Hanover (Ind.) College in 1867, from the Indiana Medical College in 1871, and from Harvard University in 1873. He was professor of Latin and Greek at Butler College, Indianapolis, from 1868 to 1870, and professor of chemistry at Purdue University and State chemist of Indiana from 1874 to 1883. In 1883 he became chief of the division of chemistry in the U. S. Department of Agriculture, where by his energetic enforcement of the Pure Food and Drugs Act of 1906 he at times aroused much antagonism among manufacturers. Fully exonerated after Congressional investigation, Dr. Wiley resigned in 1912 and thereafter continued advancing the cause of pure food by frequent lecturing and writing, conducting the department of foods, sanitation, and health in *Good Housekeeping* from 1912 until 1930. He was professor of agricultural chemistry at George Washington University, with which he had been associated since 1899. His works include: *Songs of Agricultural Chemists* (1892); *Principles and Practice of Agricultural* (3 vols., 1894-97; 2d ed., 1909-11); *Foods and Their Adulterations* (1907-11); *1001 Tests* (1914); *The Lure of the Land* (1915); *Not by Bread Alone* (1915); *Beverages and Their Adulterations* (1919); *Health Readers for Schools* (1919); and *Harvey W. Wiley, An Autobiography* (1930).

WILLIAM AND MARY, COLLEGE OF. An institution for the higher education of men and women in Williamsburg, Va.; founded in 1693. The enrollment for the autumn of 1930 was 1431, of whom 757 were men and 675 women; there was also an enrollment of 1649 students in extension classes in Norfolk, Richmond, and Newport News. The registration for the 1930 summer session was 729. There were 72 members on the faculty. The productive funds amounted to \$332,557, and the income for the year was \$1,317,000. The library contained 70,000 volumes. During 1929-30, in connection with the Williamsburg restoration financed by John D. Rockefeller, Jr., and others, the main building of seventeenth-century architecture, after the style of Sir Christopher Wren, was restored at a cost of \$400,000. President, Julian A. C. Chandler. Ph.D.

WILLIAMS, FRANK MARTIN. An American engineer, died in Albany, N. Y., Feb. 20, 1930. He was born in Durhamville, N. Y., Apr. 11, 1873, and was graduated from Colgate University in 1895 and from the law department of Syracuse University two years later. Admitted to the New York bar in 1897, he practiced law in Oneida, N. Y., until 1900, engaging at the same time in engineering and contracting. In 1900 he entered the engineering department of New York State, becoming in 1909-10 state engineer and surveyor. He was appointed in 1923 consulting engineer to the New York and New Jersey State Bridge and Tunnel Commissions on the construction of a vehicular tunnel under the Hudson River from New York to Jersey City. He was also consulting engi-

neer for a number of utility companies in New York State. In 1929 he was appointed by President Hoover to the Inter-oceanic Canal Commission which undertook an investigation of the Nicaraguan Canal project.

WILLIAMS, FRITZ. An American actor, died in New York City, Apr. 1, 1930. He was born in Boston, Mass., Aug. 23, 1865, and was educated at St. John's College, Fordham, N. Y. He first appeared on the stage in Boston in 1879, when he played the part of Sir Joseph Porter in a juvenile production of *H.M.S. Pinafore*. In 1884 he appeared on the New York stage as Anatole in a *Scrap of Paper*. He was a member of the Lyceum Company of New York City from 1889 to 1896. His later plays include *Hoity-Toity*, with Weber and Fields (1901); *A Japanese Nightingale* (1903); *Come to Bohemia* (1916); *Rain* (part of Dr. McPhail, 1922-24); and *Spread Eagle* (first London appearance, 1928). At the time of his death, he was playing the rôle of the American ambassador in *Berkeley Square*, which was produced in New York.

WILLIAMS COLLEGE. A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1930 totaled 809, including 7 graduate students, 183 seniors, 189 juniors, 200 sophomores, and 230 freshmen. There were 81 members on the faculty, of whom 13 were new appointees. The productive funds of the college amounted to \$7,188,215, and the income for the year ending June 30, 1930, was \$808,659. The library contained approximately 133,000 volumes. President, Harry Augustus Garfield, LL.D. See POLITICS, INSTITUTE OF.

WILLINGDON, VISCOUNT. For his appointment as Viceroy of India, see INDIA under *History*.

WINDWARD ISLANDS. The name applied to a group of British-owned islands in the West Indies, comprising Grenada, St. Vincent, and St. Lucia, together with the Grenadines (which are one-half under Grenada and one-half under St. Vincent); forming the eastern limit of the Caribbean Sea between Martinique and Trinidad. (See articles on the islands mentioned above.) Each of the islands is under its own government, but they are united for certain common purposes and have a court of appeals. Governor and commander-in-chief in 1930, Sir Frederick Seton James. For effects of sugar depression, see GREAT BRITAIN under *History*.

WINKLER, MAX. An American philologist and educator, died in Ann Arbor, Mich., Mar. 14, 1930. He was born in Austria Sept. 4, 1866, and was brought to the United States in childhood, his parents settling in Cincinnati, Ohio. After his graduation from Harvard in 1889 he was assistant professor of modern languages for a year at the University of Kansas. He then became instructor in German at the University of Michigan, where two years later he received the Ph.D. degree. In 1895 he became assistant professor; in 1900, acting professor; and in 1902, professor of German language and literature. He edited Lessing's *Emilia Galotti* (1895); Goethe's *Egmont* (1898); Schiller's *Wallenstein* (1901); and Goethe's *Iphigenie*.

WIRELESS TELEGRAPHY AND TELEPHONY. See RADIO COMMUNICATION.

WISCONSIN. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,939,006. The population on Jan. 1, 1920, was 2,632,067. The capital, Madison.

AGRICULTURE. The following table presents the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|-------------------------|--------------|
| Hay | 1930 | 3,627,000 | 6,001,000 ^a | \$74,534,000 |
| | 1929 | 3,653,000 | 7,685,000 ^a | 79,631,000 |
| | 1930 | 2,035,000 | 79,365,000 | 57,148,000 |
| Corn | 1929 | 1,995,000 | 79,800,000 | 66,234,000 |
| | 1930 | 2,470,000 | 108,680,000 | 35,864,000 |
| | 1929 | 2,470,000 | 85,215,000 | 37,495,000 |
| Potatoes .. | 1930 | 244,000 | 18,056,000 | 14,445,000 |
| | 1929 | 220,000 | 20,240,000 | 24,288,000 |
| | 1930 | 703,000 | 26,011,000 | 13,266,000 |
| Barley ... | 1929 | 703,000 | 22,848,000 | 14,851,000 |
| | 1930 | 43,000 | 52,900,000 ^b | 7,935,000 |
| | 1929 | 38,500 | 48,125,000 ^b | 7,219,000 |
| Rye | 1930 | 191,000 | 2,960,000 | 1,332,000 |
| | 1929 | 185,000 | 2,960,000 | 2,634,000 |
| | 1930 | 109,000 | 2,331,000 | 1,692,000 |
| Wheat | 1929 | 105,000 | 2,190,000 | 2,409,000 |

^a Tons. ^b Pounds.

Farms in the State numbered 182,028 in 1930, having declined from 193,155 in 1925 and 189,295 in 1920.

MINERAL PRODUCTION. Although no one branch of the mineral industry of the State predominated, the highest yield was that of stone, of which the quantity produced was 3,313,740 short tons in 1928 and 3,104,240 in 1927; the value of the product was \$5,516,067 for 1928 and \$5,181,631 for 1927. The iron mines of the State sold to furnaces 1,394,371 long tons of iron ore in 1928 and 937,935 in 1927; by value, \$3,700,797 for 1928 and \$2,567,078 for 1927. The sand and gravel industry was important in point of value, the production of 1928 being valued at \$3,680,420. There were mined in 1929, 16,986 short tons of zinc, as against 18,417 in 1928; by value, \$2,242,152 for 1929 and \$2,246,874 for 1928. The clay products of the State totaled \$1,007,826 for 1928; for 1927, \$1,228,338. The entire mineral product of the State totaled \$20,889,395 for 1928; for 1927, \$21,776,847.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$35,201,753 (of which \$9,098,567 was for local education); for interest on debt, \$109,459; for permanent improvements, \$16,099,895; total, \$52,011,107 (of which \$18,371,686 was for highways, \$4,091,840 being for maintenance and \$14,279,846 for construction). Revenues were \$54,100,856. Of these, property and special taxes formed 38.9 per cent; departmental earnings and remuneration to the State for officers' services, 9.2; sales of licenses, 41.0 (including taxes of \$6,896,080 on sales of gasoline). The State's funded debt outstanding, gross and net alike, on June 30, 1929, was \$1,463,700. On property bearing an assessed valuation of \$6,559,298,898 were levied in the year State taxes of \$10,788,008.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 7333.15. No additional construction of line or trackage in 1930 was reported.

EDUCATION. The work of surveying the whole situation of public education in the State was carried on throughout the year by an interim committee of the Legislature. The number of persons of school age in Wisconsin in the year 1929-30 was reported as 880,661. There were enrolled in the public schools 528,130 pupils. Of these, 417,622 were in common schools or elementary grades, and 110,508 were in high schools. Expenditures

for public-school education in 1929 totaled \$55,525,318. The yearly salaries of teachers averaged \$1500.

CHARITIES AND CORRECTIONS. Under the State laws applying in 1930 control over State institutions and other activities for the dependent and delinquent was highly centralized. The central organization, the State Board of Control, was a corporate body of three members, one necessarily a woman. Members served six years and were appointed one every two years. The entire number of the State's institutional inmates was 8039. It considerably exceeded the institutions' collective rated capacity of 6606, the State Prison being particularly overcrowded. The county asylums for the chronic insane held an aggregate of 7622 other inmates; the county sanatoria for the tubercular, another 1420.

POLITICAL AND OTHER EVENTS. Governor Kohler, accused by some of his political opponents of having exceeded the lawful limit of \$4000 in his expenditures during his campaign for the governorship, was indicted and placed on trial in Sheboygan County on a charge of corruption. It was submitted in his defense that certain of the campaign expenditures charged to have been made by him had actually been made in good faith by persons among his relatives and close associates. He was acquitted by jury verdict on May 15. Kohler sought a renomination from the Republican party. At the State Republican primary election on September 16 he was defeated for the candidacy for governor by Philip F. LaFollette, son of the late Senator LaFollette.

The Wisconsin board of real-estate brokers, having power to issue licenses to sell real estate, refused a license in January to the Progreso Development Company, a concern to sell land in Texas. This refusal was sustained by a court in Dane County. The Texas authorities took the matter up and the Legislature of Texas passed a boycott resolution directed against the products of Wisconsin. The State Supreme Court reversed on June 23 the anti-license decision and held it obligatory for the Wisconsin board to issue the desired license.

The State statute against the use of daylight-saving time was invoked in the spring to prevent numerous business houses' and factories at Milwaukee from adopting the summer time schedule. A number of labor organizations joined the opposition. A temporary injunction against the practice was secured, but was vacated on June 28 by a Circuit Court decision holding that the statute applied only to the agencies of the State and its subdivisions. See CHILD LABOR.

ELECTIONS. Philip LaFollette, running on the Republican ticket, was elected Governor, receiving 369,756 votes to 164,897, as unofficially reported, for Charles Hamersley, Democrat. Ten Republicans and one Democrat were elected to the House of Representatives, the Republicans losing one seat in the existing solid delegation. Republican control of both branches of the State Legislature was preserved. A proposed amendment of the State constitution to give the Governor the power to veto individual items in appropriation bills while approving the remainder of such bills was ratified by popular vote.

OFFICERS. Governor, Walter J. Kohler; Lieutenant-Governor, Henry A. Huber; Secretary of State, Theodore Dammann; State Treasurer, Scott Levitan; Attorney-General, John W. Reynolds; Superintendent of Schools, John Callahan.

JUDICIARY. Supreme Court: Justices, Marvin B. Rosenberry, Walter C. Owen, Chester A. Fowler, Oscar M. Fritz, John D. Wickhem, George B. Nelson, Edward T. Fairchild.

WISCONSIN, UNIVERSITY OF. A State institution of higher education in Madison, Wis.; founded in 1848. The enrollment for the autumn of 1930 was 9401, distributed as follows: Letters and science (including the experimental college and music), 5998; engineering, 1143; agriculture (including home economics), 781; law, 309; medicine, 309; nursing, 119; library, 38; school of education (previously included in letters and science), 704. For the 1930 summer session the enrollment totaled 5171, distributed as follows: Letters and science (including music and nursing), 4423; engineering, 230; agriculture (including home economics), 274; law, 117; medicine, 76. The faculty numbered 1339, including 317 new members. The endowment as of June 30, 1930, was \$1,054,669, while the income for 1929-30, exclusive of gifts, amounted to \$8,501,824. The library contained 846,500 volumes and 457,000 pamphlets. A school of education of coordinate college rank was organized to give a B.S. degree in education. Curricular changes in the college of letters and science provide for the giving of a certificate of junior graduate in liberal studies on the satisfactory completion of the first two years, and for the exclusion of unqualified students from the last two years of the course. An athletic field house and a children's orthopedic hospital were built during the year. President, Glenn Frank, Litt.D., L.H.D., LL.D.

WOLF, LUCIEN. An Anglo-Jewish leader, died Aug. 23, 1930, in London where he was born Jan. 20, 1857. Educated at the Athenée Royale in Brussels and in Paris, he achieved distinction as a journalist, acting as sub-editor and editorial writer for the *Jewish World* from 1874 to 1893 and as editor from 1906 to 1908. He was also assistant editor of the *Public Leader* during 1877-78, foreign editor of the *Daily Graphic* during 1890-1909, and London correspondent of *Le Journal*, Paris, during 1894-98. In addition to serving eight times as president of the Jewish Historical Society of England, he represented the Anglo-Jews at the Paris Peace Conference in 1919, where he obtained the Minorities Treaties with Poland, Rumania, Czechoslovakia, Jugoslavia, and Greece, protecting the rights of Jews and other nationals in those countries. He was also founder of and delegate to the advisory committee of the High Commissioner for Refugees of the League of Nations. At the time of his death he was secretary of the Jewish Joint Foreign Committee of the Anglo-Foreign Association. His publications include: *Diplomatic History of the Jewish Question* (1919); and *The Myth of the Jewish Menace in World Affairs* (1921).

WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL. An all-partisan and all-sectarian movement which has as its purpose the protection of the home through the abolition of the liquor traffic. It is comprised of 10,000 local unions with an approximate membership of 600,000, and is organized in every State, territory, and dependency of the United States, including the District of Columbia, Alaska, Hawaii, Porto Rico, the Philippines, and the Virgin Islands. The Young People's Branch for both young men and women who are united for total abstinence and law observance, and the Loyal Temperance Legion are under its supervision.

The national W. C. T. U. maintains a publishing house from which in the year 1930, 20,000,000 pages of literature were sent out. The official organ is *The Union Signal*; *The Young Crusader* is published for boys and girls. The 1930 national convention was held in Houston, Texas, November 14-19. The officers for 1930-31 were: President, Mrs. Ella A. Boole; vice-president-at-large, Mrs. Ida B. Wise Smith; corresponding secretary, Mrs. Anna Marden DeYo; treasurer, Mrs. Margaret C. Munns; recording secretary, Mrs. Sara H. Hoge; assistant recording secretary, Mrs. Nelle G. Burger. A legislative headquarters is maintained at the Hotel Driscoll, Washington, D. C., but the national headquarters and administrative offices are in Evanston, Ill.

WOMAN SUFFRAGE. See JAPAN, TURKEY, and SOUTH AFRICA under *History*.

WOMEN, NATIONALITY OF. See INTERNATIONAL LAW.

WOMEN IN INDUSTRY. MARRIED WOMEN. A report issued by the U. S. Women's Bureau in 1930 contained the results of a study made of married women seeking employment. The study was confined to an inquiry made among 448 women seeking work in Denver in the summer of 1928. A total of 311 women gave reasons why they were seeking employment. Of these, 281, or 90 per cent, said that economic necessity prompted them to obtain jobs; 10 per cent said they worked as a matter of preference. Of those who worked from necessity, 109, or 42 per cent, were living with their husbands; 149 were widowed, divorced, separated, or deserted; and 23 did not report. Of those women who said they were working as a matter of choice, 22 were living with their husbands, seven were widows, and one did not report marital status. The report found that of the women who worked of necessity a great number were without their husbands' support. Only 78 of the women had some support from their husbands and of these, 12 declared that the husband's earnings were inadequate, and 17 that his work was irregular. Nine reported a desire to help the husband because of some financial emergency.

WOMEN'S BUREAU. The fiscal year ending June 30, 1930, marked the end of the first decade of the work of the Federal Women's Bureau. The annual report of the director of the Women's Bureau indicated that these ten years had seen a considerable expansion in the volume and variety of the Bureau's work as a result of the increased demands made upon it by the public. Miss Mary Anderson stated:

With the number of women workers constantly growing; with striking increase in married women wage earners; with the share of women in family support and economic responsibility assuming greater proportions; with acute problems of employment and unemployment piling up as a result of our machine age; and with the development of more industries and new processes giving rise to new hazards and additional strain to women workers—the task of the Women's Bureau each year becomes more extensive and complicated.

The Bureau has been giving considerable attention to the important question of hours and wages of employed women. There was in process of publication, summarizing the research activities of a number of years, a report furnishing wage data on 100,000 white women and 6000 Negro women employed in 1472 factories, stores, and laundries in 13 States.

LABOR LEGISLATION. The Women's Bureau reported that the regular legislative sessions of the year yielded little in the way of legislation affect-

ing women in industry. The outstanding piece of legislation was the enactment in New York of amendments to the labor law which required in factories and mercantile establishments a weekly half-holiday, if more than eight hours were being worked on any day of the week. Another amendment also forbade overtime in connection with the 48-hour and 6-day week.

NEW YORK STATE. A study made in New York State by the local industrial commissioner's office attempted to ascertain to what extent hours of women in industry were being affected by the prevailing statutes. The law fixes a 48-hour week and a 9-hour day for women employed in factories and in mercantile establishments, and a 9-hour day and a 54-hour week for women employed in restaurants. In addition, women employed as elevator operators and on street railroads are limited to a 9-hour day and a 54-hour week. In view of the fact that these restrictive measures apply only to enumerated groups in the working population, a large number of women in industry are not affected by the statutes. Thus, a tabulation made by the industrial commissioner's office indicated that out of the 1,135,295 women at work in the State, the hours of labor of 771,330 were not affected by law.

The report points out that in the nine main occupational groups into which the census divides all the employed women of the State, there is only one in which a large proportion of the women have their working hours regulated by law. However, 82 per cent of the women in manufacturing industries come under the provisions of the restricted-hour law; 50 per cent of the women in trade are thus affected; only 10 per cent of the women in domestic service are affected; and only one-half of 1 per cent of the women in clerical occupations.

ENGLAND. Previous YEAR BOOKS have pointed out that studies made in the United States indicate that legislative restrictions on the employment of women do not seriously stand in their way of ability to obtain and hold jobs. Studies made by the Federal Women's Bureau of States where statutory restrictions on women in industry are explicit, have amply demonstrated the general character of this conclusion. The British Home Office, in a report issued in 1930, comes to substantially the same conclusion. The report sums up the situation in these words:

Except in a few isolated cases, there is little evidence that they have handicapped women in the past or are handicapping them in the present. On the contrary, the employment of women during the period under review has been steadily progressing. Cases where men are sometimes employed at night at work that is done by women during the day, or in which women have been displaced by men because they cannot be employed in the night shift, are rare; and in view of the strong influences that exist generally against the employment of women at night, it is doubtful whether women would be employed even if the prohibition were removed.

NIGHT WORK IN AMERICAN COTTON MILLS. The Cotton Textile Institute on October 16, in its annual convention, unanimously agreed to the abolition of night work for women and minors under 18 years of age in all the cotton mills of the United States. The beginnings of the programme were to go into effect Mar. 1, 1931, and the entire programme was to be fully carried out within three years. It was apparent from the sentiment of the convention that the programme had the wholehearted support of a large number of cotton mill owners, and the speeches of approval made

indicated a belief that the day capacity of the mills was sufficient to meet the entire demands made on the industry.

WOMEN'S CLUBS, GENERAL FEDERATION OF. An organization founded in 1889 and chartered by act of Congress in 1901 for "the promotion of movements looking toward the betterment of life." In 1930 the general federation was composed of approximately 14,500 clubs in the United States and 70 clubs outside the United States; affiliated with it were 15 national and international organizations. The work, as outlined by the general federation, is conducted through State federations which, in turn, are composed of district and county federations made up of individual clubs. The official publication is *The Clubwoman*. A convention was held in Denver, Colo., June, 1930, at which Mrs. John F. Sippel was reelected president for the ensuing biennial period. At this convention the federation reaffirmed, through resolution, its stand for prohibition, and definitely showed that foremost among its objectives were the promotion of peace and extension of coöperation between rural and urban groups. Headquarters are at 1734 N Street, N. W., Washington, D. C.

WOOD, WOOD PULP. See FORESTRY.

WOODBERRY, GEORGE EDWARD. An American author and educator, died Jan. 2, 1930, in Beverly, Mass., where he was born May 12, 1855. He was graduated from Harvard in 1877 and taught English for a year after graduation at the University of Nebraska. He then joined the staff of *The Nation*, but during 1880-82 was again at the University of Nebraska. From 1882 to 1891, he lived in Beverly, engaged in literary criticism and contributing to the *Atlantic Monthly* and other magazines. He was also for a time literary editor of the *Boston Post*. In 1891, on James Russell Lowell's recommendation, he became professor of comparative literature at Columbia University, and his appointment was a particularly happy one, as he was able to inspire his students by his ideal of beauty and sense of the spiritual value of literature. He resigned this chair in 1904, devoting his time thereafter to lecturing and writing. His popularity as a teacher was attested to by the Woodberry Society, composed of students who had studied under him and organized in his honor in 1905. Amherst and Harvard bestowed on him the Litt.D. degree in 1905 and 1911 respectively, and Western Reserve the LL.D. degree in 1907. He was one of the founders, and a fellow, of the American Academy of Arts and Sciences, a member of the American Academy of Arts and Letters, and an honorary fellow of the Royal Society of Literature, a distinction rarely tendered an American. Among his critical works are: *Edgar Allan Poe* (1885); *Studies in Letters and Life* (1890); *Makers of Literature* (1900); *Nathaniel Hawthorne* (1902); *America in Literature* (1903); *Algernon Charles Swinburne* (1905); *Ralph Waldo Emerson* (1907); *The Appreciation of Literature* (1907); *Great Writers* (1907); *The Life of Edgar Allan Poe* (2 vols., 1909); *Two Phases of Criticism* (1914); *Shakespeare* (1916); and *Nathaniel Hawthorne* (1918). His other books include: *History of Wood Engraving* (1883); *The North Shore Watch and Other Poems* (1890); *Heart of Man* (1899); *Wild Eden* (1900); *The Torch* (1905); *The Inspiration of Poetry* (1910); *Wendell Phillips* (1912); *The Kingdom of All-Souls* (1912); *A Day at Castrogiovanni* (1912); *North Africa and*

the Desert (1914); *The Flight* (1914); *Ideal Passion* (1917); *The Roamer* (1919); and *Collected Essays* (6 vols., 1920-21).

WOODROW WILSON AWARD. See LEAGUE OF NATIONS.

WOOL. The world's wool production in 1930 did not differ greatly from that in 1929, estimates being about 1 per cent greater in the former than in the latter year. The production for the five principal producing countries of the Southern Hemisphere, Australia, New Zealand, Argentina, Uruguay, and the Union of South Africa, was estimated at 1,936,000,000 pounds in 1930 as compared with 1,933,000,000 pounds in 1929. The estimated production in Canada and the United Kingdom was practically the same as in 1929, while in Germany there was a small reduction. The estimated wool shorn in the United States in 1930 was 323,000,000 pounds which was about 6 per cent greater than in the previous year. There was also an increase of about 19 per cent in the sheep slaughter which no doubt increased the production of pulled wool. These states with six other European countries produce about four-fifths of the world's clip, exclusive of Russia and China. No estimates were available for China, but in Russia the number of sheep was estimated at only 89,860,000 compared with 132,759,000 head in 1929, owing to the wholesale destruction large flocks by rich peasants. This may be expected to materially reduce wool production.

Wool production was relatively heavy during 1930 and the previous two years and consequently considerable supplies were available. In 1930 the wool exported from the five principal exporting countries of the Southern Hemisphere increased nearly 30 per cent. This resulted in heavy stocks of foreign and colonial wool in the United Kingdom which at the close of the year were estimated to be 18 per cent above those held in 1929 and 16 per cent above the last four-year average. The large supply naturally reacted unfavorably on the world price level, so that in 1930 wool prices in the United States were from 6 to 12 cents per pound lower than at similar periods in 1929. The price was particularly low toward the close of 1930 when near pre-war levels were reached. In fact there had been an almost steady drop in wool prices since 1928.

Notwithstanding the low price, wool consumption was low in the United States. Consumption of combing and clothing wools was about 20 per cent lower than in 1929 and only 55 per cent of the amount of carpet wool consumed in 1929 was consumed in 1930. Several of the continental European countries took advantage of the prices and imported considerable quantities of wool toward the close of the year. This applied particularly to Germany, France, and the United Kingdom.

In the United States on the other hand wool imports were greatly reduced. During 1929, 175,106,973 pounds of carpet wool were imported but in 1930 this was reduced 93,203,141 pounds. Clothing wool importations did not show as great a decrease, the amount in the respective years being 18,497,782 and 14,698,450 pounds, but the amounts of combing wool decreased from 83,709,708 pounds in 1929 to 54,363,170 pounds in 1930. China, Argentina, Australia, Uruguay, and the United Kingdom continued to send the largest amounts of wool to the United States. The new tariff of 34 cents per pound on clean wool also had its effect on imports. See also AUSTRALIA.

A continued interest was shown by sheep breeders during the year in the fleece production of individual sheep, not only in total production but in the quality of the fleeces. Consequently wool-scouring plants were established at a number of research institutions so that data might be obtained for individual fleeces. Such equipment may also be used in estimating the influence of environmental factors on fleece characteristics.

WORCESTER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical education of men in Worcester, Mass.; founded in 1865. The enrollment for the autumn of 1930 totaled 663, distributed as follows: Mechanical engineering, 176; civil engineering, 92; electrical engineering, 130; chemistry, 73; general science, 6; and freshmen, 186, all of whom took the same course of study. The faculty numbered 70. The productive funds of the institute amounted to \$3,060,781, and the income for the year was \$325,826. There were 23,500 volumes in the library. President, Ralph Earle, D.Sc., D.Eng., LL.D., Rear Admiral, U. S. N., ret.

WORKMEN'S COMPENSATION. OCCUPATIONAL DISEASES. The continued extension of occupational disease lists in existing workmen's compensation laws has been referred to in earlier YEAR BOOKS. The process has been going on for ten years and in that time seventeen States and territories have come to include occupational diseases as causes for compensation. These are the following: California, Connecticut, District of Columbia, Hawaii, Illinois, Kentucky, Massachusetts (by court decision), Minnesota, New Jersey, New York, North Dakota, Ohio, Porto Rico, Philippines, Wisconsin, and the United States under the Federal Employees' Compensation Act and the Longshoremen's Act. The devices employed are: (1) To list a specific number of diseases; (2) to include all occupational diseases under a blanket provision; and (3) to substitute the word "injuries" for the word "accidents" in the compensation codes. In the first group are to be found the following States: Minnesota, listing 23 diseases; New Jersey, 10; New York, 23; Ohio, 18; Porto Rico, 15. The following States have a blanket provision: California, Connecticut, North Dakota, and Wisconsin. The following have substituted the word "injury" for "accident": District of Columbia, Hawaii, Massachusetts, Philippine Islands, and the United States, in the Federal Civil Employees' and Longshoremen's Laws.

It is interesting to note to what extent workmen's compensation was being employed to cover occupational diseases. Thus, in Wisconsin, whose law has a blanket provision, over a period of eight years there were 2569 cases or an average of 321 cases per year. This was less than 1 per cent of the physical industrial accident cases. The total compensation awarded to all these cases for eight years was \$473,921, and the medical care cost was \$105,104, making an average indemnity cost of \$185 per case and an average medical cost of \$41 per case. The experiences of New York State, whose law covers 23 listed diseases, for the year ending Jan. 30, 1929, were as follows: 345 awards were made for occupational diseases which represented one-third of 1 per cent of the total number of compensated cases for that year. The compensation was \$112,000 for these 345 cases, making an average of \$325 per case. There were included five deaths from lead poisoning and one permanent total disability due to the same cause.

NEW YORK STATE. The accompanying table indicates the number and cost of compensated accidents in New York State, by causes for the fiscal year 1928-29. The number of compensable cases in New York State had been on the increase over three years. Thus, it will be noted that in 1928-29 there was a total of 100,462 cases as compared with 93,565 in 1927-28 and 98,984 in 1926-27. In the same way the average amount of compensation granted per case increased, too. Thus in 1928-29 the average amount of compensation was \$320 as compared with \$299 in 1927-28 and \$285 in 1926-27. This was largely due to the fact that the compensation cost in 1928-29 was increased because of the raising of the maximum weekly compensation rate from \$20 to \$25 during the period of total disability.

the United States, there was a total of 18,517 injuries. The total number of claims filed was 6542, of which 198 were death claims. The Post Office Department reported the largest number of injuries, the War Department came next, and the Navy Department third. The Longshoremen's Act in the fiscal year ending June 30, 1929, was in the second year of its operation. The number of injuries reported during this period was 38,052, of which 183 resulted in fatalities. Of the total number of cases 18,765 were temporary total disabilities, and 619 were permanent partial disabilities. The third act, that is to say, the Workmen's Compensation Act for the District of Columbia, for the first year of its operation (year ending June 30, 1929), resulted in the reporting of 14,295 injuries, of which 59 were fatal.

COMPENSATED ACCIDENTS IN NEW YORK STATE, YEAR ENDING JUNE 30, 1929

| CAUSES | Number of cases | Time lost (weeks) | Compensa- tion paid | Average amount paid per case |
|--|--------------------|-------------------------|---------------------------|---------------------------------------|
| Handling objects and tools | 36,101 | 445,822 | \$6,865,248 | \$190 |
| Falls of workers | 19,197 | 621,346 | 7,894,178 | 411 |
| Mechanical apparatus (machinery, conveyors, etc.) | 15,402 | 510,461 | 6,754,845 | 439 |
| Vehicles | 8,908 | 481,776 | 4,537,585 | 509 |
| Falling objects | 6,258 | 188,781 | 2,113,989 | 338 |
| Dangerous and harmful substances | 5,442 | 222,948 | 2,066,070 | 380 |
| Stepping on and striking objects | 4,718 | 47,397 | 809,955 | 129 |
| Other or indefinite | 4,436 | 104,401 | 1,280,945 | 289 |
| Total, all causes | 100,462 | 2,622,932 | \$32,122,815 | \$320 |

QUARRY ACCIDENTS. A report issued by the Federal Bureau of Mines for the calendar year 1928 showed that 119 quarry workers were killed and 10,568 were injured. This compares with 182 killed for 1911-1915 (annual average) and 7437 injured. It is interesting to compare these injuries and deaths on the basis of index figures. The death rate per 1000 for 300 day workers was 1.46 as compared with 1.63 in 1927 and 2.19 as the average for 1911-1915. Similarly the injury rate was 129.95 in 1928 as compared with 162.92 in 1927 and 89.39 in 1911-1915 (annual average). The principal causes of fatal accidents inside the quarries were falls or slides of rock, falls of persons, machinery, explosives, and haulage. One may compare the fatality rates of quarries with metal mines and coal mines on the basis of rates per 1000 for 300 day workers. In 1928 in quarries the rate was 1.46; in the metal mines it was 2.50; and in the coal mines it was 4.64. In the first two groups safety campaigns that had been waged in these industries had apparently met with some success in view of the fact that fatality rates show sizable declines since 1911. In the case of the coal miners, however, the rate had not seriously decreased over the seventeen years. Thus, in 1911, the fatality rate was 4.97.

ENGLAND. In 1928 there was a total of 464,220 compensation cases in this country, of which 2735 were cases of fatality. The following seven major industries, viz., shipping, factories, railways, docks, mines, quarries and construction work, were covered. A total of \$31,427,548 was paid out as compensation. Of this amount \$3,345,951 was paid out in fatal cases.

FEDERAL EXPERIENCES. A report was issued in 1930 by the U. S. Employees Compensation Commission covering the operations of the three Federal workmen's compensation acts whose administration was under the supervision of this body. The report showed that during the first nine months of 1929, as regards civil employees of

WORLD COURT. On Jan. 16, 1930, the Council of the League of Nations asked the Court for an advisory opinion as regards the interpretation of certain provisions in the Convention concluded at Neuilly on Nov. 27, 1919, between Bulgaria and Greece, and relating to reciprocal emigration. The purpose of this application, submitted at the request of the Mixed Commission set up under the terms of the Neuilly Treaty, was to obtain an interpretation of the provisions relating to "communities."

The Court delivered an unanimous opinion on the question of "communities" on July 31. As regards the principles governing the interpretation of the Convention, the Court observed that the Convention was closely related to the general body of measures designed to secure peace by the protection of minorities, the particular aim of the Convention being to eliminate or reduce the centres of irredentist agitation by the reciprocal and voluntary emigration of the minorities in the two countries. To facilitate and stabilize emigration, the Convention was designed to spare the persons concerning the material losses normally involved by their emigration, whether in the future or the past. Without this, the general purpose of the Convention would have been compromised. The benefit of the clauses designed to protect private property was, however, only extended to individuals and not to associations of persons. But bearing in mind the benefits derived in the East by individuals from uniting into "communities" the Convention allows them, when emigrating, to take away the movable property and the value of the immovable property of com-

munities dissolved as a result of their emigration.

The Secretary-General of the League notified the Registrar of the definitive acceptance by Lithuania, for five years as from Jan. 14, 1930, of the Optional Clause of the Court Statute. Lithuania was previously bound by this clause for a period which expired on May 16, 1927. The acceptance of this obligation by Lithuania brought to 20 the number of states between whom the Optional Clause of the Court's Statute was in force; it had been signed by 42 states. The Protocol concerning the revision of the Court Statute and the Protocol concerning the accession of the United States to the Statute was signed by the Albanian government on January 21. The first of these instruments had now been signed by all the states entitled to do so except Abyssinia and Cuba. The second had been signed by all except Abyssinia. A special agreement entered into on Apr. 19, 1928, in regard to the case of the Serbian loans issued in France, provided that, after the Court's decision, the Yugoslav government and the bondholders' representatives were to enter into negotiations for the conclusion of an arrangement.

Under the terms of the instruments signed at The Hague on January 12, at the conclusion of the second Reparations Conference, the Court was asked to appoint two new members to each of the Hungaro-Rumanian, Hungaro-Czechoslovak and Hungaro-Yugoslav Mixed Arbitral Tribunals. Provision was made in January for a right of appeal to the Court in respect of certain categories of decisions to be given by the Mixed Arbitral Tribunals set up between Hungary, on the one hand, and Rumania, Czechoslovakia and Yugoslavia on the other.

At the beginning of February, the President of the United States appointed Judge Charles Evans Hughes as Chief Justice of the Supreme Court of the United States. After his confirmation by the Senate, Mr. Hughes, on February 14, sent his resignation as a Member of the Permanent Court to the President of the Court and to the Secretary-General of the League. In the same month, the Union of South Africa, Austria, Belgium, Great Britain, and India deposited with the League Secretariat their instruments of ratification of the Protocol of Sept. 14, 1929, concerning the revision of the Statute, and the Union of South Africa, Austria, Great Britain, and India deposited their instruments of ratification of the Protocol concerning the accession of the United States to the Protocol of Signature of the Court Statute. Great Britain, India, and Latvia deposited the instruments ratifying their acceptance of the Optional Clause establishing the so-called compulsory jurisdiction of the Court. The number of members or states between which the Clause was now in force was 24. The number of declarations of acceptance was 41.

At its tenth session, the Assembly considered a proposal of the Finnish delegation that means should be studied for giving the Court jurisdiction over disputes as to whether an arbitral tribunal in pronouncing an award had acted without jurisdiction or exceeded its jurisdiction. A committee met at Geneva from May 19 to 22, to study the question. Its report stated that any general proposals put forward should be limited to awards in disputes with regard to which the parties were in conflict as to their respective rights, although particular agreements might of course be made to give the Court jurisdiction in regard to awards not falling under this definition. The

committee proposed a third ground for recourse to the Court, namely, a fundamental fault in the procedure of the arbitral tribunal.

The committee suggested three methods by which the Assembly could act for the purpose of bringing within the jurisdiction of the Court the question whether an arbitral award need not be executed. Under the first method, the Assembly would recommend the insertion in arbitration treaties, arbitration clauses and, where appropriate, agreements for submitting particular questions to arbitration, of draft provisions to be annexed to the Assembly's recommendation. Under the second, the Assembly would open to accession by all states a protocol of which a draft was submitted by the Committee. The third method would consist in the Assembly adopting a resolution recognizing that a member of the League which asserted the nullity of an arbitral award on one of the grounds in question must propose to the other party the conclusion of a special agreement submitting the question to decision by the Permanent Court.

By an Order made on Aug. 19, 1929, in the case of the Free Zones of Upper Savoy and the District of Gex, the Court granted to the French and Swiss governments a time-limit, expiring on May 1, 1930, to settle between themselves, under such conditions as they might consider expedient, the "new régime" for the territories contemplated in the Treaty of Versailles. On March 28 the Swiss Federal Council informed the Registry of the Court that it was impossible to arrive at a settlement before May 1 and on April 29, the French government reported to the same effect. Failure to reach an agreement within the time fixed threw the case again before the Court, and on September 20 the Court convoked an extraordinary session, opening October 22, to dispose of the question. The Court gave its second decision in the case December 6. In effect, the decision reiterated the Court's first ruling in urging the two countries to settle the matter between themselves. Notice was given that the Court would make a final ruling on July 31, 1931, which would either include a settlement agreed to by the two governments or a decision upon the legal points involved.

On May 15, the Council decided to seek the advisory opinion of the Court on the question: "Is the special legal status of the Free City of Danzig such as to enable the Free City to become a member of the International Labor Organization?" The Court replied in the negative on August 26.

As concerns the protection of the Free City and the guarantee of its constitution, the Court held that they would not prevent it from becoming a member of the Labor Organization. With regard to the right of Poland to conduct the foreign relations of Danzig, the Court held that a proportion of the activities of the Labor Organization fell within the category of foreign relations, e.g., the ratification of draft conventions or the filing of a complaint against a member for failure to comply with the provisions of a convention; in all such cases, therefore, Poland's consent to any action by the Free City would be necessary and could be withheld. The Court considered that the Free City of Danzig could not participate in the work of the Labor Organization until some arrangement had been concluded between it and Poland insuring that no objection would be made by this state to any action of the Free City as a member of the Organization. The

Court further held that if the arrangement involved a modification of the special legal status of the Free City, it might be subject to a veto by the authorities of the League. The immediate ground for the negative reply given by the Court to the question is the absence of such agreement.

The opinion was adopted by six votes to four. Three of the members of the minority, namely, M. Anzilotti (President), M. Huber (Vice-President), and M. Loder (former President) stated their dissent, M. Anzilotti and M. Huber filing separate opinions, which were attached to the Court's opinion.

On Sept. 25, 1930, the Assembly and the Council of the League of Nations, voting concurrently, elected as members of the Permanent Court of International Justice, for the period from Jan. 1, 1931, to Dec. 31, 1939, the 15 following candidates: Mine-ichiro Adachi (Japan); Dionisio Anzilotti (Italy); Henri Fromageot (France); Sir Cecil Hurst (Great Britain); Rafael Altamira y Crevea (Spain); Willem Van Eysinga (Netherlands); J. Gustavo Guerrero (Salvador); Baron Rolin-Jaequemyns (Belgium); Frank B. Kellogg (United States); Count Michael Rostworowski (Poland); Antonio S. de Bustamante (Cuba); Wang Chung-hui (China); Demetro Negulesco (Rumania); Walther Schücking (Germany); and Francisco José Urrutia (Colombia). The deputy judges elected were M. Erich, M. Da Matta, M. Novakavotch, and M. Redlich.

On Sept. 15, 1930, the President of the Government of the Grand Duchy of Luxemburg signed a declaration on behalf of the Grand Duchy accepting the Court's compulsory jurisdiction. This declaration, which is not subject to ratification, became effective as from the date of signature. It replaces that made in 1920 on behalf of the same state. The Albanian government, on Sept. 17, 1930, signed at Geneva a declaration of acceptance of the Court's compulsory jurisdiction. On the same day it deposited the instrument of ratification in respect of this declaration. The Salvadorean government which in 1920 signed the Optional Clause, but whose signature, failing subsequent ratification, never became effective, deposited, on Aug. 29, 1930, the instrument of ratification in respect of the Protocol of Dec. 16, 1920, relating to the Court's Statute, and announced in its *Official Gazette* the reservations placed by it upon its ratification of the Optional Clause.

On October 2, Hussein Khan Ala, Persian delegate to the League, signed the Optional Clause with a qualifying declaration and on October 8, M. Constantin Antoiniade, the Rumanian delegate, signed the Clause with qualifications. Up to Dec. 1, 1930, a total of 46 states had accepted the Optional Clause, with or without reservations, and 34 states had ratified it.

During the Eleventh Assembly of the League of Nations, Cuba refused unanimous consent to the ratification of the revised reservation to the Protocol. This prevented action at that time. On November 26, the Cuban government ratified the Protocol for the Adherence of the United States to the World Court, bringing the total number of ratifications to 32 nations. No country made any objection to this protocol, and ratification by the United States would undoubtedly hasten action on the part of the other governments which had signed but not yet ratified. The Cuban Senate approved the Protocol for the Revision

of the World Court Statute with two reservations. These reservations had to do with two points in the revised statute to which Cuba objected during the Eleventh Assembly in September: the required residence of judges near the World Court, and the method of putting the revised Court Statute into effect. Neither of these reservations, however, affected in any way the entrance of the United States into the Court.

In his message to Congress of Dec. 3, 1930, President Hoover announced that he favored the adherence of the United States to the revised World Court Statute. He submitted the protocols of adherence to the Senate on December 10 but the Foreign Affairs Committee of that body took no action up to the end of the year. See UNITED STATES under *Seventy-first Congress, Second Regular Session*.

WORLD FAIRS. See EXPOSITIONS.

WORLD LEAGUE AGAINST ALCOHOLISM. An organization originated in a conference of the Anti-Saloon League of America in Columbus, Ohio, in 1916 and formally launched in a joint conference of the Canadian Temperance Alliance and the Anti-Saloon League in Washington in 1919. The object of the league, as formulated, was "to attain by the means of education and legislation the total suppression throughout the world of alcoholism, which is the poisoning of body, germ-plasm, mind, conduct, society, produced by the consumption of alcoholic beverages."

The official league membership in 1930 comprised 61 national temperance organizations in 34 of the leading countries of the world. The work is carried on by executive, legal, publicity, and service departments, with offices in Westerville, Ohio; the research department in New York City; the Scientific Temperance Federation in Boston; and the Intercollegiate Prohibition Association in Washington. Branch offices are maintained in London, England; Lausanne, Switzerland; Oslo, Norway; and Tartu, Estonia. In 1930 the presidents of the league were: Miss Anna A. Gordon, Evanston, Ill.; Dr. Robert Hercod, Lausanne, Switzerland; the Rt. Hon. Lief Jones, London, England; and Dr. Howard H. Russell, Westerville, Ohio. The general secretary was Dr. Ernest H. Cherrington.

WORMAN, JAMES HENRY. An American educator, editor, and consul, died in Plattsburg, N. Y., Jan. 24, 1930. He was born in Berlin, Germany, Feb. 28, 1845, and was educated at the University of Berlin and at the Sorbonne in Paris. He came to the United States in 1864 and filled an assistant professorship at Knox College until 1867, when he became librarian at Drew Theological Seminary. He was editor of the *Okenango Telegraph*, 1875-76, and associate editor of the *National Repository*, 1876-80. In 1877, soon after the opening of Chautauqua Institution, he became senior professor, founding in 1878 its correspondence system of study. While connected with Chautauqua, he also held professorships at Adelphi College, 1877-82, and Vanderbilt University, 1882-85. DePauw University granted him the degree of Ph.D. in 1882. In 1885 he became editor of the magazine *Saratogian* and two years later, editor-in-chief of *Outing*. He was made American consul at Munich, Germany, in 1899, and in 1902 was consul-general. Two years later he was trans-

ferred to Three Rivers, Canada, serving until 1908.

In 1916 Dr. Worman was appointed acting professor of Spanish at the University of Vermont and in 1917, head of the department, retiring as professor emeritus in 1925.

WRESTLING. Of the two rival claimants to the world's professional heavyweight wrestling crown at the end of 1929, Gus Sonnenberg and Richard Shikat, the latter was eliminated in June, 1930, by Jim Londos, of Greece. Londos, whose title was recognized by the New York State Athletic Commission, threw the Hungarian challenger, Ferenc Holuban, at Madison Square Garden, New York, on December 29, after having previously disposed of Gino Garibaldi, of Italy, and others. Oklahoma A. and M. College won the national intercollegiate team title and three of the eight final-round bouts in the National A. A. U. tournament, the other five being taken by the New York Athletic Club. Earl McCready, of Oklahoma A. and M. College, won both the intercollegiate and the national amateur heavyweight titles. Cornell was the Eastern intercollegiate team champion.

WRIGHT, JOSEPH. A British philologist and educator, died in Oxford, Feb. 27, 1930. He was born in Thackley, Yorkshire, Oct. 31, 1855. He entered the University of London, and on graduation in 1878 taught first at Margate, then at Wareham. In 1882 he was appointed assistant instructor at Neuenheim College, Heidelberg; while at Heidelberg he also studied for his Ph.D. degree. In 1891 he became deputy professor, and in 1901 professor, of comparative philology at Oxford, holding this chair until his resignation in 1925. His great work is the *English Dialect Dictionary* (6 vols., 1896-1905), in which there are recorded provincial words and expressions, many of which were passing into disuse.

WÜRTEMBERG, würt'tém-bêrk. A constituent state of the German Republic since November, 1918; formerly a kingdom of the German Empire. Area, 7530 square miles; population, according to the census of 1925, 2,580,235. Chief city, Stuttgart, population 343,048 in 1925.

WYOMING. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 225,565. On Jan. 1, 1920, it was 194,402. The largest city is Casper. The capital is Cheyenne.

AGRICULTURE. The following table presents the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|------------|--------------|
| Hay | 1930 | 1,117,000 | 1,465,000* | \$12,943,000 |
| | 1929 | 1,094,000 | 1,577,000* | 19,125,000 |
| Wheat | 1930 | 247,000 | 3,565,000 | 1,762,000 |
| | 1929 | 256,000 | 3,409,000 | 8,034,000 |
| Corn | 1930 | 170,000 | 3,570,000 | 2,392,000 |
| | 1929 | 157,000 | 2,198,000 | 1,868,000 |
| Oats | 1930 | 126,000 | 3,402,000 | 1,225,000 |
| | 1929 | 139,000 | 3,614,000 | 1,843,000 |
| Potatoes | 1930 | 17,000 | 2,550,000 | 1,912,000 |
| | 1929 | 17,000 | 1,784,000 | 2,234,000 |
| Barley | 1930 | 136,000 | 8,382,000 | 1,466,000 |
| | 1929 | 124,000 | 2,976,000 | 1,905,000 |
| Sugar beets | 1930 | 46,000 | 621,000* | |
| | 1929 | 47,000 | 487,000* | 8,495,000 |

* Tons.

Farms in the State numbered 16,066 in 1930 as against 15,512 in 1925 and 15,748 in 1920. The area of irrigated lands totaled 1,233,604 acres in 1929, as against 1,207,982 in 1919.

MINERAL PRODUCTION. Some 95 per cent of the mineral product of the State for 1928, according to value, consisted of fuels, of which the sorts, in their order of importance, were petroleum, coal, natural gas, and gasoline derived from natural gas. The development of these mineral industries was peculiar in that, while the State's natural gas commanded for 1929 the lowest average price, 7½ cents a thousand cubic feet, reported for any State, and while the petroleum output of 1929 averaged about \$1.33 a barrel or but slightly above the average price for the petroleum product of the entire country, nevertheless the production of coal tended to maintain its importance, though the coal product of 1929 commanded an average price of \$2.54 or 76 cents a ton above the national average. Petroleum production in the State fell to 19,190,000 barrels for 1929, from 21,461,000 for 1928; in value, to \$25,700,000 for 1929 (estimated), from \$27,400,000 for 1928. The quantity of coal mined rose to 6,704,790 net tons for 1929, from 6,571,683 for 1928; the value on the contrary fell to \$17,052,000 for 1929, from \$17,363,000 for 1928. The yield of natural gas (figures for 1929 not available) rose to 47,490,000 M cubic feet for 1928, from 43,581,000 M for 1927; in value, to \$3,527,000 for 1928, from \$3,268,800 for 1927. Gasoline was extracted from natural gas to the quantity of 42,861,000 gallons in 1928 and of 44,700,000 in 1929; by value, \$2,775,000 in 1928 and \$3,250,000 in 1929. The entire mineral product of the State was valued at \$52,950,875 for 1928 and of \$56,166,600 for 1927.

The estimated output of gold, silver, and copper from Wyoming mines in 1930 in terms of recovered and recoverable metal was 465 ounces of gold, 125 ounces of silver, and 11,000 pounds of copper, according to the U. S. Bureau of Mines.

FINANCE. State expenditures in the year ended Sept. 30, 1928, as reported by the United States Department of Commerce, were: for maintenance and operation of governmental departments, \$5,297,622 (of which \$2,063,427 was for local education); for interest on debt, \$144,333; for permanent improvements, \$3,198,293; total, \$8,640,248 (of which \$3,781,815 was for highways, \$920,852 being for maintenance and \$2,860,963 for construction). Revenues were \$9,693,985. Of these, property and special taxes formed 14.9 per cent; departmental earnings and compensation to the State for officers' services, 6.8; sales of licenses, 17.9 (including taxes of \$920,839 on sales of gasoline). The funded debt outstanding on Sept. 30, 1928, was \$1,901,000. Net of sinking-fund assets, it was \$1,599,498. On property bearing an assessed valuation of \$441,833,874 were levied in the year State taxes of \$1,728,586.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2043.49.

EDUCATION. A formula for the determination of efficiency in the teaching of all public schools and likewise of the part-time classes in agriculture was put into use.

There were enrolled in the public schools, in 1929-30, 54,505 pupils. Of these, 43,341 were in kindergartens or elementary grades; in secondary grades or courses, 11,164. The year's expenditures for public-school education in the State, outlay included, totaled \$7,715,445.

CHARITIES AND CORRECTIONS. The central authority of the State in the care and custody of individuals, the State Board of Charities and Reform, as operating in 1930, was composed of the

Governor, Secretary of State, State Treasurer, State Auditor, and State Superintendent of Public Instruction. It exercised supervision over the State institutions. Under an act of 1929 the Board was charged with the work of home placement and like duties with regard to dependent and neglected children. The Board's members also served as a pardon board and as a prison-labor commission.

POLITICAL AND OTHER EVENTS. The Federal executive order halting the further development of petroleum fields on Federal lands in the West was taken by some interests in Wyoming, as elsewhere, as likely to delay the advance of the region. The subject of withholding the benefits of the Federal public lands in the State was agitated in July at the annual convention of the Wyoming Wool Growers' Association. In Wyoming, as in South Dakota, the authorities noted the upgrowth of a novel method of "rustling" cattle, that of abstracting the animals in motor trucks.

ELECTIONS. Frank C. Emerson, Republican, was reelected Governor on November 4. He was unofficially reported to have received 37,040 votes; Leslie A. Miller, Democratic candidate, 35,909. Former Governor Robert D. Carey, on the Republican ticket, was elected United States Senator, defeating Harry Schwartz, Democrat; the vote was, respectively, 42,873 and 29,928, as unofficially totaled. Vincent Carter was reelected Representative. Republican control of the Legislature in both branches was maintained. Popular vote approved a proposed issue of \$2,800,000 of State bonds for expenditure on highway work, the sum being chiefly requisite to match Federal aid to be rendered the State as authorized by Congress in the three-year programme of contribution to State road building enacted in the spring.

OFFICERS. Governor, Frank C. Emerson; Secretary of State, A. M. Clark; Treasurer, W. H. Edelman; Auditor, Roscoe Alcorn; Attorney-General, W. O. Wilson; Superintendent of Public Instruction, Katharine A. Morton.

JUDICIARY. Supreme Court: Chief Justice, Fred H. Blume; Associate Justices, Ralph Kimball and W. A. Riner.

WYOMING, UNIVERSITY OF. A State institution of higher education in Laramie; founded in 1886. It consists of colleges of liberal arts, agriculture, engineering, education, and a law school. The enrollment for the summer session and for the autumn term of 1930 was 1194. The faculty numbered 150. The income for the year from State and local funds was \$977,761, and from Federal grants for agricultural extension, \$113,541. The library contained 75,351 volumes. President, Arthur Griswold Crane, Ph.D.

XYLOSE. See CHEMISTRY, INDUSTRIAL.

YACHTING. The defeat of Sir Thomas Lip-ton's *Shamrock V* by the American defender *Enterprise* in the America's Cup races off Newport, R. I., in September was the outstanding event of a year in which American yachting regained much of the prestige lost in 1929. In the first race of the series on September 13, *Enterprise* finished the 30-mile course 2 minutes and 52 seconds ahead of *Shamrock V*. With a ton of ballast removed for the second race on September 15, the *Shamrock* proved somewhat unseaworthy, and Capt. Harold Vanderbilt brought the *Enterprise* over the finish line 9 minutes and 34 seconds ahead of the challenger. In the third race, September 17, the *Shamrock* was disabled when

her main halyard tore out. In the final, on September 18, *Enterprise* broke the record for the course by 3 minutes and 5 seconds, finishing 5 minutes and 44 seconds ahead of *Shamrock V*. The *Enterprise's* time was 3 hours, 10 minutes, and 13 seconds. Although the American yacht was much better sailed, mechanical winches and other contrivances, though quite legitimate, installed in *Enterprise* evoked criticism in both Great Britain and America. Regulations subsequently adopted by the British Yacht Racing Association and the New York Yacht Club, effective Jan. 1, 1931, barred the future use of metal masts and of winches below deck for the trimming of sails and rigging.

The Canada's Cup, premier yachting trophy of the Great Lakes, was retained by the *Thisbe*, sailed by W. P. Barrows of the Rochester Yacht Club, in an exciting series with *Quest*, of Toronto, sailed by Norman Gooderham. The Star class international championship was captured by *Peggy-wee*, sailed by Arthur Knapp Jr., and Newell P. Weed, of the Long Island Sound fleet. Four foreign fleets participated in the races, which were held off Gibson Island in Chesapeake Bay. America secured a leg on the British-American Cup when four American six-meter sloops defeated a similar British fleet off Oyster Bay. The British won the first leg on the cup in Scottish waters two years earlier. The American entrants were *Mars*, sailed by Van S. Merle-Smith; *Cherokee*, Cornelius Shields; *Aphrodite*, Sherman Hoyt; and *Lucie*, Briggs Cunningham. The *Lucie* won the Riviera championship early in the year, while J. B. Shethar's *Ripples* was runnerup for the Scandinavian Gold Cup, retained in Sweden.

The New London-Bermuda trophy and Class B prize was won by the American schooner, *Malay*, sailed by Raymond W. Ferris. The Class A prize went to *Malabar X*, sailed by John G. Alden. Ralph W. Manny, sailing *Blue Streak*, won the Royal Bermuda Yacht Club Trophy. The Gloucester (Mass.) fishing schooner *Gertrude L. Thebaud*, sailed by Capt. Ben Pine and Charley Johnson, defeated the *Bluenose*, captained by Angus Walters, off Gloucester in October, taking the championship of the fishing fleet from Canadian waters for the first time in nine years. American and Bermuda one-design and six-meter sloops raced off Bermuda and in Long Island Sound, dividing the honors. On the N. Y. Yacht Club Cruise the King's Cup race was won by *Andiamo*, W. K. Shaw; the Astor Cup for schooners, by *Pleione*, Joseph V. Santry; Astor Cup for sloops, *Avatar*, Floyd L. Carlisle. In the chief British events, the King's Cup at Cowes was won by *Caread*, Col. J. Gretton; the Fastnet Cup from Cowes, by *Jolie Brise*, R. Somerset; and the Ocean Channel race, by *Spica*.

YAKUTSK REPUBLIC. See SIBERIA.

YALE UNIVERSITY. A nonsectarian institution of higher education in New Haven, Conn.; founded in 1701. The enrollment for the autumn of 1930 was 5914, including 624 who were not candidates for degrees or certificates. Of those working for degrees or certificates, 812 were in the graduate school, 1680 in Yale College, 645 in the Sheffield Scientific School, 849 in the freshman year, 199 in the school of medicine, 258 in the divinity school, 325 in the school of law, 367 in the school of fine arts, 120 in the school of music, 40 in the school of forestry, and 102 in the school of nursing. There were 73 research fellows working on the various foundations. The registration for

INTERNATIONAL YACHT RACES OF 1930
"Shamrock" and "Enterprise" After Start of Third Race, "Shamrock" Leading

the summer session of the school of law was 60. The faculty of the university numbered 1351 and included 243 of professorial rank, 74 associate professors, 170 assistant professors, 267 instructors, and 595 assistants. Appointments to the faculty included: Joannes Gregorius Dussier de Barenne, of Utrecht, Holland, Sterling professor of physiology, Eugen Kahn, of Munich, Germany, Sterling professor of psychiatry and mental hygiene; James Harvey Rogers, of the University of Missouri, professor of political economy. Edgar Stevenson Furniss, professor of political economy, was appointed dean of the graduate school to fill the vacancy caused by the retirement of Wilbur Lucius Cross.

The total endowment amounted to \$82,856,840.91, and the income for the year was \$7,878,742.63. The permanent endowment funds were increased by \$12,599,671 during the year, and \$12,610,239 was received for buildings and income for special purposes. Gifts received during the year included: Edward S. Harkness Fund, to enable the university to inaugurate its residential quadrangle plan, \$5,000,000; Sterling Memorial Professorship Funds, establishing five additional professorships and increasing the endowment of the 25 formerly provided, \$2,500,000; Bingham Oceanographic Foundation, the gift of Harry Payne Bingham, \$67,500; Chester D. Pugsley Trust for Conference on International Relations, \$50,000; Henry L. Johnson Memorial Publication Fund, \$45,000; Carnegie Corporation Professorship Fund for a chair in art history \$150,000.

The transfer of the major part of 1,540,000 books to the new Sterling Memorial Library was accomplished between July and October, 1930. Other new buildings which were occupied during the year were the Raleigh Fitkin Memorial (medical and pediatric wards), the Sterling Quadrangle (dormitory), Sterling Law Buildings (dormitory section), Medical and Pediatric Laboratory, Department of University Health, and Institute of Human Relations. Buildings which were under construction at the close of 1930 included residential quadrangles, Clinic, Payne Whitney Gynasium, Graduate School Sterling Quadrangle, and Sterling Hall of Medicine addition.

Some of the projects undertaken by the Institute of Human Relations in its first year of activity included a special study of cases of bankruptcy in New Jersey, New York, and Massachusetts; a comparative study of cases of juvenile delinquency in New Haven, Boston, and Detroit; a preliminary study of human relations in industry; photographic records of young children; and researches in psychology, which embraced studies on the power of suggestion, eye movements, reflexes, etc., and anthropoid research. The library, including departmental libraries, contained 1,983,341 volumes and pamphlets. President, James Rowland Angell, Ph.D., Litt.D., LL.D.

YESHIVA COLLEGE. The first college of liberal arts and science in the United States under Jewish auspices, for men only; founded in New York City in 1896 as the Rabbi Isaac Elchanan Theological Seminary and by amendment to the charter known since 1928 as the Rabbi Isaac Elchanan Theological Seminary and Yeshiva College. The enrollment in 1930 was as follows: Senior seminary, 117; junior seminary, 206; teachers' institute, 136; preparatory department,

236; college, 81. The faculty numbered 43. The income for the year was \$143,460. Additions of about \$51,500 were made to the endowment fund. The library contained 22,000 volumes and a collection of manuscripts. President of the faculty, Bernard Revel.

YORKTOWN, VIRGINIA, ANNIVERSARY CELEBRATION. See CELEBRATIONS.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An educational, social, physical, and spiritual movement for men and boys, found in every civilized nation of the world. It originated in London in 1844, then spread to the United States in 1851. In 1930 there were throughout the world 10,397 associations, with 1,680,841 members, of whom 557,127 were boys under 18; 6955 employed officers; and net property and funds amounting to \$275,833,301. The local associations in the United States numbered 1442, with 1,034,019 members, of whom 231,234 were boys 12 to 17 years of age; 72,402 directors and committee men; 4861 employed officers; and total net property and funds paid in amounting to \$230,063,700. During the year 998,361 men and boys participated in physical training activities; 74,432 were enrolled in educational courses, including lectures, discussions, and regular day and evening classes; 98,149 attended summer camps; 90,895 were assisted in securing employment; and 209,084 were enrolled in Bible classes, while a total of 4,511,000 attended religious meetings.

Headquarters of the National Council of the Young Men's Christian Associations of the United States of America are at 347 Madison Avenue, New York City. The officers in 1930 were: President, Francis S. Harmon; chairman of the general board, Adrian Lyon; treasurer, Walter W. Head; and general secretary, Fred W. Ramsey. The World's Alliance of Young Men's Christian Associations has its headquarters at the office of its president, John R. Mott, 230 Park Avenue, New York City, and also at the office of its general secretary, W. W. Gethman, 3 Rue General Dufour, Geneva, Switzerland.

YOUNG PLAN. See GERMANY under *History*; REPARATIONS.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. An organization and movement of which the purpose is to advance the physical, social, intellectual, and spiritual interests of young women; to promote growth in Christian character and service; and to be a social force for the extension of the Kingdom of God. Its national organization holds a biennial convention to which all affiliated associations send delegates. The 1930 convention was held April 25 to May 1 in Detroit, Mich. The national executive organization is known as the National Board of the Young Women's Christian Associations. To it is entrusted the work of the national body during the interim of conventions. The officers of the National Board in 1930 were: Mrs. Robert E. Speer, New York City, president; Mrs. John French, Greenwich, Conn., chairman executive committee; Mrs. John Huston Finley, New York City, first vice-president; Mrs. Howard Gillespie Myers, New York City, second vice-president; Mrs. George B. Ford, New York City, third vice-president; Miss Katharine Lambert, New York City, secretary; Mrs. Samuel Murtland, New York City, treasurer; Mrs. George W. Davison, Greenwich, Conn., assistant treasurer.

In 1929 there were 1145 associations in the United States, of which 965 were affiliated with

the national board and 180 were as yet unaffiliated. Of these associations, 265 were in cities, 142 in towns, 47 in rural communities (with 10 more in process of organization), and 691 were student associations on college and university campuses. There were also 65 branches for colored girls and women, and 56 International Institutes, centres for foreign-born girls and women. The total Y. W. C. A. membership in the United States was 603,876.

The value of real estate owned by the Y. W. C. A. in the United States was \$71,749,902, while 175 associations reported a total endowment of \$12,559,328. There were 3755 professional workers employed in the movement, of which 3473 were in local work, 189 were on the national staff, and 93 were serving in foreign countries. Working as volunteers, as board and committee members, in 1929 were 55,000 women.

The National Board received in 1929, from contribution sources and quota payments, \$1,108,603; from income on endowment, \$237,233; and from income-producing sources, \$1,007,422. Gross-expenditures were \$2,337,236. The endowment fund as of Dec. 31, 1929, amounted to \$4,376,218; the approximate value of the National Board's property was given as \$4,450,290. Headquarters are at 600 Lexington Avenue, New York City, with Miss Anna V. Rice as general secretary and Miss Emma P. Hirth, associate secretary.

YUGOSLAVIA. See **JUGOSLAVIA**.

YUKON, yŏŏ'kŏn. A territory of the Dominion of Canada; bounded on the west by Alaska and stretching from British Columbia to the Arctic Ocean; constituted a separate political unit in 1898. Area, 207,076 square miles; population, 4157, according to the census of 1921; estimated June 1, 1930, at 3700. Dawson, the capital and largest town, had 975 inhabitants in 1921. Mining is the principal occupation, and the chief minerals are gold, copper, silver, lead, and coal. The output of gold in the year ending Mar. 31, 1929, was \$654,672. Silver production for the calendar year 1928 totaled \$2,000,000. Revenues for 1929 were \$220,268 and expenditures, \$211,232. At the head of the government is a gold commissioner and a territorial council of three elected members. Gold Commissioner in 1930, G. I. MacLean.

ZAMBONINITE. See **MINERALOGY**.

ZANZIBAR PROTECTORATE. A British protectorate off the coast of Tanganyika in East Africa, comprising the islands of Zanzibar, Pemba, and adjacent small islands. The area of the island of Zanzibar is 640 square miles and of Pemba, 380 square miles; their respective populations, at the census of 1924, were 128,099 and 88,691. In 1921 the protectorate contained 270 Europeans, mostly English, and 12,000 British Indian subjects, who controlled most of the trade of East Africa. Zanzibar, the capital, had 38,700 inhabitants. The protectorate is the world's chief source of cloves, the annual production approximating 19,343,000 pounds.

ZAUDITU (JUDITH). Empress of Ethiopia, died in Addis Ababa, Apr. 2, 1930. She was born in 1876, daughter of Menelek II, and was married at the age of six to Ras Sahla Selasse, aged 12 years and son of John IV. In the marriage contract it was stipulated that Zauditu's father, Menelek, then Ras of Shoa, should succeed John on the throne and that his son-in-law, Sahla Selasse, should succeed him. Zauditu's dowry was the kingdom of Wollo, and she and her husband

were known as "queen" and "king." Upon Sahla Selasse's death in 1901 Zauditu was married to Dadjasmatch Ube who divorced her soon after. Her third husband was Ras Gugsa who also divorced her in 1909. Zauditu succeeded to the throne in 1916 on the deposition of her nephew, Lij Yasu, who during his three-year reign had openly acknowledged the overlordship of the Turkish Sultan as Caliph and had attempted to overthrow the National Church of Ethiopia. She was crowned empress Feb. 11, 1917, and Ras Taffari Makonnen, a distant cousin, was proclaimed Regent and her heir and successor. After Taffari's coronation as King in 1928, her rule was only a nominal one. See **ETHIOPIA**.

ZINC. Low industrial demand throughout the world in 1930 was reflected in the zinc industry in the United States, according to the U. S. Bureau of Mines. Production of primary zinc from domestic and foreign sources and apparent deliveries for domestic consumption were lower than in any year since 1922. Stocks of metallic zinc at smelters and at electrolytic refineries were nearly doubled during 1930 and at the end of the year they were the highest on record. In 1930 the exports of slab zinc, which have declined sharply and, with only one exception, steadily since 1925, were less than one-half of exports in 1929 and were only slightly more than 10 per cent of exports in 1925.

The output of primary metallic zinc from domestic ores in 1930, was about 491,100 tons and that from foreign ores was about 8200 tons, a total of 499,300 tons. In comparison with 612,136 tons from domestic ores and 13,311 tons from foreign ores, a total of 625,447 tons in 1929, the decrease in total primary production for 1930 amounted to 20 per cent. In addition to the output of primary zinc, about 34,800 tons of redistilled secondary zinc was produced, as compared with 47,348 tons in 1929. Thus the total supply of distilled and electrolytic zinc in 1930 was about 534,100 tons, composed of 161,500 tons of high grade, 21,600 tons of intermediate, 94,600 tons of select and brass special, and 250,400 tons of prime western zinc. Of the total output of primary zinc in 1930, 132,000 tons was electrolytic zinc. Of the primary retort output, 102,000 tons was produced in Pennsylvania, 94,000 tons in Illinois, 80,700 tons in Oklahoma, and the remainder in Arkansas, Indiana, Kansas, Texas, and West Virginia.

A total number of about 107,100 retorts was reported at the 21 zinc smelters that operated during all or a part of the year. Of that number, about 38,000 were reported in operation at the end of November. Only a little more than one-third of retort capacity at the 21 smelters, or about 37,700 retorts, was estimated to be in operation at the end of the year. The average monthly price of prime western zinc at St. Louis was 5.24 cents a pound in January. From this figure it declined steadily to 4.33 cents a pound in July, rose to 4.36 cents in August and dropped again to a low for the year of 4.06 cents in October. The average for December was about 4.09 cents and on December 29 the price was 4.12½ cents. The average quoted price for 1929 was 6.49 cents a pound. The average selling price of all grades of zinc in 1929, was 6.6 cents a pound.

ZONING. See **CITY** and **REGIONAL PLANNING**.

ZOOLOGY. The American Society of Zoologists and the American Society of Naturalists met at

Cleveland, Ohio, in affiliation with the American Association for the Advancement of Science, in the week of Dec. 29 to Jan. 3, 1931. H. V. Neal was president of the Zoölogists and A. F. Blakeslee of the Naturalists. The eleventh International Zoölogical Congress met at Padua, Italy, from September 3 to 11, under the presidency of Paolo Enriques.

OCEANOGRAPHIC INSTITUTE. After exhaustive investigation and in a voluminous report, a committee of the National Academy of Sciences recommended the establishment of an Oceanographic Institute to be located at Woods Hole, Mass., and financed by the Rockefeller Foundation. Enough funds were available to supply all of the necessary equipment, including residence and laboratory buildings, and a sea-going vessel, fitted to carry on investigations in any sea and at any depth. The Institute is an independent organization, but proposed to cooperate with universities and other research institutions in all phases of oceanographic work. Woods Hole was chosen as the location partly because of the proximity of the Marine Biological Laboratory and the laboratory of the U. S. Bureau of Fisheries, and partly because from it there is easy access to an unusually wide variety of oceanic conditions. It was expected that work in the Institute would begin in the summer of 1931. Dr. H. B. Bigelow was Director.

William Beebe, who had done under-water investigations with the aid of a diving helmet, had more recently (*Nature*, 126, p. 220) developed an apparatus in which he was able to descend to 1426 feet. The machine is a steel sphere 57.3 inches in diameter and $1\frac{1}{2}$ inches thick, with a 6-inch window of quartz glass. Decayed meat hanging in a bag outside the window served as bait and the whole was illuminated by a searchlight.

While no biologist doubts that life on the earth has reached its present status through an evolutionary process, there was still much difference of opinion as to the mode of origin of new species. Some consider it most probable that they have arisen through mutations, i.e. the sudden appearance of changes of specific value which are heritable and give rise in one generation to individuals differing specifically from their immediate ancestors. Work in genetics has shown that such mutations are constantly appearing under laboratory conditions and that they are heritable and constant. Fruit flies, under treatment with X-rays and with radium emanations (see YEAR BOOKS for 1927 and 1928) show mutations, in some cases exactly like those appearing spontaneously in laboratory cultures, though in considerably greater proportionate numbers than in the untreated animals.

The question then arises whether, if under laboratory conditions radiations produce mutations, naturally appearing mutations may not be the result of the action of normal earth radiations. If so, may not the answer to the problem of the origin of species be that mutations, arising as the result of the action of radioactive earth agencies, are the materials from which species are built. Babcock and Collins (*Proc. Acad. Nat. Sci.*, 15, p. 623) tested this question by exposing fruit flies in an earth tunnel where radioactive materials were present in considerable abundance and found that proportionately more mutations appeared here than

in the control cultures kept in the laboratory, indicating that the expected changes actually had taken place.

Muller (*Am. Nat.*, 64, p. 220) stated that, while it is absolutely certain that the mutations artificially produced are exactly the same as those appearing naturally, a comparison of the strength of natural radioactive emanations with those he used in producing artificial mutations showed that the former, in order to produce the observed amount of mutations, would have to have been 1000 times their present ascertained strength. It may be that some substance in the protoplasm itself may have radioactivity, but so far as can be seen, the radioactivity of the earth can be responsible for only a part of natural mutations.

That the effect on the chromosome is to produce a "point mutation," and not a general "wrecking" of the chromosome is shown by the fact that it is possible to reverse the action so as to recover the original character, which would not be the case if the chromosome were injured. Hersh, Karrer, and Loomis (*Am. Nat.*, 64, p. 552) experimented on fruit flies with sound waves of high frequency to determine if they would have any effect comparable to radioactive substances. While the results were inconclusive, it seemed certain they would not.

Dobrovolskaia-Zavadskaja (*Biol. Reviews*, 4, p. 327) achieved through nice results quite different from most workers in this field. After a critical examination of the literature and a description of her own experiments, she concluded that X-rays cannot produce mutations. Where mutations follow after X-ray treatment, it is because there are in any animal species, a very few individuals who have a definite predisposition to change and the treatment encourages these but is not in itself the cause of the change. The hypothesis that species are stable but have a few potentially changeable individuals, she considered the nearest approach to an explanation for the origin of species that can be made with our present information.

It has repeatedly been stated in earlier YEAR BOOKS, that present day zoölogy is undergoing its greatest development along experimental lines, and morphology, or study of structure, has suffered a corresponding decline. This supplanting of morphology by experiment repeats in large measure an earlier supplanting of taxonomy by morphology. Some zoölogists believe that the reaction against taxonomy (the classification of animals) went too far and that there is a need for a return to it. The presidential address before the Section of Zoölogy at the British Association for the Advancement of Science at Bristol had the title "The Taxonomic Outlook" (*Nature*, 126, p. 440), President Calman asserting that "if there is any truth in the theory of evolution it is obvious that function and habits have an evolutionary history behind them, but it is no less obvious that this history has not been independent of the organisms that display them."

EUGENICS. The English Eugenics Society received during the year a bequest from the estate of Henry Twitchin, of between £70,000 and £80,000, the income to be used to further the work of the Society. The Galton lecture for 1930 was given in England by Professor S. J. Holmes, of the University of California. He thought (*Eugenics Review*, 22, p. 7) that, ow-

ing to advances in medical science and social assistance for defectives, natural selection on physical grounds plays little part in human societies, but that the intelligence quotient has great importance. A factor operating against racial improvement is the differential birth rate which tends to increase the numbers of the less desirable elements of the population.

Pearl (*Scientia*, 47, p. 175) held that in experiments designed to show the action of natural selection as a race-modifying agency the following proofs are essential. 1. Proof of somatic differences between survivors and eliminated. 2. Proof of genetic differences between them. 3. Proof of age of survivors, since if past the reproductive age their survival cannot affect the race. 4. Proof that the race has altered genetically. 5. Proof that the race has altered somatically. Up to now, only the first of these proofs has been taken into consideration.

The reputed effect of alcohol on the heredity of animals is a question of sufficient importance to attract a good deal of attention, and the balance of evidence to date has indicated that, whatever may be said about the effects of alcohol on the individual, there is no reason to think that its effects are transmitted to descendants. Hanson and Cooper made a final report (*Jour. Exp. Zool.*, 56, p. 369) on learning ability in white rats after prolonged alcoholic treatment. Their results, carefully treated by statistical methods, showed that an acquired tolerance for alcohol repeated for ten generations, does not impress itself on the germ cell. In each generation the treatment causes a falling off in the growth curve, but this is not inherited.

PROTOZOA. Ludwig (*Zool. Anzeiger*, 92, p. 33) showed that in accordance with rules of zoological nomenclature the spelling of the common protozoön should be *Paramecium*, and gave diagnoses of the different species. Bullington (*Jour. Exp. Zool.*, 56, p. 423) reported that in the characteristic spiral mode of swimming of ciliates there is in each species a constant tendency to turn either to the right or to the left. In each case, the contrary direction may be taken, but this requires more attention to maintain and the animal behaves as if it were a learning process. In backward swimming, all of the species he studied spiralled to the left. This direction of spiraling is a characteristic of taxonomic importance.

Pascher (*Biol. Zent.*, 50, p. 1) described an amoeba which he named *A. stigmatica*, which has zoöchlorellæ in its protoplasm and a red stigma. He was unable to study any division stages, but did get encystment and in all cases the stigma and zoöchlorellæ were carried through the encystment. The animal is phototropic (it is not stated whether positive or negative), this probably being due to the contained zoöchlorellæ and the stigma. Beers (*Jour. Exp. Zool.*, 56, p. 193) discussed the significance of encystment in *Didinium*. If the animal is fed an inadequate diet encystment follows, but when revived from this encystment by transfer to a fresh hay infusion and again subjected to inadequate food, it showed an increase in vitality. From this it was concluded that encystment may act to increase vitality after a previous period of depression due to insufficient food. Encystment is not a rejuvenation process since an intrinsic life cycle terminating in senescence is absent in this ciliate.

Hopkins (*Jour. Morph.*, 48, p. 371) found that the rate of locomotion of amoeba is dependent on the nature of the substratum, and on the relation of the Na., K., Li., and Rb. cations to the Ca. and Sr. present. If either series is present in high concentration without adequate antagonistic action of the other, movement ceases. Darby (*Jour. Exp. Biol.*, 7, p. 132) found that the division rate in protozoa can be varied by varying the pH concentration of the medium, and when cultures are maintained under optimum conditions encystment and conjugation can take place at any age. Under these conditions neither endomixis nor conjugation has any effect on the division rate.

Raffel (*Biol. Bull.*, 58, p. 293) found that conjugation affected the division rate in *Paramecium*, the ex-conjugants in his experiments having a lowered rate, which character was transmitted to their descendants. Faure-Fremiet (*Biol. Bull.*, 58, p. 28) considers that the development of the colonial protozoön *Zoothamnium alternans* in giving rise to the colonial adult condition is intermediate between the formation of a group of free cells and that of a multicellular animal.

PORIFERA. Wilson earlier showed that sponges would regenerate from fragments even if these were small enough to pass through the meshes of fine wire netting. Further study by Wilson and Penney (*Jour. Exp. Zool.*, 56, p. 73) stated that in general this is a case of regeneration from comparatively unspecialized cells and that no dedifferentiation occurs. Collar cells, however, are not a product of regeneration and are carried over from the old tissues. This regeneration process then (in *Microciona*) is essentially the same as gemmule development, complicated by the carrying over of the parental collar cells.

PLATYHELMINTHES. Sonneborn (*Jour. Exp. Zool.*, 57, p. 57) studied asexual reproduction in *Stenostomum*, a turbellarian which reproduces by transverse division. It has been assumed that the two products of division are anatomically and physiologically equivalent to one another, but Sonneborn found that the line of the successive anterior products of division show a gradual senescence and final death while the successive posterior products have the characteristics of newly produced young. The anterior products of division, therefore, may properly be regarded as an individual giving off young from the posterior end. Shearer (*Jour. Exp. Biol.*, 7, p. 260) disagreed with Child's conclusions concerning metabolic gradients in *Planaria* (see earlier YEAR BOOKS), and also with reference to their application to other animals. Respiration, for example, is not stronger in the anterior than in the posterior end of insects, and in vertebrates the liver respiration is much greater than that of the brain.

INSECTS. Shull (*Zeit. f. induktive Abstamm. u. Vererbungs.*, 55, p. 108) reported on results of experiments on the effect of light and temperature in determining the production of parthenogenetic and gametic females in aphids. High temperatures (24° C. and above) applied to wingless aphids tend to make the offspring parthenogenetic females, low temperatures (16° C. or below) tend to make them gametic females. Continuous light applied to winged aphids tends to make their offspring parthenogenetic. Alternating light and darkness tend to make them gametic. Determination in these cases is prenatal.

If prenatal development took place under light conditions tending to produce parthenogenesis and temperature conditions tending to produce gamic, development proceeded more slowly than when both prenatal conditions acted in the same direction.

Gerould (*Jour. Morph.*, 48, p. 385) discussed a phenomenon which he reported was first observed by Malpighi (1628-1694), that in insects there is a periodical reversal in the direction of flow of blood in the heart, varying in its rhythm at different times in the life cycle of the animal. A similar rhythm has been observed in ascidians where it has been explained as due to alternate actions of nerve centres, but Gerould did not think that this explanation applies to the insect. Another explanation, ascribing the reversal to back pressure on the blood stream, cannot apply for it will take place in excised hearts. A common text-book statement is that the insect heart is composed of a series of chambers separated by valves, but Gerould denied this, pointing out that while there may be valves in the ostia, preventing a backward flow into the pericardium, there are none in the heart itself. The blood flow is set up by a peristaltic contraction of the wall of the heart.

Shipitzina (*Bull. Biol. Inst. Perm University*, 7, No. 4) showed that *Anopheles* larvae, which feed by filtering water through their highly specialized mouth parts, are not dependent merely on the larger particles in the water but may take in and retain even colloidal substances. Meyer (*Zcit. f. vergl. Phys.*, 11) disproved the commonly held notion that the pigments of insect bodies are obtained from plants by showing that the green pigment in hemolymph may be formed as an oxidation product of protein. Beeson (*Nature*, 126, p. 12) found a definite reaction to smell in the beetle *Hoplocerambyx* where the insects came in great numbers to newly felled trees of *Shorea robusta*, coming upwind in remarkably straight courses toward their objective point. When there was an appreciable wind blowing, none came from windward. This trait was utilized in trapping these beetles in protective work against their injurious activities.

Sachorov (*Ecology*, 11, p. 505) reported that cold resistance in insects depends on a lowering of water, and increasing of fat, content. Neave (*Ecology*, 10, p. 568) described peculiar migration phenomena in May-fly nymphs. Five to ten weeks before their final metamorphosis they migrate from the more permanent waters into temporary overflow areas and streams.

Weyer (*Zool. Anz.*, 90, p. 177) found that germ glands are present in worker and soldier termites and that they differ from the sexually mature females in that there are fewer follicles as well as fewer ova. In some males of these castes mature sperm were found. Concerted rhythmical activities of insects have often been observed, generally in connection with the production of sounds. Ittis (*Zool. Anz.*, 90, p. 58) described a peculiar rhythmical movement in the larvae of *Lophyrus sertifer*, a tenthredinid fly, occurring in large numbers on the leaves of a pine tree. At intervals of three to five seconds they would bend the anterior end of their bodies backward in perfect unison. This action was entirely independent of any observable external stimulus such as wind movements or motions of the observer. Ittis called it an autonomous group movement due to some internal stimulus.

Tanner (*Science*, 72, p. 560) described synchronous pumping movements in plant lice, which go on even if one is isolated from the rest. The movement is synchronous in all members of a single colony, but not with that of any other colony. Wigglesworth (*Proc. Royal Soc.*, London, 106, p. 230) proposed a new theory of insect respiration. He believed that the fine tracheoles contain water and are not filled with air, and their walls are semipermeable with respect to lactic acid. This water will be drawn along the tracheoles by hydrostatic pressure and the osmotic pressure in the tissues. When, in consequence of activity, lactic acid is in excess in the tissues, the water is absorbed and air passes down into the tracheoles.

The Japanese beetle has in recent years presented a serious economic problem in New Jersey, as it feeds on a wide variety of plants and control measures are difficult to apply. Glaser and Fox (*Science*, 71, p. 16) reported that in a limited locality in New Jersey, these insects are parasitized by a nematode worm, described as a new genus and species under the name of *Neomplectana glasceri*, which is fatal to infected insects. It is hoped that this worm may prove to be an efficient control for the beetles. A later report (*Science*, 72, Suppl. Dec. 19) states that a small hymenopterous parasite, which after ten years of experiment has been successfully reared and proves to be of much aid in the fight against the beetle, lives and feeds on the wild carrot, a plant which for years has been a much hated pest in meadows.

A novel application of economic entomology is the use of fly larvae in the treatment of osteomyelitis. During the World War Dr. N. S. Baer noted cases where much neglected wounds, which were swarming with fly larvae, healed with great rapidity, apparently due to the cleansing action of the larvae, feeding on the decaying tissues. Later he tried these larvae as above mentioned, with remarkable success. The U. S. Department of Agriculture was actively engaged in propagating species of flies which may be useful for this purpose. See SURGERY, PROGRESS OF.

During the year enormous swarms of locusts (grasshoppers) occurred, especially in the Palestine region. Uvarov (*Nature*, 126, p. 706) stated that there are two phases of this insect, a solitary and a gregarious, the former quite harmless, the latter often very destructive. The two differ in structure, color, and habits. If reared singly, the insects develop into the solitary form, if reared under crowded conditions into the gregarious. Adequate preventive measures can be developed only when more is known of the conditions governing the transformation from one to the other phase. A commission was appointed by the British Government to study this problem.

ARACHNIDA. Bristowe (*Ann. and Mag. Nat. Hist.*, 6, p. 334) discussed the mode of origin of spiders' webs. Originally, he thought, the purpose of the web was as a covering for egg masses, but secondarily became employed for catching insects.

MOLLUSCA. Butcher (*Biol. Bull.*, 59, p. 154) studied the development of the eyes in the scallop, *Pecten*, where they are arranged around the margin of the mantle. As the animal grows and the increase in size of the mantle separates eyes already formed, others will develop in the spaces between them. Eyes will regenerate

if cut away, and "anlagēn" of eyes, if transplanted to other localities, will develop there. They are, therefore, self differentiating tissues. Baker (*Ecology*, 11, p. 489) studied the distribution of the North American mollusca as affected by the Glacial period and concluded that following the recession they populated the lakes. Under these new environmental conditions they changed rapidly in external form and to a certain extent internally as well, giving rise to ecological or environmental varieties and species. Ankel (*Zool. Anz.*, 89, p. 129) found in the egg capsules of *Natica catenata* an average of 50 eggs would be laid, but only three or four would develop. Those which develop have typical cleavage; those which do not develop have atypical. He was unable to explain this condition.

The U. S. Bureau of Fisheries laboratory at Fairport, Iowa, had for one of its major problems how to increase the number of fresh water clams from whose shells pearl buttons are made. Normally, the young clams attach themselves to fishes, living there for some time as parasites, and a part of the problem was to secure as great an infection as possible. It was announced during the year, that it had been found possible to rear these larvæ on artificial culture media and thus secure much more efficient results than followed upon the most successful of the experiments on infection of fish.

FISHES. Carter and Beadle (*Jour. Linnean Soc.*, 37, p. 197) described the nesting habits of *Lepidosiren paradoxa*. The fish burrows down through the mud and into the clay which underlies the mud. This latter layer is impervious to water, hence this part of the burrow is full of water which protects the fish from drying. There may be one or several plugs to the burrow. Another fish, *Symbranchus marmoratus*, though not related to *Lepidosiren*, builds similar burrows, which it uses for estivation. The breeding nest is a nearly horizontal burrow with a nest lining of leaves and grass. The male guards the eggs. Both of the above fish will grasp firmly a stick thrust into the burrow and can be drawn out without loosing their hold.

AMPHIBIA. Witschi (*Jour. Exp. Zool.*, 56, p. 149) recorded observations on the European frog *Rana temporaria*. According to his interpretation, in a narrow region running through southern Germany, west into France, and east into Russia, which was not covered by ice during the Glacial Epoch, there are descendants of the original amphibian fauna which inhabited this region before Glacial times. In these is found a tendency toward hermaphroditism. North and south of the above mentioned area are "North German" and "Pre-Alpine" regions where there are semi-differentiated sex races and still farther north and south are the "Baltic" and the "Alpine" regions where differentiation is complete. He thinks that these steps represent stages in orthogenetic development from the hermaphroditic to the separate sexed, the process being somewhat influenced by temperature conditions.

Parker (*Proc. Nat. Acad. Sci.*, 16, p. 395) found that as compared with flat-fish, tree frogs have a very limited ability to develop a resemblance to any mottling of their background. Figge (*Jour. Exp. Zool.*, 56, p. 241) studied the question why some amphibians, e.g. *Neoturus*, do not metamorphose. Dissection showed

that the sixth aortic arch, which in other amphibians carries blood to the lungs, is absent in this amphibian and this led to the conclusion that since the lung gets no impure blood it does not become functional. This conclusion was strengthened by the results of experiments on *Ambystoma*, where, when the ventral part of the sixth arch is ligated, metamorphosis does not take place.

REPTILIA. Notes on the venom of the Gila Monster of the southwestern United States, the only poisonous lizard known, are given by Arrington (*Bull. Antivenin Inst. of America*, 4, p. 29). Two species occur in the above localities, *Heloderma suspectum* and *H. horridum*. The venom is not a specialized substance as in most snakes, but is mixed with the saliva, both being secreted by the submaxillary gland. The reptile strikes laterally with great force and accuracy and the teeth are shut in a "bull-dog" grip which it is impossible to loosen. Authentic cases of death solely from the venom are not known, where death has resulted it probably occurred from blood poisoning or other complication. The mouth of the reptile swarms with bacteria, and infection follows the bite. No anti-venom has yet been developed, the best remedy being thorough sterilization of the wound, and injection of potassium permanganate.

AVES. It is generally believed that the passenger pigeon is extinct in the United States, a considerable reward offered some years ago for the discovery of either adult or nest never having been claimed. Hadley (*Science*, 71, p. 187) described several observations which indicated that possibly some of these birds were still living in northern Michigan. Van Oordt and Junge (*Zool. Anz.*, 91, p. 1) experimented on the effects of castration on the Laughing Gull in which a definite sequence of colors appears in feathers, beak and leg, the first adult coloration appearing two years after the animal hatches. Males that were entirely castrated failed to develop the full summer coloration, but retained the color of the immature male. If only partially castrated, the summer color will develop but the beak and feet are in this respect intermediate between the normal and the fully castrated.

MAMMALIA. In a symposium conducted by the American Society of Mammalogists, in New York City (*Jour. of Mammalogy*, 11, p. 325) it was stated that at present the coyote was the most destructive of all predatory mammals not only because it kills other animals, but also because in some parts of the western United States it has spread rabies among human beings as well as among the lower animals. It seemed, however, to be the general consensus of the discussion that by keeping down the number of rodents which would do immense damage to farmers' crops the coyote in large measure atones for the damage it does and that no protective measures thus far devised sufficiently discriminate between the coyote and other carnivorous animals. See ENTOMOLOGY, ECONOMIC.

ZUIDER ZEE. See RECLAMATION.

ZULULAND, zool'loo-länd. A portion of the Province of Natal in the Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles; population in 1911, 219,606. There are extensive sugar and tea plantations. See SOUTH AFRICA, UNION OF, for data on Natal.
